In Indochina, as we well know, it has been apparent for some time that Communist China has been giving material assistance to the troops of Ho Chi Minh. A recent United States intelligence report, which has been made public, states that—

> In the Viet Minh itself there are Soviet and Chinese Communist advisers or supervisors in the military organization down at least to the company level in the military and • • • spread throughout the administrative hierarchy.

It was estimated that approximately 20,000 Viet Minh troops were trained and rearmed in China in preparation for the offensive of September 19, 1950. This is only one example of the large amount of sustenance being given by the Communist Chinese to the Viet Minh.

In Korea the Chinese Communists entered a war against the United Nations itself. Here they not only attempted to help an aggressor but they defied the organization they now wish to enter. Later they disregarded accepted rules on the care of prisoners of war. Since the armistice they have repeatedly violated the terms of the armistice agreement, proving they are not yet willing to respect their international obligations. For example, the Swedish and Swiss members of the neutral nations supervisory commission have been prohibited from exercising supervision in North Korea as provided by the armistice. The provisions of the agreement prohibiting the reinforcement of military personnel, combat aircraft, armored vehicles, weapons, and ammunition have been ignored. The Communist leaders have not yet exhibited a willingness to negotiate a peaceful settlement of the Korean question in good faith.

Taken as a whole, therefore, the international conduct of the Chinese Communists no more shows interest in maintaining peace and promoting friendly relations than their domestic conduct shows respect for even elementary human rights. I cannot believe that such a government could possibly represent the Chinese people whom we have always known to be peace loving and deeply respectful of the highest values. To recognize such a regime as the legitimate government of China would, therefore, be a betrayal of the Chinese people themselves. To give it a seat in the United Nations would be a betrayal of the organization which was founded for the purpose of maintaining peace and security. Finally, such action would be a betrayal of ourselves and the principles of democracy, respect for the individual, and liberty on which the United States was founded and from which we must never deviate.

Mr. JUDD. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. CLARDY].

Mr. CLARDY. Mr. Chairman, as one who introduced a resolution that goes somewhat further than that of my colleague from Michigan [Mr. BENTLEY], I want to endorse what he has said and to suggest that while I would much prefer to have a stronger statement of position by this House, I am prepared to go along with the resolution now before us.

I think I should warn the Members who may come back next year that if I am successful in the coming November

election I intend to introduce on the first day of the next session a resolution which will firmly and flatly and unequivocally place this House on record as stating flatly that in the event Red China is brought into the United Nations through one door we will immediately depart by the other.

Mr. O'KONSKI. Mr. Chairman, will the gentleman yield?

Mr. CLARDY. I yield.

Mr. O'KONSKI. Does the gentleman from Michigan see any difference in the nature of communism in Red China and communism in any other country?

Mr. CLARDY. I do not.

Mr. O'KONSKI. Does not the gentleman think then that this resolution would have more meaning and more sense if we opposed the entrance of any Communist nation into the United Nations?

Mr. CLARDY. Not only that, but also the ejection from the United Nations of any Communist nation. They are our sworn enemy, they are dedicated to our destruction. It is utter nonsense to call this a peace preserving organization as long as they are in our midst.

Mr. KEARNS. Mr. Chairman, will the gentleman yield?

Mr. CLARDY. I yield.

Mr. KEARNS. Does the gentleman feel we will have proper protection in the interim until the gentleman introduces his resolution?

Mr. CLARDY. I do, or I would not support the resolution as it stands. I think that the voice this House has raised has been heard around the world because of what has transpired up until today and I am saying now that it is my interpretation of this resolution that this House is saying flatly that while we are not announcing our punch in advance, we are going to get out of the United Nations if the unexpected should happen.

Mr. KEARNS. I want to compliment the gentleman for his great conviction.

Mr. CARNAHAN. Mr. Chairman, I yield 3 minutes to the gentleman from Alabama [Mr. BATTLE].

Mr. BATTLE. Mr. Chairman, I rise in support of House Resolution 627 as introduced by the gentleman from Michigan [Mr. BENTLEY].

This resolution is somewhat similar to those we have had previously expressing our determination to prevent the seating of Red China in the United Nations. Last year I had a similar resolution, and last year the Foreign Affairs Committee and the House of Representatives passed a similar resolution setting out our determination to prevent this coming about. Certainly nothing has happened in the meantime to make us alter this course; as a matter of fact, events in the last few months have brought us to a position where we must be even more determined.

I do not want to recognize the Communists who have raped China. I do not condone the gangster tactics they have adopted. I do not want to reward the Communists for their aggression.

A few days ago the House Committee on Foreign Affairs was considering the Bentley resolution. This resolution as first offered suggested in effect that we have an agonizing reappraisal if the Communists are admitted as the representatives of China. It followed the general pattern to some extent of the Knowland amendment in recognizing the fact that Red China might be admitted. We must have an agonizing reappraisal if this does happen; but I do not believe in admitting defeat before we start.

We should use the veto in the Security Council and fight to a successful conclusion in case this question is brought up before the General Assembly.

I shall support this resolution. It is a positive approach in making sure that our goal is achieved, in making sure that the Communists are not seated as representatives of China.

Mr. JUDD. Mr. Chairman, I yield such time as he may desire to the chairman of the Committee on Foreign Affairs, the gentleman from Illinois [Mr. CHIPERFIELD].

Mr. CHIPERFIELD. Mr. Chairman, I approve of this resolution and shall support it.

Mr. JUDD. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. HOSMER].

Mr. HOSMER. Mr. Chairman, this is perhaps one of the greatest issues that this Congress has had an opportunity to consider. It is great for two reasons: It is great because as indicated by the gentleman from Michigan [Mr. CLARDY] already the very fact of its discussion by the United States Congress has prevented the raising of the issue of the admission of Red China to the United Nations this fall. It is great because it forces us to redetermine what kind of an organization the U. N. should be.

The elected Representatives of the people of the United States of America, both in this body and in the other body, have so fully and so firmly expressed decisively their objection to membership of Communist China in the United Nations that it has deterred action on the part of the other nations of the world who were about to take this terrible step.

It is, as indicated by the gentleman from Michigan [Mr. BENTLEY], a step which would have wrecked the United Nations. We who have advised pulling out of the United Nations if Communist China is admitted have been accused of attempting to wreck it; but actually the day the United Nations membership falls to such a low regard for the objectives and the moral character of that organization as to admit a perfidious state like Communist China to membership then the organization is too weak morally to survive anyway.

So by the resolution that is before us today we may have accomplished one other great purpose. We may have accomplished a focusing of the attention of the American people on the question of what kind of an organization should the United Nations be.

Should the United Nations be an organization of like-minded States that have certain minimum standards for admission, or should the United Nations be a common brawling ground with no standards of admission, a place where even the worst type of nation can go and have an arena to stage its brawls with the other countries, an arena that is short of the battlefield?

I prefer to think of the United Nations in the first sense, that it is something more than an arena. But if it is no more than that and if the awareness of the people of the United States can come to understand that it is just an arena and not an organization which is going to save the world, then what the gentleman from Michigan wants to do, reexamine our attitude toward the United Nations, is exactly the thing that should happen. If it is not an altruistic organization but an arena then we most certainly should reexamine our policies and thereafter look at it as an arena and not an altruistic organization. In doing so the United States can certainly make greater and more realistic use of it than it does at the present time.

Mr. MASON. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from Illinois.

Mr. MASON. Would not the gentleman agree that so far the record of the United Nations has proven that it is nothing but a brawling arena?

Mr. HOSMER. I will admit that the record of the United Nations is a disappointing one, in many respects, but I certainly do not give up all hope that through it we can attain a better world.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from Minnesota.

Mr. JUDD. I agree with the gentleman that this resolution causes proper discussion of what the United Nations ought to be. But, of course, that is an academic question in reality because the United Nations operates under a charter which determines what it is. That charter says "membership in the United Nations is open to all other peace-loving states." Therefore, to admit to membership organization or nations which are openly at war with the United Nations itself would make a mockery of every single basic principle on which the U. N. is founded and violate the specifications clearly set forth in the charter. I commend the gentleman for the point he is making that to admit China would not strengthen the U. N.; it would destroy its moral foundation and its legal integrity, because it would be an open and blatant violation of the charter. Obviously, that would destroy its effectiveness.

Mr. HOSMER. As the gentleman from Minnesota [Mr. JUDD] so well pointed out at the Foreign Affairs Committee hearings last Friday, admission of the Communist Chinese to the United Nations would accomplish nothing more than immediately to make them subject to expulsion for violation of the rules of that organization.

The basic fact we start out with is the perfidy of the Communist regime which kidnaped the mainland of China by murder, subversion and intrigue and which, as the President has stated:

First. Is still at war with the United Nations over Korea;

Second. Has been condemned by the United Nations as an aggressor for part in the Korean war;

Third. Still occupies parts of North Korea;

Fourth. Is now seeking to enslave the people of Indochina;

Fifth. Holds American war prisoners and American civilians unjutifiably.

If the U. N. is to be an alliance of like-minded states functioning under certain minimum standards of decency, then, obviously, the Red regime in China is far below the minimum. Should the members of the U. N. be so insensitive to the nature of that organization, portrayed by this concept, as to admit Red China we can only reach one conclusion: It is not an alliance of decency, its morals are decadent, or nonexistent, and it is no place for the United States of America to be. The greatest harm that we can do ourselves and the cause of freedom everywhere is to compromise on great moral principles. Therefore, upon such event, we should forthwith withdraw from membership.

If, on the other hand, we conceive the U. N. to be a meeting ground for all nations, irrespective of the base character of governments represented, the situation is different. We then conceive of the U. N. as a common brawling ground, something like the arenas of ancient Rome, where contestants, no matter how crude, indecent, or immoral, can stage their spectacles for all to see.

The latter concept requires a reexamination of our policy toward the United Nations. I believe our policy toward the U. N. up to now has been based on the concept of that organization being something more than a common brawling ground. Certainly, if it is only that, then our policy toward it should be reexamined. If it is no more than a place of conflict for divergent nations of whatever character, then, recognizing it as such, we possibly can obtain much more use of it than we are getting at the present time.

Mr. DOLLINGER. Mr. Chairman, I ask unanimous consent that the gentleman from New York [Mr. ROOSEVELT] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ROOSEVELT. Mr. Chairman, I rise in support of this resolution. As I have frequently stated, I am opposed to any nation shooting its way into the United Nations. Red China by its actions has shown that it cannot conscientiously subscribe to the fundamental purposes of a peaceful world under the United Nations. To my mind, it is an absolute prerequisite to any nation's membership in the family of nations that they demonstrate by their deeds and not just by their words that they subscribe to the basic principles of international morality and that they pursue peaceful purposes. Instead, Red China by all of its actions has shown its devotion not to the fundamental concepts of the United Nations but rather to the concept of aggression engineered and directed by the Kremlin.

Mr. JUDD. Mr. Chairman, I yield 2 minutes to the gentleman from Pennsylvania [Mr. FULTON].

Mr. FULTON. Mr. Chairman, I rise in support of this legislation to state the position of the Congress against the seating of the Communist regime to represent China in the United Nations. I believe it should be pointed out that the seating of Communist China regime in the United Nations would not only seat them as members of the General Assembly but would likewise seat them in the Security Council as one of the five permanent members. That would mean 2 Communist permanent members of the 11-country Security Council, which I believe could be a danger to this country and to its security.

Secondly, when we are speaking of seating this particular group in charge of the Chinese Communist regime, we would be admitting these representatives into our country through the United Nations and the United Nations buildings in New York City. Thus these Communist Chinese representatives would probably have access to the whole of the United States of America with little or no restriction, and we might have very little chance to restrict the numbers. On the contrary, there would be no American representation or travel permitted in Red China. So, on security grounds likewise I favor this resolution.

I believe this is a resolution in support of the President's position and the President's policy against the seating of the Communist regime to represent China in the United Nations. I believe that on foreign policy matters, where communism and its menace to this country are involved, we are neither Republicans nor Democrats but are acting as good loyal United States citizens in carrying out our United States foreign affairs policy, and in protecting the security of this good country of ours.

Mr. CARNAHAN. Mr. Chairman, I yield 5 minutes to the gentleman from Kansas [Mr. MILLER].

Mr. MILLER of Kansas. Mr. Chairman, I ask unanimous consent to proceed out of order.

The CHAIRMAN. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. MILLER of Kansas. Mr. Chairman, before beginning on the few remarks that I care to make out of order, I do wish to say that I am in full sympathy with the purposes of this resolution. But, as to the remarks that I wish to make out of order, my colleagues, it is on a subject that concerns every Member in every district of the United States.

In the forepart of next week, Monday or Tuesday, there will be introduced in the House an omnibus bill recommending various constructions on the rivers and harbors of the United States. Among these there will be recommended the construction of two dams out in my district in Kansas, the cost of which is $38,792,000 for a dam at Milford, Kans., on the Republican River, and $16,263,000 for a dam at Perry, Kans. Now, these are small rivers but with wonderful river valleys and as fine farmland as there is in the United States. The people who live out there, the people of my district, are absolutely opposed to the construction of these dams. This is a duplication of the situation that brought me here to Congress when it was recommended that Tuttle Creek Dam near Manhattan should be constructed. That was the sole issue in my district in which I was elected as the first Democrat that ever came from that district, so you may know that there was something behind that issue. The issue in regard to these proposed dams at Perry and Milford is identical with that in regard to Tuttle Creek.

Mr. Chairman, I am taking advantage of this opportunity to call this matter to the attention of the House, because when this bill comes before the House next week it is my intention to offer an amendment to delete these two dams from the bill. It is not that the people of my district object to protection for the people living on the Kansas River valley, but that there is a better, more practicable way to do it. Upstream watershed development, already underway in the upper Delaware River area, is proving big dams on the lower river channel to be unnecessary, and, from the standpoint of flood prevention, antiquated.

Mr. JUDD. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. JACKSON].

Mr. JACKSON. Mr. Chairman, I rise in support of House Resolution 627, and wish to take this opportunity to congratulate the gentleman from Michigan [Mr. BENTLEY] upon the foresight he evidenced many months ago when he first introduced this resolution.

I do not consider, as some may, that the resolution before us today constitutes in any way a threat directed at anyone. Tonight and tomorrow morning, throughout the world, the peoples of the earth and the legislative representatives of those people will learn by press and by radio and by every other means of communication that the House of Representatives, representing the collective opinion and the consensus of 160 million Americans, has voiced its unalterable opposition to the recognition of international banditry.

It may be that some others have forgotten the crosses that mark the graves of those who fell in Korea. This resolution will be evidence to the world that the United States has not forgotten the 25,000 or more crosses which mark the price that we paid for our participation in that theater of war. We have not forgotten our men, their hands wired behind their backs and their brains blown out.

International banditry, rape, brutality, violence such as the civilized world has not known for a thousand years have been perpetrated by the Chinese Communist government. That government has no place in the councils of decent and honest men.

It is my very sincere hope that when the rollcall comes upon this resolution, it will represent the unanimous voice of this great forum of opinion.

Mr. CARNAHAN. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. CELLER].

Mr. CELLER. Mr. Chairman, I am unalterably in favor of this resolution.

I loathe communism and all its works. I do not think China should now be admitted into the United Nations. I believe we are right in our firm conviction to refuse recognition to Red China.

I am very happy to note that this resolution is not a meddlesome interference with the prerogatives of the President. The President, under the Constitution, is the architect of our foreign policy. It is well to recognize that power given to him by the Founding Fathers, and supported by the country and its people for over a hundred and fifty years. However, we have too often members of either body presuming to act as sole shapers of our foreign policy.

However, it is pertinent to ask one or two questions. We do not recognize China; we reject her admission into the United Nations. There must be a reappraisal beyond that. It may be agonizing, it may be difficult, but the reappraisal must be had with reference to Asia, particularly with reference, for example, to Japan. It is well known that a vast quantity of goods was sold to China by Japan before the Second World War. China was Japan's best customer. What shall be our policy with reference to Japan's trade with China or Russia or the satellite countries? We are pouring great wealth into Japan to bolster its economy and bridge the gap between its exports and imports. I now ask, What is to be the policy of the administration concerning Japan? We are on the horns of a dilemma. We either have to keep pouring that wealth into Japan or in the alternative allow Japan to trade. We cannot take all of Japan's surplus goods. Japan presently is bursting at the seams with her manufactured products. What is to happen to those products? The answer must be had and soon.

It is difficult if not improvident to have any entity or any persons shape our foreign policy except the President of the United States, in whom we must have confidence. Foreign policy cannot be formulated in this Chamber. Men who have their eyes on the next election too often may be actuated by sensation rather than by sanity, by passion rather than patience. Getting reelected and pandering to the groundlings prevents too often a statesmanlike approach. For that reason, as I said before, I am happy to note that this resolution supports the President in his present firm and expressed determination to use all means to prevent representation of China in the United Nations. I take it the President could have different views depending upon the shape of world events in the future. If the President at some distant time feels that his plan and his policy vis-a-vis China must be reoriented, I think that the expression of that reorientation or change of view and implementation thereof would be perfectly consistent with this resolution.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Iowa.

Mr. GROSS. The gentleman has raised a question that is going to pose one of our greatest headaches, that of Japan. I am sure the gentleman will agree with me that this great organization known as the United Nations, so steeped in morality, that the other 59 member nations are going to come to the financial assistance of Japan along with the United States. Will not the gentleman agree that with all their morality they are now going to take the goods of Japan and help us finance that country?

Mr. CELLER. I do indeed hope the gentleman is correct. I do indeed hope the United States will not be alone in helping Japan.

Mr. JUDD. Mr. Chairman, I yield 2 minutes to the gentleman from New York [Mr. JAVITS].

Mr. JAVITS. Mr. Chairman, I am for this resolution precisely because it contains no threat to withdraw from the United Nations. If it contained such a threat, I would be against it on the ground that the threat to leave the U. N. is more inimical to the interests of the United States than the unanimous declaration of the House of Representatives—a declaration already made by the Congress before and by the President and Secretary of State recently—that they are against the admission of the Communist Chinese regime to represent China in the United Nations, a view which I hold very strongly and have held from the beginning. Incidentally, I think we ought to keep to that name of the Chinese Communist regime. It is not the Government of Communist China, it is a regime which has put a yoke of slavery around the neck of China and its people.

It strikes me that the very same people that are found running down the United Nations and saying it is no good and not worth anything are the ones who turn around when something happens like that in Indochina and say, "Where is the United Nations? Why isn't it doing something?" Also, the very same people who say we should not trade with the Communist world are the very people who ask the question, "What do we do now?" and are unwilling to be for greater and more open trade when we run into a question of free world trade, and are also unwilling to help finance the economic dislocation which the free world would suffer if nonstrategic trade with the Communist bloc were entirely cut off. Our responsibility is to the 1,600,000,000 people of the world who remain outside of the orbit of the Communist countries. Instead of subjecting Japan, a great nation, to the blandishments of trade with totalitarian countries like Communist China we should be working hard to integrate economically the trade and development of the free world and to open up vast new markets based on greater development and higher standards of living.

I do not think we ought to have a foreign policy by threat. I think the reason we are here today reiterating our determination in this resolution is that some feel that confidence in American leadership has been momentarily shaken. Confidence in American leadership is based upon the moral power and the moral conviction of the American people. We must have confidence, too, in other free peoples, that they are just as honest and just as moral and just as sincere as we are, and that they, too, will not let the Communist Chinese regime shoot its way into the United Nations—which is all it amounts to—and have the rest of the world undertake a colossal appeasement of them. Because all the Communist Chinese say is, "We want to get in the U. N. and then maybe we will be good boys." But the Communist Chinese regime fails in any way to cease its aggression and barbarous depredations against the whole civilized world. I am for this resolution expressly because it does not contain a threat but relies on the justice of the cause of the free peoples and their moral power backed up by organization, and I think the House ought to support the resolution unanimously.

Mr. CARNAHAN. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. YORTY].

Mr. YORTY. Mr. Chairman, I think it is very interesting that the committee report on this resolution, which I, of course, favor along with, I believe, every other Member of the Congress has this to say: "The events of the last 6 months have proved the necessity for giving increased consideration to this matter. The concern of our Government and our people has been heightened by the Geneva Conference, and the carefully planned activities of the Communist Chinese leaders and their cohorts throughout the world to develop support for their efforts to acquire the seat now occupied by the representative of Nationalist China."

Of course, the resolution itself says that the House of Representatives "reiterates" its opposition to the seating of Red China in the United Nations. I believe it is very singular that 6 months is the time set forth in this resolution because I have spent a great deal of time out among the people of California in the last 6 months, and I have rarely seen them so nervous over the foreign policy of any administration or as confused as they are over the policies of the present administration and particularly its activities during the last 6 months.

I remember well my own feeling not too many months ago when I saw a statement by Secretary of Defense Wilson that we were going to withdraw our troops from Europe. That was followed the very next day by a statement by Secretary Dulles that we would not withdraw our troops from Europe, and it was followed a little bit later by a statement by President Eisenhower that our troops would be left there so long as they were needed to defend Western Europe. He made that statement in order to try to encourage the signing of the European Defense Pact.

When you think back over all the great promises of 1952, and think of the great strength that the United States was going to have, if we had a new administration and the great new foreign policy that we were going to have, and when you see the floundering around today and the ineffective attempts the administration is making to carry out the policy that was charted by the Democrats for the European Defense Pact, then you no longer wonder at the confusion of the American people.

The administration, during the campaign of 1952, made a great political issue out of Korea. It was perfectly evident, even then, to every thinking person that Korea and Indochina were two ends of the same battlefront, and if we took the pressure off the Communists in Korea, it was perfectly obvious that they could shift their emphasis and their power to the important area of Indochina. Yet, when that very thing happened, a few months later, this administration acted surprised and the Secretary of State went rushing around to the capitols of the world to try to arrange some kind of an agreement. Our people were not even told at the time what kind of an agreement he was trying to make with our friends. It was suspected that he was trying to get an agreement to intervene in Indochina. Yet, at the same time that this was being done the military power of the United States had been drastically cut back.

The Air Force program was first cut back and then delayed for 2 years when the administration attempted to return to the very program that they scrapped when they first came into office. While they were doing this, it was announced that the Army of the United States was being cut back from 20 divisions to 17 divisions, and at the same time the administration was talking about intervention, and probably ground intervention in Indochina. They did not say with what or how they would intervene. We did not have much help in Korea except from the South Koreans who certainly were valiant in their own defense. Who would have been able to help us in Indochina if our allies had agreed to intervene? We had five divisions tied up in Europe by agreement and 7 stuck on fly paper in the Far East that could not safely move. What was the administration going to use? What were they going to use to intervene in Indochina?

We had only five Army divisions left to defend the United States and keep our farflung commitments which the administration is expanding all over the world. It was nothing but a bluff of this administration that I submit fooled the American people and confused them, but it did not confuse the Communists. Under the weak and confused leadership of this administration the Communists have marched on to greater strength and victories in Berlin and in Geneva, to the point where the Secretary of State is not willing to go to Geneva to face another diplomatic defeat. So growing Communist power, aggressiveness, and strength has been the answer to Republican sloganizing, weakness and confusion. Republican statements, I repeat, have misled our own people but have not fooled the Communists. It is time for this administration to set a clear-cut policy and tell the American people what it is, and then we will not be so nervous about the Communists shooting their way into the United Nations. All of us are against that.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. JUDD. Mr. Chairman, I yield such time as he may desire to the gentleman from New York [Mr. BECKER].

Mr. BECKER. Mr. Chairman, I appreciate the opportunity the gentleman from Minnesota has given me to express without reservation my wholehearted support of the resolution offered by the gentleman from Michigan [Mr. BENTLEY] in excluding Communist China from the United Nations.

I would like to say with reference to the statement made by the gentleman from California [Mr. YORTY], that to date we have gained more by our foreign policy under our great President and our Secretary of State than in many years in the past. In the speech he has made against the administration the gentleman from California is completely missing the truth as to the accomplishments that have been made.

Mr. JUDD. Mr. Chairman, I yield such time as he may desire to the gentleman from New York [Mr. RADWAN].

Mr. RADWAN. Mr. Chairman, in April of this year I introduced a resolution similar to the one before us today. It was very gratifying indeed when the House Foreign Affairs Committee, of which I am a member, took up the resolution before us:

Resolved, That the House of Representatives reiterates its opposition to the seating of the Communist regime in China as the representative of China in the United Nations or any of its specialized agencies and supports the President in his expressed determination to use all means to prevent such representation.

I vigorously urge the adoption of this resolution. Certainly the events of the last 6 months have proved the necessity for giving increased consideration to this matter. The concern of our Government and of our people has been heightened by the Geneva Conference and the carefully planned activities of the Chinese Communist leaders and their cohorts throughout the world, who develop support for their efforts to acquire the seat now occupied by the representative of Nationalist China.

Early this year I stated, and today I want to bring to the attention of this great House of Representatives, that there is a growing apprehension among the American people that we could be moving in the direction of another Yalta. I have a strong conviction that Red China should not be admitted into the United Nations. My feelings in this matter are reinforced from time to time by letters I receive from my constituents, vigorously opposing any recognition of the outlaws who now rule close to 500 million Chinese.

Unanimous expression by this body, reflecting the solid view of the American people, will serve notice to the world that the position of the United States is clear and unequivocal, and that our free Government will not compromise a sacred principle. In the cold shadow of America's 32,000 Korean war dead, it seems a little short of sacrilegious to propose that the captive government of Red China be allowed to shoot its way into the United Nations.

Adoption of this resolution will have the effect of assuring the American people that the present administration, as well as the legislative branch of our Government, stands united in support of the principles of the free world.

I am glad that the language contained in the resolution makes reference to President Eisenhower's recent strong statement on this issue, and I am happy to support my President in his expressed desire and determination in this matter.

Mr. CARNAHAN. Mr. Chairman, I yield 5 minutes to the gentleman from Texas [Mr. DIES].

Mr. DIES. Mr. Chairman, when President Roosevelt agreed to recognize the Soviet Union, Maxim Litvinoff, Soviet Commissar for Foreign Affairs, agreed on behalf of his government "not to permit the formation or residence on its territory of any organization or group—and to prevent the activity on its territory of any organization or group, of representatives or officials of any organization or group—which has as an aim the overthrow or the preparation for the overthrow of, or the bringing about by force of a change in, the political or social order of the whole or any part of the United States, its territories or possessions." In effect, this was a solemn agreement on the part of President Roosevelt and the Soviet Union to outlaw Communist organizations and activities in the United States.

The duplicity with which Litvinoff entered into this agreement may be judged from his gleeful account of the negotiations as he gave it to his associates, D. H. Dubrowsky, former head of the Russian Red Cross; Boris Skvirsky, attaché of the Soviet Embassy; and Peter A. Bogdanov, chairman of the board of directors of the Amtorg Trading Corporation. When Litvinoff met these men only a few minutes after the conclusion of negotiations for the recognition of the Soviet Government by the Government of the United States, he entered, all smiles, with the remark, "Well, it's all in the bag." He rubbed his hands with satisfaction, as he added: "They wanted us to recognize the debts we owed them and I promised we were going to negotiate. But they did not know we were going to negotiate until doomsday." Litvinoff continued sarcastically: "The next one was a corker; they wanted us to give them freedom of religion in Russia. And I gave it to them. I was very much prompted to offer that I would collect all the Bibles and ship them out to them."

When Dubrowsky testified before the Special Committee on Un-American Activities, he explained:

You see, the general motive is that any promise given to a bourgeois state is not worth the paper it is written on.

The ink had hardly dried upon that agreement when the Soviet Union began to violate it. From that day to the present, their broken pledges litter the path of our relationship with the Kremlin. The Committee on Un-American Activities has accumulated and documented scores of instances of flagrant violations of this solemn agreement, which was the basis of our recognition of the Soviet Union. It is evident from the testimony of Dubrowsky and the subsequent conduct of the Soviet Union that the Kremlin never intended to fulfill or

respect its commitment which induced President Roosevelt to recognize the Soviet Union. As I have been saying for 25 years, you cannot do business with a wicked and criminal regime conceived in iniquity, spawned by deceit, and maintained by terror and the ruthless suppression of human rights.

In spite of the clear and unmistakable purpose of the Kremlin, there are many who continue to hug the delusion that the free world can do business with Red dictatorship. The plain truth is, Mr. Chairman, as the Dies committee pointed out in its first report on January 3, 1939, the fixed and unalterable purpose of the Kremlin is to conquer the world. For reasons of expediency there have been times that the masters of Russia have shifted their tactics, but at no time have they changed their ultimate goal. World conquest remains the heart and core of the Communist creed. There was ample evidence to demonstrate this truth many years ago, but if any doubt existed then there is no room for doubt today. Once we recognize this simple truth, however unpleasant and disagreeable it is, we can shape a realistic policy to halt Communist aggression. The forces of freedom and decency have never gained any victory through appeasement of evil. The free world tried to appease Hitler with the result that he became a menace. Time and again in the history of mankind, motives of expediency have induced governments and rulers to compromise with evil and to subordinate principle to expediency. The results have always been the same. The final payoff was always much higher than would have been the case if principle had been followed and expediency rejected.

As I have previously told this House, the fatal weakness of the Red empire is its scarcity of food and fiber. Through slave labor and terroristic methods the Kremlin has been able to produce military armaments. It has utterly failed to produce food and fiber. The collectivistic farms are being abandoned throughout the Red empire, and agriculture as the basic industry has virtually collapsed. Even the ingenuity of the commissars has failed to devise tortures sufficiently frightening and effective to compel farmers to produce a surplus. Consequently, the great crack in the Soviet armor is its desperate need for the basic essentials of life. This is the Achilles' heel of the Red monster. It is for this reason that the Soviet Union is making a desperate effort to trade with the free world. Through slave labor their gold mines have been worked feverishly and unremittingly to produce the gold with which to buy from the free world. Thus, the free world has been presented with an eleventh hour opportunity to redeem the stupid blunders which led to Soviet aggrandizement. An embargo placed upon the exportation of all goods and commodities to the Red countries would do more to halt Soviet aggression than all the resolutions in the world. I realize, of course, Mr. Chairman, that the free world would have to pay a high price. I know how important it is for the non-Communist countries to trade. I know that it will cost the United States a great deal to support a realistic policy of refusing to trade with the Red bloc. I can assure you, however, that in the end the cost of such a program would be a fraction of what we will have to spend in blood and resources to save the world and ourselves from Communist domination.

I read in the papers a few days ago that the Commission of Governors, which included our own Texas Governor, made a report to the President in favor of trade between Japan and Red China. I am unalterably opposed to this recommendation. If it is adopted, it will mean that the ruthless masters of China will be able to maintain and strengthen their hold upon the unfortunate peoples of that country. It will mean that Communist influences and propaganda will infiltrate Japan to such an extent that Japan may join the Red bloc in the not too distant future. Japan will become dependent upon the Red regime. With the flow of goods would come the flow of propaganda and insidious influences. This recommendation of the governors is contrary to what I have been preaching on the floor of this House for some time. When the bill providing for the disposition of surplus agricultural commodities abroad was under consideration in the House, I offered an amendment to prevent the beneficiaries of our bounty from trading with the Red countries. That amendment was defeated but several of my amendments were adopted to keep the bill from being used to stimulate trade with the Soviet Union and her satellites.

Mr. Chairman, the madmen who rule Russia will stop at nothing to achieve their fanatical determination to conquer the world. They will employ every means at their command to accomplish this goal. A Member of this House recently assured an audience that the Communist dictatorship would not use the A and H bombs in the event of war. Such an assurance is based upon the false premise that the Soviet rulers are normal people and are influenced by normal motives. By this time every Member of this House should have learned differently.

Out of all the mass of detailed evidence which has been presented tc the Committee on Un-American Activities, there has emerged one fact, the importance of which probably exceeds that of all others: The Communist regime is an agency for the planning and perpetration of high crimes. The Communist criminal is not an ordinary criminal even when he is committing ordinary crimes.

The extraordinary thing about a Communist crime is that it rests upon an elaborate philosophy which is summed up in the doctrine that the end justifies the means. If the Communists reached the conclusion that by the unannounced and sudden use of the A- and H-bombs they could destroy the United States, they would not hesitate to use these bombs. If a hot war broke out between the Soviet Union and the free world, these madmen in control of the Red empire would not hesitate to use the A- and H-bombs if in their distorted minds they decided that the use of these bombs would bring them victory.

The non-Communist countries, including our own, say that they want to stop Communist aggression. To date there has been no evidence that the free world is willing to pay the price to contain communism. The non-Communist countries are not willing to give up the temporary profits which they gain from trade with the Red empire. The wily masters of the Kremlin know full well that the free world is not ready or willing to pay the price of a realistic and effective program to halt Communist aggression. Someone quoted Stalin as saying that the non-Communist countries want peace as much as the Red countries, but that they are not as willing to risk war as are the Red countries. In spite of all past blunders, I am convinced, Mr. Chairman, that a firm and unselfish policy on the part of the non-Communist countries moving in unison would roll back the Red tide. It is the supreme tragedy of this age that our real policy toward advancing communism is appeasement.

Mr. Chairman, I see no evidence that the non-Communist countries are prepared to adopt and follow a realistic program to halt the steady advance of Communist dictatorship. I am fearful that within a year all Asia will fall victim to the insatiable appetite of the Kremlin.

For 25 years the Communists have outsmarted and outgeneraled us. They are better poker players than we are. They know every move that we propose to make. They know every card in our hand. They, on the other hand, play with consummate skill. We have one ace left and they want it desperately. They must have food and fiber to keep their sprawling empire from falling apart. Therefore, they dangle before our hungry eyes the glittering prospect of profitable trade. They show us gold which was wrung from the sweat of their slaves. They propose to use the products of our farms and factories to sustain life at a minimum requirement. They propose to stockpile huge quantities to prepare for war. They want us to commit suicide by furnishing them with the one thing they need to destroy us. It is almost unbelievable that we would fall for this obvious bait when the certain result will be our own destruction.

If we could stand for 12 months with courage and resolution and say to them: "You are not going to get anything out of us, neither food nor fiber nor industrial product," the Red empire would collapse.

While I favor this resolution, candor compels me to state that it is only a very small beginning of a realistic policy that ought to be followed by this country. If we want to stop communism, let us call upon the non-Communist world to agree to an all-out embargo upon the exportation of any product to the Red empire. If we want to stop communism, let me urge the subcommittee of the Judiciary Committee, under the able and conscientious leadership of the gentleman from Pennsylvania [Mr. GRAHAM], to bring out my bill to outlaw the Communist Party and its various components of subsidiary, auxiliary, and frontal organizations.

Mr. GRAHAM. Mr. Chairman, will the gentleman yield?

Mr. DIES. I yield.

Mr. GRAHAM. I have just filed that bill.

Mr. DIES. Well, God bless you.

Mr. CARNAHAN. Mr. Chairman, I yield 3 minutes to the gentleman from Arkansas [Mr. HAYS].

Mr. HAYS of Arkansas. Mr. Chairman, one of the hazards of the democratic way of life is that by necessity we have to air our differences out in the open. The Kremlin suffers no such handicap, for while there are dissents, those conflicts that persist are apparently settled by a firing squad.

We accept the hazard partly because of the values that are in the very process of discussion itself, and partly because we have faith in the survival of the system, no matter how severe the conflicts of opinion may be. This applies, of course, not only to our political conflicts here at home but to policy conflicts affecting relations with those allied with us in fighting world communism. The strain resulting from differences with Great Britain and France will not last.

Mr. Chairman, I think we must exert ourselves continuously to make bipartisanship in foreign policy a reality. As I indicated in my comments on the Mutual Security Act a few days ago, the question is delicate and this is not the occasion for more than a fleeting reference. In voicing a dissent when there is an honest disagreement with foreign policy proposals, we on our side must avoid the appearance of divisiveness, and, I believe we have been meeting this standard acceptably. The present perils are too great to indulge in the incriminations that sometimes emerge in an election year. The burdens of world leadership resting upon our country are so great that nothing less than the total moral and intellectual resources of both parties will suffice.

I hope that at the conclusion of this debate, it will be evident that whatever reservations there might be as to phraseology, this resolution represents the unanimous judgment of the House with reference to the efforts of Red China to secure membership in the United Nations.

Of course we oppose those efforts for the reasons that have been enumerated. We have been heartened by the assurances of the President and the Secretary of State that every instrumentality at their command will be used to prevent Communist China from having a seat in the United Nations. At the same time I concur in the President's suggestion that we avoid decisions based on an assumption that we will lose.

There is an affirmative emphasis in this resolution that is wholesome. So, with your permission, let me direct attention to its language:

Resolved, That the House of Representatives reiterates—

And that word "reiterate" is entitled to notice, too, because we have gone on record before—

its opposition to the seating of the Communist regime in China as the representative of China in the United Nations or any of its specialized agencies—

This is the language I wish to call attention to, the concluding words—

and supports the President in his expressed determination to use all means to prevent such representation.

I am happy to support this language, for I have confidence in the President of the United States and want to uphold him as foreign-policy spokesman. I believe that this represent the attitude of those who sit on our side of the aisle and at this critical time we must have a single firm voice in world affairs. We want the world to know he speaks for all of us and that differences in domestic policy are promptly forgotten when grave security questions are considered. The outlook for a united and clearly directed leadership is brighter and the Congress should sustain the Executive in these efforts.

Mr. CARNAHAN. Mr. Chairman, I yield the remaining 2 minutes on this side to the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, the other day our former Speaker, the gentleman from Texas, said that he was going to support the mutual security program despite what he described as political attacks on a former administration that made his blood boil. We on this side feel the same way now. It is a little difficult to remain quiet at this particular moment after listening to the tirade and the charges just made by the gentleman from California [Mr. YORTY] against the present administration because of the truce in Korea. I think one word must be said to keep the record straight and before the people. It was not this Republican administration that pulled out MacArthur when victory was within his grasp. It was not a Republican administration which made it impossible for Van Fleet to go forward to smash the Communist forces when he and every general in Korea of whatever nationality wanted to go ahead and the Communists were becoming demoralized. It was not a Republican administration that refused to let him win when he could win, and could thereby have prevented the war in Indochina. It was not a Republican administration that turned over to General Eisenhower an enormously more difficult situation where the Communists had been given 2 years in which to recover and to build up almost impregnable defenses, 30 miles in depth. It was one thing to accept a truce in the spring of 1953 when to resume the offensive and fight to victory would have cost our American forces blood by the gallon and lives by the tens of thousands; it was quite another to have gone ahead to the victory those forces were already winning in the spring of 1951.

I think there is enough credit and enough blame on both sides without adding the sort of unjustified invective which has been hurled here today and I hope will not be indulged in again in the future by either side. But such statements as were made cannot be allowed to go unchallenged without something being said on the other side. We cannot be expected to remain silent when charged with responsibility for the bad results of decisions made by others.

Now, Mr. Chairman, coming back to the pending resolution, some consideration ought to be given in this debate to the arguments that are made in some quarters in favor of seating Communist China in the United Nations. One has been discussed this afternoon by the gentleman from California [Mr. HOSMER], namely, that the United Nations is supposed to be a universal organization and therefore all governments that exist should be admitted. That argument is demolished by the language of the charter itself. It was not intended to be a universal organization. That was settled at San Francisco. Extensive machinery was set up in the charter to determine how nations are to be admitted, what are the credentials and qualifications they must have; also how they are to be expelled if they do not abide by their commitments under the charter.

Maybe there ought to be an international organization in which all existing de facto governments would be eligible for membership. But the United Nations is not such an organization. The purpose of this resolution is to keep the United Nations what it was intended to be or as nearly as possible what it was intended to be—a union of peace-loving states. To admit Communist China would be brazenly to convert it into a league with organized gangsters, murderers, thugs, and racketeers. We have gangsters in our country too, but we do not advocate that, just because we may have to deal with them on occasion they should therefore be brought into the FBI.

I remember last year some public officials in the State of New York were strongly criticized and impeachment demanded because they went up to Sing-Sing to see one gangster; yet it is seriously proposed in some parts of the world that we should bring into the United Nations an outfit made up of the worst gangsters in history, plotting constantly against our security and our survival.

Another argument often heard is that if we will just recognize and accept the Chinese Communists into respectable society, maybe we can detach them from the Soviet Union; maybe we can drive a wedge between Peiping and Moscow; maybe we can make Titos out of Mao Tse-tung and Chou En-lai. That is a more subtle argument, but there is not one thing in Communist theory or Communist history or Communist practice to support it. Besides, why should the Chinese Communists break with the Kremlin if they can have all the advantages of trade and good relations with the free world and with the Communist bloc at the same time? Of all the possibilities, this is the least likely.

Mr. Churchill said here in Washington the other day that we should make "a real good try for peaceful coexistence" with the Communists. I would like to ask what it is we have been doing all these last 10 years if not a real good try. We gave the Reds Poland. It was not ours but we gave it to them anyway.

We gave them Eastern Germany. We gave them control of Manchuria. We gave them North Korea. That is exactly how we got into our present mess in Asia—by making a real good try to get along with the Chinese Reds. We gave Russia the Kurile Islands, overhanging Japan and southern Sakhalin with the only oil wells Japan had. No wonder Japan is in economic difficulties.

What more are we to be asked to do in order to make a "real good try?" Give them western Germany? Give them the Middle East and the Suez Canal? Give them the rest of Japan? Give them India? Give them Alaska? How about California?

It is incredible that anyone should be considering adding to the list of what we have already given in the vain notion that by sacrificing our own principles and those of the United Nations, and by yielding other peoples' territory, other peoples' rights, yes, even their freedom, we will win better relations with Communists or woo them away from Moscow. I should like to pull the Chinese Communists away from the Kremlin; but the way to do it is to keep the heat on and make them lose, not help them win.

There is a further answer to the argument, it seems to me, and that is this: Why would the Kremlin be moving heaven and earth, and for years, to get Communist China into the United Nations, if that would lead or enable Communist China to break with the Soviet Union? Why do you suppose Moscow and all the satellites would be trying so hard to get Communist China into the United Nations, if that would split Communist China from the Kremlin and hereby wreck all it has been doing for 30 years in steadily expanding its world conspiracy? The Soviet leaders may have made a lot of mistakes, but can anyone believe they are so stupid as to work so hard to get Red China into the United Nations in order to have it break with the Kremlin and destroy the whole Communist position in the world?

In addition to the moral reason that admission of Red China would make a cynical mockery of the principles of the U. N. Charter, and the legal reason that the Communist Chinese do not qualify for membership—we are not excluding them out of mere prejudice or arbitrariness; they have excluded themselves by their own lawless behavior—are the practical reasons. What would be the result in Asia of admitting Communist China? All of free Asia is in flux today. It has a dozen or so new governments struggling to maintain their independence. They singly do not have the strength to defend themselves one by one against Communist China. They know the free world, if united, does have the strength; it does not have the will, they know the Communist world has the will; it does not yet have the strength. I suspect the outcome of the world struggle will depend on which side, the Communist or the free world side, gets first both the strength and the will.

These countries in Asia will crumble once they are convinced the Communists are going to win. To admit Communist China to the United Nations would mean to the people of Asia, and it should mean to us, that the Communists have already won. Let Communist China into the United Nations, gentlemen, and that will be the ball game for Asia. That is why the Kremlin wants it so desperately and offers almost any concession in order to get it.

If our relatively strong allies in Europe are willing to embrace Communist China, how can we expect young and relatively weak governments like Laos and Burma and Indonesia and India, yes, and the Philippines, to have the fortitude and the insight and the understanding and the steadfastness to stand up and defy giant Communist China. They cannot be expected to resist successfully that which the rest of the U. N. accepts.

There is one more point I should like to make if I have time. It is said by some outside that to pass such a resolution is an attempt to force other countries to our position. No; it is an attempt to persuade them to abide by the principles of the United Nations and by the commitments all of us have made under its charter.

Mr. Chairman, there is a lot of talk nowadays to the effect that we must negotiate—but how negotiate with a tiger? We must give and take, but what are we to give this time?

We must achieve peaceful coexistence with communism, but how get peaceful coexistence between normal tissue and a malignantly spreading cancer?

Mr. Chairman, what we need most to do is to rediscover and rededicate ourselves to the convictions on which our Nation was founded. The most fundamental of them all is inscribed around the inside of the Jefferson Memorial. What did he say about negotiating with tyrants? He said:

> I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man.

That is what we are dealing with, the cruelest tyranny over the mind of man in all history. Whatever other countries may try to do, the United States cannot make peace—and God give us strength not to make peace—with tyranny.

The CHAIRMAN. All time having expired, the Clerk will read the resolution for amendment.

The Clerk read as follows:

> *Resolved*, That the House of Representatives reiterates its opposition to the seating of the Communist regime in China as the representative of China in the United Nations or any of its specialized agencies and supports the President in his expressed determination to use all means to prevent such representation.

Mr. BUSBEY. Mr. Chairman, I move to strike out the last two words.

Mr. Chairman, the only reason I am imposing myself on the committee at this time is that I, with some of my colleagues, have recently returned from Europe, after having spent 4 weeks there as a member of the Committee To Investigate Communist Aggression against the Baltic and other satellite countries of Europe. We held hearings in London, Munich, and Berlin. I am sorry it was not possible for every Member of the House to be present, but if the Members will take the time to read those hearings when they are published, I guarantee that they will find them many times more interesting in every respect than the 12 best books that have been written on the subject of Communist aggression.

We listened to witnesses who were the top people of the governments of these countries when the Communists took over. The conclusion of all of the witnesses—some 55 or 60 of them—was that you cannot trust the Communists and you cannot do business with them under any circumstances. Every move the Communists make is aimed toward their ultimate goal of world conquest—world domination by communism.

One could not sit and listen to these witnesses—as our committee did in various cities in the United States during the last 2 years—without coming to definite conclusions.

Incidentally, I intend to ask permission later to insert in the RECORD a sermon given by an Air Force chaplain on Sunday, July 4, in Berlin, to which I listened. It was broadcast over the Armed Forces Network. The title of his sermon was "Communism versus Christianity." As I considered it one of the best I have ever heard on the subject, I secured a copy for insertion in the RECORD.

To sum up this matter, I wish to concur with the remarks of my friend and colleague, the gentleman from Texas [Mr. DIES], under whose chairmanship I had the pleasure of serving on the Committee on Un-American Activities in 1943 and 1944. Having been a student, to some degree, of this subject ever since 1921—when I made my first talk against communism—I have come to one inevitable conclusion.

There is only one way we can handle this problem without going into total war. The only way I know of—and I propose to draft and present a resolution to the House in the very near future concerning this matter—involves two courses. The first is to do everything possible to get all the nations of the free world to join the United States in cutting off diplomatic relations with the gangsters and bandits in the Kremlin. The second and more drastic—and this was touched on by one of the previous speakers today—is to enforce economic sanctions. I sincerely agree with what was said by, I believe, the gentleman from Texas [Mr. DIES], although it may have been someone else: that if we could put on a complete blockade and cease all trade with the Soviet Government and the satellite nations, it would do more to wreck the program of the Kremlin for bringing about a world revolution than anything else we could do at this time.

I will support the resolution that is before us today, but I do not believe it goes far enough.

Mr. GROSS. Mr. Chairman, I move to strike out the last few words, and ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. GROSS. Mr. Chairman, I take this time to ask the chairman of the committee a question or two. In formulating this resolution, was any evidence obtained in the hearings that any deal had been made as a part of the Korean truce, that Red China would be recognized?

Mr. JUDD. Deal by whom?

Mr. GROSS. On the part of any of the so-called free world friends.

Mr. JUDD. I can assure the gentleman none has been made by our country. I know nothing as to what any other country may have done. I have no better sources regarding them than the gentleman.

Mr. GROSS. That was not gone into by the Committee on Foreign Affairs? No evidence was obtained by the committee to the effect that any deal had been made that as a price for the Korean truce Red China would be recognized in the United Nations?

Mr. JUDD. That was gone into and we have no evidence whatsoever of any such deal. We have allies, of course, who openly advocate that Communist China be brought into the U. N.

Mr. GROSS. But no evidence that that was obtained as a part of that truce over there?

Mr. JUDD. None whatsoever.

Mr. GROSS. What is proposed to be done if Red China is seated? You must have given study to that.

Mr. JUDD. That is right. But no firm decision should be announced in advance. A good doctor when he prepares to operate has instruments ready for every eventuality, but his job is to see that complications do not occur that will require their use. If we concentrate successfully on preventing the seating of Red China in the U. N., the question of what to do should she be admitted will not come before us. I see no reason to cross a bridge before we come to the bridge.

Mr. GROSS. I think the gentleman's resolution falls far short of the mark. I think we should have gone on in this resolution and moved to get out of the United Nations if Red China is seated.

I should like to ask the gentleman another question. Why is this language in the resolution?

The House of Representatives reiterates its opposition to the seating of the Communist regime in China as the representative of China.

I refer specifically to the words "as the representative of China." Why that window dressing? Why not strike out those words and say that the House of Representatives reiterates its opposition to the seating of the Communist regime in China in the United Nations and continue with the remainder of the language?

Mr. JUDD. Because China already sits in the United Nations. The question is not the admission of China, the question is, Who is to occupy the Chinese seat and represent China in the United Nations?

Mr. GROSS. You are here dealing with the Communist regime, you are not dealing with China.

Mr. JUDD. It is not a question of admission of China, Communist or Nationalist. It is a question of determining who is to occupy the Chinese seat in the United Nations. We are opposed to seating the Communist regime.

Mr. GROSS. Why not say as you start out to say here, "The House of Representatives reiterates its opposition to the seating of the Communist regime in the United Nations, and so forth"? Why not say that? It is simple, effective, and not susceptive of dual meaning.

Mr. JUDD. That is what we do say.

Mr. GROSS. No, you add the words "as the representative of China."

Mr. JUDD. That is what the Communist regime in China would be if it were seated. How else would the gentleman describe it? It is not the Communist regime in Guatemala, it is the Communist regime in China.

Mr. GROSS. Why put in "as the representative of China"?

Mr. JUDD. To be accurate in our description of the situation. China has a seat in the United Nations. It is occupied by the legitimate Nationalist government as the representative of China. We are opposed to the Communist regime being recognized and seated as the representative of China in that seat in the United Nations.

Mr. GROSS. If I could get a good explanation from the gentleman as to why this extraneous language I would not offer an amendment.

Mr. JUDD. This is not extraneous language; it is a straight statement of the situation we face.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. BOW. I call the attention of the gentleman and the House to the fact that we already have a law which is in effect at this time containing this language which was in the State, Commerce, and Justice Departments' appropriation bill. The language is as follows:

It is the sense of the Congress that the Communist Chinese Government should not be admitted to membership in the United Nations as the representative of China.

So what we are doing today is reiterating the language contained in the State, Commerce, and Justice Departments' appropriation bill.

Mr. GROSS. As I say, there is no necessity for this language in the resolution. Why not just say we are not going to accept Communist China in the United Nations—period?

Mr. BOW. That is what this resolution says. And it is already in a law which has been passed by the Congress.

Mr. VORYS. Mr. Chairman, in proposing this form of resolution, our committee felt we should, in the words of the song, "accentuate the positive—eliminate the negative."

It is quite proper and effective for individual Members of either body to announce their own views as to what should be done if the Red Chinese should make their way into the United Nations. We felt, however, that this negative approach was not appropriate for official action by the House, first, because it smacked of defeatism in an issue where we are almost sure to win, and second, because our country should not officially notify our enemies of what we will or will not do in hypothetical future situations.

As to the defeatist attitude; suppose a football coach announced before the season opened that if his team lost a big game during the season he would recommend withdrawing from the conference; that might create a psychological attitude that would cause his team to lose a sure winner.

Only 15 members of the U. N. have even recognized Red China. Every year, time after time, in many different ways, the Reds try to get the Chinese Communists in to represent China, and they are regularly voted down. This happened in 1951 when I was a delegate to the U. N. Assembly; it has happened each year since. It will happen again this year. Why should we talk about losing a contest we always win?

On the other hand, if the whole world changed, if 25 nations changed their vote, and it would take that many more to change the result, if the whole character and purpose of the U. N. changed, we should remember that, whatever else we do, we must first get the U. N. out of the United States before we get the United States out of the U. N. We cannot withdraw from the U. N. while it has its headquarters in the heart of our largest city. It would not be helpful, it is not necessary, to announce now all the actions that might be taken so as to result in the withdrawal of the U. N. from its present headquarters. Suffice it to say that this result could be arranged and must be accomplished before we would ever withdraw from the U. N.

In this resolution, no such negative course is mentioned. We accentuate the positive. We reiterate our stand and uphold the President in keeping the U. N. to its positive, useful, charted course. This resolution gives positive support to the Eisenhower positive foreign policy.

Mr. ELLIOTT. Mr. Chairman, I rise in support of the pending resolution, which has for its purpose reaffirming our hard-spoken opposition to admitting Communist China to the United Nations, or to any of its specialized agencies.

Communist China has repeatedly shown itself to be unfriendly to the United States. It has shown itself to be unfriendly to the concept of world peace—the fundamental purpose of the United Nations is to maintain peace.

Communist China has stirred up trouble in the world and has been the agency through which thousands of American boys lost their lives and through which more thousands of American boys were wounded in Korea. Its aggressive spirit has cost this Nation billions of dollars.

To its guilt as a declared aggressor in Korea has been added Red China's efforts to take over Indochina. In addition, Mao and his government have refused to conclude a peace in Korea—as a result, the country is technically still at war with the United Nations. It is inconceivable to me that, under these circumstances, Communist China could possibly be admitted to the U. N.

UNIVERSITY OF MICHIGAN LIBRARIES

The chief argument advanced in favor of seating Red China in the United Nations seems to be that such a step might bring about a change of heart on the part of these Communists. I say to you, in answer to this flimsy excuse, that the United Nations was fashioned as, and is, an international organization dedicated entirely to world peace—it is not a reform school.

President Eisenhower is the President of the United States, and thus the President of all of our citizens. Though I am a member of another political party, I recognize the responsibility of the President and of his Secretary of State for carrying on the foreign policy of this great Nation.

The President has expressed his determination to use all the means at his disposal to prevent the Communist regime of China from being seated in the United Nations. I agree wholeheartedly with his stand.

He is entitled to a bipartisan support on his stand. I am happy to pledge him my support on this issue. I hope that every Member of the House of Representatives will do likewise.

Mr. RABAUT. Mr. Chairman, we are today discussing a resolution, the substance of which has lately met with treatment on the front pages of practically all of our newspapers and has been the subject of careful appraisal by many thoughtful citizens. The spirit of this measure is that we deny to Communist China the privilege of a seat in the United Nations.

Despite the sweet prompting of pressure groups, and what they might have to say to the contrary, the United Nations was set up as an organization which would be comprised of peace-loving nations, with her councils available only as necessary means to the attainment of that peace, not as forums in which irresponsible and contentious groups of international pirates might hawk their wares of disunity, hate, and dishonesty.

What possible argument could there be in favor of Communist China's admission? Are our memories so short that we forget the atrocities she has perpetrated in Korea and Indochina? Are we unaware of what she stands for and what she has stood for in the past? Are we operating under the delusion that she is just another Peck's Bad Boy who, given a chance and in good time, will begin behaving himself? Are we unmindful of the lessons that the schemers of communism are teaching every hour of every day in the occupied sections of the world, a philosophy of deceit, cruelty, and slavery of men's minds and souls?

A look at the record should be enough to convince us that the Communists are tough, shifty, and undependable.

After looking at the record, it should not be difficult to determine what their plans are for the future.

World domination is the ultimate goal of the Marxist-Lenin-Stalin ideology, whether it is the Russian or the Chinese brand.

The unanimous action today of the House of Representatives is clear indication of how the American people feel about this matter.

We will not be browbeaten into doing something that goes so clearly against the spirit and purpose of the United Nations and against the interests of our own country.

World peace may well depend upon whether we stand firm in the matter of admitting Red China into the U. N. Our own sense of decency and justice requires that we make our position unmistakably clear, for neither economic considerations nor a glittering appeal to questionable security will dissuade us from the moral ideals to which we have dedicated our lives, our fortunes, and our Nation's well-being.

Mr. NEAL. Mr. Chairman, in supporting this resolution I would remind the Chinese people that it is not they, but their unyielding imperialist leaders whose determination to force their way into the United Nations we are unwilling to recognize.

These leaders, misguided by the treacherous and power-seeking men of the Kremlin, have consistently disregarded all the rules of international warfare and openly defied the United Nations as an opponent of aggression and an instrument of peace.

As a member of the United Nations, the United States cannot approve the admission of China to this international institution created for the primary purpose of maintaining peace.

The Chinese people are not imperialist minded. This has been proven by many centuries of recorded history.

Under responsible democratic leaders China will once more assume her rightful place among the leading peace-loving nations of the world.

When shown this is being attempted, America will not only welcome China into the family of nations, but will, as she has traditionally done in years past even with her defeated enemies, extend freely of her material and spiritual resources to restore the Chinese people to self-government and a more abundant life.

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 1, line 3, after the word "China", strike out the words "as the representative of China."

Mr. GROSS. Mr. Chairman, I do not want to labor this point, but I simply want to reiterate there is no reason for extraneous language in the resolution. There should be no qualification of any kind. If we are going to adopt this proposal, let us say simply and effectively that we are opposed to the seating of the Communist regime in China in the United Nations. Then, go on with the rest of the language as it is in the resolution.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. FULTON. If the gentleman's amendment were accepted, would he then vote for the resolution?

Mr. GROSS. I am going to vote for the resolution although I feel that it falls far short of what we ought to say.

Mr. FULTON. I want to accommodate the gentleman. But is it important enough that you would say you would vote against the resolution, if this particular language is in it?

Mr. GROSS. No, I will not vote against it with that language, but I see no reason for it. Let us make it as effective as possible.

Mr. VORYS. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. VORYS. Does the gentleman understand that China, the republic we recognize, the country, the nation of China, is now a member of the United Nations and the whole issue is not whether China shall be a member of the United Nations, but who shall represent China in the United Nations. The gentleman is striking out the important issue here.

Mr. GROSS. No, no, that is not the issue and the gentleman knows it. There is only one Communist regime in China, and the gentleman well knows that. You would not in any way jeopardize the nationalist government of China.

Suppose the United Nations should adopt a motion, as a first step, recognizing Communist China as the representative of China. You would regret ever having put such language in this resolution.

Mr. Chairman, I ask that the amendment be adopted.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. GROSS].

The amendment was rejected.

Mr. McCORMACK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I listened with a great deal of interest to the remarks made by my friend, the gentleman from Minnesota [Mr. JUDD]. I am in complete agreement with everything he said except his preliminary remarks, which I will not refer to on this occasion. The gentleman and I have been very much interested for some years in the situation and the matter which is before the House now. As a matter of fact, we were two of a small group which comprised the sponsors of the committee of 1 million where a million signatures were obtained throughout the entire United States opposing the admission of Red China into the United Nations.

I want to ask the acting chairman of the Committee on Foreign Affairs a question because I think it is important for the record. This resolution states that it "supports the President in his expressed determination to use all means to prevent such a representation." Secretary Dulles within the past week has stated that the United States, if it desired, could use the double veto in the Security Council, that is correct, is it not?

Mr. JUDD. That is correct, so I am informed.

Mr. McCORMACK. Is this resolution to be construed that it is the intention of the committee and of the House upon its adoption that if it is necessary for our country to use the double veto it should be done?

Mr. JUDD. Yes. We discussed in committee whether the resolution should read that we support the expressed determination of "The President and the

Secretary of State," in order to make sure that it includes the statement of the Secretary on the use of the veto in this case. It seems clear that the term "President" is inclusive of the Secretary and other responsible officers and their official statements. Mr. Dulles has said we would use the veto and that means this administration has declared that as its position. That is our understanding, when the resolution speaks of using "all means."

Mr. McCORMACK. I assumed that was so, but I thought the record should show whether my assumption was correct, that if a situation ever arises where the exercise of the double veto on the part of our country is necessary, this resolution contemplates its exercise.

Mr. JUDD. That is our understanding.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ELLSWORTH, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the resolution (H. Res. 627) reiterating the opposition of the House of Representatives to the seating of the Communist regime in China in the United Nations, pursuant to House Resolution 634, he reported the resolution back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the resolution.

Mr. JUDD. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 381, nays 0, not voting 53, as follows:

[Roll No. 105]

Feighan	O'Brien, Mich.	Willis

So the resolution was agreed to.

The Clerk announced the following pairs:

Mr. Hillings with Mr. Roosevelt.
Mr. Bonin with Mr. Camp.
Mr. Martin of Iowa with Mr. O'Brien of Michigan.
Mr. Norblad with Mr. Barrett.
Mr. Curtis of Missouri with Mr. Fogarty.
Mr. McGregor with Mr. Perkins.
Mr. Kersten of Wisconsin with Mr. Morrison.
Mr. Utt with Mr. Regan.
Mr. Scott with Mr. Rivers.
Mr. Bender with Mr. Lucas.
Mr Mailliard with Mr. Thompson of Louisiana.
Mr. Weichel with Mr. Thompson of Texas.
Mrs. Frances P. Bolton with Mr. Sikes.
Mr. Coudert with Mr. Willis.
Mr. Cotton with Mr. Fisher
Mr. Harrison of Wyoming with Mr. Dodd.
Mr. Ostertag with Mr. Teague.
Mr. Miller of New York with Mr. Brooks of Louisiana.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

COMMITTEE ON FOREIGN AFFAIRS

Mr. VORYS. Mr. Speaker, I ask unanimous consent that the Committee on Foreign Affairs may have until midnight Saturday to file a report on H. R. 9910.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

AMENDMENT TO HELIUM ACT

Mr. HOFFMAN of Michigan. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 8713) to amend section 1 (d) of the Helium Act (50 U. S. C., sec. 161 (d)), and to repeal section 3 (13) of the act entitled "An act to amend or repeal certain Government property laws, and for other purposes," approved October 31, 1951 (65 Stat. 701), with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 1, line 8, after "operations", insert "not needed for Government use."

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The Senate amendment was concurred in, and a motion to reconsider was laid on the table.

GUILLERMO MORALES CHACON

Mr. JONAS of Illinois. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 2617) for the relief of Guillermo Morales Chacon, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 1, line 11, strike out "in excess of 10 percent thereof."

UNIVERSITY OF MICHIGAN LIBRARIES

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Senate amendment was concurred in, and a motion to reconsider was laid on the table.

MRS. AUGUSTA SELMER-ANDERSEN

Mr. JONAS of Illinois. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 6642) for the relief of Mrs. Augusta Selmer-Andersen, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 2, line 2, strike out "in excess of 10 percent thereof."

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Senate amendment was concurred in, and a motion to reconsider was laid on the table.

COMMITTEE ON RULES

Mr. ARENDS. Mr. Speaker, I ask unanimous consent that the Committee on Rules have until Saturday night to file reports on bills.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was not objection.

PROGRAM FOR NEXT WEEK

Mr. ARENDS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ARENDS. Mr. Speaker, the program for next week will be as follows:

On Monday the Consent Calendar will be called, and following that will be the consideration of a supplemental appropriation bill.

Beginning Tuesday and for the balance of the week—and I will say this is for the balance of the week with no definite dates set for any of these bills—the program will be as follows:

The Private Calendar.

H. R. 9757, the atomic-energy bill.

H. R. 8658, punishment of bail jumpers.

H. R. 7130, forfeiture of citizenship.

H. R. 4979, the immunity bill.

House Joint Resolution 527, to provide for the creation of a Commission on Security in Industry.

H. R. 236, the Fryingpan-Arkansas project.

H. R. 8896, multiple mineral development.

H. R. 9463, military housing.

S. 3589, the Export-Import Bank.

H. R. 9756, the Commodity Credit Corporation.

The Mutual Security Administration appropriation bill.

H. R. 9859, the omnibus rivers and harbors bill.

Of course, conference reports will be in order at any time.

By agreement entered into the other day, Wednesday will be suspension day, and suspensions will be in order on that day.

Mr. WOLVERTON. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from New Jersey.

Mr. WOLVERTON. I should like to inquire as to the present status of H. R. 7840, the bill that has the backing of the 23 railroad brotherhoods, an amendment of the Retirement Act.

Mr. ARENDS. That is not on this list. I will check into it and try to inform the gentleman later.

Mr. WOLVERTON. A great many Members of the House are interested in the bill. It is rather surprising that it should have gone on as long as it has without some action being taken.

Mr. PRIEST. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Tennessee.

Mr. PRIEST. I realize it is extremely difficult for the gentleman to say when the atomic-energy bill will be considered. He has said it will come up following the Private Calendar on Tuesday. Can the gentleman say rather definitely that we may expect it at that time?

Mr. ARENDS. We have it on the program. We are waiting to see whether the other body completes action on the bill.

Mr. RAYBURN. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Texas.

Mr. RAYBURN. Is there any kind of understanding that there will not be a rollcall on Monday next?

Mr. ARENDS. Not to my knowledge.

The SPEAKER. The Chair wishes to state that if there were to be a rollcall on Monday it could well be put over until the next day.

Mr. RAYBURN. Have rules been granted on all these bills?

Mr. ARENDS. No; they have not.

Mr. RAYBURN. How many days do you expect the House to be in session next week?

Mr. ARENDS. I would say that if the rules are granted and we are to complete the program it will take most, if not all of next week.

Mr. RAYBURN. In any event, it will carry us through the week?

Mr. ARENDS. Yes.

Mr. HOFFMAN of Michigan. Are other bills coming up by petition, bills on which the Committee on Rules has not granted a rule?

Mr. ARENDS. I would not have any way of knowing that.

CALENDAR WEDNESDAY

Mr. ARENDS. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday next be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

PERSONAL ANNOUNCEMENT

Mr. BENDER. Mr. Speaker, a few moments ago, the House voted on House Resolution 627 by Mr. BENTLEY, opposing the seating of the Communist regime in China as the representative of China in the United Nations. Unfortunately, I missed the vote by a few minutes as I was testifying before the Senate Judiciary Committee in behalf of my good friend, Judge James C. Connell, of Cleveland, Ohio, who was nominated for Federal judgeship in northern Ohio district. Had I been present, of course, I would have voted for the resolutions as I have voted on a number of previous occasions when appropriation bills for the State Department were under consideration.

This same provision was contained in section 110 of Public Law 471. The Bentley resolution reaffirms the position of the American people to the request of Communist China.

Governments achieve their position in the society of nations upon the basis of their conduct. No country merits recognition today unless it demonstrates a desire to live at peace and to cooperate in the establishment of an orderly and peaceful world.

Communist China has demonstrated a complete disregard for these standards. She has instigated and encouraged aggression in Korea and Indochina. There is evidence that her agents are at work in Japan, India, and the Philippines. Her leaders have done nothing to prove an intention to establish durable peace anywhere in Asia.

To admit such a regime to the United Nations is to declare the United Nations bankrupt. No country should be permitted to shoot its way into the family of nations. I know that we speak for the people of every section of America in enacting this resolution, affirming our support of President Eisenhower's stand against the admission of Red China to the United Nations.

The SPEAKER. The gentleman's statement stands in the RECORD.

SPECIAL ORDER GRANTED

Mr. JAVITS asked and was given permission to address the House for 20 minutes on Tuesday next, at the conclusion of the legislative program and any special orders heretofore entered.

UNITED STATES AIR FORCE GUNNERY MEET

The SPEAKER. Under previous order of the House, the gentleman from California [Mr. MILLER] is recognized for 30 minutes.

Mr. MILLER of California. Mr. Speaker, I had the pleasure of visiting Nellis Air Force Base, at Las Vegas, Nev., during the recent United States Air Force gunnery meet. I think my colleagues would like to have a report on that meet, because it revealed so much about the fine state of readiness of our Air Force. I personally want to make such a report, as it gives me the opportunity to pay a tribute to the Air Force, based on the demonstration of proficiency, skill, and high morale I saw at Nellis.

My distinguished colleague, the Honorable LeRoy Johnson, Mr. John R. Blandford, and Mr. Philip W. Kelleher, committee counsels of the House Armed Services Committee, and I had the privilege of visiting Nellis, and witnessing the concluding events of the meet, as the guests of the Secretary of the Air Force. I am sure that I speak for us all when I say that in witnessing competitive firing by crack Air Force pilots we had a rare educational experience.

This was the first all-jet Air Force fighter gunnery and weapons meet in history, and staged not only as a measure of Air Force readiness but to demonstrate in part the most efficient and economic expenditure of budget funds through the commands. The meet was staged to demonstrate where corners can be cut in conjuring more combat potential from fixed resources, and where the edge can be taken off inefficiency in air-to-air combat, skip-and-dive bombing, panel gunnery and rocketry. All of this is important to the Air Force plan to operate the 137-wing Air Force, now 3 years off, with only 20,000 more uniformed personnel than it has in the 115 wings now operational. The meet had been in progress several days when our groups arrived making the 40-mile flight by helicopter from Las Vegas to the gunnery range at Indian Springs, just over the ridge from Yucca Flat, site of historic atomic-bomb explosions. The demonstrations of air-to-ground gunnery and rocketry went off with superb precision, and impressed all of us with the capability of the pilots. Of particular note was a fly-by involving a Spad, an F-41, an F-86, and the F-100, four planes covering almost the history of combat aviation. We were fortunate in having Congressman JOHNSON with us, because he, as a pilot who had flown a Spad during World War I, was able to give us the performance characteristics of that aircraft.

We were not the guests of the Air Force only but of the community of Las Vegas as well. At the meet we were given a demonstration of Air Force training, skill, proficiency, and readiness, and, as guests of the community, we were given an impressive example of the fine community relations prevailing at Nellis. Las Vegas certainly supports the Air Force and furnishes a fine example of the grass-roots aspects of national defense. There is no question about the community attitude toward the Air Force. The people out at Las Vegas know where national defense begins.

During the evening, we were guests at a western-style barbecue staged on the football field of the Las Vegas High School by the Aircraft Industries Association, the Las Vegas Chamber of Commerce, and allied groups. At the conclusion of the meal, we adjourned to the school auditorium and enjoyed an entertainment program consisting of several acts from different hotels. After that program, Gen. T. D. White, Vice Chief of Staff of the Air Force, presented trophies for the portions of the gunnery meet contest which had been completed.

One of the participating teams had been the 191st Fighter Interceptor Squadron of the Air National Guard, based at Salt Lake City, Utah, and flying F-86A's. The 191st is part of the 144th Fighter Bomber Wing, composed of men fram California, Utah, and Nevada, all training to provide a fully trained standby force for the protection of the United States. Team captain of the Air National Guard unit for participation in this meet was Lt. Col. George W. Edmonds, a native of Illinois, a European ace in World War II, and commander of the 144th Fighter Bomber Group since the 1st of March, this year.

The trophy for air-to-ground low-angle skip bombing and strafing went to another team member, Lt. Col. Roland R. Wright, with a score of 295 hits out of 400. Col. Wright, a native of Idaho, but now a resident of Salt Lake City, is presently commander of the 191st Fighter Bomber Squadron. I can tell you that his squadron was proud of their commander's record. General White's presentation of the trophy and his tribute to the Air National Guard team's fine performance evoked a spontaneous round of enthusiastic applause. I understand that sighting targets and shooting same is old stuff to at least two other Air National Guard competitors in the meet besides Colonel Wright. Maj. Milton R. Graham, of Wilder, Idaho, commander of the 194th Fighter Bomber Squadron, and Maj. James W. Edwards, of Reno, Nev., operations officer of the 192d Fighter Bomber Squadron, teamed up to win the Air National Guard gunnery meet at Boise, Idaho, in September 1953, and Lieutenant Colonel Wright was himself a member of the 140th Fighter Bomber Wing team that won the Tactical Air Command's gunnery meet at Eglin Air Force Base, Fla., in 1952.

The crack marksmen of the Air Training Command's team of aces came out on top by a wide margin to win overall meet honors and air-to-air gunnery in the day-fighter bracket. This Nellis-based team tallied 3,153 points, 398 more than their closest competitors. But honors were widely distributed. Second place overall honors went to a globe-girdling quartet from the Strategic Air Command, the 508th Strategic Fighter Wing. This team also took first place in air-to-ground rocketry, bombing, and gunnery events. Third place went to a team from the Far East Air Forces, with a score of 2,386 to 2,755 for second place. First place in the security-cloaked special delivery competition, a new category having to do with special weapons techniques, was won by the 20th Fighter Bomber Wing, a team from the United States Air Forces in Europe. Second place in this special competition went to the team from the 49th Fighter Bomber Wing, based in Korea. There was certainly an international character to the distribution of awards, all of which merely emphasized the farflung responsibilities and overall readiness of the Air Force.

One other matter that should be stressed is that pilot skill and grade-A support from ground crews paid off in more than scoring points during the competition. They resulted in an accident-free meet, the second consecutive all Air Force meet at Nellis to be free of major accidents. Experience and training pay off—and they will pay off in the showdown, if it comes, just as they paid off at Nellis.

A precaution which fortunately was unnecessary during the meet was the crash barrier which was in readiness on a runway. This device, developed by the Air Force in Korea, employs an arresting gear of nylon webbing, steel cable, and 800 feet of anchor chain to decelerate jets in case of power failure on takeoff, or defective brakes, or other difficulties in landing. More than 30 combat planes used the system during a 90-day period in Korea, and since its adoption at Nellis it has saved five pilots from possible injury and prevented major damage to the aircraft. But like the two air-rescue H-19 helicopters on standby during the meet in case of accident, the crash barrier was not needed.

Gen. J. E. Roberts, who was our considerate host and commander at Nellis, made a statement in which he said:

> Aside from providing us the best possible means, short of actual combat, to evaluate our personnel, training methods, and material, the gunnery meet has afforded the Air Force an ideal opportunity to demonstrate the qualities that go to make it such a fine organization.

I might add to what General Roberts said, that the meet afforded the members of your Armed Services Committee an ideal opportunity of evaluating the qualities of the Air Force commanders, and leaders, and crews that produce the Air Force in which we place so much confidence, and with such good reason.

Mr. ELLIOTT. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. ELLIOTT. Mr. Speaker, today marks the end of the second full year since the McConnell coal-mine safety bill became law on July 16, 1952.

I have just been advised by Mr. Harry F. Weaver, Chief, Coal Mine Inspection Branch, Bureau of Mines, that the 2 years since this law was passed have marked the sharpest decline in both fatal and nonfatal injuries in the entire history of coal mining.

As a matter of fact, there has been only 1 major disaster where 5 people were killed. There is a question as to whether or not this disaster should be charged up to the period covered by the new coal-mine safety law, because it occurred while the Federal coal-mine inspectors were under an injunction from the State court preventing them from enforcing provisions of the safety law.

Though the announced intention of the law was to prevent major disasters in the coal mines of America, it is clear that it has had the very desirable result of reducing smaller accidents as well as the major ones. An example is that 31,000 people suffered nonfatal injuries in American coal mines in 1952. In 1953 this number was reduced to 22,000.

Again, in 1952 a total of 548 people were killed in coal mines. Last year this number was reduced to 457, the smallest of any year in the history of coal mining.

This fine record is the direct result of the splendid cooperation between coal miners, their unions, mine owners and operators, State and Federal coal-mine inspectors. It is a record of which all can be proud.

INCREASE OF BENEFITS FOR CERTAIN VETERANS AND THEIR DEPENDENTS

The SPEAKER. Under the previous order of the House, the gentlewoman from Massachusetts [Mrs. ROGERS] is recognized for 2 hours.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am reminding the membership that there is pending at the desk the Radwan petition to discharge the Rules Committee from further consideration of the bill H. R. 9020, a bill which would provide a 10 percent across-the-board increase for service-connected cases, for widows, orphans, and dependents, and also about a 12 percent increase to veterans of the Spanish-American War, and certain other increases for non-service-connected disability cases.

For a long time, Mr. Speaker, we have been trying to secure action, by way of a rule, suspension, or in some method, to bring this bill up. This is an extremely meritorious bill, it is a very moderate one. As a matter of fact, we cut some $50 million from the bill as originally introduced. We have also had a regard for the Treasury of the United States and the economic conditions of our country. However, we feel that the least we can do is to give help to the veterans of our country. We feel that we should not sit here quietly in our seats and not fight for our veterans.

Mr. Speaker, there are certain other of our bills pending before the Rules Committee. I have heard intimations to the effect that rules would be granted on some of the more modest bills. I am hopeful that that may be true. I also have inferred from conversation that perhaps something might be done in reference to H. R. 9020 if it were modified. However, I am not satisfied and I will not feel satisfied completely until that legislation is passed. I do not personally see how we can cut H. R. 9020 any further.

Mr. Speaker, I was over in the other body the other day and a chairman of one of the committees that handles such legislation said: "Mrs. ROGERS, why do you not send over more bills to us. We are hungry for veterans' legislation over here."

Another committee chairman asked: "When are you going to send your legislation over to us. We would like for you to send it over."

Mr. Speaker, if we were to modify the provisions of H. R. 9020 I believe the Senate would increase them. I do not think we should modify that bill. I think it should be taken as is.

I for one do not feel that I can go back to my veterans who are in the hospitals and say that we have done practically nothing for the veterans this year.

Mr. ALLEN of Illinois. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield to the gentleman from Illinois.

Mr. ALLEN of Illinois. The gentlewoman says we have not done anything.

Mrs. ROGERS of Massachusetts. I said "practically nothing."

Mr. ALLEN of Illinois. Let me refer the gentlewoman to the CONGRESSIONAL RECORD of July 13, 1954, page 10441 where the gentlewoman herself said that 11 veterans' bills have been enacted into law, as reported by the Committee on Veterans' Affairs during the current session of the Congress. One is now pending before the President. That is 12 all told. I do not know whether they mean much or little, but I presume such a great committee as the Committee on Veterans' Affairs headed by such an excellent chairman as the gentlewoman does not bring in bills that mean nothing. The gentlewoman stated that 12 bills have been passed. I can remember a Congress when I first came here, and another party was in power, reducing the benefits for veterans 15 percent.

Mrs. ROGERS of Massachusetts. That is no reason for saying that we should do anything to cut the veterans now.

Mr. ALLEN of Illinois. The gentlewoman herself said that 12 bills have been passed during the current session of the Congress. I will leave it to the judgment of the able chairman of the Committee on Veterans' Affairs as to whether only minor bills are reported by that committee.

Mrs. ROGERS of Massachusetts. We have brought in a number of bills involving land grants, granting to certain towns and communities land which they permitted the Veterans' Administration to have. Now they want it back and the Veterans' Administration allows them to take it back.

This House passed a direct loan bill which is still pending in the Senate. I understand that the Senator from Alabama the other day moved to add $50 million a quarter as a grant rather than $25 million, which was in the bill as we passed it. They have had more requests for direct loans than ever before. The bill is now a part of H. R. 7839, the so-called Housing Act of 1954, which is in conference. It is true that we passed bills granting the Philippine veterans certain privileges and rights in reference to hospitalization and so forth, and I have never seen a more grateful group.

Personally I am devoted to the chairman of the Committee on Rules; I have great admiration for him, but I realize that the gentleman's hands are often tied. I am sure he would grant rules if he did not have a lot of people trying to prevent their passage. There is a bill now before the committee granting $200 per year increase per patient in the amount the Government pays the States for the veterans in State homes. I understand there is no objection to that, and I understand the Committee on Rules will grant a rule on it.

Mr. ALLEN of Illinois. I cannot say what the Committee on Rules will do, but I favor that bill.

Mrs. ROGERS of Massachusetts. There is another bill to allow the Korean boys in hospitals, and some World War II veterans, even, to have money to purchase automobiles when they are discharged. I know there was no intention to debar them. They had an extension 3 years ago, and that expired, and that must be passed before they can get the $1,600. Now, a great deal of money has been paid back to the Federal Government in the way of taxes by these veterans themselves. That is due to the increased tax that the veterans, who have jobs, pay as the result of having automobiles. On top of that, there is a tax paid on the purchase price of the automobile. If you could hear the men saying "We have a job now because we can go to and from work," I know it would make you happy. It is a great rehabilitation measure, and I think the Congress deserves a great deal of credit for passing it.

Mr. McCORMACK. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. I am glad to associate myself with the gentlewoman from Massachusetts in connection with the veterans legislation that she is so deeply interested in, particularly on this occasion, in reference to H. R. 9020. On 2 or 3 previous occasions I stated in colloquy with the gentlewoman from Massachusetts, when she had the floor, that I hoped the leadership would report out a rule on that bill or even let it come up under suspension; that I was sure it would pass this House practically unanimously, if not unanimously.

Now, I was interested in the remarks made by my good friend, the gentleman from Illinois, [Mr. ALLEN], about some previous Congress and a reduction of 15 percent in veterans' compensation. The gentleman from Illinois is correct. I remember it very, very well, because I was a member of this body. That was back in either 1933 or 1934. It was known as the so-called Economy Act. I remember it very well, because I was one of the few Members of the House then who voted against it. And, I might say, in view of the fact that my friend from Illinois has made reference to another party being in control—of course, he meant the Democratic Party, and that is correct—that there were less than 50 Members of the House who voted against it. That meant that both Democrats and Republicans in that Congress practically overwhelmingly voted for the bill. And, I must make this observation, because I was one of the few Members who voted against the bill. I might also say that whatever harm was done was corrected in succeeding Congresses. I think it is also only fair to say that on veterans' legislation the question of partisanship has played no part, negligible at the most. We do this without regard to our party affilia-

tion. But, in connection with the bill that the gentleman did refer to, I wanted the RECORD to show what the real history was; that both Republicans and Democrats overwhelmingly voted for it, and only a very small percentage of the Members of the House at that time voted against it. And I happened to be one of them, and, frankly, my vote against that is one of the proudest votes I ever cast.

Mrs. ROGERS of Massachusetts. I will say to the gentleman that many of the benefits were restored for the men that were cut under that bill, but a good many were not restored, and they have not received the benefits. The Director of the Budget at the time wrote a letter saying that the economy of the country was going to pieces, and he gave us the information that no service-connected cases would be cut, but they were cut. I will say to the gentleman that this year our committee was asked to pass an omnibus veterans' bill which would mean the raising of some benefits, but the curtailment of others, and our committee took no action on it. Our committee feels that we are not willing to curtail and liquidate the benefits now being given to the veterans.

Mr. JAVITS. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield to the gentleman from New York.

Mr. JAVITS. I support the gentlewoman's position on H. R. 9020 and believe we should consider the legislation here and now before we adjourn, and I hope very much that we will. I am not at all willing to believe that we are pulling up hill. On the contrary, I feel that it is a winning, not a losing fight.

Mrs. ROGERS of Massachusetts. I thank the gentleman for his support. Of course, I am personally interested in this matter; not that it affects me, but it affects the veterans. Those of us who see them day in and day out know just what it means for them to have a little money, or a little bit more money. I was at the hospital the other day. There I saw boys with 3 limbs gone, or 4 limbs gone. Those boys say to me, "Mrs. ROGERS, does this mean that we cannot get the automobile money if we are not discharged before the time the bill expires? Does it mean that we are not going to get a slight increase in compensation? We are bedridden. We cannot speak for ourselves. We cannot come in and argue for ourselves." There was one boy who said something about his disability and not being able to get any compensation for it but he said, "I get used to it."

It means so very much to these boys to have something. They read stories about increases in salary for Federal employees, about increases for the men in the services and in benefits; about increases to Members for telegraph money and clerks and they cannot understand why they are not given something.

Next year I think our committee will have to object to the dispensing with the business on Calendar Wednesday every week. We might possibly get a hearing that way, although it would take 18 Wednesdays in order for us to get a hearing on our bills.

It is incredible to me that we have not even been able to get hearings by the Committee on Rules on our measures. When people see us coming, they run in the opposite direction. The only place left to discuss matters is the floor of this forum. Thank heaven for that and thank heaven for the right to petition.

Mr. EVINS. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield to the gentleman from Tennessee.

Mr. EVINS. I want to commend my chairman, the gentlewoman from Massachusetts [Mrs. ROGERS], for the very gallant fight she has been making during this entire session, as she always has, on behalf of the veterans of this Nation.

As the gentlewoman knows, I have always been pleased to join with her, and I am pleased now to give expression to my support of her position in this matter.

The Subcommittee on Compensation and Pensions of the Committee on Veterans' Affairs held extensive hearings during this session of Congress. It was the principal objective of the veterans' organizations of this Nation during this term of Congress to obtain a reasonable increase in cost-of-living allowances or compensation. This legislation was very carefully considered by the subcommittee. It was favorably reported, unanimously reported by the full committee. Today we are taking action to try to force the matter to the floor so that Members will be given an opportunity to vote on this proposed legislation on which I feel sure the majority of the Members of the House wish to express themselves.

I certainly want to assure the lady from Massachusetts that I am pleased to aline myself with her at this time in this fight.

Mrs. ROGERS of Massachusetts. We are all in this together. The gentleman knows that our committee is a 14–14 committee. We have 14 Republicans and 14 Democrats on our committee. We have worked in a nonpartisan way. At this time I, as chairman of the committee, would like to thank every member of the committee for his great consideration and cooperation. It has meant a great deal to me, because the members have had such constructive views. I am only the chairman; they really run the committee.

Mr. MATTHEWS. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield to the gentleman from Florida.

Mr. MATTHEWS. I would like to associate myself with the views expressed by the chairman of our committee. I think it should be stressed again that when we come out of our committee with a bill, nearly 95 percent of the time it is by a unanimous vote.

I am very proud of the fact, to which the chairman has already referred, that the Committee on Veterans' Affairs is in the truest sense a bipartisan committee. I appreciate the remarks of the distinguished gentleman from Massachusetts, our minority whip, when he made that point very clear a few moments ago. The gentlewoman from Massachusetts has pointed out that this bill, in which we are vitally interested, H. R. 9020, was considered for weeks by our committee. We made many concessions in the committee. There was much give and take. We tried to have a proper record and studied every angle of this bill. It came out of our committee by a unanimous vote.

What is of particular concern to all of us on the Committee on Veterans' Affairs today is to try to get a rule on H. R. 9020.

I would like to thank my distinguished chairman and associate myself again with her views. I am very proud to point out the fact that there are a number of other members of the House Committee on Veterans' Affairs who are here and who I know are anxious to say some things about this bill, too.

Mrs. ROGERS of Massachusetts. Yes, there are a number of them here. May I thank the gentleman again. There are a great many names on the petition already, although it has been on the desk only since 12 o'clock. If we had another full day, undoubtedly the full quota of names would be on the petition.

I do not know when we are going to adjourn. May I ask the majority whip when he expects the Congress will adjourn.

Mr. ARENDS. Does the gentlewoman mean today, or the end of the session?

Mrs. ROGERS of Massachusetts. I mean the end of the session.

Mr. ARENDS. That is problematical. I would think some time the fore part of August.

Mrs. ROGERS of Massachusetts. Some time in the middle of August?

Mr. ARENDS. That is only one person's guess.

Mrs. ROGERS of Massachusetts. In the middle of August?

Mr. ARENDS. I said the forepart of August. That is merely a guess on my part.

Mrs. ROGERS of Massachusetts. Then we will have ample time to get all of the names on the petition and get the petition out, if we are not granted a suspension. I do not know that they will give us a rule, but if we get a suspension, we do not care by what means we get the legislation out so long as it comes up for action.

Mr. BYRNE of Pennsylvania. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield.

Mr. BYRNE of Pennsylvania. I am glad to associate myself with the chairman of our committee, the Committee on Veterans' Affairs. This is a nonpartisan bill. On every bill that comes up the whole committee votes in a nonpartisan spirit. Therefore, I wish the Committee on Rules would see their way clear to bring out the bill H. R. 9020, because it means so much to the veterans.

Mrs. ROGERS of Massachusetts. The gentleman would not be surprised if we could bring it up under suspension?

Mr. BYRNE of Pennsylvania. Another point is that when these legislative bodies come down here concerning legislation they should invite our chairman to the committee meetings.

Mrs. ROGERS of Massachusetts. I think they would benefit very much if

UNIVERSITY OF MICHIGAN LIBRARIES

they would come and consult the entire committee that was created to handle the veterans' legislation. Many of the members of the committee are expert lawyers and experts on veterans' legislation. We have some of the ablest and smartest Members of the House of Representatives on that committee. People testifying before our committee have stated they thought that by and large it was the ablest Committee on Veterans' Affairs they had ever testified before.

Mr. BYRNE of Pennsylvania. I agree with the gentlewoman. This committee has sat for hours taking testimony. When there is any kind of meeting of the various veterans' organizations I believe our chairman or some member of our committee should be invited. If not, we might just as well fold up as a committee.

Mrs. ROGERS of Massachusetts. There was a unanimous vote of the committee to that effect, I would say to the gentleman. With very great emphasis on the meeting of yesterday, they feel that everything that has to deal with our legislation should be taken up with the Veterans' Committee and not through other groups. I think there are some committees of the House that would be very glad to take over some of the legislation for the veterans; in fact, I know that to be the fact. They think it would be very nice to have the veterans' legislation go through their committees. We have to guard that zealously. There are six great departments that are run by the Administrator of Veterans' Affairs. He has a terrific job.

By the way, just at that point, if I may go on for a moment, in the independent offices appropriation bill which came from the other body, there was $3,500,000 appropriated for the operation of regional offices. Mr. Higley, the Administrator of Veterans' Affairs, had made a mistake in his estimates and he could not consolidate the regional offices so he asked for $8 million more. The other body granted it, but then when the conferees got together, they cut that by over $4 million. The budget told me twice that they did not see how the Veterans' Administration could function with that cut. And the Committee on Appropriations were told, and this is not their fault originally because they allocated all the money that the Bureau of Medicine and Surgery of the Veterans' Administration asked for, but they were cut, and they did not have enough money to pay for the services of the medical section and the hospitals. So they are asking now for $3 million supplemental. There was a million added in the other body for repairs on a hospital in Long Beach, Calif. I think those repairs are necessary. I visited there and I approve of that. But, certainly, the money for that should not have been cut, and certainly there should not have been any cuts for the Veterans' Administration. This year all the appropriations for the veterans have been cut.

Mr. EDMONDSON. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield.

Mr. EDMONDSON. I would like to express the appreciation which, I am sure, many of us on both sides of the aisle feel toward the gentlewoman for her courageous fight in behalf of a just and reasonable cost-of-living increase for the veterans and their dependents and orphans of veterans under H. R. 9020. I think the great number of signatures, which have already been placed on this petition, is evidence of the feeling on the part of a great number of the Members of the House that this is a matter which should be voted upon and voted upon soon. I would like in this connection to ask the gentlewoman from Massachusetts a question: Has any reason been given to the gentlewoman from Massachusetts for the refusal of the Committee on Rules to hold a hearing on this bill?

Mrs. ROGERS of Massachusetts. I have not been given any valid reason, I am forced to admit. Frankly, I do not know whether it is the fault of the chairman of the committee because I think he is guided by the leadership of the House. But, in all fairness, I will say to the gentleman, in the past we have had a great deal of difficulty in securing rules on legislation when the gentleman's party, the Democratic administration, was in power and we have even had to stay in session late and to hold the Congress in session in order to secure the passage of our legislation. Unfortunately, our legislation in the past has always come late.

Mr. EDMONDSON. I understand one reason that has been advanced as an objection to this bill is on the point of economy, and on the ground that the budget cannot stand this kind of increase. Yet, is it not true that this increase represents only about one-fifteenth or one-sixteenth of the foreign aid appropriation which was voted just a week or two ago by the House of Representatives?

Mrs. ROGERS of Massachusetts. That is very true. I voted for that appropriation even though I did not want to vote for it. But, I did vote for it because I thought if there was anything we could do to prevent another great war, and to prevent the spread of communism, I was willing to try it. It has been suggested here on the floor that the appropriations for the veterans be taken out of that appropriation.

Mr. EVINS. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield.

Mr. EVINS. I think it is appropriate to reemphasize and repeat for the record the fact that the total appropriations for all veterans' programs immediately after the war was about $9 billion. They amounted to $8,900,000,000. Each year they have been reduced, and last year it was about $4 billion or about one-half of what it formerly was. The next fiscal year it will be $3,800,000,000. So the appropriations for the veterans of this country, although the veterans have been increasing in number, have been drastically and substantially reduced. The amount of money being appropriated for all veterans' programs is much less than one-half of what it formerly was so this modest cost-of-living increase, I think, is nothing that the Congress should be alarmed about.

Mrs. ROGERS of Massachusetts. That also brings to my mind the fact that the medical section of the Veterans' Administration is short of doctors and the Board of Appeals is short of doctors to rate the cases. That means slowness in the veterans having justice done in that way. Frankly, I do not see how any Administrator of the Veterans' Affairs can function with the investigators he has. I think Mr. Higley recently has been trying to function with the suggestions of a former telephone company man, who is an efficiency expert. That is why he is making some of his reductions. Various investigators go out from the General Accounting Office and from the Budget Office and they tell Mr. Higley to economize, and he tries to economize and he is short of money.

Mr. HAGEN of California. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I yield.

Mr. HAGEN of California. Does this legislation, H. R. 9020, have the support of all veteran organizations?

Mrs. ROGERS of Massachusetts. Oh, yes. It has the unanimous support of all veteran organizations, very enthusiastically given. They are here all the time talking with us about it. Also, I would remind the gentleman that there are 22 million veterans in the country today and only 5 million belong to any veteran organizations. I think it would be better if more belonged to the organizations, because they would have more strength. At this point I would like to commend National Commander Connell, of the American Legion, and Mr. Miles Kennedy, his legislative director, for their untiring efforts to secure the enactment of this legislation. But we represent not only the organized veterans but the great mass of veterans who do not belong to any organization.

Mr. HAGEN of California. I understand one of the prime planks of the various veteran organizations is the preservation of the integrity of our committee, which is the only committee in Congress which deals exclusively with veterans' matters.

Mrs. ROGERS of Massachusetts. Oh, that is absolutely correct. The Veterans' Committee was first formed in 1924. Before that veterans' legislation came from the various committees. In 1924 the Veterans' Affairs Committee was formed to handle veterans' legislation. I became a member of that committee in 1925, so I have watched the committee for a great many years.

Mr. HAGEN of California. I may say to the gentlewoman from Massachusetts that this legislation is bipartisan; but if it fails in its enactment, the criticism will not necessarily be bipartisan.

Mrs. ROGERS of Massachusetts. No. But may I say this: I think every one of us will be criticized, whether we be Republicans or Democrats. During the 20 years under a Democratic administration I have fought just as hard as I am fighting today to secure the passage of legislation. Many of us here have worked until 3 or 4 or 5 o'clock in the

morning, at night sessions, trying to secure the passage of bills. So while the leadership is Republican now, there is great responsibility on both sides of the aisle on veterans' legislation more than anything else, because without them we would not be free today, and we owe them a duty we can never hope to repay.

I do not know whether the veterans will punish Members for not voting for them, but certainly the feeling will be very bitter against Members who do not vote for them, and, I think, justifiably so. I believe the President would sign H. R. 9020. I have no reason to think he will not. I know he wants economy, but in my heart I feel very sure that the President would sign H. R. 9020. I do not think there is any doubt about that.

Mr. Speaker, today the chairman of the Subcommittee on Hospitals, the gentleman from New York [Mr. KEARNEY], and his subcommittee heard Charles N. Collatos, commander of the department of Massachusetts, of the American Legion, on the necessity for maintaining the Cushing Hospital at Framingham; also Mr. Norman B. Hartnett, one of the select men of Framingham, Mass., appeared with a very fine statement, and Congressmen LANE and PHILBIN and DONOHUE appeared for their bills.

I introduced the bill H. R. 9646, which would authorize the retention of the Cushing General Hospital as a chronic disease hospital and a sort of veterans domiciliary. It is not important which bill goes through except that whatever bill goes through should provide for the treatment of chronic diseases and its use as a veterans domiciliary. It is greatly needed, and I am sure the Members, if they will read the testimony which I will insert in the RECORD, will be thoroughly sure of the necessity for such a hospital in Massachusetts.

We are committed to taking care of the veterans, to see that they are hospitalized rather than that they die in the streets; also that the mentally incompetent must be taken care of. We have had some suicides and murders because men have not been hospitalized in time or because they have been put out of hospitals due to a shortage of beds.

Under permission previously granted, I insert at this point the statement of Mr. Collatos:

STATEMENT BY CHARLES N. COLLATOS, COMMANDER, DEPARTMENT OF MASSACHUSETTS, THE AMERICAN LEGION, BEFORE THE HOUSE COMMITTEE ON VETERANS' AFFAIRS, THURSDAY, JULY 15, 1954

Madam Chairman and members of the House Committee on Veterans' Affairs, as department commander of the American Legion for Massachusetts, I desire to express my thanks for the kind invitation extended me to appear before you on pending veterans legislation as it affects the veterans of Massachusetts and New England. We in Massachusetts are grateful to you members and your outstanding chairman for the fine effort you have put forth in behalf of our war veterans. To you, especially, Mrs. ROGERS, we are grateful for your past efforts in behalf of our New England veterans, and for introducing H. R. 9646, which we believe is very timely.

H. R. 9646 seeks to retain the former Cushing Veterans' Administration hospital as a center for domiciliary and chronic cases. I would like to give you some of the past history of this fine hospital.

Cushing Hospital, which formerly operated as a 1,900-bed Army hospital with a large paraplegic center, was declared surplus and was taken over by the Veterans' Administration on October 1, 1946, with an authorized bed capacity of 1,100 beds. The VA took over the care of the paraplegic Army patients remaining. It operated the hospital with a 1,000-bed authorized capacity, and for years it operated at maximum capacity, having a daily patient census well in excess of 900 patients. It is interesting to note that while many of the former military hospitals taken over by the VA had difficulty in operating at maximum capacity due to staffing problems, Cushing hospital had an outstanding record. In reviewing the record of eight visitations by our national field service, we find that on the first visit, August 30, 1948, shortly after activiation of this hospital, of 31 full-time physicians authorized, there were vacancies of only 2 physicians, but on the subsequent 7 visitations, extending through September 18, 1953, authorized positions for full-time physicians (up to 48) were filled and no vacancies present.

As regards the nursing situation, from the first visitation up to the eighth on September 18, 1953, there was not a single vacancy in the nursing service, with as high an authorization as 244, except that on the last visit, when the hospital was in process of closing, there was only 1 nurse vacancy. I doubt if there is a Veterans' Administration hospital in the country with a better record regarding availability of authorized personnel. Likewise, the hospital had as many as 59 consultants and 73 attending physicians, and ran a large resident physicians program, up to 65. I am mentioning these statistics in view of a complaint that in many areas the Veterans' Administration experienced difficulty in the recruitment of professional and other personnel. Here we have a constructed hospital, where there would be no difficulty in adequately staffing same, to take care of veterans who are unable to obtain needed hospitalization due to lack of adequate facilities.

With Massachusetts now operating 1 TB, 3 NP, and 1 general medical and surgical VA hospital, we find that large waiting lists of certified eligibles still exist in these hospitals. As of March 31, 1954, information from VA form 10–7371, the monthly report of eligible persons not yet admitted for VA hospitalization, shows the following in these Massachusetts VA hospitals:

Bedford, Mass., shows 477 psychotic and 91 other psychiatric, a total of 568.

Northampton, Mass., shows a waiting list of 240 psychiatric cases.

The new VA hospital at Brockton shows a certified waiting list of 67 psychotic, 27 other psychiatric, 8 tuberculosis, 3 medical, and 2 surgical cases, a total of 107.

The new general medical and surgical hospital at Boston shows a waiting list of 115 psychotic, 12 other psychiatric, 14 neurologic, and 2 surgical cases, a total of 143.

Thus, we see that 1,085 veterans with certified applications are awaiting admission to these four veterans' hospitals because beds are not available to them. This does not take into consideration the large numbers of veterans not included in this certified list of 1,085 who did not make formal application for admission after being advised of the difficulty in being hospitalized in the near future, nor does it include those veterans rejected for hospitalization because of chronic conditions with no adequate facilities for the care they need.

It would seem to me that we would be less than mindful of the welfare of our war disabled if the former Cushing VA hospital were released and not utilized by the Veterans' Administration, in the presence of demonstrated needs and in view of past experience that in the Cushing hospital staffing difficulties have not been experienced. Certainly we believe it to be wise economy to utilize this existing hospital rather than to plan for further new construction, if the Congress decides to take care of these needy and sick veterans. I would also desire to stress that Cushing VA hospital can also be utilized to take care of needs in nearby States where adequate facilities for sick veterans do not exist.

I also want to stress the large number of veterans on the certified waiting list with neuropsychiatric disabilities. Their chances of being admitted in the foreseeable future, I am advised, is remote.

I have been advised by competent medical source that many chronic psychiatric cases, now being hospitalized under locked-ward facilities at the other VA hospitals in Massachusetts, could be classified as nonsecurity mental cases and could be adequately cared for even on nonlocked wards in a place like Cushing. The CONGRESSIONAL RECORD (p. 5082, CONGRESSIONAL RECORD, Senate, dated Apr. 14, 1954) shows that Senator KENNEDY, of Massachusetts, brings out in a reproduced letter from a Framingham chapter of the Disabled American Veterans that the Governor of Massachusetts was planning to establish at the former Cushing VA hospital, if the State could obtain same "an institution for elderly mental patients not requiring close confinement." Certainly the VA could free much needed occupied beds in the other active NP services at existing VA mental hospitals for cases of this type and thus make available greatly needed beds for the more active mental cases on the present certified list of eligibles needing locked-ward care and close supervision. Also at Cushing there are adequate locked-ward facilities for the care of such cases found to need close confinement. Cushing at times took care of over 300 NP cases while a VA hospital, and when closed these were transferred to the new GMS hospital at Boston. Our field representative's report of February 19, 1953, shows that on that date the Boston VA hospital was taking care of 460 GMS cases and 235 NP patients. His report contains the following:

"This [Boston VA] hospital opened for patients on July 1, 1952. Since its opening, 6,400 patients have been treated and approximately 2,000 veterans seeking admission have been turned down for various reasons. On the day of dedication, July 27, 1952, there 498 patients, many being NP patients transferred from Cushing VA hospital and others from West Roxbury."

This is mentioned to show that Cushing has facilities even for the more serious mental cases.

I would like to mention that even with the opening of the new GMS hospital at Boston, there has been no actual gain in GMS beds for the Boston area. Cushing with its 1,000 operating beds was essentially a GMS hospital. West Roxbury, which had a 327-bed GMS capacity, in addition to a 55-bed NP unit, was converted as of November 1953 to 151 GMS beds and 153 paraplegic beds. Thus, we in Massachusetts sustained a 176 bed loss in GMS beds in addition to the losses in GMS beds occasioned by the closing of Cushing VA hospital and the opening of the new Boston GMS hospital. Also, this new GMS hospital at Boston has a constructed capacity of 940 beds, and as of February 28, 1954 had 792 of these beds occupied (including the NP unit there). Present VA plans based on budget estimates for fiscal year 1955 call for a 778 average daily bed occupancy as compared to an average daily bed occupancy of 774 from July 1953 to April 1954. Certainly this does not appear to be sufficient for the needs of the war disabled in Massachusetts.

One of the greatest shortages in the Veterans' Administration and the Nation as a whole is in the category of chronic disease.

...BUILT UP MILLIGAN LIBRARIES

The Annual Report of the Administrator of Veterans Affairs for the fiscal year ending June 30, 1952 states on page 9:

"For the most part, veteran patients constitute a closed and aging population, characterized by a greater frequency of multiple disabilities and chronic disorders less amenable to treatment, which require longer care."

Also, on page 17 of this report we find:

"Not less than 86.8 percent of the beds available in VA and non-VA hospitals (for VA care) were therefore required for tuberculosis, psychiatric, and neurological patients and for general medical and surgical patients whose disabilities were either service-connected, permanent and total, or long-term requiring hospitalization of more than 90 days, or whose hospitalization was clearly the responsibility of the Federal Government."

Further, a similar annual report for the fiscal year ending June 30, 1953 states on page 14:

"However, the waiting list for neuropsychiatric cases has been increasing generally since 1945."

The same report on page 19 states:

"The comparison of the most frequent diagnostic conditions among discharged veterans with different periods of war service provides a guide for forecasting the future composition of the VA patient load."

These studies indicate the need of providing sorely needed facilities for certain aged and infirm mental patients as well as for chronic disease of all categories, which could very adequately be cared for if Cushing VA hospital is retained. The needs exist; the facilities do not.

In addition to being able to provide adequate facilities for providing care for chronic cases as described, Cushing hospital could very well serve the domiciliary needs of New England.

Domiciliary care is the provision of a home, with such incidental medical care as is needed, for eligible veterans suffering from a permanent disability who are incapacitated from earning a living and have no adequate means of support.

Prior to 1944 there appeared to be an adequate number of domiciliary beds as there was then in existence an 1,100-bed domiciliary at Togus, Maine. In 1944, due to the great demand for NP beds, this domiciliary unit was discontinued and converted into a neuropsychiatric hospital as it was felt that there was a greater need for the neuropsychiatric beds. Since 1944 New England has been without a VA domiciliary home. As there was need for 1,100 domiciliary beds at Togus, Maine prior to 1944, we are unable to understand why there is no need for domiciliary home beds in the New England area since then. We have been advised that since the closing of the domiciliary at Togus the Veterans Administration has been attempting to meet the domiciliary needs of the New England area by making available four domiciliary centers, namely, at Bath, N. Y. (the closest to New England); Dayton, Ohio; Martinsburg, W. Va.; and Kecoughtan, Va. It is further brought out that these 4 centers report that they are providing domiciliary care for only 244 veterans, listing residence in the New England States, with 154 of these at Bath, N. Y. It is quite evident that this small number of domiciliary residents from the New England area can be accounted for mainly by the distance involved in travel of these sick and needy veterans, and is no true criterion of the existing needs for domiciliary beds in the New England area.

Following the closing of the Togus domiciliary there was an increase in the number of State soldiers homes beds; but even these, we understand, were not adequate to meet the needs of our war disabled in New England. Apparently the Veterans' Administration is cognizant of this fact, that is, that the small number of New England veterans domiciled is due to distance from their residence. We have been advised that the need for accommodations at a point close to place of residence is considered "economically impractical as long as there are existing beds within a reasonable distance." We do not believe that the centers listed as serving the New England area constitute "reasonable distance" for those veterans "sick and broke" and with no one to take care of them. It appears that the Veterans' Administration has desired to take care of the domiciliary needs of the veterans of New England. It is reported that at one time they had under consideration the utilization of the former Cushing hospital for this purpose, but that in view of "lack of authority and funds" to operate it as a domiciliary facility, the VA declared it excess.

Again I want to stress that this action in declaring Cushing excess was not prompted by the lack of need but by lack of authority and funds to operate Cushing. It is our understanding also that the Bureau of the Budget's advice regarding the continuation of Cushing as a domiciliary has been unfavorable, apparently only on a basis of reduction of funds. It is my opinion that the amount of moneys involved here is not very great, and the amount of good derived in taking care of the chronic cases now on the waiting list and the domiciliary needs of the New England area will far outweigh the relatively small funds necessary to continue Cushing as proposed in H. R. 9646.

Again I wish to express my deep appreciation to the chairman and members of this committee for their courtesy in hearing this presentation, and their abiding interest in studying and proposing legislation beneficial to the veterans of this country.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the RECORD, or to revise and extend remarks, was granted to:

Mr. VURSELL in two instances.

Mr. HYDE and to include a statement of Mr. HYDE, sent to the chairman of the Committee on Public Works, with respect to H. R. 9137.

Mr. RODINO and to include an editorial.

Mr. MILLER of Nebraska.

Mr. WOLVERTON in two instances and to include extraneous matter.

Mr. O'HARA of Illinois in two instances and to include related matter.

Mr. BYRD.

Mr. BENDER.

Mr. CANNON.

ENROLLED BILLS SIGNED

Mr. LECOMPTE, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H. R. 1067. An act to authorize the Supreme Court of the United States to make and publish rules for procedure on review of decisions of The Tax Court of the United States;

H. R. 1673. An act for the relief of James I. Smith;

H. R. 5578. An act for the relief of Hatsuko Kuniyoshi Dillon;

H. R. 5731. An act to authorize the Secretary of the Interior to construct facilities to provide water for irrigation, municipal, domestic, military and other uses from the Santa Margarita River, Calif., and for other purposes; and

H. R. 7664. An act to provide for the development of the Priest Rapids site on the Columbia River, Wash., under a license issued pursuant to the Federal Power Act.

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 1276. An act to amend the Bankhead-Jones Farm Tenant Act, as amended, so as to provide for a variable interest rate, second mortgage security for loans under title I, and for other purposes; and

S. 3539. An act to further amend title II of the Career Compensation Act of 1949, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services.

ADJOURNMENT

Mr. ARENDS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 23 minutes p. m.) the House, pursuant to its previous order, adjourned until Monday, July 19, 1954, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1735. A letter from the Secretary of the Navy, transmitting a draft of proposed legislation entitled "A bill to authorize permanent appointments in the United States Navy and in the United States Marine Corps"; to the Committee on Armed Services.

1736. A letter from the Acting Secretary of the Treasury, transmitting a draft of a proposed bill entitled "A bill to amend section 5240 of the Revised Statutes, as amended, relating to the examination of national banks"; to the Committee on Banking and Currency.

1737. A letter from the Assistant Secretary of the Interior, transmitting a proposed award of a concession contract to Arthur F. and Marion J. Lange, doing business as the Trading Post, which will, when executed on behalf of the Government by the regional director, region No. 2, National Park Service, authorize them to operate a general store and gift shop, and soda fountain and lunch counter, in Grand Teton National Park, Wyo., for a period of 5 years from November 1, 1953, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1738. A letter from the Secretary of the Army, transmitting a draft of a proposed bill entitled "A bill for the relief of Hans Kuzura"; to the Committee on the Judiciary.

1739. A letter from the Acting Secretary of the Treasury, transmitting a draft of a proposed bill entitled "A bill to amend section 4421 of the Revised Statutes, in order to remove the requirement as to verifying under oath certain certificates of inspection, and for other purposes"; to the Committee on Merchant Marine and Fisheries.

1740. A letter from the Postmaster General, transmitting a draft of proposed legislation entitled "A bill to provide for the purchase of bonds to cover postmasters, officers, and employees of the Post Office Department, contractors with the Post Office Department, mail clerks of the Armed Forces, and for other purposes"; to the Committee on Post Office and Civil Service.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DONDERO: Committee on Public Works. H. R. 9859. A bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes; without amendment (Rept. No. 2247). Referred to the Committee of the Whole House on the State of the Union.

Mr. ARENDS: Committee on Armed Services. S. 22. An act to validate certain payments for accrued leave made to members of the Armed Forces who accepted discharges for the purpose of immediate reenlistment for an indefinite period; without amendment (Rept. No. 2249). Referred to the Committee of the Whole House on the State of the Union.

Mr. HOPE: Committee on Agriculture. S. 3245. An act to provide emergency credit; with amendment (Rept. No. 2250). Referred to the Committee of the Whole House on the State of the Union.

Mr. HOPE: Committee on Agriculture. S. 3697. An act to amend the act of April 6, 1937, as amended, to include cooperation with the Governments of Canada or Mexico or local Canadian or Mexican authorities for the control of incipient or emergency outbreak of insect pests or plant diseases; without amendment (Rept. No. 2251). Referred to the Committee of the Whole House on the State of the Union.

Mr. ALLEN of California: Committee on Merchant Marine and Fisheries. H. R. 7334. A bill to authorize certain property transactions in Cocoli, C. Z., and for other purposes; without amendment (Rept. No. 2252). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 8897. A bill to authorize and direct the Secretary of the Interior to transfer 40 acres of land in the Northern Cheyenne Indian Reservation, Mont., to School District No. 6, Rosebud County, Mont.; with amendment (Rept. No. 2253). Referred to the Committee of the Whole House on the State of the Union.

Mr. ARENDS: Committee on Armed Services. H. R. 9302. A bill to permit retired members of the uniformed services to revoke elections made under the Uniformed Services Contingency Option Act of 1953 in certain cases where the elections were made because of mathematical errors or misinformation; with amendment (Rept. No. 2254). Referred to the Committee of the Whole House on the State of the Union.

Mr. REAMS: Committee on Post Office and Civil Service. H. R. 9825. A bill to authorize the Postmaster General to prohibit or regulate the use of Government property under his custody and control for the parking or storage of vehicles; without amendment (Rept. No. 2255). Referred to the Committee of the Whole House on the State of the Union.

Mr. LeCOMPTE: Committee on House Administration. S. 1654. An act to amend the act entitled "An act to provide for a method of voting in time of war, by members of the land and naval forces absent from the place of their residence," approved September 16, 1942, as amended; with amendment (Rept. No. 2257). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 7813. A bill authorizing the Secretary of the Interior to adjust or cancel certain charges on the Milk River project; with amendment (Rept. No. 2258). Referred to the Committee of the Whole House on the State of the Union.

Mr. ALLEN of Illinois: Committee on Rules. House Resolution 639. Resolution for consideration of H. R. 8896, a bill to amend the mineral leasing laws to provide for multiple mineral development of the same tracts of the public lands, and for other purposes; without amendment (Rept. No. 2263). Referred to the House Calendar.

Mr. REED of New York: Committee on Ways and Means. H. R. 8932. A bill to reclassify dictaphones in the Tariff Act of 1930; with amendment (Rept. No. 2264). Referred to the Committee of the Whole House on the State of the Union.

Mr. REED of New York: Committee on Ways and Means. H. R. 9666. A bill to amend section 1001, paragraph 412, of the Tariff Act of 1930, with respect to hardboard; with amendment (Rept. No. 2265). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ARENDS: Committee on Armed Services. H. R. 9804. A bill to authorize the appointment in a civilian position in the Department of Justice of Maj. Gen. Frank H. Partridge, United States Army, retired, and for other purposes; without amendment (Rept. No. 2248). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H. R. 4866. A bill for the relief of George S. Ridner; with amendment (Rept. No. 2256). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. House Concurrent Resolution 254. Concurrent resolution favoring the granting of the status of permanent residence to certain aliens; without amendment (Rept. No. 2259). Referred to the Committee of the Whole House.

Miss THOMPSON of Michigan: Committee on the Judiciary. H. R. 3869. A bill for the relief of Gilbert Elkanah Richards, Adelaide Gertrude Richards, and Anthony Gilbert Richards; with amendment (Rept. No. 2260). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. H. R. 6762. A bill for the relief of Mrs. Irmgard (Chrapko) Broughman; with amendment (Rept. No. 2261). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. H. R. 9671. A bill for the relief of Mrs. Fa-chi Ling Wang and Eileen Wang; with amendment (Rept. No. 2262). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. VORYS:

H. R. 9910. A bill to amend section 413 (b) of the Foreign Service Act of 1946; to the Committee on Foreign Affairs.

By Mr. ABERNETHY:

H. R. 9911. A bill to amend the United States Cotton Standards Act and for other purposes; to the Committee on Ways and Means.

By Mr. BEAMER:

H. R. 9912. A bill to provide for the issuance of a special postage stamp in commemoration of the 75th anniversary of the first electrically lighted city in the world, Wabash, Ind.; to the Committee on Post Office and Civil Service.

By Mr. BENTSEN:

H. R. 9913. A bill to convey by quitclaim deed certain land to the Brownsville Navigation District of Cameron County, Tex.; to the Committee on Armed Services.

By Mr. BERRY:

H. R. 9914. A bill to declare that the United States holds certain lands in trust for the Rosebud Sioux Tribe of the Rosebud Reservation in the State of South Dakota; to the Committee on Interior and Insular Affairs.

By Mr. GRAHAM:

H. R. 9915. A bill declaring the Communist Party and similar revolutionary organizations illegal; and for other purposes; to the Committee on the Judiciary.

By Mr. HINSHAW:

H. R. 9916. A bill to amend section 5 (a) of the Federal Trade Commission Act with respect to certain unfair methods of competition in connection with the sale of manufactured products; to the Committee on Interstate and Foreign Commerce.

H. R. 9917. A bill to amend section 5 (a) of the Federal Trade Commission Act with respect to certain unfair methods of competition in connection with the sale of motor vehicles; to the Committee on Interstate and Foreign Commerce.

By Mr. LOVRE:

H. R. 9918. A bill to change the name of Gavins Point Reservoir back of Gavins Point Dam to Lewis and Clark Lake; to the Committee on Public Works.

By Mr. MILLS:

H. R. 9919. A bill to release and quitclaim all rights and interests of the United States in certain real property to Newport, Ark.; to the Committee on Government Operations.

H. R. 9920. A bill to release and quitclaim all rights and interests of the United States in certain real property to Walnut Ridge, Ark.; to the Committee on Government Operations.

By Mr. REED of Illinois:

H. R. 9921. A bill to amend section 709 of title 18, United States Code, so as to protect the name of the Federal Bureau of Investigation from commercial exploitation; to the Committee on the Judiciary.

By Mr. REED of New York:

H. R. 9922. A bill to authorize the Secretary of the Treasury to prescribe regulations relating to qualifications of persons who assist taxpayers in the determination of the Federal tax liabilities, and for other purposes; to the Committee on Ways and Means.

By Mr. ROGERS of Texas:

H. R. 9923. A bill to provide that the provisions of the Natural Gas Act shall not apply to the sale of natural gas, as an incident of its production and gathering, by an independent producer not engaged in the interstate transmission of natural gas; to the Committee on Interstate and Foreign Commerce.

By Mr. SHORT:

H. R. 9924. A bill to provide for family quarters for personnel of the military departments of the Department of Defense and their dependents, and for other purposes; to the Committee on Armed Services.

By Mr. TOLLEFSON:

H. R. 9925. A bill to increase the efficiency of the Coast and Geodetic Survey, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. YOUNG:

H. R. 9926. A bill to provide for the stockpiling of surplus agricultural commodities for civil defense purposes; to the Committee on Armed Services.

By Mr. SIMPSON of Illinois:

H. J. Res. 560. Joint resolution to authorize the Commissioners of the District of Co-

UNIVERSITY OF MICHIGAN LIBRARIES

lumbia to promulgate special regulations for the period of the American Legion national convention of 1954, to authorize the granting of certain permits to the American Legion 1954 Convention Corp. on the occasion of such convention, and for other purposes; to the Committee on the District of Columbia.

H. J. Res. 561. Joint resolution to authorize the quartering in public buildings in the District of Columbia of troops participating in activities related to the Amercan Legion national convention of 1954; to the Committee on the District of Columbia.

By Mr. O'NEILL:

H. Con. Res. 255. Concurrent resolution to express the sense of Congress with respect to the admission of Chinese Communists to the United Nations; to the Committee on Foreign Affairs.

By Mr. JAVITS:

H. Res. 635. Resolution for extension of greetings to the Gold Coast and Nigeria; to the Committee on Foreign Affairs.

By Mrs. KELLY of New York:

H. Res. 636. Resolution providing a code of fair procedure for the committees of the House of Representatives; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CRETELLA:

H. R. 9927. A bill for the relief of Luzie Biondo (Luzie M. Schmidt); to the Committee on the Judiciary.

By Mr. JAVITS:

H. R. 9928. A bill for the relief of Dionisios Ravanis; to the Committee on the Judiciary.

By Mr. O'NEILL:

H. R. 9929. A bill for the relief of Vasilios Liakopoulos; to the Committee on the Judiciary.

By Mr. ROONEY:

H. R. 9930. A bill for the relief of Vito Recchia; to the Committee on the Judiciary.

By Mr. SADLAK:

H. R. 9931. A bill for the relief of Dr. and Mrs. Henri Revilliod; to the Committee on the Judiciary.

By Mr. SHUFORD:

H. R. 9932. A bill for the relief of the Dixie Novelty Co.; to the Committee on the Judiciary.

H. R. 9933. A bill for the relief of Gerasimos Athanase Haberis; to the Committee on the Judiciary.

By Mr. SIEMINSKI:

H. R. 9934. A bill for the relief of Rodrigo D. Brito Peres; to the Committee on the Judiciary.

By Mr. WIDNALL:

H R. 9935. A bill for the relief of Mrs. Emma Isabel Butler; to the Committee on the Judiciary.

By Mr. BURDICK:

H. Res. 637. Resolution providing for sending to the United States Court of Claims the bill (H. R. 6242) for the relief of the West Coast Meat Co. of Hayward, Calif.; to the Committee on the Judiciary.

By Mr. LANE:

H. Res. 638. Resolution providing for sending to the United States Court of Claims the bill (H. R. 5813) for the relief of Jacksonville Garment Co.; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

1101. By Mr. WOLCOTT: Petition of William Swayze, Lapeer, Mich., and 86 others, relative to H. R. 1227, a bill to prohibit the transportation in interstate commerce of advertisements of alcoholic beverages, and for other purposes; to the Committee on Interstate and Foreign Commerce.

1102. Also, petition of Henry Levasseur, Mount Clemens, Mich., and 15 others requesting that H. R. 4596, a bill to grant a pension of $100 per month to all honorably discharged veterans of World War I who are over 62 years of age, be enacted into law; to the Committee on Veterans' Affairs.

1103. By the SPEAKER: Petition of the chairman, Hawaii Statehood Commission, Honolulu, T. H., relative to a special meeting held June 24, 1954, at Honolulu, that, with the profoundest respect and sorrow for the memory of its lost leader, Joseph R. Farrington, the Commission implore the United States Congress to quicken action on Hawaii's statehood bill; to the Committee on Interior and Insular Affairs.

1104. Also, petition of Daniel B. Maher, State of Maryland, relative to filing a petition for redress of grievance in behalf of Clyde L. Powell, who is a resident of the State of Missouri; to the Committee on the Judiciary.

1105. Also, petition of the president, Public Power and Water Corp., Trenton, N. J., relative to an affidavit in support of motion and petition for impeachment, Public Power and Water Corp. against Hon. Herbert Brownell, Jr., Attorney General of the United States; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Let's Not Deceive Ourselves

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. BYRD. Mr. Speaker, the Red tide sweeps on in Asia while Western diplomacy continues to parry and obviously tries to compromise with the menace of Communist imperialism.

Having secured the rich Red River Delta under their belts, a prize awarded to them by voluntary French withdrawal, the Communists are now sweeping on toward Hanoi. It is not a pleasant thing, Mr. Speaker, to read of Americans and other civilians fleeing with an alacrity that suggests panic at Hanoi, and of course there are increasing signs that a Red fifth column awaits only the signal to spring into action inside the city.

Soon, we are told, the battle for Hanoi will begin. Judging by the resistance that has been offered thus far to the onrushing Reds, this is not a very cheering prospect. The Communist offensive against this important city comes at a time when the French Government at home is at what appears to be a perpetual crisis, and the disposition of Western diplomacy seems to be to make a gift of a large part of Vietnam to the Reds.

We might do well to pause and ponder what the recent French withdrawal from the Red Delta in Tonkin, Vietnam, meant. Without the firing of a shot, the Reds were handed a territory embracing some 1,600 square miles, and given control over some 2½ million of people. This region is a rich agricultural belt, but, more than this, the action handed over free peoples into Bamboo Curtain slavery—that is what it amounts to on a practical basis no matter how anyone tries to sugar-coat the bitter pill.

Furthermore, Mr. Speaker, a deal is being rigged right now at Geneva where "peace" for Indochina is being framed by "statesmen," statesmen who are bent on coexisting with communism and who will endeavor to legitimatize this selling out of millions of souls to Red tyranny. Mr. Dulles has already been importuned to get back to Geneva so that the prestige of the United States may be utilized to give an air of respectability to this newest and latest sellout to communism.

I ask you, Mr. Speaker, does any sensible, right-minded person believe for a second that anyone is going to be fooled by all the high-sounding platitudes that will be used to cover up this latest chapter of appeasement? Does anyone believe for a moment that the actions of Americans fleeing Hanoi will be lost on Asia's teeming millions as the West suffers the loss of face once more? No. When the people of the world see what is going on at Hanoi, they will be wondering when it will be Saigon's turn, and how long it will be before Tokyo becomes the target for an all-out Communist drive.

That is the logical course of events, Mr. Speaker, in view of the West's soft policy toward Communist aggression. All of these objectives I have outlined are but station stops on the Communist drive for world conquest. What a pity it is that, in the face of such brutal evidence, statesmen of the West—men who should know the ways of aggression and especially the wiles of the Communist plunderer—continue to delude themselves that this way of abject appeasement is the road to peace. What monumental folly, Mr. Speaker. What moral blindness. What dangerous policy.

I wonder how many of our so-called Western "statesmen" stop to realize that in a world threatened by an atomic armament race the potentials of Asian resources far outstrip those of the Western World. Let us look to our maps, consult our geography, note the rich natural resources of Asia, and speculate upon the almost unlimited manpower of the East; then let us speculate, grimly, if you please, upon what will be the balance of power if, in our poverty of policy, we allow the Asian Continent to come wholly under Communist rule.

The first point in an intelligent, realistic approach to the global threat presented by Communist imperialism must be the realization that coexistence with communism can only be achieved upon Communist terms, and this represents victory for the Communists by default.

Secondly, no matter what the Communists pretend in the way of coexistence with the West, they do not themselves believe coexistence to be possible, for they are committed to the proposition that it is a matter of historical necessity that Marxism must eventually be triumphant over the West. So, when the Communists talk of coexistence they are merely using it as a pretext for a breather so as to gain time to digest their gains and get prepared for the next forward push.

Thirdly, in our diplomatic approach to the problem, we must realize that a political-moral chain reaction follows each and every single set of appeasement toward communism. An action in any one place in the world of public affairs is followed by political reaction everywhere else throughout the world. Japan, the bastion of the free world's defense in the East, is watching closely every development in Indochina. So, too, are Malaya, Burma, Indonesia, Thailand, and Pakistan and Iran—all of these states feel the political tremors as the Red storm breaks over Asia. Continued appeasement of Russian imperialism can only react to our ultimate sorrow.

Finally, we deceive ourselves at our own peril. We cannot embrace evil and hope to dwell in peace and security with it.

Mr. Speaker, I offer these suggestions for the West, and I commend them to the attention of Western diplomats in the hope that the free world may arouse itself from the torpor of delusion and the sweet gas of appeasement before it is too late. It is even now well beyond the 11th hour.

Tribute to William J. Jernick, Newly Elected Grand Exalted Ruler of the Benevolent and Protective Order of Elks

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. RODINO. Mr. Speaker, the Benevolent and Protective Order of Elks of the United States of America is favored in many respects. But our order appears to be especially favored in the unimpeachable character and outstanding qualifications of the men who are willing to devote a year of their lives to serve as Grand Exalted Ruler. We were more than fortunate at the recent Los Angeles grand lodge session in the unanimous choice of William J. Jernick, of Nutley, N. J., as chief executive for the ensuing year.

It is not strange that the Order of Elks was attracted to such a man or that the order appealed to him as offering a wide field for useful endeavor. His election to grand exalted ruler climaxes Jernick's 20-some years of membership in the Elks. He joined Nutley Lodge in 1934, and 5 years later was its exalted ruler. Then in 1940, he became president of the New Jersey State Elks Association. He entered the grand lodge by appointment to the activities committee, of which he became chairman. Further grand lodge service included grand treasurer and grand trustee.

Eighty-six years have passed since a small group of inspired men took the virtues of charity, justice, brotherly love, and fidelity, and bound them into the organization of the Benevolent and Protective Order of Elks. The order has grown from the modest to the magnificent and has increased from a parlor group to 1,122,803 members.

Under Bill Jernick's inspiring guidance we may turn our faces to the future, knowing our splendid traditions will be upheld and that the order will expand its sphere of usefulness to mankind. The guidance we can expect is well illustrated in William Jernick's acceptance speech at Los Angeles. After urging Elks and all Americans to plan their thinking and living toward the preservation of our freedom against the threat of communism, Jernick stated:

If this world had more respect for divine guidance, it might have less need for guided missiles.

A charming wife and daughter—Mrs. Betty Duffy, of Honolulu—constitute the distaff side of the Jernick family. Two sons are Elks, Dr. Robert H. Jernick and William J. Jernick, Jr.

Bill Jernick is a resident and former mayor of Nutley, N. J. As an executive of the Thomas Edison Co. in Belleville, N. J., he is devoted to his work in the battery division as assistant vice president in charge of production. He has found time to give unselfishly to community interests and has established himself in the confidence and esteem of his fellow townsmen, as evidenced by the following editorial from the July 8, 1954, issue of the Nutley Sun:

PRIDE IN A GOOD NEIGHBOR

Nutley can but feel a warm glow of extreme pride in the election this week of former Mayor William J. Jernick to the office of grand exalted ruler of the Benevolent and Protective Order of Elks. His election is one of those one-in-a-million tributes because the Elks' membership now surpasses 1,125,000.

The national fraternal society recognized early in Jernick exactly the same qualities of integrity, honesty, endeavor, and ability which we, here in Nutley, recognized when time after time we elected him as our mayor. His record at the head of our town administration was outstanding and by his temperate leadership, his calm, fair, and fearless guidance of the town commission, he established our municipal government on a high standard of honest efficiency.

For the next year Bill Jernick will travel the land because one of the duties of his office is to visit as many lodges as possible. Wherever he goes, he can but add to the prestige of Nutley. It is with a great deal of pride and happiness that Nutley will join in a "welcome home, Bill" fiesta in the oval on July 24 for his is a personality which makes only friends, no enemies. To all of us he is our good friend, our good neighbor.

R. E. H.

Red China Has No Right to Membership in the United Nations

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. WOLVERTON. Mr. Speaker, there is no basis of right or justice that entitles Red China to membership in the United Nations. On the contrary, there is every reason why it should not be admitted as a member.

The history of Red China has been one of war. Its hands are stained with blood. Its entrance into the Korean war prolonged hostilities and resulted in the unnecessary shedding of the blood of good American boys. Nearly 150,000 casualties in the ranks of our Army in Korea can be charged to it. And today Red China is giving aid and support to the fighting that is raging in Indochina. What a record on which to base a claim of right to admission to the United Nations, the fundamental purpose of which is to promote peace.

Even the most casual reading of the purposes of the United Nations destroys any right of Red China to membership in it. Observe the following taken from the charter of the United Nations:

Article 1 spells out the purposes for which the United Nations has been organized—

To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace;

To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;

To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion; and

To be a center for harmonizing the actions of the nations in the attainment of these common ends.

Article 2 imposes rules of conduct upon the members:

The organization is based on the principle of the sovereign equality of all its members.

All members, in order to insure to all of them the rights and benefits resulting from membership, shall fulfill in good faith the obligations assumed by them in accordance with the present charter.

All members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any State, or in any other manner inconsistent with the purposes of the United Nations.

All members shall give the United Nations every assistance in any action it takes in accordance with the present charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action.

Mr. Speaker, measured against the requirements laid down in the charter, the Chinese Communists do not meet the standards prescribed for membership in the United Nations. They have shown a consistent disregard for fundamental human rights, they have degraded the dignity of persons, and they have obliterated the rights of individuals. Freedom has been stifled; intolerance has been substituted for tolerance.

In the international field the Chinese Communists have not only refused to assist the United Nations in its action taken in accordance with the charter against aggression in Korea; they have participated in the aggression. This is not alone the judgment of the United States. It is the considered conclusion reached by an overwhelming majority of the General Assembly. A regime that has been held to have violated the charter cannot plead that it meets the standards necessary to hold a seat in an organization pledged to support that very charter. Indeed to seat the Chinese Communists would only qualify them for expulsion. Article 6 states that—

A member of the United Nations which has persistently violated the principles contained in the present charter may be expelled from the organization.

To accord representation to a regime that is unable or unwilling to discharge its international responsibilities would make a mockery of the very principles that led to the creation of the United Nations. It would violate both the letter and the spirit of the charter.

The moral and legal issues involved in this question are not in conflict with the practical issues. The United States and the United Nations are engaged in hostilities against the Chinese Communists. To give them a permanent seat on the Security Council equal in weight to that of the United States and the other permanent members, would enhance their prestige, give courage to their sympathizers, and weaken those who are resisting Communist aggression from without and Communist subjugation from within. It would imply an acceptance of their permanent conquest of China and give them an air of respectability. All of this is in contradiction to the judgement already expressed by the members.

The consequences of seating the Chinese Communists would be disastrous. It would be a reward to the enemies of the United Nations and of the United States. The prestige of the organization would suffer irreparably no less than that of the members who are fighting to uphold its principles.

The United States has vigorously opposed efforts to seat the Chinese Communists in the United Nations at each of the approximately 150 times that this question has been raised since 1950.

The administration under President Eisenhower has been alert at all times to the danger inherent in admitting Communist China into the United Nations. On July 7, of the present year, President Eisenhower in answer to questions addressed to him at his press conference replied in a manner to leave no doubt of his unqualified opposition. He said:

I am completely and unalterably opposed under the present situation to the admission of Red China into the U. N. I personally think that 95 percent of the population of the United States would take the same stand. Now let's take a look at this thing for a minute, if you will bear with me. There is a moral question, first of all, that is involved. The United Nations was not established primarily as a supergovernment clothed with all of the authority of a supergovernment and of great power to do things. It was, among other things, an attempt to marshal the moral strength of the world in order to preserve peace, to make certain that quarrels were composed through a decent respect for justice and fairness and right, and to see whether we couldn't avoid resort to force. Now, today we have Red China going to Geneva and instead of taking a conciliatory attitude toward anything, it excoriated the United Nations. As a matter of fact, in Geneva it demanded repudiation of the United Nations position. On top of that, Red China is today at war with the United Nations. They were declared an aggressor by the United Nations in the Assembly. That situation has never been changed. They are occupying North Korea; they have supported this great effort at further enslavement of the peoples in Indochina; they have held certain of our prisoners unjustifiably and they have been guilty of the employment of the worst possible diplomatic deportment in the international affairs of the world. Now, how can the United States as a self-respecting nation, doing its best and in conformity with the moral standards as we understand them, how can we possibly say this country should be admitted or this government should be admitted to the U. N.? That is the way the case stands now, and that is my position.

* * * * *

We went into the United Nations under treaty forms. Now, I must say first, if the United States ever reaches the point that it wants to repudiate solemn treaty obligations it must do so after the most careful deliberation and study of all of the consequences that could be involved. Secondly, I repeat, the establishment of the United Nations was an effort to rally the moral forces of the world. I don't see how in all conscience the United Nations—I don't see how any state, impartial state, can vote for their acceptance under present conditions—I don't understand it.

This firm statement by the President as well as others by the Secretary of State and by Members of both Houses of Congress appear to have borne fruit. Within the past few days one of our major allies that seemed to be giving strong support to Communist Chinese representation in the United Nations has advocated a more cautious and realistic approach.

To further substantiate the strong position that has been taken by our Government, I draw attention to the letter of Thruston B. Morton, Assistant Secretary of State, dated July 8, 1954, addressed to Hon. ROBERT B. CHIPERFIELD, chairman of the Committee on Foreign Affairs of the House of Representatives, in which he sets forth the policy of the United States Government. It reads as follows:

DEPARTMENT OF STATE,
Washington, July 8, 1954.

The Honorable ROBERT B. CHIPERFIELD,
Chairman, Committee on Foreign Affairs,
House of Representatives.

DEAR MR. CHIPERFIELD: Pursuant to our telephone conversation of July 7, the Department of State submits the following comments on House Joint Resolution 286 which provides that if the Communist regime of China "should be admitted to the United Nations or any of the specialized agencies referred to in article 57 of the United Nations Charter, the United States Government should reexamine its policy regarding the United Nations or the specialized agency, as the case may be, and its membership therein."

This Government firmly opposes the seating of representatives of the Chinese Communist regime in the United Nations and the specialized agencies. The President reaffirmed this policy as recently as July 7. United States representatives in meetings of the United Nations and the specialized agencies are actively carrying out this policy. They will continue to do so. In addition, the considered and firm policy of this Government has been made clear to other friendly governments beyond the possibility of any misunderstanding, and we will continue to reiterate our views whenever required. We believe that this course of action offers the best prospect for the continued achievement of our basic policy objective.

If representatives of the Chinese Communist regime should be seated in the United Nations or any of the specialized agencies, it is axiomatic that we would reexamine our policy regarding the organization concerned, in the light of the circumstances then existing. However, we would not think that the policy we have in mind would be promoted by any congressional action which seemed to take it for granted that the Chinese Communist regime would in fact be seated in the various organs of the United Nations.

Sincerely yours,

THRUSTON B. MORTON,
Assistant Secretary
(For the Secretary of State).

I am in full accord with the attitude our Government has taken in its opposition to Communist China. I shall vote in favor of the resolution—House Resolution 627—now under consideration by the House and which reads as follows:

Resolved, That the House of Representatives reiterates its opposition to the seating of the Communist regime in China as the representative of China in the United Nations or any of its specialized agencies and supports the President in his expressed determination to use all means to prevent such representation.

Question of the Week

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. BENDER. Mr. Speaker, can anybody tell us what "peaceful coexistence" means to Moscow?

Public Laws 404 to 423, Inclusive

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 15, 1954

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the reports to my constituents covering Public Laws 404 to 423, inclusive, as follows:

THIRTY-FIRST REPORT ON LEGISLATION OF THE 83D CONGRESS

DEAR FRIEND: As the 83d Congress continues the drive toward an expected adjournment around month-end the number of House Members who have answered all rollcalls (including quorum calls) has been reduced from 9 (of 435) at the close of the first session to 4 at the present time. I am happy that good fortune has permitted your Representative to remain on the list. I thought you would wish it that way.

The number who have answered all calls in the 1953–54 sessions, I am told, is the lowest in the modern history of the Congress, due among other good and valid reasons to the President's congressional luncheons and the trips to Nevada to witness atomic explosions. Important committee assignments at home and abroad necessarily caused others to miss some rollcalls.

Begining where we left off, here are the new laws of the land:

PUBLIC LAW 404

S. 2761, irrigation costs: This is legislation to take care of hardship cases in connection with the Hermiston and West Extension irrigation districts in Oregon. I found the facts interesting; I think you will.

Operation of the Hermiston unit started in 1908. Total repayments on the $2,573,000 cost have been little more than $300,000. The west extension unit was opened in 1917. Cost was $1,137,000; repayments have totaled $86,000. Reason: because of soil conditions, lands reverted to their original condition, covered with sagebrush and greasewood; farmers just could not raise crops to meet required repayments.

Public Law 404, similar to other laws in like situations, adjusts scale of repayments to gear with land productivity. The original act provided for an amortization period of 40 years, later extended to 50 years. Public Law 404 further extends the period to 163 years. At the end of that period slightly less than half a million dollars additional repayments will have been made on both projects, leaving Uncle Sam to hold the bag for close to $3 million. Proving, I would say, that all the millions that go into irrigation do not come out in fertile acres.

The overall record of repayments on irrigation projects in the 17 States where located is reported as good. Some have returned to the Federal Government 100 cents on the dollar, others have gone almost completely sour. This of interest to you since you contribute to the Federal tax dollars that foot the bill when miscalculations and overzeal in the planning result in later busts.

Also you will take local interest and pride that under the direction of Gordon Clapp, M. A. (University of Chicago) in the case of TVA not only has the repayment schedule been met, but payments are far in advance of a schedule requiring complete repayment in 40 years. Furthermore, TVA is returning a 4- to 5-percent yield on the money invested by the Federal Government. That University of Chicago's M. A. in this instance means "money ahead" for Uncle Sam and you, his taxpaying nieces and nephews.

PUBLIC LAW 405

S. 2773, mail distribution from motor vehicles: Envisioned in this law is a future with a post office on motor wheels driving up to your doorstep with your morning mail. At present there are 133 highway post offices distributing mail en route in rural short-haul areas. But existing law prohibited their operation where adequate railroad facilities were available. Public Law 405 leaves it to the discretion of the Postmaster General. Immediate expansion of the motor-vehicle service is in prospect, at first in substitution of branch-line railroads which either have gone out of existence or have greatly reduced train service. If it works, the post office on wheels in big cities like Chicago is among the possibilities.

The railway postal clerks and other postal workers are watching the development with some apprehension. I was present at a meeting of railway postal clerks in Chicago when an accredited representative of the Postmaster General stated it was the thought of his department ultimately to use the railroads only in long-haul operations, otherwise motors and aircraft. The railway postal clerks have rendered a long and honorable service to the Government. It is only fair that in any innovations in the name of progress, economy, and efficiency due respect be shown their right in seniority.

In voting for Public Law 405 it was on the assurance that its administration in the limited area planned would not be permitted to trespass upon the rights of present postal workers.

PUBLIC LAW 406

S. 3090, Falcon Dam on the Rio Grande: Falcon Dam, 75 miles from Laredo, Tex., is a joint multiple-purpose project of the United States and Mexico. It was completed in 1953. This year when devastating floods destroyed 1,500 homes and did vast damage around Laredo the huge reservoir of the dam (storing flood waters for future dry seasons) completely protected the area south of Laredo on both sides of the border.

The project includes one power plant. Two additional plants, one on the American side, one on the Mexican, are near completion. Cost: $47 million, divided equally between the two Governments. The power plants, interconnected, will generate 250 kilowatt-hours annually, subject to equal division.

Public Law 406 provides for the transmission and disposition (under the Secretary of the Interior) of our share of this power. Rate schedules will cover cost of production and amortization of Uncle Sam's investment. Protection against a grab by a private company is in this provision: "Preference in the sale of such power and energy shall be given to public bodies and cooperatives."

Here is a strengthening illustration of how two governments can work together in a joint adventure contributing to the economic development of both countries and in the end realizing the full return of invested capital.

PUBLIC LAW 407

S. 3524, temporary appointments in Navy: During the Korean emergency title III of the Officer Personnel Act of 1947 relating to the advancement of junior naval officers was suspended. Now the Navy plans to go back to that act. Public Law 407 clears the way by classifying some 17,750 naval officers promoted since June 30, 1951, under another act as having been promoted under title III. Passed by consent.

PUBLIC LAW 408

S. 3446, West Point: This authorizes the needed rehabilitation of two barracks at the West Point Academy.

PUBLIC LAW 409

H. R. 107. Fort Buford, N. Dak.: By reason of this legislation the North Dakota State Historical Society will take over part of the site of Fort Buford (trading post in 1774) to restore it to the likeness of old days when troops rode from its enclosure to do battle with hostile redskins. Its proposed restoration follows a popular nationwide trend resulting from auto touring and the love of Americans to visit spots of interest in our national history.

THIRTY-SECOND REPORT ON LEGISLATION OF THE 83D CONGRESS

DEAR FRIEND: Continuing where we left off, here are the new laws of the land:

PUBLIC LAW 410

H. R. 2226, naval civilian employees: This repeals an old law (1902) under which civilian employees of the Navy serving overseas were paid salaries from date of vessel's departure from and arrival at United States ports. Hereafter they will be paid as all other Government overseas employees, from date of leaving their actual homes and arrival at work sites, and vice versa on return. Passed by consent.

PUBLIC LAW 411

H. R. 8487, census of manufactures: This is a good illustration of how the first session of the 83d Congress (1953) made a false showing of economy.

By law a census of manufactures, minerals, and other businesses is required every 5 years after 1949. That made one due in 1954. But the Congress, to make a paper showing of economy, failed to include it in the appropriations for 1953, when the work had to be done.

Public Law 411 authorizes the extension of the time for the census from 1954 to 1955. Result: the money saved one year will be spent the next.

PUBLIC LAW 412

H. R. 6328, Hawaii: Hawaiian Organic Act prohibits any exchange of public lands exceeding 40 acres in area or $5,000 in value. So when the Territory [to encourage citizen farmers and to consolidate its own holdings] wished to swap 288 acres of public lands near Waimea for Citizen Smart's 308 acres, Public Law 412 (authorizing the trade) was necessary.

PUBLIC LAW 413

H. R. 2849, Hawaii: In 1936 the Federal Government gave to the Territorial government of Hawaii some 9 acres at Kahului exclusively for use as a public park. No residences nearby, there is no demand for a park. But business of the port has boomed and there is presently a demand for additional storage and shedded area for increased shipping. Public Law 413 makes the 9 acres available for that purpose by removing the park restriction.

PUBLIC LAW 414

H. R. 5913, second-class mail matter: This simplifies the handling of postage on newspapers and periodicals by repealing an obsolete law (39 U. S. C. 286) requiring the manual affixing of stamps. It will save work and expense for both the postal service and the publishers.

PUBLIC LAW 415

H. R. 5831. Hawaii: Territorial Legislature of Hawaii petitioned the Congress for this legislation authorizing the Hawaiian Homes Commission to exchange lands under its control for other public lands of equal value. The Commission makes homesteads available to native Hawaiians up to 5,000 acres a year.

PUBLIC LAW 416

H. R. 5833, Hawaii: Another law for the Hawaiians. It authorizes the exchange of public lands for private lands needed as the sites for new public schools.

PUBLIC LAW 417

H. R. 6888, Hawaii: Still another Hawaiian measure. This provides for the lease to native Hawaiians of irrigated pastoral lands in lots of from 40 to 100 acres.

UNIVERSITY OF MICHIGAN LIBRARIES

PUBLIC LAW 418

H. R. 6800. Hawaii again: When the Legislature of Hawaii extended an electric light and power franchise on the island of Kauai it had to come to the Congress (under the organic act) for approval.. Public Law 418 O. K.'s the act of the legislature.

PUBLIC LAW 419

H. R. 8092. Philippines: Under Public Law 419 nationals of the Republic of the Philippines coming to the United States as traders and investors will be issued nonimmigrant visas on the basis of a reciprocal agreement granting similar privileges to our nationals.

PUBLIC LAW 420

H. R. 6655, education of the deaf:

Columbia Institution for the Deaf was incorporated by Congress in 1857. It consists of Gallaudet College, the only college in the world exclusively for deaf students, and Kendall School, an elementary and secondary school for the deaf. Although not a Federal instrumentality, it largely is supported by Federal appropriations and by law 1 Member of the Senate, 2 of the House serve on its board of directors.

Public Law 420 changes the name to Gallaudet College (after Rev. Thomas Hopkins Gallaudet, 1787–1851, a clergyman who established the first school for the deaf in America). It also provides a new charter under which the board of directors will have full authority in curriculum and other matters similar to that usually exercised by the boards of private and State universities. The objective is to make Gallaudet College adequate to give the advantages of higher education to applicants from all sections of the country who have no other place to receive college training. With new facilities and improved teaching personnel, as planned, the college is expected to have a standing sufficiently high to become accredited.

This is the character of legislation I especially am happy in supporting with the vote you have delegated me to cast for you.

PUBLIC LAW 421

H. R. 8044, Philippines—hospitalization of veterans: Part of the expense of taking care of hospitalized veterans of the Philippine Army who served with the Armed Forces of the United States in World War II is borne by the United States. A hospital, now under construction, was made possible by a $22,500,000 grant from our Government. Public Law 865 of the 80th Congress (1947–48) authorized an annual appropriation of $3,285,000 to aid the Philippine Government in the care of the veterans. Public Law 421 of this Congress, passed by the House by consent, extends this authorization another 5 years.

PUBLIC LAW 422

S. 1794, care of demented Indians: This authorizes the payment to the South Dakota State Hospital for the Insane of $8,124 for care of demented Indian patients. Through inadvertence authority for hospitalization had not been cleared previously through the Bureau of Indian Affairs, as required, hence the necessity for another law. Passed by consent.

PUBLIC LAW 423

S. 2654, stone quarry in District of Columbia: In 1898 the District of Columbia purchased 17 acres in nearby Maryland for a stone quarry. It has been abandoned for years. Public Law 423 gives the District Commissioners the go-ahead in selling it at public auction to the highest bidder. It required a law of Congress.

Cordially and sincerely,

BARRATT O'HARA,
Member of Congress.

Echo Park Dam—Too Much Heat and Not Enough Light

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. MILLER of Nebraska. Mr. Speaker, it is often said that a little knowledge is a dangerous thing. I know this is true in the field of medicine—it must be true in other problems facing Congress.

The Interior and Insular Affairs Committee, of which I am chairman, is often bombarded with the pros and cons of arguments on many subjects that seem to carry more heat than light. Emotions are easily aroused whenever you discuss the subject of conservation.

I have always been a firm believer in the fact that if the people know the truth, they seldom make a mistake. I believe knowing the truth will make you free. In that spirit I submit certain questions and answers that have been frequently asked on the subject of the Echo Park Dam in the upper Colorado River Basin. As chairman of the committee which is handling this legislation, I have tried to maintain a constructive and objective view of this problem.

I have been convinced of one thing—water is the lifeblood of many communities. With no water, there can be no development of industry or population. I am also convinced that one of the biggest wastes of the resources in this country is the permitting of water to run to the ocean without first being used over and over for power, irrigation, and domestic or industrial use. Communities live or die, grow or remain the same because they either have plenty of water or not enough water.

Mr. Speaker, I am convinced it is time for Members of Congress to talk about the new wealth coming from irrigation projects and the proper use of water instead of how much the projects cost. Water put upon thirsty land produces new wealth, new industry, and, of course, new taxes to help Uncle Sam meet the needs of a growing, dynamic country.

Very few quarrel over the many billions of dollars which are spent for flood control, river and harbor navigation, and agriculture conservation programs. What does it cost Uncle Sam—nearly $7½ billion. This is more than 4 times the amount spent on irrigation and reclamation during the past 50 years. The total cost of navigation and conservation programs is also a sizable amount.

I might remind my colleagues that not 1 cent of this money is returned to the Federal Treasury. However, Federal money invested in irrigation and reclamation is returned to the Treasury. Federal money invested to generate power as incidental to irrigation is returned to the Treasury with interest.

I do not oppose appropriating money for flood control, conservation, and navigation, for they, like irrigation and reclamation, are a vital program of keeping our country strong and prosperous.

Those who fail to interpret the new jobs, the new homes, and the new wealth which comes from irrigation and reclamation are destitute of imagination. Rather than seeing our country grow and prosper, they would prefer to see it remain the same.

The Upper Colorado River Basin is one of the last major reclamation projects which remains undeveloped. It has been found to be economically feasible and the power and water to be made available by its development is critically needed throughout the entire area.

Now, as to the questions on the Echo Park Dam:

1. Question. Will the Echo Park Dam destroy or flood the Dinosaur National Monument?

Answer. No. The Echo Park Reservoir will occupy only 9 percent of the monument area, and this is confined to the bottoms of the canyons that are 3,000 feet deep. Thus, even at the dam site, inspirational values remain relatively unimpaired. The total effect is not to destroy inspirational values since there are literally hundreds of miles of deep colorful canyons remaining in the Colorado River country.

2. Question. Do the dams "invade" the monument and violate national park rights

Answer. No; the Dinosaur National Monument was enlarged to include the Green and Yampa Rivers in 1938. Two years earlier in 1936, Park Service officials promised residents of the area, both in Utah and Colorado, that the enlargement of the Monument would not interfere with the development of power and water projects in the river canyons. Good faith requires that these promises be kept.

3. Question. Will the construction of proposed dams in Dinosaur National Monument doom wilderness areas in America to extinction?

Answer. In its present State only about 3 percent of Dinosaur National Monument is accessible to the general public. The remaining 97 percent is unseen and unknown to the traveling public as a whole.

Construction of the proposed dams, with their resultant lakes and safe waterways, will make the major features of the monument accessible to the public and still preserve large areas as untouched wilderness.

After construction of both Split Mountain and Echo Park Dams only 11 percent of the monument area will be inundated, leaving 8 percent in its present native state.

In the more than 150 national parks and monument areas of the United States are preserved wilderness regions nearly as large as the State of Maine. Canadian national parks preserve an area larger than Scotland or nearly 30,000 miles. The national forests of the United States preserve nearly 20 million acres of wilderness. State parks preserve additional thousands of acres. Besides all these vast wilderness regions, hundreds of thousands of square miles of untamed nature "run wild" outside these restricted areas.

Pioneers have struggled and died to tame a small percentage of this boundless area in order that the frontiers of civilization might be advanced. A few needed dams should not be looked upon as a national calamity. They are a means of securing hard won frontiers and pave the way for expanding populations. They provide the means for meeting acute human needs of these expanding populations.

4. Question. Is it true that the Dinosaur National Monument belongs to all the people of the United States, and, that, therefore, it cannot be used?

Answer. No. Admittedly, under its status as a national monument, it does belong to

citizens of the United States. However, opponents of Echo Park Dam derive from this the absurd notion that it may not be used by local families thirsting for its waters in a desert area. Use of the monument for water-storage purposes was definitely promised at the time of its enlargement. Faith in and reliance on this promise has been demonstrated by (1) uncontested water filings involving dams near the Split Mountain and Echo Park damsites made in 1939 after the monument enlargement; (2) permission granted to the Bureau of Reclamation engineers to make surveys and core drillings of the damsites within the monument; (3) testimony of local Utah and Colorado citizens before the Secretary of Interior in 1950 and at hearings before Committees of Congress early in 1954; and (4) letters, testimony and expressions of high officials of the Department of Interior of both the previous and present administrations.

This moral commitment to the people must be kept.

5. Question. Will the Echo Park Dam cost the taxpayers money?

Answer. No. Funds used to build the dams are good investments by the Federal Government. All costs of Echo Park Dam are repayable together with interest on the power investment. Power revenues will also aid in paying for irrigation features of participating projects, after which millions of dollars per year will flow into the General Treasury of the United States.

6. Question. Do these dams mean Federal control and violate the principles of private enterprise?

Answer. No. On the contrary, the dams will encourage private enterprise by providing water and power for agriculture, municipal, and industrial use. Representatives of both private and public enterprise heartily support them.

7. Question. Will boating, now enjoyed by the general public, be destroyed?

Answer. No. The risky, rapids-shooting now possible on some stretches of the river is expensive and dangerous, and, is, therefore, not available to the general public. After completion of Echo Park Dam, a beautiful still-water reservoir for safe and economical boating will be enjoyed by great numbers of people instead of by just a select few.

8. Question. Why should Echo Park Dam be constructed?

Answer. Because—

(a) It is so located as to capture the waters of two rivers, the Yampa and the Green.

(b) It is needed to fulfill interstate compact obligations.

(c) It reduces water losses to a minimum.

(d) It is more efficient than any proposed alternatives.

(e) It will open up and stimulate the development of a vast recreational area now virtually closed to the general public.

9. Question. Are alternate damsites outside the monument just as good?

Answer. No. Many years of investigations by competent engineers have shown that there are no alternate sites or combination of sites that will provide the necessary river regulation, low cost power within reach of upper basin load centers, and a minimum of water loss by evaporation. "Alternate sites" being proposed are not substitutes for Echo Park because they, themselves, are integral parts of the overall plan of development of the basin and will be needed in addition to Echo Park in due course.

10. Question. Are increased losses of water by evaporation from proposed alternative reservoirs of little consequence as claimed by opponents to Echo Park Dam?

Answer. Any losses of water that can be prevented are of great consequence in an area which never will have a sufficient supply to adequately develop its natural resources. Even the most rabid opponents of Echo Park Dam admit that their proposed alternatives involve an increased loss of water sufficient to care for the acute domestic water needs of 200,000 people. Are these people of little consequence?

11. Question. Will the lower Colorado Basin States and California be hurt by the building of the Echo Park Dam?

Answer. No. Holding the excess waters back during a rainy season should make more water available instead of less. There is a contract to supply 75 million acre-feet of water over a 10-year period at Parker Dam. Holding back this extra water will make this possible.

In conclusion, Mr. Speaker, I am convinced that the building of this dam will attract many thousands of people instead of a few hundred. Roads will be built to make the place accessible. We, who have visited the Hoover Dam area, realize there would be no attraction now unless the dam had been built to hold the water back and make it more accessible to the millions who may now enjoy this area.

There are hundreds of canyons in the Rocky Mountain region which are unexplored that nature lovers can still enjoy.

Mr. Speaker, I believe it is in the interest of our America of tomorrow to develop such areas as the Echo Park Dam. A growing country must not falter in developing and preserving for future generations the assets that it possesses.

To Assist Local Communities in Building Modern Industrial Plants in Labor-Surplus Areas

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. HYDE. Mr. Speaker, under permission granted, I insert in the CONGRESSIONAL RECORD a statement which I sent to the chairman of the Public Works Committee with respect to H. R. 9137, a bill to authorize Federal loans to assist local communities in building modern industrial plants in labor-surplus areas.

The statement follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 2, 1954.

Hon. GEORGE A. DONDERO,
Chairman, Public Works Committee,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: May I take this opportunity to request action on H. R. 9137, a bill to authorize Federal loans to assist local communities in building modern industrial plants in labor-surplus areas.

I have a labor-surplus area in my congressional district, namely Allegany County. This community has been listed as a distress area for some time and is urgently in need of new industry. There is a large surplus of highly skilled labor in this community which can and should be utilized by some progressive industry.

It has been my experience that in a community the size of Cumberland, Md., the procurement of sufficient capital to provide the required facilities is a major obstacle in attracting new industries. I believe that this bill offers an excellent solution in overcoming this financial obstacle. We know that when hardship areas such as Cumberland are given a boost, they react to the benefit of other areas; hence, there should be no objection to the bill.

The only change we suggest in the bill is a provision to insure that proper recognition be given the local industrial development groups without any Federal interference of appointment. I think it should also be made clear in the bill that a new industry would not have to be located within the city limits of the city which is recognized as eligible for assistance, but that such a new development could be located at least within a reasonable radius of the city limits.

I shall appreciate it if the Public Works Committee could consider this bill as promptly as possible. With kind regards, I am

Sincerely,

DEWITT S. HYDE.

Notice of Further Consideration by Committee on Interstate and Foreign Commerce of Health Reinsurance Plan of President Eisenhower—It Is Not Dead

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. WOLVERTON. Mr. Speaker, I am convinced from the response that has come from all over the Nation that the people are back of President Eisenhower's demand, that Congress provide a health plan of insurance that will enable the people to obtain adequate insurance, both as to coverage and rates, and that will enable them to meet the high cost of present day medical and hospital care.

The President's plan had a setback in the House on Tuesday of this week. I agree with the President that it was only a temporary delay. The bill is a well considered and carefully worked out plan. It has no element of socialized medicine in it. It is simply a plan to encourage insurance companies to expand the coverage of their present policies by including long-term illnesses, such as cancer, heart disease, tuberculosis, and other diseases as against which there are no available policies issued at this time by any insurance companies. Health insurance of this kind will help families to carry the terrific costs that must be met in these so-called long-term illnesses. The costs are so burdensome today, even as to the ordinary illness as distinct from long-term illness, that it wrecks the financial structure of the average family.

This bill is entirely voluntary in character. There is no element of compulsion, hence in no way socialistic in character. It does not even have within it anything that would tend to, or lead to, socialized medicine.

It is purely and simply an insurance bill. It is drawn along lines of good insurance principles. It has the endorsement of many of the outstanding insurance executives of the Nation who

met in consultation with President Eisenhower, and, likewise, it has the support of the most substantial insurance companies in the country.

The opposition of the American Medical Association to the bill was without any justifiable basis whatsoever. In fact, it had the support of some of the most outstanding and forward looking physicians in the Nation. It in no way was detrimental to the best interests of any practicing physician. In fact it would be of vast help to their profession. The insurance policy would provide funds from which physicians' fees and hospital and other medical charges would be paid. Wherein does this interfere either with rights of the physician or the right of patients to have a free choice of physician? Instead of a detriment it would be a great benefit to the physician. It is for these reasons, namely, absence of any form of compulsion, and an assurance that money would be available to pay fees and carry the usual medical costs, that physicians who have studied the plan are in favor of it. The only physicians who indicated opposition are those who have not read the bill, or who have been willing to follow blindly the unfounded, untruthful, and deceptive propaganda that has been put out by selfish interests who are opposed for other than justifiable reasons.

It is time that the members of the American Medical Association took a look at the proposed legislation which is a part of President Eisenhower's health program—a program that has been and is being worked out with the greatest care by the efficient and capable Secretary of Health, Education, and Welfare, Oveta Culp Hobby.

The American Medical Association that comprises 140,000 out of 220,000 physicians throughout the Nation is a fine and worthwhile organization with ethics of a high order. For this reason it should not permit a few executives at the top to assume to speak for the rank and file of the membership. It has been evident to me many times, and, in many ways by personal conversation with practicing physicians, and otherwise, that the pronouncements and propaganda in the name of AMA did not represent the views of the great body of fine physicians, members of the organization and otherwise, who have in the past and will continue to render in the future noteworthy and beneficial service to our people. The opposition of AMA to anything and everything that has been proposed by way of additional facilities and otherwise, for the health benefits of our people, is not in accord with the progressive spirit that has driven the medical fraternity to greater and greater heights and achievements. It is time that physicians study for themselves the plans and programs of this administration to improve the health and welfare of our people. This administration and each of us who are a part of it are keenly aware of the need that exists today, and, we are determined to prevent socialized medicine even getting a foothold, and, furthermore, we believe we can meet and solve the existing need in a truly American way that recognizes the American principle of free enterprise and freedom of choice—reinsurance health.

The bill which the American Medical Association through its executive officers has opposed does nothing more than recognize and make effective in the field of medicine the same principle that underlies the Federal Deposit Insurance law that guarantees bank deposits, the law that guarantees loans of Federal Housing and the many other similar laws. It is a well recognized and established principle not only in Government, but, also in the everyday transactions in commercial and industrial activities. All such have worked satisfactorily. So would the President's reinsurance bill, designed to encourage the writing of health policies that will cover the ills of mankind and help our people meet the staggering cost incident to illness.

Yesterday, July 14, 1954, President Eisenhower expressed, at his press conference, his views on the subject of his Reinsurance Health Plan. He left no doubt of his conviction that it is a good law and that he will continue his fight for its enactment, notwithstanding the temporary setback that it had in the House of Representatives on last Tuesday.

I include the remarks that President Eisenhower made on the above occasion. They are as follows:

Ladies and gentlemen, in the campaign I made two promises that have to do with the health of the American people. I said, first, that I was opposed to socialized medicine and would use every single attribute and influence of the Presidential office to defeat any move toward socialized medicine.

I also said in talking about the great deficiencies in medical care in this country and particularly for people who can't afford the expensive type of service that is now available to us in our best hospitals, that something must be done.

We were going to study ways and means to bring better medical care to the rural areas and bring good and fine medical care within reach of the average household budget. This is what we have been trying to do.

I am sure that the people that voted against this bill just don't understand what are the facts of American life.

I don't consider that anyone lost yesterday except the American people. There is nothing to be gained, as I see it, by shutting our eyes to the fact that all of our people are not getting the kind of medical care to which they are entitled.

I do not believe there is any use in shutting our eyes to the fact that American people are going to get that medical care in some form or other. As I say, I am the last one to believe that the answer lies in socialized medicine, and I am trying to provide a plan. If they want to amend the plan or to perfect it in some way, to go ahead; but when the opponents of the plan get up in the House and say that this is only an effort of the Republicans to redeem our campaign promise, I plead guilty.

Of course I am trying to redeem my campaign promises, and I will never cease trying.

This is only a temporary defeat. This thing will be carried forward as long as I am in this office.

It is the duty of everyone, Members of Congress, and individual citizens also, to support this noble effort of our President to improve the health of the Nation, and make possible the means that will enable our people to carry the cost of illnes in a less burdensome way than now prevails.

To the end that the bill shall have continued and further attention it is my intention to bring it again before the Committee on Interstate and Foreign Commerce of the House on Tuesday, next, July 20, 1954.

The plan is good. It deserves to live and not die.

The Mexico High School Dixie Grays Band

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. CANNON. Mr. Speaker, one of the happy features of the annual convention of the Lions International, meeting this year in New York City, was the invitation extended to high-school bands in various parts of the country to attend and participate in the convention program.

Among the bands which received the coveted invitation was the Dixie Grays Band, the famous high-school band of Mexico, Mo.

The band is under the experienced leadership of Mr. John Willer, band director of the music department of the high school. The trip is sponsored by the Lions Club of Mexico in cooperation with the State Lions organization, and is financed by the Lions with the aid of the Band Mothers Club, the A. P. Green Fire Brick Co., and the Mexico Refractories Co. The trip is under the capable direction of Mr. Robert H. Finley, former mayor of Mexico and vice president and general manager of the Northeastern Missouri Greyhound Lines, Inc., and adheres to a split-second schedule throughout.

The party, accompanied by Director and Mrs. Willer, Mr. and Mrs. R. C. Romdall, and Mr. and Mrs. Richard Kinne as chaperones, left Mexico the morning of July 4 and arrived in New York City July 6, where it played in Madison Square Garden for the opening of the Lions International convention and participated in the huge parade of July 7 down Fifth Avenue.

Most of the States of the Union were represented in the 30-block-long parade which also included bands from Alaska, Australia, Bermuda, the Bahamas, Canada, China, Colombia, Cuba, Ecuador, Hawaii, British Honduras, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama, Bolivia, Chile, Portugal, Puerto Rico, Samoa, Sweden, Switzerland, West Indies, Tangier, and Venezuela.

The vast meeting, so efficiently timed and directed, served as a remarkable example of international cooperation and emphasized the worldwide interest in music and the cultural training of the young people of all lands in student organizations.

The band completed its New York schedule July 8 and is now en route home and is sightseeing in Washington today, where it is being entertained by Senator

SYMINGTON and the Senator's administrative assistant, Mr. Stanley R. Fike.

The personnel of the band and those accompanying it include: Rose Tratchell, Betty Martin, Donna Davis, Marilyn Morris, Linda Crump, Margaret Dickey, Nancy Harper, Judy Cooper, Dorothy Allen, Doris Harelson, Marjorie Farrah, Marjorie Merry, Judy Oiler, Barbara Durham, Jennie Norfleet, Mary Margaret Smith, Patsy Bonnell, Shirley Smith, Pricilla Aird, Donna Sapp, Betty Wray, Betty Payne, Glenda McIntire, Patsy Neal, Nina Harris, Marietta Tinsley, Warren Marinaccio, John Ferris, Hadley Stacey, Russell Sword, Jim Harrison, Gerald Keithley, John Precht, Charles Knox, Ronnie Curtis, James Clark, Jerry Romdall, Charles Inlow, Rogers Adams, John Bollinger, Kenneth Walker, Jim Kennedy, Richard Phillips, Ronnie Henderson, Larry Woodson, Larry Davis, Ned Dermody, Howard Hinze, Larry Niedergerke, Gordon Pitts, Donald Lotton, Ronnie Sapp, Larry Harvey, Donald Bonney, Carl Altrogge, Merril Gates, Larry Kaizer, James Breneman, Jerry Shay, C. J. Phillips, Delbert Clark, Donald Smith, Kit Bond, John Hopkins, Jim Grainge, Olan Tratchell, Gary Singleton, Jim Atkinson, Donald Ayres, Bill Young, Ronald Hampton, Donald Hampton, Mr. and Mrs. John Willer, Mr. and Mrs. R. C. Romdall, and Mr. and Mrs. Richard Kinne.

Farm Surplus Legislation

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. VURSELL. Mr. Speaker, the farmers of the Nation will be glad to know that we recently passed the surplus-property disposal bill—S. 2475—which will increase the sale of our surplus farm commodities to foreign countries and help to relieve the depressing effect of farm surpluses overhanging the farmers' market.

The bill authorizes the President to use a $1 billion revolving fund over the next 3 years to increase the sale of surplus farm commodities to foreign countries, and, when necessary, to accept local currencies of other nations, and also to barter farm commodities for strategic materials needed for the United States.

This legislation also permits the President to use $300 million in the 3 years to furnish emergency assistance on behalf of the needy people of the United States, and to the free peoples of other nations, in order to meet famine and urgent relief requirements.

Thus, we are trying to dispose of a minimum of $1,300,000,000 or more of surplus farm commodities now owned and stored by the Government.

This legislation should greatly increase sales and exports of agriculture commodities to foreign nations. It will help to remove the roadblock of trade between the United States and other free nations by making it possible to accept their currencies during the period when they are short of American dollars. We, in turn, can use their currency with other nations in payment for import goods to our country or in payment for some of our military operations in foreign countries.

It further provides that these surplus farm products can now be sold on the world market, which is some less than our export prices, and it should greatly help in selling more farm products to the nations of the world.

This practical emergency approach in the interest of the farmers is the most advanced step yet any Congress has made to increase our export and sale of surplus products abroad. It is bound in time to be of great benefit to the farmers, as it will reduce our very large surpluses of farm products that are costing the Government tremendous sums for storage, and are depressing, here at home, farm prices.

Public Laws 424 to 436, Inclusive

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 15, 1954

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include my report on Public Laws 424 to 436, inclusive, to my constituents in the Second District of Illinois, as follows:

THIRTY-THIRD REPORT ON LEGISLATION OF THE 83D CONGRESS

DEAR FRIEND: Continuing where we left off:

PUBLIC LAW 424

S. 2657; unlicensed practice in District: Another District of Columbia measure, increasing the penalties for the unlicensed practice of the healing art.

PUBLIC LAW 425

S. 3050, tobacco marketing penalty increase: Tobacco growers asked Congress to crack down on cheaters who produce above their quotas while benefiting from price stability maintained by farmers who do cooperate. Public Law 425 increases to 50 percent (of the market price) the penalty on marketing in excess of quotas.

PUBLIC LAW 426

S. 2225, revested public lands in Oregon: This will interest you if I can tell it briefly. In 1866 Congress gave a generous land grant to the Oregon & California Railroad. In 1916 it revested the unsettled portion. This included 472,000 acres, all timberland, part within the boundaries of the national forests, and managed to conform with the perpetual sustained-yield program. Since 1925 there has been a jurisdictional dispute between the Department of Agriculture and the Department of the Interior, now happily terminated by Public Law 426. The lands will continue to be administered by the National Forest Service, but receipts will go into a special fund, 25 percent covering cost of administration, 75 percent going to 18 Oregon counties. The law conforms with a 1954 decision of the United States Court of Appeals (D. C.) directing a payment of $7 million in accumulated funds to the fortunate counties of Oregon.

PUBLIC LAW 427

S. 1004, rehabilitation of ex-convicts: This will permit the Commissioners of the District of Columbia under proper circumstances to employ deserving ex-convicts for whom the Board of Parole with difficulty is seeking employment in its rehabilitation program.

PUBLIC LAW 428

H. R. 8583, appropriations for executive offices: Appropriation measures will be covered in a separate and later report.

PUBLIC LAW 429

H. R. 1005, Fort Union National Monument, New Mexico: Old Fort Union, part of the glory of old of the Santa Fe Trail when the Great Southwest was growing up, is deteriorating rapidly, due to the elements, grazing cattle and other causes. Public Law 429 preserves the ruins of the historic fort by the establishment of a national monument. The Union Land and Grazing Co. will donate the land (1,000 acres) and the State of New Mexico will build and maintain a highway. Touring automobilists, jot down.

Old Fort Union is linked with the names of such heroes as Kit Carson, U. S. Grant, Robert E. Lee, Phil Sheridan, Longstreet. From 1851 to 1891 many young lieutenants fresh from West Point were broken in at Fort Union.

PUBLIC LAW 430

H. R. 3097, study of grape culture: For use exclusively for agricultural research (grape culture) Public Law 430 conveys to the University of California 20 acres of land in Napa County, Calif.

PUBLIC LAW 431

H. R. 2566, termination of Contract Settlement Act: This was signed by the President on June 28, 1954. It provides a cutoff date 180 days thereafter for filing of claims under the Contract Settlement Act of 1944, a measure waiving formal and technical defects in war contracts.

PUBLIC LAW 432

H. R. 3986, International Peace Garden: This increases the authorized appropriation for the International Peace Garden in North Dakota (2,100 acres on the American Canadian international boundary near the geographical center of North America) from $100,000 to $200,000. The peace garden is maintained by the North Dakota State Historical Society as a memorial to the peaceful relations between the peoples and Governments of the two countries. Canada bears its share of the cost.

PUBLIC LAW 433

H. R. 6173, Southern Ute Indian Trail: Southern Ute Tribe of Indians in Colorado, numbering 540 persons, have $5,900,000 on deposit, settlement for tribal lands taken over by the United States. Public Law 433 authorizes, among other things, a $1,000 per capita payment under the jurisdiction of the tribal council to enable the tribal members to improve and make more profitable their small farms.

PUBLIC LAW 434

H. R. 8357, ⅝-bushel basket: Housewives, please note. Public Law 434, urged by some fruitgrowers, legalizes a new size basket, one with a content of three-eighths of a bushel. Previously among the sizes legal under the Standard Container Act of 1928 there was an eighth bushel, a quarter, and a half bushel. Congressman PETER MACK, JR., of Illinois, a member of the Committee on Interstate and Foreign Commerce, made a gallant but unsuccessful fight in committee and on the floor of the House against this measure. I voted with MACK. The difference between a three-eighths bushel basket and one with a half-bushel content would not be readily detected. Advice to the housewives in the Second District: Keep your eyes open; Public Law 434 has legalized a size with which

you have not been familiar. A bad law, I think. I am glad to have the opportunity in these reports of forewarning you; makes the labor entailed seem worth while.

PUBLIC LAW 435

H. R. 8456, Memorial Hospital at Gulfport: This conveys to the city of Gulfport, Miss., for use in the Memorial Hospital the dispensary of the Gulfport Naval Training Station no longer needed by the Armed Forces.

PUBLIC LAW 436

H. R. 8933 Coosa River development: It is said that the Coosa River in Alabama and Georgia is the second greatest undeveloped waterway in America. In 1945 the Rivers and Harbors Act provided a comprehensive plan for the development of the river by the United States Army Engineers. But Congress continued year after year to drag its feet in the way of necessary appropriations, just as it has been doing with Calumet-Sag.

Public Law 436, introduced by all Alabama Members of Congress including Senator SPARKMAN, permits private capital (Alabama Power Co.) to step in and do the job at an expenditure of $100 million under the jurisdiction of the Federal Power Commission and checking by the Corps of Army Engineers.

The company first will build a flood-control dam, then other dams for hydro-electric power. Some, including your Representative were fearful of the measure as a dangerous precedent; finally reluctantly acquiesced because (a) immediate need of power for industrial growth and (b) bill had support of outstanding friends of TVA in both bodies.

Imports of Foreign Oil

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 15, 1954

Mr. VURSELL. Mr. Speaker, unless action is taken by the Congress or some power is exerted by the executive department of the Government, we will add to the present surplus of farm commodities a supply of oil commodities, and, in fact, have a tremendous surplus of oil commodities on hand now.

Time has proven that we should have passed legislation when it was before the last session of Congress to limit oil imports that are flooding the Nation, causing us to cut back and to continue to cut back our domestic productive capacity, and at the same time crowding our storage capacity, which has brought about a situation where the pipelines are reducing their purchase of oil, in some instances, by 30 percent, which has caused a reduction of crude oil, in some instances, of 12 cents per barrel, and is throwing out of work thousands of men in southern Illinois and the Nation, many of whom will have to revert to unemployment compensation. Their earning power is stopped, and with it the taxes the Government would receive if these men could remain employed.

This condition has been brought about by a few American oil companies bringing in oil from the Middle East and other places, which is working a great hardship on the small independent operators as well as doing great damage to the economy of the various States and the Nation.

In 1949 imports of foreign oil averaged about 784,000 barrels a day. That is as much oil as should be permitted to come into this country daily at the present time, yet, these imports have increased to one million barrels of foreign oil a day.

It is the responsibility of the Congress and the executive department to use whatever means they have to reduce foreign oil imports at the earliest possible date, to a reasonable level.

Mr. Speaker, these excess imports have created a very serious condition in the oil industry in the entire nation. I have in my hand two telegrams recently received which I am including in the RECORD. These will give you some idea of the condition that has been brought about among the independent oil producers in my State of Illinois, and may I say, this same condition is present in Indiana, Kentucky, and generally among the independent producers, and major producers as well, throughout the Nation:

MOUNT CARMEL, ILL., *July 21, 1954.*

Hon. CHARLES W. VURSELL,
House of Representatives,
Washington, D. C.:

The independent oil producers of Illinois met spontaneously this week at Fairfield, Ill., alarmed and much disturbed over the recent cutback or proration and reduction of price by two of the largest purchasers of crude oil in the basin. This gathering represented 50,000 barrels daily oil of the total 180,000 barrels produced in the State of Illinois. A committee of nine, including myself, was appointed to contact our representatives in Washington, including the President, calling to their attention the alarming and serious situation confronting us.

I was likewise appointed chairman of a special committee from our Rotary Club for a mass meeting with other civic clubs and chambers of commerce who are disturbed along with farmers and land owners. The entire business of the State and Nation will be seriously affected unless some means of relief is immediately obtained to help this situation and protect us against import oil and import buyers flooding our market to the detriment of the entire Nation.

We here cannot be compared in many respects with Western States where they primarily have large ranches and leaseholds as compared with our small farms with low oil reserves and an average production of seven barrels per day per well in Illinois, and with the drilling of each well committing us to drill on the small adjacent farms to protect them against drainage, we certainly should not be called upon to stand proration. Under such circumstances, we cannot carry out our commitments and obligations under this proration and the condition can easily become disastrous.

I know that our representatives in Washington with the aid of the good offices of the President should be able to remedy this situation. The oil operators asked for 50 percent reduction in import oil instead of the steady increase which we have been getting, which will greatly relieve our serious situation and the present national economy.

If it would help our cause to show the seriousness of this present situation, you can be furnished with at least 100,000 immediate spontaneous signatures to telegrams, letters, or petitions showing that this entire community is up in arms and at the stage of demanding militant action.

The school boards have just informed me that this reduction will greatly decrease their tax revenue, thereby impairing the present building program to replace the now extremely inadequate school facilities.

J. ROY DEE,
Member of the Committee, of the Combined Organizations of Oil Producers.

CARMI, ILL., *July 23, 1954.*

Congressman CHARLES W. VURSELL,
House Office Building,
Washington, D. C.:

Our local economy is seriously affected by recent curtailment of oil production. Fifty percent of local commerce is dependent upon the oil industry. We are not begging for subsidies of any kind, but are aware of the serious domestic results of imports of foreign oil. As representatives of the commerce, industry, and welfare of White County, we urge congressional action to curb imports of oil.

CARMI CHAMBER OF COMMERCE,
GEORGE H. SCHANZLE, *President.*

SENATE

FRIDAY, JULY 16, 1954

(Legislative day of Friday, July 2, 1954)

The Senate met at 10 o'clock a. m., on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

Lord God Almighty, early in the morning our song shall rise to Thee. Only when our vision is cleansed and corrected by far horizons can we see the transient in the light of the everlasting. Without a sense of Thy presence in this world of change and decay, fear of failure and of the unknown future haunts our hearts. Only at the springs of Thy abiding reality we keep alive our faith in values that are permanent and in the kindly light behind all shadows.

Send us forth to the duties of this day with serenity and calm to meet an agitated world with an unruffled kindness that is strength and an inner candor which is the courage of the soul. In the dear redeemer's name we ask it. Amen.

THE JOURNAL

On request of Mr. KNOWLAND, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, July 15, 1954, was dispensed with.

COMMITTEE MEETING DURING SENATE SESSION

Mr. KNOWLAND. Mr. President, after consultation with the minority leader, I ask that the Subcommittee on Rules of the Committee on Rules and Administration be permitted to meet during the session of the Senate today.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. KNOWLAND. Mr. President, I ask unanimous consent that immediately following the quorum call there may be the customary morning hour for the transaction of routine business, under the usual 2-minute limitation on speeches.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. KNOWLAND. I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the call of the roll be rescinded.

The PRESIDING OFFICER (Mr. BUTLER in the chair). Without objection, it is so ordered.

Morning business is in order, under the 2-minute limitation.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

PROPOSED AWARD OF CONCESSION CONTRACT, GRAND TETON NATIONAL PARK, WYO.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed award of a concession contract to operate a general store in Grand Teton National Park, Wyo. (with accompanying papers); to the Committee on Interior and Insular Affairs.

PURCHASE OF BONDS TO COVER EMPLOYEES OF POST OFFICE DEPARTMENT

A letter from the Postmaster General, transmitting a draft of proposed legislation to provide for the purchase of bonds to cover postmasters, officers, and employees of the Post Office Department, contractors with the Post Office Department, mail clerks of the Armed Forces, and for other purposes (with an accompanying paper); to the Committee on Post Office and Civil Service.

REPORT ON MAINTENANCE OF GOVERNMENT-OWNED RUBBER-PRODUCING FACILITIES

A letter from the Executive Director, Rubber Producing Facilities Disposal Commission, Washington, D. C., transmitting, pursuant to law, a report on repairs, replacements, additions, improvements, or maintenance of the Government-owned rubber-producing facilities, prepared by the Reconstruction Finance Corporation, the operating agency, for the period in the fiscal year 1954 ending May 31, 1954 (with an accompanying report); to the Committee on Banking and Currency.

REPORT ON NUMBER OF AIR FORCE OFFICERS ASSIGNED TO DUTY AT THE SEAT OF GOVERNMENT

A letter from the Director, Legislative Liaison, Department of the Air Force, reporting, pursuant to law, that 2,582 officers of the Air Force were assigned to duty in the executive element at the seat of Government; to the Committee on Armed Services.

REPORT OF PROCEEDINGS OF SPECIAL MEETING OF JUDICIAL CONFERENCE

A letter from the Chief Justice of the United States, transmitting, pursuant to law, a report of the proceedings of a special meeting of the judicial conference of the United States, held at Washington, D. C. April 15–16, 1954 (with an accompanying report); to the Committee on the Judiciary.

AUDIT REPORT ON FISH AND WILDLIFE SERVICE

A letter from the Acting Comptroller General, transmitting, pursuant to law, an audit report on the Fish and Wildlife Service, Department of the Interior, for the fiscal year ended June 30, 1953 (with an accompanying report); to the Committee on Government Operations.

RESOLUTIONS OF NEW ENGLAND REGION OF HADASSAH

Mr. SALTONSTALL. Mr. President, on behalf of myself, and my colleague, the junior Senator from Massachusetts [Mr. KENNEDY], I present for appropriate reference, and ask unanimous consent to have printed in the RECORD, two resolutions adopted at the recent conference of the New England Region of Hadassah, of Boston, Mass., relating to aid to Israel and the shipment of arms to Iraq.

There being no objection, the resolutions were referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

GRANT IN AID

Whereas the United States Government has given grant in aid to Israel for the past few years, which has contributed greatly to the economic stability of that new democracy; and

Whereas the administration has recognized that the Israeli Government has taken extraordinary measures to put its economy on an orderly basis; and

Whereas the economic assistance to the whole Middle East has raised the standard of living and thus strengthened the economies in these countries and demonstrated that this is the best way to fortify the free world and win friendship for America: Therefore, be it

Resolved, That the New England Region of Hadassah in conference assembled at Magnolia, Mass., June 1, 2, and 3, 1954, urges Congress to continue aid to Israel along the same levels which America has given in the past so that Israel's economic independence can be assured.

SHIPMENT OF ARMS TO IRAQ

Whereas the United States Government in agreement with the Government of Iraq has made arrangements to ship arms to that country; and

Whereas Iraq is the only country in the Middle East which does not have an armistice agreement with the state of Israel; and

Whereas the United States Government has not made it a condition that Iraq initiate peace talks with Israel: Therefore be it

Resolved, That the New England Region of Hadassah in conference assembled at Magnolia, Mass., June 1, 2, and 3, 1954, views with alarm and deep concern any shipments of arms to Iraq or any country in the Middle East without the mandatory condition of peace talks with Israel.

LOWERING OF RETIREMENT AGE FOR SOCIAL SECURITY BENEFITS—LETTER

Mr. SALTONSTALL. Mr. President, on behalf of myself, and my colleague, the junior Senator from Massachusetts [Mr. KENNEDY], I present for appropriate reference, and ask unanimous consent to have printed in the RECORD, a letter from Theodore A. Cote, adjutant, Franco-American War Veterans, Inc., Department of Massachusetts, embodying a resolution adopted by that organization assembled in convention at Salisbury Beach, Mass., favoring the enactment of legislation to lower the retirement age from 65 to 60 years for social security benefits.

There being no objection, the letter was referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

DEPARTMENT OF MASSACHUSETTS,
FRANCO-AMERICAN WAR VETERANS, INC.,
New Bedford, Mass., June 14, 1954.

Hon. LEVERETT SALTONSTALL,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: The Franco-American War Veterans, Inc., Department of Massachusetts, in convention assembled at Salisbury Beach, Mass., on June 4, 1954, adopted unanimously the following resolution with a directive that a copy be sent to you:

"Whereas many veterans of World War I are between the ages of 60 and 65; and

"Whereas no national emergency exists requiring more manpower in our defense establishments: Be it

"*Resolved*, That this convention go on record as approving legislation, now, being considered in Washington, D. C., recommending the lowering of the retirement age for social-security benefits from 65 to 60; be it further

"*Resolved*, That copies of this resolution be forwarded to all Senators and Representatives from the Commonwealth of Massachusetts."

It is hoped that you will favor such a change.

THEODORE A. COTE,
Adjutant
(For the Department).

PUBLIC SCHOOL CONSTRUCTION ACT OF 1953—MESSAGE AND TELEGRAM

Mr. WILEY. Mr. President, I have received from the Wisconsin Congress of Parents and Teachers a message with regard to legislation offered by our colleague, the distinguished Senator from Kentucky [Mr. COOPER], entitled "The Public School Construction Act of 1953."

I also have the text of the message in the legislative action program of the National Congress of Parents and Teachers as a whole on this same significant subject.

I send to the desk now the brief reference in that overall action program of the national PTA, as well as the telegram which I received from the legislative chairman of the Wisconsin PTA's.

I ask unanimous consent that they be printed at this point in the RECORD and be thereafter appropriately referred.

There being no objection, the message and telegram were ordered to lie on the table and to be printed in the RECORD, as follows:

ITEM 3A OF NATIONAL PTA LEGISLATIVE ACTION PROGRAM

SCHOOL BUILDING CONSTRUCTION

School enrollments continue to make headlines, and the peak has not been reached. Every State faces building shortages, makeshift classrooms, and unsafe structures. A national emergency is upon us. Emergencies require special consideration. Legislation to help States provide these necessary classrooms is a "must." Children's needs can't wait.

MADISON, WIS., *July 15, 1954.*
Hon. ALEXANDER WILEY,
Senate Office Building:

The Wisconsin Congress of Parents and Teachers most urgently request your support of emergency school construction act of 1954, S. 2601. Educational opportunity for children and youth imperative. Nationwide need for school construction most critical.

Mrs. GLENN F. OLWELL,
Legislative Chairman, Wisconsin Congress of Parents and Teachers.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BUSH, from the Committee on Public Works:

H. R. 3300. A bill to authorize the State of Illinois and the Sanitary District of Chicago, under the direction of the Secretary of the Army, to help control the lake level of Lake Michigan by diverting water from Lake Michigan into the Illinois Waterway; with amendments (Rept. No. 1815).

By Mr. MARTIN, from the Committee on Public Works:

S. 2317. A bill authorizing the modification of the existing project for navigation on the Delaware River, Pa., N. J., and Del.; with amendments (Rept. No. 1817).

By Mr. SALTONSTALL, from the Committee on Armed Services:

H. R. 9678. A bill to promote the security and foreign policy of the United States by furnishing assistance to friendly nations, and for other purposes; without additional amendment (Rept. No. 1816).

CITATION OF ALBERT SHADOWITZ FOR CONTEMPT OF SENATE—REPORT OF A COMMITTEE

Mr. McCARTHY. Mr. President, from the Committee on Government Operations, I report an original resolution, citing Albert Shadowitz for contempt of the Senate, and I submit a report (No. 1812) thereon.

The PRESIDENT pro tempore. The report will be received, and the resolution will be placed on the calendar.

The resolution (S. Res. 280) was placed on the calendar, as follows:

Resolved, That the President of the Senate certify the report of the Committee on Government Operations of the United States Senate as to the refusal of Albert Shadowitz to answer questions before the Senate Permanent Subcommittee on Investigations, said refusal to answer being pertinent to the subject matter under inquiry, together with all the facts in connection therewith, under the seal of the United States Senate to the United States attorney for the southern district of New York, to the end that the said Albert Shadowitz may be proceeded against in the manner and form provided by law.

CITATION OF CORLISS LAMONT FOR CONTEMPT OF THE SENATE—REPORT OF A COMMITTEE

Mr. McCARTHY. Mr. President, from the Committee on Government Operations, I report an original resolution, citing Corliss Lamont for contempt of the Senate, and I submit a report (No. 1813) thereon.

The PRESIDENT pro tempore. The report will be received, and the resolution will be placed on the calendar.

The resolution (S. Res. 281) was placed on the calendar, as follows:

Resolved, That the President of the Senate certify the report of the Committee on Government Operations of the United States Senate as to the refusal of Corliss Lamont to answer questions before the Senate Permanent Subcommittee on Investigations, said refusal to answer being pertinent to the subject matter under inquiry, together with all the facts in connection therewith, under the seal of the United State Senate to the United States attorney for the southern district of the State of New York, to the end that the said Corliss Lamont may be proceeded against in the manner and form provided by law.

CITATION OF ABRAHAM UNGER FOR CONTEMPT OF THE SENATE—REPORT OF A COMMITTEE

Mr. McCARTHY. Mr. President, from the Committee on Government Operations, I report an original resolution citing Abraham Unger for contempt of the Senate, and I submit a report (No. 1814) thereon.

The PRESIDENT pro tempore. The report will be received, and the resolution will be placed on the calendar.

The resolution (S. Res. 282) was placed on the calendar, as follows:

Resolved, That the President of the Senate certify the report of the Committee on Government Operations of the United States Senate as to the refusal of Abraham Unger to answer questions before the Senate Permanent Subcommittee on Investigations, said refusal to answer being pertinent to the subject matter under inquiry, together with all the facts in connection therewith, under the seal of the United States Senate to the United States attorney for the southern district of the State of New York, to the end that the said Abraham Unger may be proceeded against in the manner and form provided by law.

PROHIBITION OF TRANSMISSION OF CERTAIN GAMBLING INFORMATION IN INTERSTATE AND FOREIGN COMMERCE—AMENDMENT

Mr. BRICKER. Mr. President, from the Committee on Interstate and Foreign Commerce, I report an additional amendment to the bill (S. 3542) to prohibit transmission of certain gambling information in interstate and foreign commerce by communication facilities, heretofore reported from that committee.

After the hearings had been concluded, and after the report of the committee had been submitted, conferences were held between the Department of Justice and the industries interested in the bill. The amendment represents an agreement between the Department of Justice, the communications companies, and the Federal Communications Commission. So far as I know, there is no objection to the amendment.

I call the amendment to the attention of the Senator from Connecticut [Mr. PURTELL], so that he may submit it when the bill is considered on the call of the calendar.

Mr. PURTELL. I thank the Senator from Ohio.

The PRESIDENT pro tempore. The amendment will be received and printed.

REPORT OF SENATE OFFICE BUILDING COMMISSION RELATING TO ADDITIONAL SENATE OFFICE BUILDING (S. DOC. NO. 143)

Mr. PURTELL. Mr. President, I submit a report of the Senate Office Building Commission relating to an additional office building for the United States Senate, and request that the report be printed as a Senate document, with illustrations.

The PRESIDENT pro tempore. The report will be received, and without objection, will be printed, as requested by the Senator from Connecticut.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JACKSON:

S. 3761. A bill for the relief of Dominic Gaetano Morin; to the Committee on the Judiciary.

By Mr. BRICKER (by request):

S. 3762. A bill to amend section 4421 of the Revised Statutes, in order to remove the requirement as to verifying under oath certain certificates of inspection, and for other purposes; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. BRICKER when he introduced the above bill, which appear under a separate heading.)

By Mr. ROBERTSON:

S. 3763. A bill for the relief of Marcelina Anderson; to the Committee on the Judiciary.

By Mr. HUMPHREY:

S. 3764. A bill for the relief of Monika Jonitz Jeffries; to the Committee on the Judiciary.

By Mr. KEFAUVER:

S. 3765. A bill for the relief of Katie May Fraser; to the Committee on the Judiciary.

AMENDMENT OF SECTION 4421 OF REVISED STATUTES RELATING TO VERIFICATION UNDER OATH OF CERTAIN CERTIFICATES OF INSPECTION

Mr. BRICKER. Mr. President, by request, I introduce for appropriate reference a bill to amend section 4421 of the Revised Statutes, in order to remove the requirement as to verifying under oath certain certificates of inspection, and for other purposes. I ask unanimous consent that an analysis of the bill be printed in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the analysis will be printed in the RECORD.

The bill (S. 3762) to amend section 4421 of the Revised Statutes, in order to remove the requirement as to verifying under oath certain certificates of inspection, and for other purposes, introduced by Mr. BRICKER, by request, was received, read twice by its title and referred to the Committee on Interstate and Foreign Commerce.

The analysis referred to is as follows:

ANALYSIS

The proposed bill makes only one basic change in present law, the deletion of the requirement of a sworn verification on certificates of inspection, issued after inspection and approval of vessels, as provided in title 52 of the Revised Statutes. In addition, amendatory language is proposed which will reflect, in the basic law, the changes already accomplished by Reorganization Plan No. 26, 1950, which transferred to the Secretary of the Treasury, with certain exceptions, the duties and functions of subordinate Treasury Department officials. Other changes are made merely to clarify the provisions of the section by using transitive rather than intransitive language.

INVESTIGATION OF HEALTH CONDITIONS IN THE COMMERCIAL SLAUGHTERING AND PROCESSING OF POULTRY

Mr. DOUGLAS submitted the following resolution (S. Res. 283), which was referred to the Committee on Agriculture and Forestry:

Resolved, That the Senate Committee on Agriculture and Forestry, or any duly authorized subcommittee thereof, is authorized and directed to conduct a full and complete study and investigation in order to determine whether, in the commercial slaughtering and processing of poultry, any unhealthy or unsanitary conditions exist which might result in the transportation or sale in or affecting interstate commerce of poultry that is in any way unfit for human consumption. The committee shall report its findings, together with such recommendations as it may deem feasible, to the Senate at the earliest practicable date.

SEC. 2. For the purposes of this resolution, the Committee, or any duly authorized subcommittee thereof, is authorized to employ upon a temporary basis such technical, clerical, and other assistance as it deems advisable. The expenses of the committee under this resolution, which shall not exceed $———, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

INVESTIGATION AND STUDY OF TRANSPORTATION PROBLEMS OF NEW ENGLAND

Mr. KENNEDY. Mr. President, on behalf of my colleague, the senior Senator from Massachusetts [Mr. SALTONSTALL], the junior Senator from Maine [Mr. PAYNE], the senior Senator from Maine [Mrs. SMITH], the senior Senator from New Hampshire [Mr. BRIDGES], the junior Senator from New Hampshire [Mr. UPTON], the senior Senator from Vermont [Mr. AIKEN], the junior Senator from Vermont [Mr. FLANDERS], the junior Senator from Rhode Island [Mr. PASTORE], the senior Senator from Rhode Island [Mr. GREEN], the senior Senator from Connecticut [Mr. BUSH], the junior Senator from Connecticut [Mr. PURTELL], and myself, I submit for appropriate reference a resolution authorizing and directing the Committee on Interstate and Foreign Commerce of the Senate to make a full and complete investigation and study of the transportation problems of New England. Such an investigation could well be undertaken during the coming recess.

Mr. President, to those who have studied the problems besetting New England, it has long been apparent that one of the chief causes of New England's economic difficulties is the transportation policy and rate structure under which the New England area has been compelled to operate. New England's primary role of a processor of raw materials which must be transported into the area in raw material form and then transported to the markets of the country for distribution as finished products accentuates any disadvantages borne by the New England area in the transportation rate structure of this country. Moreover, New England's geographical location in the northeastern corner of the country has tended to increase the transportation burden on the area as the industrial centers and the commercial markets of the country have moved westward and to the South.

My colleagues, who have joined me in sponsorship of this resolution, and I have recently had occasion to familiarize ourselves with many specific transportation problems. In so doing it has forcefully come to our attention that the New England area is apparently being discriminated against in almost every phase of transportation policy, including land, air, and water transportation rates. Although the national transportation policy specifically provides that no areas shall be discriminated against, we have reason to believe that the implementation of this national policy has not resulted in fair treatment to every section of this country. The many specific instances which have come to our attention indicate that, through design or otherwise, New England has not been treated fairly in national transportation matters.

Mr. President, the suggestion that New England transportation problems be studied and investigated is not original with us. In 1951, the Council of Economic Advisers in their report to the President on the New England economy suggested that a detailed study of transportation service in New England and of commodity rates under which freight is shipped should be undertaken. The New England governors textile committee in 1952 urged that an investigation be conducted to inquire into the differentials on transportation rates which operated to the detriment of New England interests. Our preliminary inquiry into this subject indicates strongly that a full-scale investigation into the transportation policy's effect upon New England will disclose that there has been continuing discrimination against New England. It is our hope that if the investigation proposed by our resolution discloses evidence of discrimination, appropriate legislative action will be taken to remedy this situation as quickly as possible.

Mr. President, an investigation of this nature by the Interstate and Foreign Commerce Committee of the Senate would not be a new or unusual undertaking. I am advised that that committee has in the past inquired into the activities of the Civil Aeronautics Board to determine whether that agency was acting consistently with the national transportation policy. It may also be recalled that the study of interterritorial freight rates conducted by the Board of Investigation and Research created by the National Transportation Act of 1940 was undertaken as a result of urging by Members of Congress. Rail rates for the South and the West have been the subject of several official studies.

One of the most graphic examples is the plight shared by New England ports which have had any competitive advantage they possess in ocean shipping distances by virtue of their being situated substantially nearer to foreign ports than other Atlantic ports eliminated by equalized ocean transportation rates to all Atlantic coast ports. When these equalized rates are coupled with the inland rail rate structure which is based on the distance the commodity must travel to the port, it is clear that the charge for through traffic moving through New England ports is greater than through other ports from most sections of the country. This squeeze has had a deleterious effect on New England as evidenced by a sharply declining use of those ports. It should be noted, incidentally, that both equalized ocean rates and inland rates based on distances apparently result from the national transportation policy as found in existing statutes and interpretations thereof.

Mr. President, it must be obvious that investigative action is warranted when it is pointed out that in shipping 100 pounds of finished cotton piece goods, one of New England's major exports, the transportation charge to Toronto, Canada, from Augusta, Maine, is $3.23; from Lewiston, Maine, $3.13; from Nashua, N. H., $2.94; from Fall River, Mass., $3.06; but from Charlotte, N. C., the rate is $2.91 for the same 100 pounds. Surely this and many other examples of rate structures which have placed New England producers and shippers in impossible competitive positions which have been brought to our attention by our constituents deserve an explanation. New England does not seek a freight-rate advantage. It simply wants to compete on a fair basis.

Mr. President, I ask unanimous consent that the resolution be printed at this point in my remarks and that a memorandum outlining the many recent examples of discrimination against New England in transportation matters be printed in the RECORD following the resolution.

The PRESIDENT pro tempore. The resolution will be received and appropriately referred; and, without objection, the resolution and memorandum will be printed in the RECORD.

The resolution (S. Res. 284), submitted by Mr. KENNEDY (for himself and other Senators), was received, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

Resolved, That the Senate Committee on Interstate and Foreign Commerce, or any duly authorized subcommittee thereof, is authorized and directed to make a full and complete investigation and study of the transportation problems (including land, air,

and water transportation rates) of the New England States of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

The committee shall make a full and complete factfinding study and investigation of the New England transportation system and its relationship to the national transportation system, and of such related matters as it may deem proper, with a view toward ascertaining what changes, if any, should be made in the present national transportation policy especially as it relates to New England. The committee shall determine the scope of such study and investigation without limitation thereon.

The committee shall report its findings, together with such recommendations as it may deem advisable, to the Senate not later than January 31, 1955.

SEC. 2. For the purposes of this resolution, the committee or any duly authorized subcommittee thereof is authorized to sit and act at such places and times during the sessions, recesses, and adjourned periods of the 83d Congress, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, to procure such printing and binding, and to make such expenditures as it deems advisable.

SEC. 3. For the purposes of this resolution, the committee, or any duly authorized subcommittee thereof, is authorized to employ upon a temporary basis such experts, consultants, and other employees as it deems necessary in the performance of its duties, and is authorized with the consent of the head of the department or agency concerned, to utilize the reimbursable services, information, facilities, and personnel of any of the departments or agencies of the Government of the United States. The expenses of the committee under this resolution, which shall not exceed $———, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

The memorandum presented by Mr. KENNEDY is as follows:

MEMORANDUM IN SUPPORT OF SENATE RESOLUTION 284, REQUESTING AN INVESTIGATION OF THE EFFECT OF THE NATIONAL TRANSPORTATION POLICY UPON NEW ENGLAND

The importance of the transportation policy and rate structure to the Nation as a whole and to each of the principal regions of this country has long been acknowledged. In this connection it is pertinent to note that New England is perhaps more vitally concerned and affected by the national transportation policy than any other region of the United States. New England's geographical position at the northeast corner of the country, although providing some advantage because of its proximity to the great manufacturing centers and markets of the country, has many serious drawbacks. For example, almost all products exported from New England to the other portions of the country must pass through a highly industrialized area which is competitive with New England. The tremendous increase in production centers and markets in the Midwest, South, and far West have tended to aggravate New England's locational disadvantages. In addition, New England's role of manufacturer and producer, taken with its relative lack of raw materials, makes the transportation picture in New England doubly critical, inasmuch as New England must import practically all of its raw materials, process them, and then export the finished products to other markets.

There is current a belief of long standing, held by many transportation observers and experts within and without New England, that New England has been and continues to be discriminated against in transportation matters. In 1951, the Council of Economic Advisers, in their report to the President on the New England Economy, suggested that a detailed study of transportation service in New England and of commodity rates under which freight is shipped is essential to determine the validity of the frequent charge that the national rate structure discriminates against New England. The report on the New England textile industry by the New England Governors Committee (1952) claimed that New England is at a disadvantage with respect to its competitors in other regions of the country in truck transportation rates, pointing out that approximately 70 percent of finished textile products are shipped by truck. The committee urged that differentials be eliminated and asked that the matter be investigated further.

The transportation situation in New England should be thoroughly examined to determine whether the national transportation policy calling for nondiscrimination against any region of the country has, in fact, been implemented in such a manner that the intended results have been accomplished. Congressional committees have frequently investigated the activities of expert regulatory bodies created by Congress to perform highly technical services in order to determine the success or failure of the agency in applying the national policy as enunciated by the Congress. The Interstate and Foreign Commerce Committee of the Senate has inquired into the activities of the Civil Aeronautics Board to determine whether that agency was acting consistently with the national policy. It may also be recalled that the study of interterritorial freight rates conducted by the Board of Investigation and Research created by the National Transportation Act of 1940 was instituted at the urging of Members of Congress. Rail rates for the South and the West have been the subject of several official studies.

The need for such an inquiry concerning the transportation situation in New England, which may well lead the way for similar studies for other regions, is indicated by the preliminary facts already at hand.

1. RAILROAD RATES FOR NEW ENGLAND

Because of the pattern of transportation development in the United States, varied regional rate structures had developed prior to the assumption of jurisdiction in this field by the Federal Government. Thus, prior to the 1900's southern and western rates were considerably higher than that of official territory (the northeastern region of the country). Although the disparity between these rates had been narrowed sharply as a result of the establishment and operations of the Interstate Commerce Commission, the Commission conducted an extended and detailed investigation into the rate structure with a view to establishing a uniform class-rate structure and unified freight classification. As a result of this 12-year study, the Commission at the end of May 1952 put into effect the uniform class-rate structure. It has not yet been possible to determine its effect upon the various regions of the country. It would appear, therefore, that an investigation at this time would be desirable to evaluate the results of this order which incidentally was vigorously opposed by many interests, including New England.

In fact, it is interesting to note that an analysis of rail rates as of May 15, 1952, prior to the effective dates of the unified rate order, discloses significant evidence illustrating that New England was even then discriminated against by the rate structure.

An examination of rates on May 15, 1952, showed that for rail rates on tanned or finished leather New England suffered competitive disadvantages outside the New England area. This is based upon the transportation cost which is a function of rate and distance. For example, the cost of shipping 100 pounds of tanned or finished leather to Harlem River, New York, a major market, was $1.16 from Philadelphia, Pa., the nearest production center. If, however, the purchaser in Harlem River, N. Y., were examining second alternatives, he would find that the rate from Richmond, Va., to the delivery point would be $1.60 for the 100 pounds whereas it would cost $1.64 from the Boston shipper, who is a much shorter distance from the New York point than is the Richmond shipper. In the case of women's shoes, although the New York production center which is nearest to the Pittsburgh market enjoyed the lowest transportation charge, Boston, which is closer to Pittsburgh than St. Louis, had a slightly higher transportation charge than did the St. Louis shipper. Similarly, in shipping 100 pounds of finished cotton-piece goods, one of New England's major exports, the transportation charge to Toronto, Canada, from Augusta, Maine, is $3.23; from Lewiston, Maine, $3.13; from Nashua, N. H., $2.94; and from Fall River, Mass., $3.06; but from Charlotte, N. C., $2.91.

These few examples indicate that there are situations in which even on a straight mileage basis, New England has been discriminated against. The more significant result of this analysis of freight-cost figures in May 1952 is that, although New England generally has a freight-cost advantage in its own markets, competitors of New England shippers enjoy a substantial cost differential not only in their own markets but also in most or all marginal markets. Thus it could not properly be broadly concluded that there was a competitive advantage enjoyed by New England because of discriminatory freight rates prior to May 1952, and it appears, therefore, that the adjustment adopted by the ICC at that time increased New England's competitive disadvantage with its competitors from other regions. Such a disadvantage, accentuating the disadvantages of New England's location in the upper corner of the country, with its competitors located between it and the producing and consuming markets of the country, has been a significant factor in the difficulties experienced by the New England economy.

Another factor which has worsened the competitive position of New England shippers has been the ICC practice of granting percentage rather than dollar-and-cent increases in freight rates. For example, if the rate between point A and point D is $2 and between point B and point D is $3, a flat increase of 50 cents maintains the $1 spread between the 2 rates. If, however, there is a 25-percent increase, the A–D rate becomes $2.50, the B–D rate $3.75, and the spread $1.25. Thus it is pointed out by a New England plant that where it had to absorb a 40-cent per 100 pounds freight differential in competing with Buffalo, N. Y., plants in the Cleveland market in 1946, the spread now is between 80 cents and a dollar due to percentage freight-rate increases. This problem was recently brought to the general freight traffic committee of the eastern railroads by the refractory industry, and as a result maximum increases were applied thereby minimizing the effect of percentage increases and reducing the freight-rate spread between competing regions of the country. There appears to be considerable merit in this handling of the percentage increase problem; the feasibility and desirability of this suggestion should certainly be thoroughly investigated.

New England does not seek a freight-rate advantage; it simply wants discrimination against it to be ended. It wishes to compete on a fair basis.

2. RAIL RATES ON EXPORTS AND IMPORTS

One of the most apparent transportation inequities to which New England is subject is its squeeze between unequal rail rates on exports and imports on the one hand, and

equalized ocean shipping rates on the other. Discrimination against New England ports on inland rail rates on goods for export or which were imported through such ports began in the last century, justified apparently on the belief that New England would be able to offer shippers lower ocean cargo rates because of its location nearer to important world ports. But as discussed below, this intention was defeated by the equalization of ocean shipping rates. Yet the inequality in freight rates on such goods has continued.

Finally, in the case of grain shipped from Buffalo for export through Boston, an ICC order canceling more equitable rate schedules was reversed by the Federal courts, in a case confirmed by the United States Supreme Court. (*New York Central Railroad Company v. United States.*) The opinion of the lower court pointed out that the greater distance between Buffalo and Boston, as compared with the distance from Buffalo to Philadelphia or Baltimore, was not controlling. The Court held that inasmuch as there was no finding that the proposed rates would be noncompensatory, a burden on other traffic, or unduly prejudicial to Baltimore or Philadelphia, the ICC order was not enforceable; for mere distance differential does not carry with it the requirement that a rate differential be maintained. In a subsequent order, June 7, 1954 (I. & S. Docket 5641), resulting from the court decisions in the grain case, the ICC quoted with approval an earlier (1941) statement of principle: "* * * the legislative history of the amendment of section 3 of the act in 1935 * * * clearly indicates that a fair distribution of export traffic through the various ports, so far as that can be effected through lawful rate adjustments, was one of the contemplated purposes of the amendment."

Nevertheless, the ICC has continued to carry out this discrimination in a recent case concerning iron-ore rates frow the Atlantic ports to the Wheeling-Steubenville-Youngstown steel-producing areas. Although an ICC hearing examiner recommended that all new rates proposed be allowed, thus eliminating the differential for Philadelphia, New York, and Boston, Division 2 of the Commission, in a 2-to-1 decision, reversed the examiner with respect to the Boston and New York rates, permitting the Philadelphia proposal to stand. Thus the New England railroads and ports were again denied equality. The matter is presently pending before the full Commission.

3. OCEAN RATES AND POLICY

Prior to the adoption of the conference method of establishing ocean transportation rates (1870 in England—about the turn of the century in the United States), New England ports profited by their favorable location in that lower transit rates prevailed between foreign and New England ports which were considerably closer than other Atlantic coast ports. The conferences, however, established equalized rates to all ports on the east coast—first to those above Virginia and finally to all Atlantic ports. Although jurisdiction over ocean rates rests formally with the Federal Maritime Board, these conferences are conducted by ocean carriers with no governmental control. The policy of equalized rates, however, has the sanction of national maritime policy. Section 205 of the Merchant Marine Act of 1936, which governs the establishment of ocean rates, provides that nothing shall prohibit ocean common carriers from establishing rates to all American ports "at the same rates which it charges to the nearest port already regularly served by it." Under the influence of this section, there have been established blanket rates on shipments to the major ports of the east coast. Thus, although Boston is 1,926 miles closer to Bordeaux, France, for instance than New Orleans and 200 miles closer than the nearest competitive eastern seaport, 1,740 nearer Calcutta and even 500 miles closer to Buenos Aires, and 100 miles nearer Rio de Janeiro than is New Orleans, it is forbidden, the competitive advantage that such a geographical position should afford. This is particularly unfair, as previously mentioned, because of the unequal inland rates on such cargoes by rail.

The effect of this discriminatory practice on the North Atlantic ports is demonstrated by the following table showing the percentage of all foreign-trade cargo handled by major Atlantic and gulf ports between 1935 and 1952. The statistics were compiled by the Chief of Engineers of the United States Army, and 1953 figures will not be available until October:

	New York	Boston	Philadelphia	Baltimore	Norfolk	Mobile	New Orleans
1935	50.2	8.7	10.1	11.3	4.2	2.8	12.7
1936	49.7	7.8	9.8	13.6	4.5	2.8	11.9
1937	46.4	6.4	9.8	16.8	4.9	3.3	12.7
1938	46.9	5.3	8.1	15.5	5.0	4.6	14.6
1939	48.7	5.9	9.0	16.2	5.6	3.4	11.2
1940	45.1	5.3	10.0	18.4	6.5	2.6	12.1
1941	55.1	5.3	9.1	15.8	4.4	2.4	8.0
1942	53.8	3.9	8.5	11.6	4.6	5.6	11.9

4. INTERCOASTAL SHIPPING

Another recent ICC case (Docket No. W-1019—West Coast Transoceanic Steamship Line Common Carrier Application) involved the application of a steamship line for a certificate from the ICC authorizing regular intercoastal steamship sailings for the transportation of general cargoes and commodities between New England and the west coast. The port of Boston, we are informed, is now served regularly only by one company, which apparently scheduled only one intercoastal sailing per week from Boston to the west coast. The complete inadequacy of this service was testified to by traffic officials from all parts of New England. On September 9, 1953, division 4 of the Commission denied the applicant's request for a certificate of convenience and necessity, intimating in its decision that, although there was probably evidence supporting need for eastbound cargo, there was insufficient need for westbound service, and characterizing the evidence of demand for westbound service as "little more than a temporary need." The decision of Division 4 was ratified by the full Commission on January 19, 1954.

5. MOTOR CARRIER RATES

It is frequently charged that trucking rates on commodities shipped in and out of New England are confused and discriminatory. For example, it is cheaper to ship from Boston to Philadelphia by truck than from Boston to New York. Moreover, a large differential prevails on trucking rates between North and South. In the case of New England textiles, which are in intense competition with the South and ship primarily by truck, this differential amounts to about one-third. For example, to ship a quantity less than a truckload of cotton or cotton and rayon from Lowell, Mass., to Detroit, Mich., costs $2.15 per 100 pounds; but from Greensboro, N. C., to Detroit, approximately the same distance, it costs only $1.60 per 100 pounds, according to one recent study. Trucks are handling great and increasing quantities of general freight between points within the region and between New England and points throughout the country, particularly in the period since World War II. Seventy percent of New England's interregional shipments of finished textile products are by truck. The committee on the textile industry of the New England Governors' Conference recommended:

"An equalization of trucking rates for shipments of raw materials to New England and for finished textiles out of New England with rates equal for equal distances to those rates for shipping to and from the South."

As a result of a petition by 4 traffic bureaus of New England representing a large group of motor carriers, the Commission, in 1949, ordered a 5-percent across-the-board increase in truck rates. A further result was an investigation of the New England-New York motor rates generally. After lengthy hearings the full Commission, in a 7–3 decision issued on January 19, 1954, held that all except some specified commodity rates on less-than-carload or truckload shipments were to be eliminated and that class rates should be reinstated as the minimum reasonable rate. This had the general effect of raising rates substantially, although, as pointed out in the dissenting opinion, no evidence was heard on the amount of the cost to shippers nor was there any indication of what it would amount to. The commodities excepted from the class rates were textiles, tobacco products, brass, bronze, and copper articles. The Commission found that the carriers were not in as precarious a financial situation as they were in 1948 when they first requested relief, but that the destructive rate-cutting practice of New England carriers was bound to result in dire consequences to the group. The Commission authorized petitions seeking further hearings with respect to any of the commodity rates which were not preserved by its opinion. As a result, substantial numbers of shippers and carriers have filed petitions alleging error on the part of the Commission and that serious harm will result from cancellation of the commodity rates. Because of the large number of petitions, the effective date of the order has been moved forward from April 1954 to July 15, 1954. An examination of the petitions filed by various parties indicate that shippers of these commodities are objecting to the decision: Candy and confectionery, phonograph records, sugar, abrasives, bakery goods, wool, packinghouse products, foodstuffs, wool and mohair, scoured wool and mohair, plastic materials and products, paper envelopes, strip steel, cocoa, chocolate milk, chocolate or cocoa compound, locks, screws, groceries, clocks, aluminum articles, iron and steel articles, dairy products, tires and tubes, cast-iron pipefittings and hangers, rubber-coating fabrics, flavoring sirup, athletic goods, games, building materials, paving and roofing materials, boots and shoes, furniture, children's vehicles, electrical distribution equipment, floor covering, typewriter and typewriter parts, gums or resins (synthetic), tools, newspaper supplements, magazines, dental supplies, hospital and surgical supplies, toilet preparations, electric motors and parts, alcoholic liquors, stone, band and strip steel, drugs and drugstore supplies, marine and industrial hardware, vacuum bottles, and cordage. In addition, objections have been raised by numerous shippers and carriers.

6. GRANITE BY TRUCK

Although direct railroad and indirect motor-carrier service is available to New England granite producers for transporting their products to the midwestern using States, primarily Ohio, they have had tremendous difficulties in securing certificates of convenience and necessity authorizing the transportation of less-than-carload lots by motor carrier direct from New England to the States which use their granite. As a result of what appears to be unreasonable delay by the ICC on two specific applications (Dockets No.

M. C. 93529 and M. C. 66906), New England granite producers are seriously threatened by ruinous competition from Georgia, Wisconsin, and South Dakota producers who presently have direct truck authorization of the type sought by New England producers. In response to numerous inquiries, the Commission has advised that the matter is under consideration and will be handled promptly. It does not appear that 2 years is a prompt handling of this particular problem. Part of the reticence of the ICC apparently stems from its belief that the railroads and the indirect trucking facilities now authorized are adequate, although the New England producers point out that the indirect handling facilities referred to involve excessive handling of the product, causing almost irreparable damage.

7. CONCLUSION

These specific examples of discriminatory practices indicate the need for a full-scale investigation into the effects of the national transportation policy and its implementation on the New England States.

PRIVATE FINANCING OF NEW-SHIP CONSTRUCTION—AMENDMENTS

Mr. BUTLER submitted amendments intended to be proposed by him to the bill (S. 3219) to amend certain provisions of title XI of the Merchant Marine Act, 1936, as amended, to facilitate private financing of new-ship construction, and for other purposes, which were ordered to lie on the table and to be printed.

REVISION OF ATOMIC ENERGY ACT OF 1946—AMENDMENTS

Mr. JOHNSON of Colorado (for himself and Mr. GILLETTE) submitted amendments intended to be proposed by them, jointly, to the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes, which were ordered to lie on the table and to be printed.

Mr. LEHMAN submitted an amendment intended to be proposed by him to Senate bill 3690, supra, which was ordered to lie on the table and to be printed.

NOTICE OF HEARING ON NOMINATION OF NORMAN P. MASON TO BE FEDERAL HOUSING COMMISSIONER

Mr. BEALL. Mr. President, on behalf of the Committee on Banking and Currency, I desire to give notice that a public hearing has been scheduled for Wednesday, July 21, 1954, at 2 p. m., in room P–63 in the Capitol, upon the nomination of Norman P. Mason, of Massachusetts, to be Federal Housing Commissioner. At the time and place all persons interested in the nomination may make such representations as may be pertinent.

NOTICE OF HEARING ON NOMINATION OF ANDREW N. OVERBY TO BE UNITED STATES EXECUTIVE DIRECTOR OF THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

Mr. BEALL. Mr. President, on behalf of the Committee on Banking and Currency, I desire to give notice that a public hearing has been scheduled for Wednesday, July 21, 1954, at 2 p. m., in room P–63 in the Capitol, upon the nomination of Andrew N. Overby, in the District of Columbia, to be United States Executive Director of the International Bank for Reconstruction and Development for a term of 2 years—reappointment. At the time and place all persons interested in the nomination may make such representations as may be pertinent.

MEETING OF AMERICAN INSTITUTE OF COOPERATIVES

Mr. WILEY. Mr. President, I was pleased to note in the current issue of News for Dairy Co-ops, published by the National Milk Producers Federation, an announcement of the forthcoming dairy section meeting of the American Institute of Cooperatives at Cornell University. This meeting fits in very well with dairying's self-help program.

I was recently privileged to speak at such a meeting in my own State, in the city of Sheboygan.

I ask unanimous consent that the description of this splendid dairy program shaping up for the summer conference be printed at this point in the body of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

MANY DAIRY SPEAKERS ON INSTITUTE PROGRAM

Seventeen or more dairy co-op spokesmen will be featured on the program of the 26th annual summer conference of the American Institute of Cooperatives to be held August 15 to 19 at Cornell University, Ithaca, N. Y.

A sectional meeting for the dairy groups will devote Monday morning of the session to three topics: What Is the Dairy Picture Today?, by E. M. Norton, secretary of the National Milk Producers Federation; How Dairy Cooperatives Can Better Serve Their Members, by C. W. Pierce, Pennsylvania State University; and Developing a Nationwide Dairy Cooperative Merchandising Program, a panel discussion led by Donald E. Hirsch, chief of the dairy branch of the Farmer Cooperative Service.

Appearing on the panel will be M. L. Totten, director of sales, Land O'Lakes Creameries, Inc., Minneapolis; Russell S. Waltz, president of the National Milk Producers Federation and general manager, United Dairymen's Association, Seattle; Truman Torgeson, general manager, Lake to Lake Dairy Cooperative, Manitowoc, Wis.; and Stanley W. Beal, general manager, United Farmers of New England, Boston. Ken E. Geyer, manager, Connecticut Milk Producers Association, will chairman the sectional meeting.

During the Tuesday general sessions R. H. Cronshey, secretary, Challenge Cream & Butter Association, Los Angeles, will be one of a panel on Farmer Cooperatives and the Public, and Glenn A. Boger, president, Lehigh Valley Cooperative Farmers, Allentown, Pa., will discuss Major Problems and Possibilities Today as Seen by a Manager. Donald Sederstrom, of Litchfield, Minn., president of the federation's National Young Cooperators, will sum up Teaming Up To Do an Educational Job With Youth, on the Thursday general session.

Among speakers on the afternoon sectional program will be James Driscoll, eastern sales manager of Land O'Lakes, on How Land O'Lakes Has Been Made a National Branch. Mrs. Gertrude Corfman, young cooperators service, Dairymen's League Cooperative Association, Inc., New York, will describe the Organization of Our Youth Program. Mr. Cronshey will talk on Better Organization—More Efficiency.

Dairymen's League young cooperators service also will be discussed by Louis R. Bruce, supervisor, at one of the eye-opener morning sessions, chairmaned by Mr. Waltz. Other eye-opener meetings will be headed by Margaret Quick, director of public relations, Miami Valley Milk Producers Association, Dayton, and Genevieve A. Judy, Dairymen's League home department. Stanley H. Benham, treasurer of the league, will be chairman of the Wednesday general session.

SENATOR McCARTHY AND COMMITTEE MEETINGS

Mr. FLANDERS. Mr. President, before the morning hour concludes, I should like to raise a question which properly comes in the morning hour. I had been told—whether authoritatively or not, I do not know—that the junior Senator from Wisconsin [Mr. MCCARTHY] was going to request unanimous consent to hold a committee hearing in Boston during the coming week. I may or may not be present at the time when he makes that request, but I wish to state——

Mr. KNOWLAND. Mr. President, will the Senator from Vermont yield to me at this point? I think I can throw some light on the subject.

Mr. FLANDERS. I yield.

Mr. KNOWLAND. When I read that one of the Senate committees was anticipating the possibility of meeting on Saturday, I called the Senator from Wisconsin—because the Senate will have a meeting on Saturday, beginning at 10 o'clock in the morning, and continuing as late into the night as necessary in order to complete its work—and told him we were planning to hold a meeting of the Senate on Saturday, and that I would request all the committees or any committee which had any intention of meeting outside of Washington not to do so. He agreed to cooperate, and said that no meeting would be held outside of Washington, under the circumstances, with the Senate in session.

So it will not be necessary for the Senator from Vermont to indicate that he would object, because, I will say, the majority leader himself would object to any request for a committee meeting outside of Washington, but it will not be necessary to object, because the Senator from Wisconsin has assured me that no such request will be made.

Mr. FLANDERS. I thank the Senator from California for his statement to that effect, which is the way I would expect him to approach the question.

I wish to bring up, in about 20 words, two other reasons for objecting. One is that I doubt that the subcommittee or the committee of the junior Senator from Wisconsin has jurisdiction over that subject matter, because it is one affecting private industry, not Government operations.

Second, I had supposed the junior Senator from Wisconsin knew he had a date with me here on the floor of the Senate on July 20; and I was sure that if that had been in his mind, he would not have suggested being in Boston at the time.

ADDITIONAL ASSISTANT SECRETARIES OF DEFENSE—ARTICLE BY ROSCOE DRUMMOND

Mr. CASE. Mr. President, recently the Senate approved proposed legislation which will authorize the creation of some additional Assistant Secretaries in the Department of Defense. That is a part of a reorganization of the Department of Defense by which Secretary Wilson is, I believe, going to give us a modern Department of Defense, and particularly a modern Department of the Army, geared to present-day needs.

Roscoe Drummond commented upon that action in a recent article, which I desire to place in the RECORD. He pointed to the fact that General Montgomery, one of the outstanding leaders in World War II, recently said that modern war was four-fifths supplies and logistics, and only one-fifth tactics and strategy. That reminded me that during World War II, General Marshall once told a number of us that he was born either too soon or too late, because the training he had received was training for leading armies, but he found that he had been assigned to the task of logistics.

Therefore, Mr. President, I ask unanimous consent to have printed at this point in the RECORD the article by Roscoe Drummond to which I have referred.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ARMY REORGANIZATION—CIVILIAN RULE OF SUPPLY TIGHTENED

(By Roscoe Drummond)

It deserves to be put into the record that the United States Army did not stop business during the Stevens-McCarthy hearings.

In fact it carried forward to completion one of the most important pieces of business in Army history—a wide-ranging reorganization of the Pentagon's high command designed to insure effective civilian management and control of its far-flung and complex operations.

Although public announcement of the reorganization will not be made until later this month, it has been formally approved by Army Secretary Stevens and by Defense Secretary Wilson and will be put into operation before the adjournment of Congress.

The reorganization, which will create new assistant secretaries and realine and clarify responsibilities, will primarily affect the massive nonmilitary activities of the Army.

Its significance is best conveyed by a remark made by Field Marshal Montgomery in looking back over his experiences in the war. The one basic lesson he drew was this: "The problems of World War II were four-fifths supply and one-fifth strategy and tactics."

The United States Army's impending reorganization is designed, above all, to give the most experienced, creative, and continuous management to the problems of the design weapons, the procurement of all materiel, its controlled inventory storage and ultimate supply to the fighting forces; that is, to deal better—more efficiently as well as more economically—with four-fifths of the problem of fighting.

The effects of the reorganization will be:

To give the civilian Secretaries fuller participation in and firmer control of this four-fifths of the Army's operations, everything short of combat.

To delineate clearly the responsibilities for civilian leadership at the secretarial level.

To allocate to the Assistant Secretaries of the Army duties comparable to the duties allocated to the Assistant Secretaries of Defense, thus insuring a closely knit executive team.

To develop a professional class of officers who will specialize in logistics (design, procurement, and supply), who will not be drawn from civilian sources but will be regularly produced by the Armed Forces. This will require an adaptation of the rotation system. The logistics officers would not normally be assigned to nonlogistics missions any more than doctors would normally be assigned to nonmedical missions.

In the logistics field, for example, there will be a new Assistant Secretary for Logistics. Under him will be another new post, that of Deputy Chief of Staff for Logistics, in order to bring the civilian and military logistics officials into close and responsive relationship.

Probably because of misinformation, there has been some criticism within the Army on the ground the new setup severed participation in logistics from the Chief of Staff. This is not correct. The Deputy Chief of Staff for Logistics is responsible both to the civilian Assistant Secretary and to the Chief of Staff, and the reorganization specifically provides that "if at any time the Chief of Staff finds himself in conflict with the instructions of any of the Assistant Secretaries in the discharge of their responsibilities for functional control, the Secretary or the Under Secretary will resolve them."

There is no doubt that the reorganization greatly strengthens the civilian direction and authority over the noncombat activities of the Army. It is so intended.

This is the intention of the President. It is the intention of Secretary Wilson. It is also in line with one of the recommendations left with President Truman by Secretary of Defense Robert Lovett when he left office in 1952. It is their view that if civilian control is to have meaning, the Under Secretary and Assistant Secretaries must take a strong, positive hand in the affairs of the Defense Department.

It is their intention to do so, and the soon-to-be-announced reorganization is the means for doing it.

Fully a year and a half of study and discussion by the Rockefeller Committee, by the Davies Committee, and by Defense officials has preceded this decision.

The participants unanimously agreed that there had been a lack of recognition and a lack of preparation for the changes in the character, size, and complexity of the organization needed to produce and support the combat forces—four-fifths of the Army's job. They also reached the conclusion that the Army organization was not adequate to guarantee, through creative development of weapons and materiel, that the best possible arms would be placed in the hands of the Ground Forces in the event of another war.

The imminent Army reorganization is designed to make it adequate to produce and supply the best possible arms efficiently and economically, and to center accountability upon the civilian Secretaries if they fail to do so.

REDUCTION IN BEDS AVAILABLE AT VETERANS' HOSPITALS

Mr. JOHNSTON of South Carolina. Mr. President, during the wars in which this country has been involved, the Congress of the United States and the American people have made commitments to the young men and young women who left their homes and families and traveled to far distant lands in the fight to preserve our freedoms. We promised these men and women certain rights as veterans of our Armed Forces. Among these rights was adequate hospital care in order to heal the wounds sustained in the defense of our Nation. We established Veterans' Administration hospitals, and equipped them with the best of facilities and medical personnel. However, in recent years we have watched these facilities dwindle to such a low ebb that the same men and women to whom all these promises were made are being deprived of medical care. Cases needing hospital attention are being turned down because of a lack of beds. We are short-changing the young men and young women who fought for us on the battlefields.

The situation in my own State is portrayed in a very accurate and impressive manner by an editorial entitled "Hospital Beds Reduced," which appeared in the July 11, 1954, issue of the Columbia State, published in Columbia, S. C..

I ask unanimous consent that the editorial be printed in the body of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOSPITAL BEDS REDUCED

As of July 1, available beds at the veterans' hospital in Columbia are 427, yet the capacity is 609.

There is only one veterans' hospital in South Carolina. There has been talk of others; it seemed almost a certainty once that a new facility would be built at Greenville, but the plans didn't materialize.

The State is informed that at the veterans' hospital here the legitimate demand exceeds the supply, and that cases needing hospitalization must be turned down for lack of space. This is bad.

The trouble is not with the management, which can operate only as funds are provided by the Congress. The cause of the reduction is in Washington.

At the recent State convention of the American Legion held in Greenville, a strong resolution was passed protesting the scarcity. Senator JOHNSTON has had the resolution read in the Senate, and referred to the Committee on Labor and Public Welfare. It was also printed in the CONGRESSIONAL RECORD.

The Legion expressed it in part this way:

"Whereas the limited allocation of funds for the operation of the hospital in Columbia for the fiscal year beginning July 1, 1954, makes it necessary to fix the operating bed capacity to 427 beds and thereby rendering it possible for that hospital to provide medical and surgical care for only a segment of those veterans who not only need hospitalization but who are not financially able to pay for it in other hospitals; and

"Whereas as evidence of this deplorable situation there is a constant waiting list of applicants, the daily total running from 150 to 200, thus necessitating a long waiting period, with the prospect that as time passes the number of applicants will increase because of age factors; and

"Whereas even though there are VA general medical and surgical, neuropsychiatric, and TB hospitals located in the adjoining States of North Carolina and Georgia, only a limited number of beds in those hospitals are available for our overflow of applicants, and none for the mental case unless it has been declared to be service connected, thereby making it necessary for the State hospital in Columbia to care for our mental cases: Therefore be it

"*Resolved*, That the American Legion, Department of South Carolina, at its annual convention convened in Greenville this the

22d day of June, 1954, goes on record as deploring the unfortunate situation which faces the sick and disabled veterans in South Carolina who need hospitalization who are not able to pay for same in private hospitals; be it further

"*Resolved*, That the department protests the present practice of limiting funds for the operation of the hospital in Columbia and thereby removing from use approximately 175 beds which were constructed for the benefit of South Carolina veterans, while at the same time opening and staffing new hospitals in other areas of the country."

The veterans' hospital in Columbia was opened in 1932 after a long and hard fight for the establishment of the facility, led by the American Legion. Later it was enlarged to its present capacity, the only potential patients at that time being veterans of the Spanish-American War, who were few in number, and those of World War I. As pointed out, since then World War II has been fought, and the Korean war, increasing greatly the number of men and women to be served. The total veteran population is placed at 235,000. Yet the available beds are cut by 182. It doesn't make sense.

Our entire delegation in Congress should follow through in this matter and see that the situation is corrected.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. BUSH obtained the floor.

Mr. GORE rose.

Mr. BUSH. Mr. President, does the Senator wish me to yield to him?

Mr. GORE. I think we should have a quorum before we proceed with the consideration of the bill. I suggest the absence of a quorum.

Mr. BUSH. I have the floor——

Mr. GORE. Will the Senator yield for that purpose?

Mr. BUSH. I intend to proceed for 15 or 20 minutes on the subject of the pending business. If there is some good reason for a quorum call, I have no objection.

Mr. GORE. It is entirely within the discretion of the Senator.

Mr. BUSH. I see no particular reason for it.

Mr. GORE. I withdraw the suggestion.

Mr. BUSH. Mr. President, I wish to discuss for a few moments some of the questions which have been raised in the debate concerning the proposed contract between the Government and the so-called Dixon-Yates group. The first phase of the question which I wish to discuss is that of the risks which are being assumed by this private group in connection with the proposed contract.

I begin by saying that I think the private power companies which propose this arrangement do accept major risks, and I wish to speak for a few minutes on that particular point.

Attempts have been made to indicate that excessive profits were to be realized by the Dixon-Yates group on a modest capital investment, and that no risks were involved. In a memorandum of July 9, 1954, prepared by the Bureau of the Budget and subsequently inserted in the CONGRESSIONAL RECORD at pages 10381 and following, we find the following on page 10383:

There are several significant considerations in connection with this proposal:

1. By utilizing private utilities, the Federal Government will save a capital outlay of at least $100 million over the next 3 years, the cost estimated by TVA for the construction of equivalent capacity at the Fulton site.

2. The sponsors' proposal is a firm offer with a stated maximum capital cost reflected in the demand charge whereby a ceiling is placed on maximum liability on capital cost to the Government. The sponsors bear one-half of any possible increased cost from an estimated cost of $107,250,000 to $117 million and all the cost above $117 million. In addition, if the plant is built for less than $107,250,000, the Government will share 50 percent of the saving.

The reference here, as I shall point out later, is to additional costs of servicing the additional capital, insurance, and so forth. These additional costs amount to $58,000 per annum for each $1 million by which construction costs vary up or down from the $107,250,000 estimate. Such annual additional costs or savings, within the limits set forth on the up side, and without limit on the down side, are shared equally by the sponsors and by the Government.

I continue to read from the memorandum:

3. There is no guaranty as to the ultimate capital cost of a TVA plant even though that agency has had a favorable construction record in recent years.

Mr. GORE. Mr. President, will the Senator repeat that statement?

Mr. BUSH. The statement is:

3. There is no guaranty as to the ultimate capital cost of a TVA plant even though that agency has had a favorable construction record in recent years.

Mr. GORE. Mr. President, will the Senator yield?

Mr. BUSH. I am glad to yield.

Mr. GORE. I concur in the statement that there is no flat guaranty with respect to construction costs. I am sure the Senator agrees, as he has so generously conceded, that the TVA has had a very successful construction record, and also a very successful record of accuracy as to estimates. I was on the House Appropriations Subcommittee which handled appropriations for this agency, and also other agencies of the Government. I have never known the Tennessee Valley Authority to miss its estimates by more than 3 percent. I have known other Government agencies to miss them by as much as 126 percent. However, this particular agency, as the Senator has said, has a successful record of construction. I can fully agree with that statement. I wished to make this additional observation.

Mr. BUSH. Further in that connection, Mr. President, let me say that once the TVA embarks on the construction of a powerplant it will be completed, no matter what the construction costs turn out to be in actuality, and the Government has that money invested, without recourse from now on.

Reading further from the memorandum:

4. The proposal provides a guaranty and a real incentive on the part of the sponsors to assure that capital costs do not exceed $107,250,000. Thus, if the cost should go to $117 million, the return on $5,500,000 of equity capital would be reduced from 9 percent ($495,000) to 3.8 percent ($210,000). If the capital cost should exceed $117 million, return on equity capital would rapidly reduce to zero. Thus the sponsors have a real risk under the proposal offered and a compelling reason to keep capital costs below the estimated cost of $107,250,000.

5. In addition, the plant is not completely amortized at the end of the 25-year contract. There is 24.6 percent of the debt not retired at the end of 25 years so the rate under the proposal does not provide for completely amortizing the plant over the 25-year period.

Parenthetically, I may say that I do not know why the Budget Bureau failed to point this out, because it is significant. At the end of the 25 years the sponsors will have all their equity tied up in the project. There is no way to withdraw the $5½ million of equity during the life of the 25-year contract, unless it is sold to some other interest.

Reading further from the memorandum:

6. Acceptance of the proposal will help spread the risk in the event of future reduction in the AEC power requirements, which will in 1957 amount to about 30 percent of the TVA power supply.

Mr. GORE. Mr. President, will the Senator yield?

Mr. BUSH. I yield.

Mr. GORE. I intended to ask the Senator a question with respect to the previous sentence.

Mr. BUSH. With respect to the equity?

Mr. GORE. Yes. In dealing with the financial structure of utilities, it is not the custom to withdraw the equity capital, but rather to earn a dividend upon the investment. The debentures are sold on the market.

Mr. BUSH. Once the equity capital is put into an enterprise of that kind, it would be pretty difficult to withdraw it. I agree that the normal thing to do is to leave the capital there. The point is that in entering into this arrangement, if permitted to do so, the company will put $5½ million of its own capital into the enterprise on a permanent basis.

Mr. GORE. Mr. President, will the Senator yield?

Mr. BUSH. I yield.

Mr. GORE. Recognizing the eminent experience and record and ability of the able Senator from Connecticut, the junior Senator from Tennessee approaches even a brief colloquy on financial matters with him with considerable trepidation. With that qualification, I should like to ask the Senator if it is not true that through the process of depreciation there is in a sense a return of equity capital when related to the tax structure?

Mr. HICKENLOOPER. I should like to interrogate the Senator from Connecticut on that point, unless he wishes to answer the question of the Senator from Tennessee.

Mr. BUSH. I should like to answer the question of the Senator from Tennessee, but I shall be glad to yield to the Senator from Iowa if what he wishes to inquire about is in point.

Mr. HICKENLOOPER. It is in point to the subject under discussion, but I do not want to interfere with the Senator's answer to the Senator from Tennessee. If the Senator from Connecticut will yield at this point, the question I wish to ask him or the interrogation I wish to pursue at this point is whether the Senator does not believe that sufficient clarity has been given to the question of whether a windfall will be paid to the private firm at the end of 25 years. As the Senator has so well pointed out—and I am sure he will develop the point in detail later in his remarks—it is extremely unfortunate to refer to a windfall in that connection. The Senator has clearly shown that 24.6 percent of the bond obligations against the plant will not be paid off at the end of 25 years, and will be in existence, which means that the plant will be obligated for $26 million or $27 million, plus $5½ million of equity capital; so that at the end of 25 years there will still be debts owed by this plant in the amount of $32 million, which is far from having a free and clear plant.

Mr. BUSH. That is correct.

Mr. HICKENLOOPER. It will not be free and clear at the end of 25 years. There will still be a debt of $32 million.

Mr. BUSH. The Senator is correct. The owners of the property will be in possession at the end of 25 years, and they may have to find new markets for their power, because they will have been estopped from marketing power in the area in which they are located, especially to the west, because they will be committed to feed the power into the TVA system. Therefore, they will be faced with that risk at the end of 25 years.

Mr. HICKENLOOPER. The Senator has had considerable experience, undoubtedly more experience than the rest of us have had in such business operations, and perhaps has also had international experience in this field. We are considering a utility plant which, from experience in this country, has a rapid rate of deterioration, and which at the end of 15 or 20 years after it is built will have deteriorated almost to nothing, unless vast amounts of money are spent for new machinery and modern equipment, and so on, none of which the Government will pay for. Therefore, at the end of 25 years, as the Senator knows, the plant will have an approximate worth of $32 million, and will have deteriorated probably even below that point, in all likelihood, considering the new advances which are in the offing now, to say nothing of the atomic-energy development of power.

Mr. BUSH. In all candor, I will say to the Senator that I believe these people will maintain their property. They are very careful managers. They will certainly keep their property in excellent condition.

Mr. HICKENLOOPER. I was attempting to exclude the necessary good housekeeping operations which any good management will undertake, but those housekeeping operations will not come out of the Government's contribution and will not be paid by the Government. They would come out of the company's own good management policies.

Mr. BUSH. That is correct. I may say also to the Senator, who is much more familiar with the subject than I am, that there would be some possibility that the development of atomic energy for use in the generation of power would result perhaps in the plant being completely inadequate in 25 years. That is among the risks the company would be taking.

Mr. HICKENLOOPER. At any rate, at the end of 25 years it would still bear the bond obligation of at least $25 million.

Mr. BUSH. At least $25 million.

Mr. HICKENLOOPER. Plus the $5 million of equity capital. Therefore, the total charge still existing would be——

Mr. BUSH. Upwards of $30 million.

Mr. HICKENLOOPER. Perhaps upwards of $32 million.

Mr. BUSH. There is no question about it, if the cost of the property is approximately $107 million.

Mr. HICKENLOOPER. That is the basis for my figure.

Mr. BUSH. There is no question about it.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. BUSH. The junior Senator from Tennessee asked me a question a moment ago with respect to depreciation. I am sorry, but will the Senator restate his question?

Mr. GORE. I asked the eminent Senator, being the authority that he is in this field, if depreciation of plant facilities, in relation to the tax structure, does not operate eventually to effectuate a return of capital investment.

Mr. BUSH. That question is a little involved. The purpose of depreciation is to set aside out of earnings a sufficient amount each year so that theoretically over the life of the property there will be depreciated the full value of the property, and the owner will then be able to stay in business by rebuilding the property. Theoretically that is the purpose of depreciation. However, it does not work that way, because the owners keep building back the property as they go along, and as things wear out they replace them. One does not have to go very far from here to find utility plants 20, 25, or 30 years old which are still in good shape. They may not be as efficient as newly constructed plants, but I know of hydroelectric plants within a few hundred miles of Washington, along the Susquehanna River, which have been there for many years, and, due to good management and wise depreciation policies those plants have been kept in good condition and they still are efficient plants.

Mr. GORE. Mr. President, will the Senator yield further?

Mr. BUSH. I yield.

Mr. GORE. I agree with the Senator fully. Will he not——

Mr. BUSH. The Senator from Tennessee would not have it otherwise, I am sure.

Mr. GORE. I am not sure that I would not change the theory, but I believe some of the depreciation schedules permitted under the tax laws are too rapid to reflect that theory. It was that particular point to which I desired the able Senator to address his remarks.

Mr. BUSH. All I can say to the Senator is that in connection with the proposed contract I have not had a chance to examine into what the depreciation policies would be or what the allowances would be. Those are pretty closely regulated by the State public utility commissioners and by the Federal Power Commission. Therefore, in this case the owners will not have a free hand in depreciation and will have to depreciate in accordance with the accepted regulations of the utility body to which they will be responsible.

Mr. GORE. The point I was trying to make is that the Senator pointed to some examples of efficient generating plants now 25 or 30 years old. Under the present tax law and its rapid depreciation schedules, the theory of depreciation allowances to which the Senator refers is violated.

In many instances rapid depreciation is justified. But in its relationship to the return on capital investment I think we must recognize that the depreciation schedules allowed under the present tax law, which are to be made more generous if the bill now in conference shall become law, actually operate in the case of a company with large earnings outside the particular plant, to bring aoout return of capital investment.

Mr. BUSH. It is my impression that in almost every State the body which regulates public utilities also regulates depreciation rates. This proposed company would not have a free hand with reference to accelerated depreciation, but would have to take such rates of depreciation as are permitted under the laws of the State in which the plant operates.

Mr. GORE. Mr. President, will the Senator from Connecticut yield further?

Mr. BUSH. I yield.

Mr. GORE. The Senator has just said that the public utility authorities regulate the rates of depreciation. I do not believe that is the case with respect to Federal taxes. Does the Senator think that the Arkansas Public Utilities Commission would be able to control the depreciation schedule for a plant built in Arkansas with respect to Federal taxes, or would not the law which Congress enacts be controlling in that regard?

Mr. BUSH. So far as Federal taxes are concerned, obviously, the State of Arkansas would have no jurisdiction. Those taxes would be developed by the operation of the business in accordance with Federal tax laws, and the State of Arkansas would have nothing to do with Federal taxes.

Mr. GORE. I thought that was the case. Do our Federal laws require that depreciation be taken at a rapid rate or is it not permissive to take depreciation at a rapid rate?

Mr. BUSH. With respect to public utilities, if I correctly understand the situation, where the Federal Power Commission has jurisdiction over utilities which are in interstate commerce—and this one probably would be—the rates are fixed by the Federal Power Commission. The rates have to be approved by the Federal Power Commission.

If the plant operates solely within the State, the Federal Power Commission would not have any jurisdiction. I think the Senator from Tennessee is aware of that. I hope I am not talking unnecessarily. The State has the right to fix the rate of return on the investment, and also the rate of depreciation.

Mr. GORE. The particular plant under discussion, however, is different, in that the Atomic Energy Commission would pay for the electricity, and the Atomic Energy Commission is directed to make its contract in a manner to reimburse the company for its taxes. Just how do depreciation allowances fit into a contract such as that?

Mr. BUSH. They are a prior charge.

Mr. GORE. A prior charge?

Mr. BUSH. The owners of the plant do not know what their taxes are going to be until their earnings are ascertained. Depreciation is a charge against earnings.

Mr. GORE. Would the company have complete discretion as to whether it could claim rapid depreciation or whether it could claim depreciation over an extended period, thereby deferring the claim of depreciation for Federal tax purposes?

Mr. BUSH. I would say to the Senator that, judging by the projections of earnings which have been made, and the comparison of cost of the TVA on the one hand and this operation on the other hand, it would certainly seem impossible that accelerated depreciation was contemplated, even in the minds of the sponsors. It would be my opinion—and I have not seen the proposal in detail—that depreciation rates would be closely prescribed, as they would be in connection with any utility operating in interstate commerce.

Mr. GORE. I presume, as I believe the Senator from Connecticut does, that in this case the normal depreciation rate schedules would apply with respect to the calculation of Federal taxes.

Mr. BUSH. Without knowing any differently, I would assume that to be true.

Mr. GORE. I presume that is the case, though I have raised the question in order to explore it with the Senator, because what we have here is a most unusual situation in which the taxpayer is given immunity from all taxes, whether they go up or whether they go down. Fluctuations in tax rates would not affect the taxpayer at all if this contract is consummated.

Does the Senator expect to discuss that subject later on?

Mr. BUSH. I believe I do; yes.

Mr. GORE. Then, I shall desist for the time being.

Mr. KEFAUVER. Mr. President, will the Senator from Connecticut yield for a question?

Mr. BUSH. I yield.

Mr. KEFAUVER. I wanted to ask a question about the value of the property at the end of the 25-year period of the contract when the plant built by Dixon-Yates is to be owned by them. The Senator, being fair, as he usually is, in his discussion of this matter, has stated that the property, if kept up, would be of considerable value. I wanted to ask the Senator if it is not true in connection with a steam plant of this kind that a substantial part of the money invested is in connection with harbor facilities for handling coal, the actual construction of the building, the erection of very high smokestacks and other structures of that sort, which would be usable for 40 or 50 or many, many years?

Mr. BUSH. I certainly believe that many important perquisites to the plant might be good for 25 years, or even for a longer period than that, if properly maintained. One of the important duties of management, as the Senator knows, is to maintain the property and to keep it in good condition. It is not the duty of the management to wear it out, but, rather, to keep it in good shape.

Mr. KEFAUVER. I agree with the Senator, but what I have particular reference to is that a large part of the plant would consist of heavy structures, such as very high smokestacks, harbor facilities, and the underground tunnels for water which are necessary. Those things do not wear out; they last indefinitely.

Mr. BUSH. They might very well bear different rates of depreciation as compared with the machinery, which does wear out. The Senator realizes that all rates of depreciation are not exactly the same. Under the law the depreciation rate may be greater for certain things than for other things.

Mr. KEFAUVER. I am not, of course, an engineer and am not familiar with amortization, as is the Senator from Connecticut, who has had much experience in business financing, but I have seen a number of large steam plants under construction at various places, and it appeared to me that a large part of the work was in connection with underground water tunnels for the purpose of getting the proper supply of water, mechanisms for unloading coal from barges, harbor facilities, and tremendous smokestacks. I have been advised by engineers that, whereas it is necessary to replace boiler parts and things of that sort in order to keep the operation and the plant efficient, the structures such as smokestacks and water tunnels are permanent and will last many years beyond the amortization time referred to in the contract.

Mr. BUSH. May I ask the Senator what is the point of that observation?

Mr. KEFAUVER. The point is that at the end of 25 years, when the contract has expired, the property, without any contractual obligation against it, will be the property of the Dixon-Yates Co., and still will have great value.

Mr. BUSH. What is the Senator's objection to that? The Senator understands, does he not, that the Government, after the expiration of the 25-year contract, will have an option for another 5 years, and then another 5 years?

Mr. KEFAUVER. My objection to that is that if a steam plant were built by the Tennessee Valley Authority at Fulton, Tenn., or anywhere else, during the period of the 25 years, the Government would save considerable money; and then, at the end of that time, the property would belong to the Government, through the Tennessee Valley Authority.

If the construction cannot be done in that way, then another group, Messrs. Von Tresckow and Burch, has offered, with private funds, to build a steam plant, with the rate for electricity to be less than that which would be charged by the Dixon-Yates Co.; and at the end of a 25-year period the Government would own the plant which would have been built by the Van Tresckow-Burch group.

It seems to me that the first preference, of course, should be for construction by the Tennessee Valley Authority, which is in the power business anyway; but, if that is not to be the plan, then the proposal of the Von Tresckow-Burch group, which would save the Government a great deal of money during the 25-year period, should be accepted.

In the one case, at the end of the 25 years the plant would belong to the Dixon-Yates group; whereas, under the other plan the plant would belong to the United States Government.

Mr. BUSH. The Senator from Tennessee is now referring to one of the essential differences in philosophy between himself and those who agree with him about the entire question of public power, and myself and others who agree with me.

I do not believe there is anything wrong with the view that in order to accommodate the needs of this situation, the Dixon-Yates utility group should build a plant, and after 25 or 30 years, if the Government then ceases to use the energy which the plant supplies, the Dixon-Yates group should have the plant and be able to remain in business and develop a market for power in that region, and perhaps in the State of Arkansas. I see nothing wrong with that, so long as the contract is a contract favorable to the United States during the period of operation.

The Senator from Arkansas [Mr. FULBRIGHT] made a very good argument on that point. The Senator from Tennessee was not here when the Senator from Arkansas spoke. The Senator from Arkansas showed that there would be very little difference in the actual cost or the annual cost of the operation to the Federal Government, as between the proposed TVA plan, if you will, and the proposed Dixon-Yates plan.

Mr. KEFAUVER. I have read the argument and the statement made by the distinguished Senator from Arkansas. However, even the Atomic Energy Commission itself and the Bureau of the Budget admit that there is at least a $92 million difference in what will be the cost to the American taxpayer.

Mr. BUSH. Over a period of how many years?

Mr. KEFAUVER. Over a period of 25 years, to say nothing of who will own the property at the expiration of that time. So, while there is nothing wrong under normal circumstances with private industry building a steam plant, in this particular instance the Atomic Energy Commission is being improperly used for that purpose, by having it enter into a very specific contract. It would be much less burdensome to the tax-

payers of the Nation if either one of two other alternatives were accepted.

Mr. BUSH. I hope the Senator will permit me to proceed, because I shall come to some of the points we have been discussing. However, I am much more impressed with the fact that the Dixon-Yates plant will save the Government immediately an outlay of upward of $100 million, than I am with the Senator's argument that over a period of many years it will cost the Government $80 million. I do not believe it is very impressive to take a period of 20, 25, 30, or 35 years, and to say that over that period the cost will be so many million dollars. Let us look at the plan on an annual basis, as the Senator from Arkansas did. I think he made a very compelling case when he said that the difference in cost is in very modest proportion when the fact is taken into consideration that the Federal Government does not have to put up any money in connection with the Dixon-Yates proposal.

Mr. KEFAUVER. Mr. President, will the Senator yield at that point?

Mr. BUSH. I yield once more for a brief question, but I should like to move ahead with my speech. I am certain the Senator wants to discuss his views in more detail.

Mr. KEFAUVER. Is it not true that, while under the Dixon-Yates proposal the Government will not have to put up any money immediately, nevertheless, over the long run, the Government will have to pay for the total investment, with at least $92 million or $137 million more? Is it not true also that——

Mr. BUSH. No; the Senator is not correct. The Government does not have to pay for the total investment, under the 25-year contract, as the Senator from Iowa [Mr. HICKENLOOPER] pointed out a while ago. The contract provides that at the end of 25 years the operators shall be left with the plant, which still will have 25 percent of the original debt on it, and all of their equity in it.

Mr. KEFAUVER. Then, I will say the larger part of it.

Mr. BUSH. That is very different; but there is a very large part represented by the 25 percent; it is $25 million.

Mr. KEFAUVER. Under the TVA proposal, the Government would have made a capital investment, which by law would have to be repaid within a period of 40 years; and during the interim the Government would save between $92 million and $137 million.

Mr. BUSH. I may say to the Senator from Tennessee that that argument is not at all impressive to me. The Government started the TVA as a flood-control project 20 years ago. Actually it has become one of the great power developers of the United States. Perhaps it is the largest. I do not know whether it is the largest developer of power; the Senator from Tennessee probably knows. But the TVA has gone from one thing to another. It has gone from the building of power dams to the building of steam plants. It has gone out on the fringes of the TVA and has installed steam plant after steam plant. Now the TVA wants to move West, across the Mississippi River, and to build a plant at West Memphis, Ark.

Mr. KEFAUVER. I must interrupt at that point. The TVA has never tried to move and does not want to move out of its service area.

Mr. BUSH. It wants to move up to Fulton.

Mr. KEFAUVER. That is on the TVA side of the Mississippi River.

Mr. BUSH. How far away is West Memphis?

Mr. KEFAUVER. It is about 2 miles across the river in Arkansas.

Mr. BUSH. I accept the Senator's correction on that point.

Mr. KEFAUVER. I am glad the Senator does, because the record is very clear that the TVA has never tried to move out of its area.

Mr. BUSH. My point is that the time has come to stop the constant expansion of the creeping giant which is called the TVA, and to stop the piling of Government capital into its operations. That is the point directly at issue in this discussion, and the Senator knows it. I do not desire to have any misapprehension as to where I stand on that question. I stand squarely behind the President of the United States, who clearly wants to limit the constant investment of Government capital in these operations, in line with his general philosophy that the Government should do for the people only those things which the people cannot do for themselves, or do so well for themselves. That is the issue in this debate.

Mr. KEFAUVER. Mr. President, will the Senator further yield?

Mr. BUSH. I will yield once more to the Senator, but I have a speech I wish to make.

Mr. KEFAUVER. I appreciate the Senator's backing up the philosophy of the President. I hope the Senator will back up the President's philosophy outlined in his statement to the people of Tennessee, when he promised that the TVA would continue to be operated at maximum efficiency. We hope the Senator from Connecticut will help us in that connection, too.

Mr. BUSH. I have no particular observation about that. Will the Senator repeat his statement? I did not quite understand it.

Mr. KEFAUVER. The Senator has said that he will back up the philosophy of President Eisenhower.

Mr. BUSH. That is correct. What was the Senator's other point?

Mr. KEFAUVER. I said I hoped the Senator from Connecticut would back up the philosophy of President Eisenhower, as evidenced by a solemn pledge to the people of Tennessee in a telegram dispatched to two newspapers, and also by statements in speeches, in which the President praised the Tennessee Valley Authority and promised the people of Tennessee that he would continue to see that it was operated at maximum efficiency.

Mr. BUSH. I may say to the Senator that I can hardly think of an individual in the United States whose promise I would rather have, if I wanted to see it kept.

Mr. KEFAUVER. I hope the Senator from Connecticut will help the President keep his promise, by not letting the TVA be chipped away with the monstrosity which is now being proposed.

Mr. BUSH. I may say to the Senator that I do not think the President needs any help in the matter of keeping promises. He is not in the habit of breaking them. I do not know of any Senators on this side of the aisle, or on the other side of the aisle, who are going to try to persuade him to break his promises. That is as far as I shall go in answer to that comment. I do say that so far as expansion of the TVA is concerned, in my judgment the time has come when we should begin to follow a policy of not letting TVA grope its way clear across the United States.

Mr. KEFAUVER. Is the Senator talking about service area, or generating capacity within the area?

Mr. BUSH. I am talking about the constant expansion of TVA, and that includes area. It keeps on reaching out.

Mr. KEFAUVER. I think, in fairness, the Senator from Connecticut ought to yield to me at this point. Does not the Senator know that the service area of the TVA was approved by Congress in 1939, and that the private power utilities admit, and the record shows, that the TVA has never tried to expand beyond that service area?

Mr. BUSH. I presume that is the case. It the Senator from Tennessee says it is, I have no doubt that is correct. But it is perfectly possible for the Congress to change its mind and make new laws, as it does from time to time. The TVA has shown a constant tendency to expand, gain ground, take over other powerplants, build steam plants, and so forth. I simply say the time has come to put a check to that and to stop putting new Government money into this great capital venture, and to use, so far as possible, the private resources of the country. That I think is a very big issue in the debate.

If the Senator will now allow me to proceed, I shall yield later if he has some additional points.

Mr. KEFAUVER. Will the Senator from Connecticut let me make one more observation? Does not the Senator feel, in fairness, that he ought to retract his statement that the TVA has been trying to expand out of its service area? That is not true.

Mr. BUSH. I do not think I said the TVA was trying to expand. I said a check should be put on it so it would not do so. At least, that is the thought I had in mind. I think that is a satisfactory answer to the question the Senator raised.

Mr. President, going back to my prepared remarks, special attention is directed to items 2 and 4. The Senator from New Mexico [Mr. ANDERSON] during his debate on the afternoon of July 14, 1954, made the statement that if construction costs exceeded the estimate of $107,250,000, the Government would put up half of the additional capital costs to a ceiling of $117 million. In other words, on an increase of $9,750,000, he indicated the Government would put up $4,375,000 of capital and the sponsors

would put up a like amount. I refer my colleagues to page 10506 of the CONGRESSIONAL RECORD.

That assertion by the Senator from New Mexico is not correct. I am sure he did not know it was incorrect, but it simply is not so. The Government will not put up one dime of capital funds if the plant costs more than $107,250,000. Its maximum exposure in the event construction costs exceed $107,250,000 is limited to an amount of $285,000 a year, all the way up to a total of $107,250,000, or a potential increase in the power bill of less than 1½ percent.

As indicated in item 4, which I previously mentioned, the so-called profit to the Dixon-Yates group would be 9 percent on the equity capital of $5,500,000, and that would be realized only if construction costs did not exceed $107,250,000. Whereas utilities companies generally are permitted to earn a return of about 6 percent on the total funds invested, this enterprise, if all goes well, will yield the sponsors about 3.78 percent. That is 3.78 percent as against a return in most States, as generally recognized and accepted by the Federal Power Commission, of 6 percent.

The money to be borrowed—about 95 percent of construction costs—will be borrowed on the credit of Middle South Utilities and the Southern Co. as well as on the basis of the Government contract. Since the contract will be cancelable on 3 years' notice, it is obvious that complete reliance cannot be given by the lenders to such contract as sole security for their loan. Furthermore, the total debt will be amortized over a 30-year period after completion of the plant. Twenty-four and six-tenths percent of the debt and all of the equity—5 percent of the capital—will still be outstanding and will be the sole responsibility of the sponsors upon expiration of the contract in 25 years. The Government will have an option to extend its contract for an additional 10 years beyond the 25-year initial contract period. So it is a one-way street whereby the Government has the sole right of cancellation any time and for any reason up to the 25th year, and it alone thereafter will have the option to renew the contract up to 35 years. For the last 5 years, if the Government elects to continue the contract, the price of power will be reduced to reflect the fact that all of the initial debt on the project will have been amortized. The sponsors cannot, by any independent act of their own, regain use of the plant facilities for 600,000 kilowatts at any time earlier than 35 years from the date the plant is completed.

Incidentally, respecting the computation I just mentioned, the 3.78 percent return on the overall investment, that is calculated in the following manner: There is a $5,500,000 equity at 9 percent, and a $101,750,000 debt at 3½ percent, the estimated cost of the financing. The weighted average comes out to a yield of 3.78 percent.

It should be noted from the excerpt from the AEC–TVA Paducah power contract, March 26, 1953, which I shall ask to have printed in the RECORD, that under such contract the AEC is far less free to cancel the contract, and does not have the sole option to extend the contract beyond an initial term of 11½ years. The excerpt from the AEC–TVA contract, dealing with conditions under which the contract may not be renegotiated, is quite illuminating.

Mr. President, I ask unanimous consent to have the excerpt printed in the RECORD at this point in my remarks.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXCERPT FROM AEC–TVA PADUCAH POWER CONTRACT, MARCH 26, 1953

1. Term of contract: The provisions of this agreement shall become effective as of July 1, 1954, and said letter contract of August 23, 1951, is hereby terminated as of July 1, 1954. This agreement shall continue in effect for an initial term expiring on January 1, 1966. Unless this agreement is canceled by Commission as provided for below, then on January 1, 1966, and on each January 1 thereafter through January 1, 1977, the term of this agreement shall be extended automatically for an additional year unless either party notifies the other that such extension shall not be effected, such notice to be delivered not less than 5 years prior to the date on which such extension would otherwise be effected. It is the intent of the parties that no such notice shall be delivered for the purpose of seeking a change in rates or other conditions because more attractive markets for power or more attractive sources of power may develop.

This agreement may be terminated by Commission, effective on any date not earlier than September 30, nor later than November 30, of any year during the initial term or its extension, upon not less than 51 months' advance written notice to Authority, accompanied by a statement of Commission's intent to reduce permanently below 1,500 megawatts its total use of power at the Paducah project.

Unless otherwise agreed, the contract demand hereunder shall be reduced to 500 megawatts for the last 12-month period to any termination or expiration of this agreement, and to 800 megawatts for the 12-month period immediately preceding said last 12-month period.

Mr. BUSH. Mr. President, as I said a little earlier, the debate raises the whole question of public power, how far we are going with it, and so forth. I had thought a few days ago I would ask the Senate to adopt a resolution, which would have been considered by the Committee on Public Works—or it surely would have ended up there, at least—providing for a thorough investigation of TVA by an absolutely independent authority, so as to ascertain exactly what is going on in the TVA. I had in mind an organization similar to the Brookings Institution, and that the Senate would supply funds for a careful investigation of the TVA. However, in checking into the question, I learned that the Hoover Commission is now making a study of the whole question of public power in the United States, and I have every reason to believe that its study will include a very careful examination of the TVA, its costs, and its allocation of costs and expenses, which study will probably be in the hands of the Congress by the end of this year. I think a study by the Hoover Commission is a very satisfactory substitute for what I had in mind, so that I shall not offer the resolution which I had discussed with some Members of the Senate a few days ago.

Mr. GORE. Mr. President, will the Senator from Connecticut yield to me?

Mr. BUSH. Yes; I am glad to yield.

Mr. GORE. I take it that the Senator is aware that a task force of the Hoover Commission has been to the Tennessee Valley and has held hearings there.

Mr. BUSH. I understood that was a part of its whole study. I did not know the task force had already been there, and I do not know what the status of the study is. But from what I have heard, I assume it is making a very impartial, factual study of the situation, and that we shall have the result before the year is over. That is all I know about it.

Mr. GORE. Mr. President, will the Senator from Connecticut yield further to me?

Mr. BUSH. I yield.

Mr. GORE. Does the Senator from Connecticut think it is the course of wisdom, in view of the study that is underway, and in view of the further fact that a new chairman of the TVA is soon to be nominated, to take an action which would prejudice the working out of a coordinated plan? Does not the Senator from Connecticut think it would be the better course of wisdom to withhold action on this particular contract until the report is in and until the new chairman has had an opportunity to recommend a program to the next session of Congress?

Mr. BUSH. I do not think so at all. I do not believe there is any reason to withhold the contract because the investigation is being made. I see no logic in such a view. I am sorry to disagree with my friend.

Mr. JOHNSTON of South Carolina. Mr. President, if the Senator from Connecticut will yield to me, I should like to ask a question. A few minutes ago I understood him to say that he did not want the TVA to spread any more. Did I correctly understand his statement?

Mr. BUSH. I said I thought it was a good time to begin to study a policy of containment of the TVA, lest it begin hopping the Mississippi River and expanding the TVA area; yes.

Mr. JOHNSTON of South Carolina. I take it from that statement that the Senator from Connecticut does not want in the New England States anything like the TVA. Is that true?

Mr. BUSH. The Senator certainly knows we do not have anything like it.

Mr. JOHNSTON of South Carolina. Does the Senator from Connecticut know what effect it is having upon the New England States?

Mr. BUSH. Yes, a very deleterious effect.

Mr. JOHNSTON of South Carolina. The Senator from Connecticut will find that the communities and rural electric cooperatives in the immediate vicinity of the Tennessee Valley Authority receive an electric power rate of 4.8 mills; and even in Mississippi, that poor State, the rate is 5.4 mills. In Alabama, the rate is 5.6 mills. In Georgia, the rate is 6.4 mills. In South Carolina, the rate is 6.8 mills.

Now let us consider the situation in the New England States, where everything is progressive: We find that in Maine the cooperatives are paying 15.1 mills; in New Hampshire, 11.4 mills; in Vermont, 12.46 mills; and in New York, 11.2 mills. In Michigan, the rate is 13.6 mills.

Does not the Senator from Connecticut want the New England rural electric cooperatives to have the benefit of a rate similar to the rate that is available in the South?

Mr. BUSH. Mr. President, let me say to the Senator from South Carolina that he does not paint the picture darkly enough; he is telling only half the story. The rates he has mentioned are the rates we are paying for power. The taxes we are paying to subsidize cheap power in the South are another part of the story; and the industries we are losing—industries that are attracted by the cheap power in the South—are still another part of the story. So the Senator from South Carolina is not telling all of the story, by any means.

Mr. JOHNSTON of South Carolina. So the Senator from Connecticut agrees, does he, that many industries are moving into the South because of the low rates available there for electric power?

Mr. BUSH. The Senator must realize that it is not the——

Mr. JOHNSTON of South Carolina. Under those circumstances, someone in New England must be overcharging someone.

Mr. BUSH. I do know just what that means. If there is any overcharge, I would say it is indirectly being done by the Government because it is subsidizing the TVA area at the expense of all the taxpayers of the United States.

Mr. JOHNSTON of South Carolina. I should like to call to the attention of the Senator from Connecticut the fact that the rates in other fields are probably higher. I have been quoting the rates charged to the rural cooperatives.

Mr. BUSH. I do not know whether the Senator from South Carolina is speaking of comparable rates. But, certainly, it is very clear that with the subsidy afforded to power in the TVA area, they should be able to sell it cheaper than the rate at which power can be sold in New York City.

Mr. JOHNSTON of South Carolina. The rates I have been quoting are not subsidized rates. They are the rates the cooperatives have to pay.

Mr. BUSH. I repeat that with the subsidies being given the TVA area, they should be able to provide power much cheaper than power can be provided in the city of New York.

Mr. JOHNSTON of South Carolina. But these rates are not the ones charged in the TVA area. They are the rates charged in the area that probably is affected by it; and the power companies are letting the cooperatives have the power at these rates. These are the rates charged by power companies, not by the TVA, in most of the instances to which I have referred. These rates show what rates will be obtained in a given territory if such a yardstick is applied to it.

Mr. BUSH. Mr. President, with all due respect to the Senator from South Carolina, I am interested in discussing only the TVA this morning.

Mr. JOHNSTON of South Carolina. I am informing the Senator from Connecticut the effect of the TVA—when a yardstick is placed over the power companies, with the result that then the power companies give the people the kind of rates they should be given.

Mr. REYNOLDS. Mr. President, will the Senator from Connecticut yield to me?

The PRESIDING OFFICER (Mr. CRIPPA in the chair). Does the Senator from Connecticut yield to the Senator from Nebraska?

Mr. BUSH. I yield.

Mr. REYNOLDS. I should like to ask the Senator from Connecticut whether the same argument could not be made, in terms of prices, if any other industry were placed on a socialistic basis.

Mr. BUSH. The Senator from Nebraska is undoubtedly correct.

Mr. JOHNSTON of South Carolina. Mr. President, I object to references to "a socialistic basis" in this connection. These rates are given by power companies because they have to do it because they have a yardstick over them.

Mr. REYNOLDS. Mr. President——

Mr. BUSH. Mr. President, I yield to the Senator from Nebraska.

Mr. REYNOLDS. Mr. President, if the Government went into the business of manufacturing clothing, I submit that the suit of clothes the Senator from Connecticut now is wearing would be cheaper; but that would be as a result of pure, unadulterated socialism.

Mr. JOHNSTON of South Carolina. Mr. President, again I call attention to the fact that the rates I have been quoting are given by power companies in the South.

Mr. REYNOLDS. That is correct; and a cheaper price for a suit of clothes, under the circumstances I have mentioned, would be the price charged by a private manufacturer if the Government went into the manufacture of clothing. In fact, if the Government went into the manufacture of clothing, automobiles, or anything else we may mention, the same argument could be made.

Mr. JOHNSTON of South Carolina. Then why do not the power companies in the New England States charge the same rates as those charged in the Southern States?

Mr. BUSH. Because it costs more to produce power there.

Mr. REYNOLDS. The Southern States have fuel, and various other items enter into that situation.

Mr. JOHNSTON of South Carolina. The New England States have streams.

Mr. BUSH. Where are the New England streams from which hydroelectric power could be developed?

Mr. JOHNSTON of South Carolina. Let me inform my friend, the Senator from Connecticut, that the St. Lawrence River is more powerful than almost any stream I know of in the South.

Mr. BUSH. But the St. Lawrence River is largely in Canada.

Mr. JOHNSTON of South Carolina. But it has not been developed, has it?

Mr. BUSH. I repeat that the St. Lawrence River is not in New England.

Mr. JOHNSTON of South Carolina. It is as close to New England as South Carolina is to the TVA.

Mr. REYNOLDS. Mr. President——

Mr. BUSH. I yield to the Senator from Nebraska.

Mr. REYNOLDS. Mr. President, if the Senator from South Carolina does not know it, he could easily determine—as expert engineers will advise him—that, with the exception of one or two places, such as Niagara Falls, there is no stream that can produce power as cheaply as a steam plant can.

Mr. JOHNSTON of South Carolina. The Senator will find that the streams in the Northeast can develop power and can provide it to the people at a much cheaper rate.

Mr. REYNOLDS. The only means by which developments such as the TVA can claim to produce cheap power is when a certain percentage of their capital is allocated to flood control, irrigation, or navigation; and that allocation is made on the simple basis of "think of a number."

Mr. JOHNSTON of South Carolina. I think the engineers will tell the Senator that the trouble arises from the types of dams the companies in the New England States have tried to build.

Mr. BUSH. Mr. President, if the Senator from South Carolina will permit me to do so, I should like to proceed to reach the conclusion of my remarks.

Mr. GORE. Mr. President, will the Senator from Connecticut yield to me?

Mr. BUSH. I yield to the Senator from Tennessee.

Mr. GORE. I do not wish to intrude upon the speech the Senator from Connecticut is making. However, he has made a reference—and I have heard other Senators make similar references; in fact, the President of the United States in a press conference the other day made such a reference—to an expansion of the TVA.

I wish to join the Senator from Connecticut in opposition to an expansion of the TVA service area. I join him in opposition to any effort to have the TVA cross the Mississippi River. That is the dividing line between the Arkansas Power & Light Co. service area and the TVA service area. I know of no intention on the part of the TVA to cross the Mississippi. I will oppose it if such a proposal comes to my attention.

Mr. BUSH. I am very glad to hear the Senator from Tennessee assure us of that.

Mr. GORE. No assurance is needed, because no such effort is being made. But if any assurance is needed, I am delighted to give it.

However, in the pending proposal, the Arkansas Power & Light Co. or the private utility combine in that area is attempting to cross the Mississippi River into the TVA service area.

If the Senator from Connecticut wishes to be fair—and of course I know he wishes to be fair in all things, but he might not interpret fairness in respect to this issue in the way I would—I believe he would say that if the Congress

has set the Mississippi River as the dividing line between the TVA service area and the adjoining private utility service area, neither TVA nor the private utility should try to invade the service area of the other; and I will join the Senator from Connecticut in such a statement, if he will just say it.

Mr. BUSH. No; I will not say it.

I wish to proceed and discuss briefly the cancellation provisions of the proposed contract. An attempt has been made to indicate that a windfall would become available to the so-called Dixon-Yates group upon cancellation. I have attached to this memorandum a copy of a letter which was submitted to the Senator from Arkansas [Mr. FULBRIGHT], dated July 14, 1954, in response to a request which he made concerning this subject. This should dispel any doubts as to the actual cancellation provisions. It shows clearly that the Government, under any foreseeable circumstances, would probably suffer little, if any, cancellation penalty. An attempt has been made to insinuate that somehow the Government would be obligated to pay some penalties on cancellation, even though the electric energy were to be sold to the sponsors to other parties. This is completely untrue. The proposal provides that the seller; namely, the Dixon-Yates group, shall be entitled to and will absorb capacity at least as rapidly as the load growth will permit, but in any event in the amount of at least 100,000 kilowatts in each year, absorbing the associated proportion of the cost. So far as the sponsors having any cancellation windfall is concerned, they have nothing but cancellation risks, and very little protection against them. I am very desirous of having the RECORD show that clearly.

I should like to make one further point, and then I shall yield the floor. Much has been made of the suggestion that there is an estimated difference in annual cost as between the proposed contract and the TVA potential. It has been estimated that the annual difference in cost would be $3,685,000. Of that, approximately $1½ million is in State and local taxes and $1,059,000 difference in the cost of the money. That approximates a little more than $2½ million, or 70 percent of the total difference. Then there is an item of $309,000, which is called extra fuel-transportation cost. I submit that is subject to challenge. I think there is no basis for thinking that it would cost any more for the Dixon-Yates group to transport fuel than it would cost the TVA.

Mr. KEFAUVER. Mr. President, will the Senator yield at that point?

Mr. BUSH. I yield.

Mr. KEFAUVER. The only difference is that the fuel would have to be transported about 50 miles farther.

Mr. BUSH. I understood the difference was about 30 miles.

Mr. KEFAUVER. The Fulton steam plant is about 30 miles north of Memphis. West Memphis, Ark., is across the river and slightly south. So I think the difference in transportation cost is exactly what the barge companies said it would be.

Mr. BUSH. It is an estimate, and I think it is definitely subject to challenge. I do not think the Senator's explanation would account for that much difference in the cost.

The question of operating costs provides a difference of $211,000. I fail to see how the TVA could operate a steam plant any cheaper than could the Dixon-Yates group, or any other well-qualified management group. The TVA cannot make coal burn any better, or make the generators run any faster. I do not see how that kind of charge can be justified.

Mention is made of $600,000 TVA transmission costs necessary in connection with the West Memphis site. I think that figure is also subject to challenge. The figures which are not subject to challenge are approximately $1,499,000 for State and local taxes, and a difference in the cost of the money of $1,059,000. Together, they total approximately $2½ million. I think those figures are not subject to challenge. Those are the differences, as anyone will agree.

This raises the entire question of whether the Government should invest $100 million in an enterprise like this, or whether it should be willing to pay the going cost for power when private power companies are able, willing, ready, and financed to do the job.

That question applies all the way through our economy and all the way through our political philosophy. I submit, as I did earlier in my remarks, that it is the political philosophy of this administration to allow private enterprise to do these things when they can be done by private enterprise. It is very much better to do that than constantly to tax the people for great capital investments. If we carry this theory to its ultimate conclusion, who in the world is to pay State and local taxes? Someone must pay State and local taxes. If these giants are to be created, and to be exempt from State and local taxes, who is to pay them? I submit the time has come to take stock of the entire situation. That, I believe, is the overall challenge in connection with this whole issue.

Mr. President, I yield the floor.

Mr. MONRONEY. Mr. President, will the Senator yield to me before he takes his seat?

Mr. BUSH. I yield.

Mr. MONRONEY. I understood that earlier in the discussion with the Senator from Tennessee [Mr. GORE] the Senator from Connecticut announced that he would discuss at length the tax situation in connection with the proposed contract. The Senator from Tennessee has momentarily left the Chamber. For the purpose of the RECORD, I wonder if the Senator could elaborate a little further on the tax-absorption principles. I noticed that he discussed the payment of taxes to municipalities and subdivisions of government, but dealt rather hastily with tax absorption with relation to the Federal income-tax features.

Mr. BUSH. I am glad the Senator reminded me of that. Federal income taxes must be paid, as I think the Senator will agree. They will be represented either in the rate or in the contract. It seems to me that there is no difference, so far as the economy is concerned, so long as we agree that the Federal income tax must be paid. There it is, sticking out where everyone can see it.

This provision is not uncommon practice. It has been done many times before in connection with contracts.

Mr. MONRONEY. Under private operation this contract would be subject to a 5-year fast write-off, because it is under the guise, at least, of a defense operation. The property would be subject to special fast amortization, would it not?

Mr. BUSH. As I stated earlier—I believe before the Senator entered the Chamber—public utilities are very different from industrial operations. They are under the control of governing authorities, which regulate rates for power, and also regulate depreciation rates and other items. It is inconceivable to me that there would be any possibility of the owners of the plant writing it off in 5 years.

Mr. MONRONEY. The Senator misses my point.

Mr. BUSH. I am sorry.

Mr. MONRONEY. I was trying to find out how the 5-year fast writeoff would apply in this case. It is frequently applied to other companies building similar plants, as well as plants that are far removed from this type of enterprise. The special fast amortization is applied almost automatically to utility companies desiring to increase their power output on the basis that a broad power base for the United States is good insurance of our industrial capability if war should come. I do not quarrel with that philosophy. However, I will say to the distinguished Senator from Connecticut that to my knowledge the vast tax savings which accrue to the private utility companies by reason of the fast writeoff are not being taken into consideration when they fix rates for power. They are ignored. The power base is not figured on the basis of the immense tax savings which private utilities enjoy.

Mr. BUSH. In the first place, I may say to the Senator that I cannot believe that that kind of writeoff is involved in the contract, or there would not be a question of Federal income tax, normal or otherwise, because no different writeoff would be made with regard to Federal income tax, if that were the situation.

Mr. MONRONEY. That is exactly the point I am raising. It is important to that contract. It illustrates, I think, the danger of having only sketchy information before the joint committee and before the Senate. That is the point on which I should like to focus attention. The distinguished Senator from Connecticut has had far more experience in financial matters of this kind, because of his past business experience, than has the junior Senator from Oklahoma. If this plant is built, will the contract provide that the Government, which bears the income tax, will get the advantage of the 5-year special writeoff?

Mr. BUSH. I do not know anything about a special 5-year writeoff. I have grave doubt that there is anything like that contemplated. I do not think it should be contemplated in this kind of contract.

Mr. MONRONEY. If it is given to all the other utilities——

Mr. BUSH. No; it is not.

Mr. MONRONEY. I beg the Senator's pardon, but practically every electrical generating station which has been built has been given this fast writeoff in accordance with a law passed by Congress. I am not saying it is a bad law or that it is a bad policy. The question I am still trying to ask is whether this plant would be entitled to the 5-year writeoff, as other plants are given that advantage. Does the Government get the advantage of that, or will the utility company, with a $107 million capital investment and capital accretion after 25 years, be able then to take its depreciation as a tax advantage at the end of 25 years? In other words, I do not want the utility company to have the Government pay the full taxes, without charging depreciation, either the fast or the regular kind, and then at the end of 25 years have a $107 million investment which has not been depreciated, and thereafter charge off the depreciation on profits, whether the depreciation be 5 years or whether it spreads it over 20 years, or whatever is the customary depreciation.

The point I am making is that that could amount to a windfall, taxwise, of almost 50 percent to the corporation, as the additional depreciation is taken. Can the Senator tell us whether, from the Federal tax standpoint, the Government's tax absorption would be based on the normal depreciation that would be written off after the plant was constructed?

Mr. KNOWLAND. Mr. President, will the Senator yield on that point?

Mr. MONRONEY. Perhaps the distinguished majority leader can enlighten me on that point.

Mr. KNOWLAND. Leaving aside this particular case, does the Senator from Oklahoma understand that in cases where there is an accelerated writeoff, which will permit a depreciation writedown in 5 years, instead of 20 years or 40 years, as the case may be, once having that depreciation written down year by year, at that point any firm can claim a second amount of depreciation? I do not understand that that is even the law or the intent of the law.

Mr. MONRONEY. This deal has so many facets, completely unexplored by Congress, that I am asking whether the Federal income taxes, which are abated or absorbed by the Atomic Energy Commission, represent the normal tax depreciation, and will the Government get the advantage of it; or will the contractor postpone any chargeoff for depreciation, which I think it can do under the tax law, and at the end of 25 years have a $107 million plant and then start on the regular depreciation.

Mr. KNOWLAND. They will not get double depreciation. They will pay the tax. The Bureau of Internal Revenue would not permit a firm to write off a plant, in this field or any other field, under the accelerated plan and then permit a second depreciation under the slower system.

Mr. MONRONEY. I am not referring to that. The point I am trying to make is that someone is going to get an eventual tax deductibility of the depreciation. Does that depreciation charge-off come to the Federal Government through AEC in the first 5 years, and is the tax contribution based on the net taxable charge, less the quick depreciation on the first 5 years; or will that be postponed, to be taken at the end of the contract, when, in fact, the utility will have a $107 million plant, and then can start charging off depreciation for tax purposes? That makes a difference of about 50 percent on the taxes the corporation will have to pay after the expiration of the Government contract.

Mr. BUSH. I may say to the Senator that I have not seen the contract. I assume the Senator has not seen it either.

Mr. MONRONEY. No; that is what makes me worry.

Mr. BUSH. The normal expectancy in such a situation would be that the public utility operators would charge normal depreciation rates. There is nothing in the situation that would justify a 5-year accelerated depreciation.

Mr. MONRONEY. That depends on how the contract is written. As I understand, the Bureau of the Budget——

Mr. BUSH. The Senator is not asking me to give him facts, because I have not seen the contract.

Mr. MONRONEY. We are talking about hypothetical possibilities.

Mr. BUSH. I will say to the Senator it is inconceivable to me that there should be a 5-year accelerated depreciation clause in this contract.

Mr. MONRONEY. Why should it be inconceivable, if every other utility being built today is enjoying such a 5-year write-off, which would inure to the benefit of the Government? If this contract is written, as I believe the Bureau of the Budget says it is written, with tax immunity, then the promoters of the project are certainly going to throw in whatever deferred tax advantage they may have at the end of the expiration of the contract. That is why this situation involves a very distinct, difficult, and troublesome tax pattern, because what is going to one defense contractor eventually is going to be demanded by all. I believe that, according to the Budget Bureau announcement, the company will be able to defer claiming the depreciation until the end of the Government contract, in 25 years, and then, for tax purposes, it will have a $107 million writeoff, which it will be able to take over a certain number of years, and that would save this corporation 50 percent of the taxes on the amount they could defer in charging off their depreciation.

Mr. BUSH. It is inconceivable to me that the Government would enter into any contract that would give any windfall profits to this organization or any other organization with which it will do business. It is absolutely inconceivable to me that that would be done. I shall certainly investigate it, since it is in the Senator's mind and he has put it in my mind.

Mr. MONRONEY. The Senator will agree that that would be possible if the contract is one of tax immunity from the Federal income-tax standpoint.

Mr. BUSH. It is not tax immunity. Perhaps it is a play on words, but it is tax absorption. The Government agrees to pay certain variable expenses, one of which is fuel and the other is taxes. That is all right. I see no objection to that, so long as we know what we are doing. It is not tax immunity. The liability is created, and once the contract has expired, then the tax liability is complete.

Mr. MONRONEY. The Senator will agree with me that whatever is normal or customary depreciation ought to inure to the Government as the taxes are paid in this holding company operation.

Mr. BUSH. To put it in another way: I do not think the Government should be penalized in any way by any special accelerated depreciation charges in a contract of this nature.

Mr. MONRONEY. Whatever taxes the utility operator would pay would pass on to the Atomic Energy Commission.

Mr. BUSH. That is the way it is projected.

Mr. MONRONEY. It is not spelled out in any way. I can see a loophole if there is tax immunity. The company could defer for 25 years writing off depreciation.

Mr. BUSH. Under present tax rates, there is an estimated Federal tax liability of $800,000 which is set up as an annual expected charge. If there is to be accelerated depreciation, we would not have that figure.

Mr. MONRONEY. I am not so sure. I am not so much concerned with accelerated depreciation, because if they take it off in 5 years they soon do not have anything else to write off, so the Government would not share too greatly in a 5-year writeoff. But who gets the advantage of the depreciation, either fast or normal? It is not spelled out, and there will be a great windfall if the Government does not insist that all normal depreciation on the plant taxwise should be used to deduct the Federal tax payments. Otherwise they could postpone until the end of the contract the depreciation charge, and the $107 million could amount to 50 percent of that sum.

Mr. BUSH. I simply do not share the Senator's concern. I think any contract which provides for windfall profits to a utility company entering into such an important obligation with the United States Government is simply unconscionable. Such a provision could not be in the contract. But I intend to look into it and will let the Senator know what I find out about it.

Mr. MONRONEY. I should appreciate being advised about it, because it has concerned me quite a good deal. I can see that unless the contract is carefully drawn to specify that the Government is entitled to every tax advantage, we might wind up by passing on this $107 million worth of deductibility at the expiration of the contract.

Mr. CARLSON. Mr. President, will the Senator from Connecticut yield?

Mr. BUSH. I yield.

Mr. CARLSON. I do not think there is any disagreement between the Senator from Oklahoma, the Senator from Connecticut, and myself as to depreciation. Once it is taken, whether it be in 5 years or 25 years—and it is generally to the advantage of corporations and other industries to take long-range depreciation—it is not accelerated depreciation. One may be taking depreciation at a time when tax rates are high. But I cannot conceive that the Internal Revenue Department would operate in that way. It follows the tax returns and depreciation charges very closely. I am confident that in this case it would do the same.

Mr. BUSH. I thank the Senator from Kansas, and I agree fully with him.

Mr. MONRONEY. Mr. President, will the Senator from Connecticut yield further?

Mr. BUSH. I yield.

Mr. MONRONEY. The Bureau of Internal Revenue would have nothing to do with it. It would be the choice of the taxpayer whether he writes off depreciation the first year or the second year or postpones it until he is ready to take it. The Bureau of Internal Revenue does not say, "You have got to take off depreciation." The Bureau is not concerned with it, because it represents a decrease in Government revenue.

Mr. KNOWLAND. Mr. President, will the Senator from Connecticut yield?

Mr. BUSH. I yield.

Mr. KNOWLAND. I think the Senator from Connecticut has put his finger on the point. Either the $800,000 estimate of taxes represents the taxes based on the normal writeoff of depreciation or on the accelerated rate. I am inclined to agree, although I cannot say it factually, that it represents the normal rate of depreciation.

Mr. MONRONEY. I do not think that is important, so long as the Government gets the advantage of the fast or regular depreciation and comes out whole at the end of the period.

Mr. KNOWLAND. After getting back depreciation on a 5-year basis the tax item would be reduced, and to that extent the amount in the proposal for taxation would be that much less. Then the utility would be faced with the fact that when they had the plant they would have no depreciation left to carry on, and they would pay a heavier tax. The gamble would be whether at that point the taxes would be a little lower or a little higher. But, knowing the general problem faced by the Government, it would be quite a gamble to assume that the taxes would be much lower at that period of time.

Mr. MONRONEY. The main thing I want to say is that quick depreciation inures to reducing the contribution that AEC will make to absorb the Federal taxes. What worries me is immunity from Federal taxes.

Mr. BUSH. I shall certainly attempt to get the Senator some factual information on that point in 24 hours.

Mr. GORE. Mr. President, will the Senator from Connecticut yield?

Mr. BUSH. I yield.

Mr. GORE. The colloquy which has just occurred illustrates the difficulties which may arise from the establishment of a precedent for reimbursement of taxes. I am speaking in all seriousness. Let me read the statement of the General Manager of the Atomic Energy Commission, appearing at page 949 of the hearings—and I should like very much to have the majority leader hear this:

> The proposal provides for reimbursement by the AEC for all taxes, licenses, and fees, State, local, or Federal.

That struck me as being most unusual. In my 16 years in Washington I have never heard of any contract containing such a proposal. I asked the legal section of the Congressional Library to find a precedent. After considerable search I was told they were unable to locate any precedent.

Mr. BUSH. I would make the observation that this is an unusual contract. It is hard to find a precedent for this kind of a contract.

Mr. GORE. I agree with the Senator completely.

Mr. BUSH. We agree on that. I will say to the Senator that I am personally familiar with at least one power contract under which one company, which takes power from another hydroelectric company, agrees to pay the taxes. That is a part of the costs. There are certainly variable costs and no one knows what they are going to be. One would be the cost of the fuel and another would be taxes. In order that there may be a satisfactory agreement, it is not at all a bad idea, in my judgment—in fact, it is a very sound idea—that those variables be taken into account as they are proposed to be taken into account in this contract.

Mr. KNOWLAND. Mr. President, will the Senator from Connecticut yield?

Mr. BUSH. I yield.

Mr. KNOWLAND. Let us assume for a moment that the construction is done by the TVA rather than in the way that has been suggested. In effect we would be contributing the taxes because, obviously, there would be no Federal income tax on power charges. We would be in effect paying for the fuel. The TVA, in some instances, because it either had peak loads or otherwise, has actually sold at less than the cost of production. It is subsidized by appropriations from the Federal Government. So, to that extent, the Government, over a long term of years, would have to pay for the increasing fuel costs.

Mr. BUSH. That is correct.

Mr. KNOWLAND. It seems to me—and I think it is very clear—that certainly it is not the policy of the present administration to destroy the TVA, to make the TVA unworkable, to break up the TVA, or to do anything of that sort. But I think it is also true that there should be, as a matter of sound public policy, for the determination of what needs to be done in the future to develop properly the Tennessee Valley, which was the original idea of the Tennessee Valley Act, a precise knowledge of what the costs are, and a proper yardstick for measuring them. I think that applies not only to the Valley of the Tennessee—and I have been in that region, and I understand the great advantages and developments which have taken place, and I am sympathetic to them—but the same kind of honest yardstick in measuring costs should be applied to the Bureau of Reclamation projects and in connection with some of the Army civil engineering projects, so that the public may know precisely what the projects cost; whether there are apparent advantages or real advantages, or whether there are advantages accruing only from the fact that the private utility must pay taxes, and the publicly owned utility may not.

Even if it be demonstrated that there is no advantage, on a comparative cost basis, as a matter of public policy, and in maintaining a yardstick, so that the public may not be gouged, or so that there may not be overcharges by privately owned utilities, it still might be desirable to continue, and very likely there will be continued, a number of yardstick developments. But, at least, we should be able to do it with our eyes open; and both Congress, which is charged with collecting taxes from the American people and appropriating funds, and the American people themselves should be able to look at a balance sheet and know precisely what the charges are, and the extent of the advantages which are accruing from each type of development.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. BUSH. I yield to the Senator from Kansas.

Mr. CARLSON. It is important that the record be kept clear with respect to the taxes. The distinguished Senator from Tennessee read a proposal which provides for reimbursement by the AEC for all taxes, licenses, and fees, State, local, or Federal; paid or payable by the new corporation during the term of the contract, except that taxes arising out of the use of facilities for purposes other than the supply of capacity and energy to the AEC will not be paid by the AEC.

The reason for the last statement is that under the terms of the contract, there may arise situations when the Government would be using all the power which would be produced in its own system. In that case, of course, the Government would not pay taxes. But when the energy was not used by the AEC, but was sold to some other concerns for private use, taxes would have to be paid by the AEC, the same as in the case of a private corporation.

Mr. GORE. I read that statement into the RECORD 2 days, I may say to the Senator from Kansas.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. BUSH. I yield.

Mr. MANSFIELD. Can the distinguished Senator from Connecticut tell the Senate exactly what the pending bill does that the original McMahon Act cannot do?

Mr. BUSH. Mr. President, no; I am not prepared to go into that.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. BUSH. I yield.

Mr. HICKENLOOPER. There is no change. We are talking about a provision presently in the law. The pending bill does not change the existing law at

all. On the question of the contractual power of the AEC, there is utterly no change.

Mr. MANSFIELD. Except that an amendment was offered last year, which made a change in the original act.

Mr. HICKENLOOPER. I thought the Senator was speaking about the law in existence. The section was amended with respect to contract authorization, in connection with the Paducah, Portsmouth, and Oak Ridge situations, where additional power was needed, and Congress provided authority for the Commission to contract.

But the bill being considered today does not change the existing law with respect to that particular section at all. It merely carries over the existing law into the bill.

Mr. MANSFIELD. Why should there be new consideration of the act at this time, with such wide changes, if the basic tenets of the McMahon Act are still valid?

Mr. HICKENLOOPER. On that score, there is none. It was considered mechanically desirable to begin to rewrite the act. Many, many provisions in the original basic act, as amended, are continued in the bill. But new additions have been made, in order to accomplish an orderly result. A rewriting of the law really was essential. The bill does not open up anything else. The attack being made today is on section 164 of the bill we are considering, which is, verbatim, the law as it exists today. It is merely rewritten in the pending bill, but is a part of the present law.

Mr. MANSFIELD. Was not that portion written into the act last year?

Mr. HICKENLOOPER. Yes; last year. In other words, section 164 as it is proposed to be incorporated in the bill is the present law, and became the present law, as it now appears in section 164, last year.

Mr. MANSFIELD. Under the proposal now before the Senate, what is the status of the preference clause relating to public power aspects?

Mr. HICKENLOOPER. There is no change in that at all.

Mr. MANSFIELD. There is no change?

Mr. HICKENLOOPER. There is no preference clause, because the bill now being considered does not contemplate the Commission going into the commercial, competitive production of power.

Mr. MANSFIELD. That brings us to the Dixon-Yates contract. It is my understanding that when representatives of that concern appeared before, I think, the Power Subcommittee of the Committee on the Judiciary, they stated that they did not know anything about the specifications inherent in the contract which supposedly had been made, or was to be made. Is that correct?

Mr. HICKENLOOPER. The contract has not been made; it is still in the process of negotiation. I do not know what the final terms of the contract will be when they are arrived at, but the contract is in the state of negotiation now. It has not been signed, and sound conclusions have not been arrived at.

Mr. MANSFIELD. But this is the first instance in which a power concern in that area will be obligated, if the contract should be signed, to furnish power to the AEC; is it not?

Mr. HICKENLOOPER. Oh, no; not at all.

Mr. MANSFIELD. Have other private companies supplied power to the AEC?

Mr. HICKENLOOPER. There are two private power companies furnishing power to the Portsmouth plant and the Paducah plant. Last year a combination of power production groups was formed to use the private companies and TVA. Each furnished large amounts of electricity to the atomic-energy plants. There are contracts existing now with the EEI and the OVEC. They are private companies which contract with the AEC and TVA. The three elements or entities have combined to furnish power now to Portsmouth and Paducah, and I presume some to Oak Ridge.

Mr. MANSFIELD. Will those private power companies furnish kilowatts at a rate cheaper than the rate charged by the TVA?

Mr. HICKENLOOPER. I think not. I do not have the figures at hand, and am not prepared to discuss that particular phase at the moment; but the figures are comparable.

Mr. MANSFIELD. Inasmuch as the TVA is a Government operation, would it not be possible to continue to build steam plants in that area, so that cheap power could be generated to supply another Government agency, in this instance the Atomic Energy Commission?

Mr. HICKENLOOPER. It could be done if Congress wanted to do it. That is the question which is now being debated.

Mr. MANSFIELD. Would the vice chairman of the committee recommend such a proposal?

Mr. HICKENLOOPER. No.

Mr. GORE. Mr. President, will the Senator yield?

Mr. BUSH. I yield to the Senator from Tennessee.

Mr. GORE. I should like to return to the question of taxing authority. The Senator from Connecticut has cited a case involving two companies, in which one company was to reimburse the other.

Mr. BUSH. Yes, I pointed that out.

Mr. GORE. That is an entirely different matter from a contract between a corporation and the taxing authority, which in this case is the Federal Government.

Mr. BUSH. The Senator is correct in that there is a difference, but the principle which is established is that there is a variable condition. There is a Federal tax bill for which compensation must be made, or else it will have to be provided for in the rate. There are local and State taxes, and there is the cost of fuel, which is a variable cost. Those items either must be provided for in an adjustable rate, or else they must be set aside from the factors which go into the making of rates. They are not items which can take care of themselves. That is the basis of the proposal. It is out in the open for all to see. It seems to me that is more satisfactory than trying to incorporate it in the rate.

Mr. GORE. What I am trying to distinguish between, for the consideration of the Senate, is the granting of tax immunity by the Government to a corporation, on the one hand, and a contractual relationship between two corporations on the other.

Mr. BUSH. The corporation is not being granted tax immunity.

Mr. GORE. Will the Senator let me proceed for a moment?

Mr. BUSH. The corporation is going to be taxed.

Mr. GORE. Oh, no, it is not.

Mr. BUSH. Oh, yes, it is going to be taxed by the States and the localities, and all that is provided for is that the Government will assume the tax liability. There is not going to be any tax exemption.

Mr. GORE. Including the tax liability imposed by the Federal Government itself?

Mr. BUSH. Exactly.

Mr. GORE. Let us follow that line of reasoning. Suppose that an unfortunate emergency befalls the country and we are forced to increase taxes. I join the Senator in the hope that that will not occur, but if it does, the particular company under discussion would be remarkably unaffected. It would not bear any additional burden.

Mr. BUSH. Let me say to the Senator that nobody in his right mind would make a 25-year contract for power at fixed rates unless he had some variables provided for, in the event there was a variable in the cost of the items. If there is no assumption of the variables by the Federal Government in the contract, then there would have to be a fluctuating power rate. The Senator will agree with that, will he not?

Mr. GORE. Will the Senator yield?

Mr. BUSH. I asked the Senator a question. Will he not answer it?

Mr. GORE. Yes.

Mr. BUSH. That is the point.

Mr. GORE. I agree that the variables need to be known, but income taxes are based upon profits, and I wish to point out to the Senator that the net result of the provision will be twofold: One result will be that it will permit the electric rate structure to appear to be more favorable than it in fact is. The second is that it will operate to guarantee, not a variable profit, but an annual profit.

To illustrate how that would be reflected in the rate structure, if the Senator will make certain assumptions on a simple calculation, let us suppose we want to create a corporation in order to obtain a Government contract, and that we wish to arrange it so that that corporation will have a net return, after taxes, of $1 million. Let us assume the rate of taxation for that particular corporation will be 50 percent. I think the Senator would agree that it would be necessary to have a net earning of $2 million before taxes in order to have $1 million left after taxes. The Senator agrees with that, does he not?

Mr. BUSH. Yes.

Mr. GORE. Very well. Now let us take a case in which the Government reimburses all the Federal income taxes. If the corporation has a net earning before taxes of $1 million, it would pay $500,000 in taxes; and then if the Federal Government reaches down in its

other pocket and hands back that half million dollars, the corporation would still have the $1 million annually throughout the life of the contract, and the taxes would not be reflected in the rate structure. Does the Senator get that point?

Mr. BUSH. No; I am sorry, I do not get it.

Mr. GORE. I am sorry. I tried hard to convey the point to the Senator.

Mr. BUSH. I know the Senator did. The Senator is trying to make the point that the corporation somehow will benefit exceptionally from the arrangement by which the Government will assume the tax liability, and I say to the Senator that the contract is perfectly clear, so that no one is going to be fooled by it, and it provides a perfectly proper way, in a 25-year contract, which is a long-time contract, to take care of variable costs. In fact, I cannot think of a better way, and I suppose that is the reason why the provision was made.

Mr. GORE. The way to take care of variable costs, with regard to fuel, for instance, is by means of an escalator clause, and I understand contracts do so provide.

Mr. BUSH. Yes.

Mr. GORE. But it is unprecedented—I repeat, it is unprecedented—to give to a corporation or a citizen immunity from taxes.

Mr. BUSH. I may say to the Senator again that there is no immunity.

Mr. GORE. The corporation is guaranteed reimbursement for whatever taxes it might pay.

Mr. BUSH. I submit that is a very different thing.

Mr. GORE. I submit it amounts to the same thing. We may use two different words, reimbursement or immunity.

Mr. BUSH. If the contract should be canceled immediately, the company would have assumed all the liability for taxes, fuel, and all other costs.

Mr. GORE. I said immunity throughout the life of the contract.

Mr. BUSH. I prefer to use the other language.

Mr. GORE. I will be glad to use the word "reimbursement." I know of no precedent. I have asked the Congressional Library to find a precedent for such a provision, and they said they were unable to find one. I know of no such precedent.

Mr. BUSH. May I ask the Senator if he asked them to find a precedent for a contract like the one being proposed?

Mr. GORE. I did.

Mr. BUSH. Have they found one?

Mr. GORE. They have not.

Mr. BUSH. No wonder, then; it is a new idea.

Mr. GORE. I think it would be a very unwise precedent to set.

Mr. BUSH. It is a new idea. I think that is the reason why no precedent is found for it at the Library.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. BUSH. Yes.

Mr. HICKENLOOPER. As the Senator pointed out, at no place in the Dixon-Yates proposal to the agency are the words "reimbursement" or "immunity" from taxes used. That is not the language contained in the proposal. That is an expression which has crept into the debate in the Senate quite by accident, through what I think is an ill-advised use of terms by the Bureau of the Budget. It is not a reimbursement or immunity from taxes.

Mr. BUSH. It is an assumption.

Mr. HICKENLOOPER. It is an assumption on a formula for payment, which includes fixed costs, which will go into the cost of the operation of the plant by the Dixon-Yates group. It may well be argued that it is, in effect, reimbursement; but if that is true, then it should be recalled that every time General Motors makes a contract with the Government for tanks the taxes are figured in the cost.

This whole discussion reminds me of the old story about the sheriff who once had a hole shot through his hat when he was arresting a person. The next month he put in a bill to the board of supervisors, in which he included an item of $10 for one hat shot while arresting a person. The board of supervisors sent his bill back to him and stated, "Sorry. We can't allow this item of $10. We do not pay for articles of personal clothing destroyed in the performance of official duty." The sheriff received the refusal, and changed the expense account. The next month he sent in an account for expenses again to the board of supervisors. It was a very properly prepared expense account, with each item specified on each line, and at the bottom he totaled the items; but down at the bottom he wrote, "P. S.—The hat is in here, but you can't find it." [Laughter.]

The item of taxes is included in everything the Government purchases. They are not necessarily corruptly concealed, but are figured in the cost of doing business. So far as the question of taxes and reimbursement is concerned, that is taken care of in the language which TVA puts into its contracts.

Perhaps the Senator from Connecticut pointed it out, but I should like to read the language which TVA demands in its contract with the Atomic Energy Commission. The TVA puts into its contract with the Atomic Energy Commission the following phrase, which I quote from the contract:

> It is understood that the buyer—

That is, the Atomic Energy Commission—

> will pay such additional amounts for capacity and energy as will result—

Oh, I beg pardon; I read the wrong section.

I shall read from the TVA proposal. I began to read the Dixon-Yates proposal, which does not use the term "reimbursement." But here is the TVA requirement of the AEC, and the AEC signed it:

> In the event that Authority—

The Authority is the TVA—

> is required by any law enacted after January 1, 1953, to pay any amounts for or in lieu of taxes which it would not have been required to pay except for the supply of power hereunder, including, without limitation, any payments resulting from Authority's ownership or operation of steam electric-generating or other facilities required for such supply of power, Commission will reimburse Authority for such payment. Authority will confer with Commission before making any payment for which it would be entitled to such reimbursement in whole or in part.

So in its very contract with the Commission the TVA includes the word "reimbursement," in case it later has to pay taxes.

Mr. BUSH. I thank the Senator from Iowa for making that point clear. I think he has made a considerable contribution to this colloquy.

Mr. GORE. Mr. President, will the Senator from Connecticut yield to me?

Mr. BUSH. I yield.

Mr. GORE. Lest the Senator from Iowa think I invented the word "reimbursement" in connection with this matter——

Mr. HICKENLOOPER. I did not say that. I said that word came in through language which I thought was unfortunately used in the Bureau of the Budget statement. I did not say the Senator from Tennessee used that term.

Mr. GORE. I thought it was presented to the Congress on that basis.

I should like to emphasize that in relation to tax matters it is not proper to compare a contract between two private corporations, on the one hand, with a contract between a private corporation and the Government on the other. Neither is it on all fours to compare a relationship between two wholly owned Government corporations, because if the law to which the able Senator from Iowa has referred is changed, Congress will change it. Therefore, in the contract the Tennessee Valley Authority was merely saying that if Congress changes the law with respect to the TVA rate structure, that shall be taken into consideration by the other Government agency, namely, the Atomic Energy Commission. So it is not the same thing at all.

Mr. HICKENLOOPER. Mr. President, will the Senator from Connecticut yield to me?

Mr. BUSH. I yield.

Mr. HICKENLOOPER. I do not wish to get into a discussion of whether we are multiplying apples by eggs, in this case—in other words, the exact perspective of the TVA and the AEC and private contracts. I brought up the point that the principle of accelerated costs by way of increased taxes is one insisted upon by the TVA itself, as a yardstick for measuring its rates; and that the principle which is involved in the tax cost of the Dixon-Yates contract is identically the same as the principle the TVA insists upon in its contracts.

Mr. GORE. I beg pardon, Mr. President——

Mr. BUSH. Mr. President, I should like to make an observation before the Senator gets further away from the initial point. He seems to take issue with my suggestion that in contracts between private companies the principle of tax absorption is embodied and he seems to feel that I am not aware of a difference involved in contracts with the Government. Of course, I am aware of it. I cited it only as an example that in busi-

ness contracts—and this is one—the principle of absorbing variables, including taxes, is nothing new. That is all. The Senator can have his own opinion—and I shall not argue the matter further with him—as to whether it is proper to have that in a contract with the Government. I think it is entirely proper. In fact, I cannot think of any basis of contract more satisfactory than to have the variables out in the open.

Mr. GORE. Mr. President, will the Senator from Connecticut yield?

Mr. BUSH. I yield.

Mr. GORE. I think it is the ultimate of satisfaction to the private corporation, certainly.

Mr. BUSH. I say it is to the satisfaction of both the Government and the corporation. It is the only way of settling the matter clearly—in the open.

Mr. GORE. Mr. President, if the Senator from Connecticut will yield further, let me say, to return to the question raised by the Senator from Iowa, that the provision in the contract between the TVA and the AEC does not relate at all to Federal income taxes. It relates to a payment in lieu of taxes which the TVA might, by Congress, be required to make, not to the Federal Government, but to the localities in which the TVA operates. That is an entirely different matter from Federal income taxes.

Again I point out that under this contract, throughout its life, no matter what emergency might arise, requiring an increase in the corporate tax rate or an increase in the excess-profits tax, this concern would have special treatment—satisfactory to it, I daresay; but no matter how much higher Congress might raise the burden of taxation upon other corporations or other persons, this particular concern would have a bombproof shelter; it would have immunity from taxation.

Mr. BUSH. That is a difference that I simply cannot reconcile with the Senator from Tennessee.

Mr. President, I am about to yield the floor, if there are no further questions.

Mr. GORE. Mr. President, before the Senator from Connecticut yields the floor, let me thank him for his courtesy in yielding. I enjoy discussion with him, both in private, in committee, and on the floor of the Senate. He is a very estimable gentleman.

Mr. BUSH. I thank the Senator from Tennessee for those very kind remarks, and I may say I reciprocate them.

ORDER FOR RECESS TO 10 A. M. TOMORROW

Mr. KNOWLAND. Mr. President, I ask unanimous consent that when the Senate completes its labors today it stand in recess until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

INCLUSION OF SENATE BILL 880 IN NEXT CALL OF THE CALENDAR

Mr. KNOWLAND. Mr. President, I ask unanimous consent that on the next call of the calendar, No. 1794, Senate bill 880, to amend the license law of the District of Columbia, may be included.

The PRESIDING OFFICER. Without objection, it is so ordered.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. HICKENLOOPER obtained the floor.

Mr. CARLSON. Mr. President, will the Senator from Iowa yield to me, to permit me to suggest the absence of a quorum?

Mr. HICKENLOOPER. First, Mr. President, I should like to make a statement by way of explanation.

Mr. President, I am about to suggest the absence of a quorum, because I wish to submit a series of 5 or 6 amendments which I have discussed with the Senator from Tennessee, and which I believe do not go to the fundamentals of the bill. The amendments make some rearrangements and are in the nature of making corrections. However, I think it is proper to have a quorum call, so that the membership of the Senate may know what we are about to take up.

Therefore, Mr. President, I now suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HICKENLOOPER. Mr. President, I offer the amendments which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendments offered by the Senator from Iowa will be stated.

The LEGISLATIVE CLERK. On page 101, line 21, before section 251 it is proposed to add as a new section 241 the following:

SEC. 241. Nothing in this act shall be deemed to repeal, modify, amend, or alter the provisions of section 9 (a) of the Atomic Energy Act of 1946, as heretofore amended.

On page 104, line 14, it is proposed to strike all of section 4.

The PRESIDING OFFICER. Without objection, the amendments will be considered en bloc.

Mr. HICKENLOOPER. Mr. President, I wish to make a brief explanation of the amendments.

These amendments bring over into the organic law the reference in section 4 of the bill which merely kept alive section 9 (a) of the Atomic Energy Act of 1946. Section 9 (a) of the act directed the President to transfer to the Commisson all interests owned by the United States in materials relating to atomic energy. This was a provision which was applicable in 1946 and 1947 when the Commission was formed. It is kept in the act only in order to permit the Commission to acquire those properties which are the subject of the provision in case there are still any such which it has not received. It has no further operation than that.

The last line of the amendment, reading "on page 104, line 14, strike all of section 4," is a matter of mechanics. The amendment would merely transfer the section as it now appears in the bill, from a place near the end of the bill to a place in the bill where it will be a part of the organic law, and will provide better continuity.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. HICKENLOOPER. I yield.

Mr. PASTORE. As a matter of fact, all the amendment does is to improve the draftsmanship of the bill. It does not change the substance of it.

Mr. HICKENLOOPER. The Senator is correct.

The PRESIDING OFFICER. The question is on agreeing en bloc to the amendments offered by the Senator from Iowa.

The amendments were agreed to.

Mr. HICKENLOOPER. Mr. President, I offer the amendments which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendments offered by the Senator from Iowa will be stated.

The LEGISLATIVE CLERK. On page 69, line 13, after the word "material", it is proposed to add "or atomic energy."

On page 63, line 12, it is proposed to delete the word "ADVISORY."

On page 68, lines 13–14, it is proposed to delete the word "Advisory."

On page 70, line 1, it is proposed to delete the word "Advisory."

On page 70, line 25, after "section 151", it is proposed to add "or section 154."

The PRESIDING OFFICER. Without objection, the amendments will be considered en bloc.

Mr. HICKENLOOPER. These amendments are minor amendments to the patent sections and provide for a drafting correction to section 156 (b), by adding the phrase "or atomic energy" to the phrase "production or utilization of special nuclear material", making the phrase read "production or utilization of special nuclear material or atomic energy." Furthermore, it returns the title of the Patent Compensation Board to its former title in place of "Patent Compensation Advisory Board" as proposed in the bill.

The elimination of the word "advisory" has been considered a proper correction. It gives a little more flexibility to the Patent Compensation Board.

The PRESIDING OFFICER. The question is on agreeing en bloc to the amendments offered by the Senator from Iowa.

The amendments were agreed to.

Mr. HICKENLOOPER. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Iowa will be stated.

The LEGISLATIVE CLERK. On page 91, line 4, it is proposed to amend section 182 to read as follows:

SEC. 189. Hearings and judicial review:

a. In any proceedings under this act, for the granting, suspending, revoking, or

amending of any license or construction permit, or application to transfer control, and in any proceedings for the issuance or modification of rules and regulations dealing with the activities of licensees, and in any proceeding brought under the provisions of section 152, and in any proceeding for the payment of compensation, an award or royalties under section 156, 186 (c) or 188, the Commission shall grant a hearing upon the request of any person whose interest may be affected by the proceeding, and shall admit any such person as a party to such proceeding.

b. Any final order entered in any proceeding of the kind specified in subsection a. above entered in an "agency action" of the Commission shall be subject to judicial review in the manner prescribed in the act of December 29, 1950, as amended (ch. 1189, 64 Stat. 1129), and to the provisions of section 10 of the Administrative Procedure Act, as amended.

Mr. HICKENLOOPER. Mr. President, this section reincorporates the provisions for hearings formerly made part of section 181 but clearly specifies the types of Commission activities in which a hearing is to be required. The purpose of this revision is to specify clearly the circumstances in which hearings are to be held. The section also reincorporates the former provisions of section 189 dealing with judicial review. There is a slight change in wording merely to clarify the intent of Congress with respect to the extent of the applicability of the act of December 29, 1950, and the applicability of the section 10 of the Administrative Procedure Act.

I state that this is a procedural operation, and does not go to the fundamentals of the so-called cross-patenting provision, or any provision of that kind.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. HICKENLOOPER. I yield.

Mr. PASTORE. As a matter of fact, referring to the bill S. 3690, as reported by the committee, at page 84, under chapter 16, "Judicial Review and Administrative Procedure," and extending to page 85, in line 11, the bill refers to "agency action." That wording was thought to be too broad, broader than it was intended to make it. The amendment limits the provision to hearings on licenses in which a review shall take place.

Mr. HICKENLOOPER. The Senator from Rhode Island is correct. This is a corrective amendment which clarifies the situation.

The PRESIDING OFFICER (Mr. CRIPPA in the chair). The question is on agreeing to the amendment offered by the Senator from Iowa [Mr. HICKENLOOPER].

The amendment was agreed to.

Mr. HICKENLOOPER. Mr. President. I call up my amendment 7–14–54–F.

The PRESIDING OFFICER. The Secretary will state the amendment.

The LEGISLATIVE CLERK. On page 76, line 11, after the words "source materials", it is proposed to strike out the phrase "which are adequately available within the United States" and insert "which are regularly obtainable from domestic producers within the United States."

Mr. HICKENLOOPER. Mr. President, the amendment on page 76, line 11, changing the words "which are adequately available within the United States" in subsection 161 (l) to "which are regularly obtainable from the domestic producers within the United States" is proposed in order to clarify the intent of the proviso. The subsection permits the Commission to import free of duty certain materials—especially source materials—purchased abroad. The intent of the proviso is to permit the Commission to use this power only when the materials are not regularly obtainable within the United States. It was not thought proper to permit the Commission to import free of duty items which are regularly produced within this country. This would create an unfair competition for American producers as against foreign producers who would no longer be required to add a duty on the price of their goods.

The only exception is source materials, which the Commission can introduce. The language as originally determined by the committee contained the words "adequately available." The committee thought that that term was sufficiently protective, but certain persons who are interested in the mining industry in the United States felt that the word "adequately" might be interpreted to mean materials which are produced in this country, in complete needed quantity, and they suggested that it would be clearer if we said "regularly obtainable." It would mean that the Commission could not willy-nilly and whimsically demand that such minerals as copper, lead, and zinc shall be imported free of duty. We have no intention of doing that. I believe the amendment clarifies the language in that respect. With the exception of source materials, it will apply to materials regularly imported into this country as not being eligible for duty-free admission.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Iowa [Mr. HICKENLOOPER].

The amendment was agreed to.

Mr. HICKENLOOPER. Mr. President, I call up my amendment 7–14–54–G.

The PRESIDING OFFICER. The Secretary will state the amendment.

Mr. HICKENLOOPER. Mr. President, if there is no objection, I ask that the amendment be not read. I shall give a short explanation of the intent of the amendment.

The PRESIDING OFFICER. Without objection, the amendment will be printed in the RECORD at this point.

The amendment offered by Mr. HICKENLOOPER is as follows:

On page 84, amend section 181 to read as follows:

"SEC. 181. General: The provisions of the Administrative Procedure Act (Public Law 404, 79th Cong., approved June 11, 1946) shall apply to all agency action taken under this act, and the terms 'agency' and 'agency action' shall have the meaning specified in the Administrative Procedure Act: *Provided, however,* That in the case of agency proceedings or actions which involve restricted data or defense information, the Commission shall provide by regulation for such parallel procedures as will effectively safeguard and prevent disclosure of restricted data or defense information to unauthorized persons with minimum impairment of the procedural rights which would be available if restricted data or defense information were not involved."

Mr. HICKENLOOPER. Mr. President, the change in section 181 relating to the Administrative Procedure Act is to provide the Commission with a little more flexibility in dealing with procedures than was provided in this section in the bill. This proposal requires the Commission, where restricted data and defense information are concerned, to establish parallel procedures to those regularly employed. But the procedures are such as to protect against the wrongful dissemination of restricted data and defense information while at the same time preserving as many of the normal procedures as is possible. The section in the bill required the Commission to have identical but secret proceedings.

I move the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Iowa [Mr. HICKENLOOPER].

The amendment was agreed to.

Mr. HICKENLOOPER. Mr. President, I call up my amendment 7–14–54–H.

The PRESIDING OFFICER. Does the Senator from Iowa desire the amendment to be read?

Mr. HICKENLOOPER. There is no need to have it read. I shall make a short explanation of it.

The PRESIDING OFFICER. Without objection, the amendment will be printed in the RECORD at this point.

The amendment offered by Mr. HICKENLOOPER is as follows:

On page 103, line 1, amend section 2 to read as follows:

"SEC. 2 a. Section 1 (d) of the act of December 29, 1950 (64 Stat. 1129), is amended by inserting before the period at the end thereof a semicolon and the following: 'when such order was entered by the Atomic Energy Commission, "agency" means that Commission.'

"b. Section 2 of the act of December 29, 1950 (64 Stat. 1129) is amended by inserting before the period at the end of the first paragraph thereof a semicolon and the following: 'and (d) of the Atomic Energy Commission made reviewable by section 189 of the Atomic Energy Act of 1954, as amended.'"

Mr. HICKENLOOPER. Mr. President, section 2 of the bill has been revised in order to amend the definition of "agencies" within the act of December 29, 1950, so that the Atomic Energy Commission is brought within that definition. This section also provides that an appeal from an order of the Atomic Energy Commission shall be subject to the same judicial review provided for other regulatory agencies. There is no change in the substance intended by this modification.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Iowa [Mr. HICKENLOOPER].

The amendment was agreed to.

Mr. HICKENLOOPER. Mr. President, I call up my amendment "I."

The PRESIDING OFFICER. Does the Senator desire the amendment read?

Mr. HICKENLOOPER. I have no objection, if some Senator wishes to have it read. I ask unanimous consent to have it printed in the RECORD, and I shall make a brief explanation of it.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HICKENLOOPER'S amendment is as follows:

On page 48, line 3, amend section 105 c to read as follows:

"c. Whenever the Commission proposes to issue any license to any person under section 103, it shall notify the Attorney General of the proposed license and the proposed terms and conditions thereof, except such classes or types of licenses, as the Commission, with the approval of the Attorney General, may determine would not significantly affect the licensee's activities under the antitrust laws as specified in subsection 105 a. Within a reasonable time, in no event to exceed 90 days after receiving such notification, the Attorney General shall advise the Commission whether, insofar as he can determine, the proposed license would tend to create or maintain a situation inconsistent with the antitrust laws. Upon the request of the Attorney General, the Commission shall furnish or cause to be furnished such information as the Attorney General determines to be appropriate or necessary, to enable him to give the advice called for by this section."

Mr. HICKENLOOPER. Mr. President, because of certain problems suggested by the Attorney General, the antitrust provision of section 105 c is proposed to be modified by this amendment somewhat to accord with provision in the Federal Property and Administrative Services Act. Under the proposed change, the Attorney General would advise the Commission whether a proposed license would create a situation inconsistent with the antitrust laws. There is no provision for hearing, but the information developed by the Commission would be a part of the administrative record. This amendment was specifically suggested by the Attorney General.

Mr. BRICKER. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I yield.

Mr. BRICKER. Does the amendment remove from the bill as it was reported by the committee the provision in regard to the Federal Trade Commission?

Mr. HICKENLOOPER. Yes, it does.

Mr. BRICKER. This is an amendment adopted by the full committee after I was called into the conference on the housing bill; is that correct?

Mr. HICKENLOOPER. I was not personally present at the time the committee adopted the amendment, but, as I understand, there was no objection. Everyone there agreed to it. I am perfectly willing to vote for it myself.

Mr. BRICKER. I was very anxious that the Federal Trade Commission provision be stricken out.

Mr. HICKENLOOPER. The amendment does that. In effect, it says the Attorney General shall advise the Commission whether a proposed license will, in the opinion of the Attorney General, create a situation inconsistent with the antitrust laws.

Mr. BRICKER. If the Attorney General should advise that there would be no violation of the antitrust laws, and then ultimately be called upon to prosecute, would a dangerous situation be created? In other words, would the advice of the Attorney General be an absolute defense, as against prosecution, to those who were licensed?

Mr. HICKENLOOPER. No; it could be an absolute defense, in my opinion. I do not believe it would create a controlling situation, a situation where the prior act would be controlling in any future prosecution or future litigation which might arise. It is an advisory situation under the conditions obtaining at the time the license is applied for.

Mr. BRICKER. Of course, the Attorney General is the legal adviser to the departments of the Government. I was concerned whether making such a provision officially a part of the act might have some binding effect upon the present or future Attorneys General.

Mr. HICKENLOOPER. I would be bound to say to the Senator that if terms and conditions of a license were set forth in the application and the Attorney General advised the Commission that in his opinion at that time the terms and conditions of the license did not create a situation inconsistent with the antitrust laws, and if the license, without any change or alteration or modification, were granted on that basis, I should think it would have an influence on a later decision.

Mr. BRICKER. Certainly a controlling effect.

Mr. HICKENLOOPER. I would not say "controlling," not necessarily. I do not think the courts would be bound by an opinion of the Attorney General. They could overturn it. But it would have an influence.

Mr. PASTORE. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I yield.

Mr. PASTORE. Will the Senator admit that it is the clear intention of the joint committee that the provision shall in no way constitute a bar to or estop future action on the part of the Attorney General for violation of any antitrust law?

Mr. HICKENLOOPER. Yes, indeed.

Mr. PASTORE. Will the Senator admit that such a provision is now a part of the Federal Property and Administrative Services Act, and that the Attorney General has approved the procedure proposed by this amendment?

Mr. HICKENLOOPER. I believe the Senator has stated it correctly. There is no intention of setting up a preliminary bar to any future legal action, either by the Government or by a private citizen or group of citizens. They will have their rights. It is a matter of advice in the manner of a pretrail examination so to speak, as used in the courts. I would not say it corresponds to a pretrial examination, because I think a pretrial hearing has certain controlling features.

Mr. BRICKER. Mr. President, will the Senator from Iowa yield further?

Mr. HICKENLOOPER. I yield.

Mr. BRICKER. The doctrine of estoppel does not run against the Government, anyway. It might prove an embarrassing situation to the Attorney General. It may be that this is the only way it can be worked out, but I have always been doubtful that there could logically lie against a licensee of a Government commission such as the Atomic Energy Commission any antitrust suit. The responsibility lies with the Atomic Energy Commission.

Mr. HICKENLOOPER. An antitrust lawsuit would not lie against the Commission.

Mr. BRICKER. No; against the licensee.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Iowa [Mr. HICKENLOOPER], identified as "I."

The amendment was agreed to.

Mr. HICKENLOOPER. Mr. President, I call up my amendment 7–14–54–J.

The PRESIDING OFFICER. Does the Senator wish to have it stated?

Mr. HICKENLOOPER. No, Mr. President; I ask unanimous consent that it be printed in the RECORD without reading.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HICKENLOOPER'S amendment is as follows:

On page 103, strike out all after line 11, over to and including line 11, on page 104, and insert in lieu thereof the following:

"Beginning at the center quarter corner of section 30, township 10 north, range 4 east, New Mexico principal meridian, Bernalillo County, New Mexico, thence south no degrees twenty-three minutes thirty seconds west one thousand nine hundred forty-seven and twenty-one one-hundredths feet, thence north eighty-nine degrees thirty-six minutes forty-five seconds east two thousand sixty-eight and forty one-hundredths feet, thence north eighty-nine degrees three minutes fifteen seconds east five hundred and forty-six feet, thence north no degrees thirty-nine minutes no seconds east two hundred thirty-two and seventy one-hundredths feet, thence north eighty-nine degrees twenty-one minutes no seconds west eight hundred fifty-two and twenty one-hundredths feet, thence north no degrees thirty-nine minutes no seconds east five hundred and sixty-one one-hundredths feet, thence along the back of the south curb of West Sandia Drive, Sandia Base, Bernalillo County, New Mexico, eight hundred sixty-five and sixty one-hundredths feet; thence north no degrees thirty-nine minutes no seconds east one thousand three hundred thirty-five and three-tenths feet to a point south eighty-nine degrees twenty-seven minutes forty-five seconds west a distance of thirty feet from the quarter corner common to sections 30 and 29, township 10 north, range 4 east, thence south eighty-nine degrees, twenty-seven minutes forty-five seconds west two thousand six hundred twenty-three and forty one-hundredths feet to the point of beginning."

Mr. HICKENLOOPER. Mr. President, this is a section, earlier defined in the metes and bounds, of the residential property of Sandia Base over which exclusive jurisdiction is being returned to the State of New Mexico. It has been redefined because of a technical error found in the original language. Exclusive jurisdiction is being given back to the State of New Mexico because the people who live on the reservation really have no acceptable forum in which to have their property rights settled.

They have questions of divorce action and other questions and cannot have them adjudicated. The Commission believes that jurisdiction over the area should be returned to the State of New Mexico so that the laws of that State

will apply. However, when the description was sent to the committee and we put it into the bill as it now appears, in checking it we found with reference to the exact metes and bounds that the line of demarcation ran right down the middle of one of the avenues, and on the boundary line. So one-half of the street would be under Federal jurisdiction and the other half would be under the jurisdiction of the State of New Mexico. Therefore, we asked to have the property so described redrawn and replotted. We now believe that the action taken is without doubt correct and that it accomplishes the purpose. The effect is that one line of demarcation of the property is moved from the middle of the street to the curb line of the right-of-way.

The amendment merely contains a restatement of the metes and bounds, and a description of the property to be retroceded to the State of New Mexico. That is the occasion for the amendment, and I think it is correct.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Iowa [Mr. HICKENLOOPER].

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

REMOVAL OF TAX EXEMPTION FROM FOUNDATIONS WHICH GIVE FINANCIAL AID TO COMMUNIST AND COMMUNIST-FRONT ORGANIZATIONS AND INDIVIDUALS

Mr. WELKER. Mr. President, on the front page of a New York newspaper of July 14 there appeared a Washington dateline story, with the byline of Edwin L. Dale, Jr., which, in my opinion, is full of misinformation and, in my opinion, is full of propaganda against the McCarran amendment to the tax bill.

Senators will remember this amendment, which passed the Senate without a dissenting vote, and which would remove tax exemption from foundations and other organizations that give money to Communist and Communist-front organizations and individuals.

The headline on this front-page story in the New York newspaper was: "Foundations Imperiled by Sleeper in Tax Bill."

Mr. President, the amendment was no "sleeper." The news story says it was accepted without debate. That is not so. The senior Senator from Nevada explained the amendment fully on the floor of the Senate at the time he offered it, and before it was voted into the bill.

Furthermore, the amendment itself was not new. The Senator from Nevada [Mr. MCCARRAN] first offered this proposal on January 7, 1953, in the form of an original bill, which was referred to the Senate Committee on Finance. The Senator from Colorado [Mr. MILLIKIN] stated on the Senate floor, at the time the McCarran amendment was debated, that this was not a new proposal, but was one which had been before the committee for a considerable time.

Mr. President, it is wholly false to say the bill will put any of the big foundations out of business. But it will, I hope, put them out of the business of giving money to Communists and Communist causes, if any so do.

No foundation has anything to fear from the amendment if it does not and will not aid subversives and subversive organizations.

The New York newspaper story makes some absurd statements. For instance, it says that under the McCarran amendment the Rockefeller Foundation would have to be able to prove that every Egyptian peasant getting DDT was not a Communist.

Mr. President, the McCarran amendment specifically provides that no penalty shall attach in the case of any donation made by an organization to an individual solely for charitable purposes to supply food, clothing, shelter, or other necessities for such individual or for members of his family or household.

Similarly, the amendment provides that no penalty shall attach in the case of any donation made by an organization to an individual solely for the purpose of providing medical or hospital services for such individual or for members of his family or household.

The newspaper story to which I have referred points out that there is in the bill a provision which says a foundation will be safe if it receives from the recipient of a grant a sworn statement that it—or he—is not a subversive organization as defined—herein—unless the donor organization knows or has reason to know that such organization—or individual—is subversive. That is not an accurate quotation from the bill, but in substance, it is a correct statement of what the bill provides. The newspaper story then goes on to say that this means every officer of the foundation would be charged with having opportunity to know that the recipient might be lying. That statement is absolutely false. It is the reverse of what the McCarran amendment in fact provides. What the amendment says is that an organization shall be charged with the knowledge of its officers and agents. In other words, if an officer or agent of a foundation knows that the recipient of a particular donation is a Communist, the foundation itself will be charged with that knowledge. This is a wholly reasonable provision. Foundations are not thinking entities. Foundations are run by people. It is only right that when something is known to the people who are running a foundation, it should be legally chargeable as knowledge by the foundation.

This newspaper article to which I refer, Mr. President, says that the foundations are making a strong effort to have the McCarran amendment stricken from the bill in the conference committee. I cannot believe that statement. I do not know to what extent effort is being fostered or promoted by such organizations as the Institute of Pacific Relations, which was for many years the beneficiary of grants from foundations. The Institute of Pacific Relations, the Senate Internal Security Subcommittee found, "has been considered by the American Communist Party and by Soviet officials as an instrument of Communist policy, propaganda, and military intelligence, and which the committee also found was infiltrated by Communists and was used for pro-Communist and pro-Soviet purposes."

I know, Mr. President, that the amendment was voted into the bill by the Senate of the United States. I am absolutely confident that the House of Representatives, if given an opportunity to vote on the amendment, would not reject it. If the conferees should strike the amendment from the bill, it will be done on their own responsibility. I hope the Senate conferees will not do so, and I do not think they will assent to doing so, for the Senate has voted on the matter and has included the amendment in the bill. The House conferees, I hope, would only vote for striking the amendment from the bill on the theory that the House was opposed to it. But the House has not opposed it. The House has not had an opportunity to vote on it. I hope that if the House conferees are in any doubt at all about this matter, they will take the amendment back to the House in disagreement and get a House vote which will guide them. If the House should vote against the amendment, then, clearly, the House conferees would be justified in opposing it in the conference committee. But unless and until the House has voted against the amendment, if the House conferees seek to eliminate it, the responsibility for doing so will be theirs personally.

Mr. President, I think the people of America are going to watch to see what happens to this amendment. Here is a strong anti-Communist provision which has been written into the tax bill by the Senate of the United States. If it is rejected in the conference committee, I believe the people of the country will want to know why, and who was responsible. The amendment should not be rejected, Mr. President; and I do not believe it will be rejected.

I ask unanimous consent that the news story to which I have referred, together with the text of the McCarran amendment, as adopted by the Senate, may be printed in the RECORD at this point as a part of my remarks.

There being no objection, the article and amendment were ordered to be printed in the RECORD, as follows:

FOUNDATIONS IMPERILED BY SLEEPER IN TAX BILL

(By Edwin L. Dale, Jr.)

WASHINGTON, July 13.—A sleeper amendment added to the big tax revision bill on the Senate floor threatens to curtail severely or even put out of business the big foundations such as the Carnegie and Rockefeller Foundations.

The foundations, awakening belatedly to the implications of the amendment, are making a strong effort to have it stricken out of the bill in the House-Senate conference which begins tomorrow.

The amendment has an innocent-sounding purpose—namely to prevent the foundations and charitable organizations generally from making grants to Communist and Communist-front organizations and individuals. It was introduced by Senator PAT MCCARRAN, Democrat, of Nevada, and accepted without debate by the Senate after Senator EUGENE D. MILLIKIN, Republican, of Colorado, chairman of the Finance Committee and floor manager of the bill, agreed to take it to conference.

The threat to the foundations arises from the details of the amendment whose central point is removal of tax exemption from any institution which makes grants to Communists. The same threat holds for churches and tax-exempt charities generally.

The key gimmick is a provision which would abolish tax-exempt status for any institution which makes a grant to a subversive individual, as distinct from an organization. If out of the 3,000 grants made annually by the Rockefeller Foundation, for example, one went to an individual who later proved to be a Communist-sympathizer, the foundation would lose its tax-exempt status for a minimum of 2 years—enough virtually to put it out of business.

Furthermore, the same rules apply to grants made abroad. Under a strict interpretation of the amendment, the Rockefeller Foundation would have to be able to prove that every Egyptian peasant getting DDT was not a Communist.

The loss of tax exemption would have the effect of cutting in half the income of most of the big foundations. That, in turn, would cut in half their grants. Furthermore, the amendment removes the deductibility from taxable income of gifts made by individuals to institutions which lose their tax-exempt status because of grants to subversives.

The requirement of the bill which, perhaps more than any other, worries the foundations is one which says a foundation will be safe if it receives from the recipient of a grant "a sworn statement that it (or he) is not a subversive organization as defined (herein), unless the donor organization knows or has reason to know that such organization (or individual) is subversive."

"OPPORTUNITY TO KNOW"

This means, as the brief of one foundation puts it, that some sort of affidavit would be required with every grant. But worse still, every officer of the foundation would be charged with having "opportunity to know" that recipient might be lying.

The foundation asks: "Would a charge be made in an anonymous letter be held to furnish a 'reasonable opportunity to know?' Would the adverse testimony of a witness before a congressional committee be regarded as placing an organization on notice, even if such testimony was not followed up by a finding of the committee itself? Would a charge by a Senator or Representative that a particular university is subversive endanger the tax exemption of any organization which made a grant to that university?"

This foundation asks: "Would the Congress wish us, before making any grant to the University of Oxford, to demand that its chancellor furnish an affidavit that it neither advises nor teaches the propriety of overthrowing the Government of the United States by force or violence?"

The Treasury has been advised of the fears of the foundations, and the Internal Revenue Service is understood to be opposed to the amendment on the ground that it will cause a tremendous problem of enforcement. The issue, however, now rests with the 5 Senators and 5 Representatives of the conference committee.

The committee comprises Representatives DANIEL A. REED, Republican, New York, chairman of the House Ways and Means Committee; THOMAS A. JENKINS, Republican, Ohio; RICHARD M. SIMPSON, Republican, Pennsylvania; JERE COOPER, Democrat, Tennessee; and JOHN D. DINGELL, Democrat, Michigan; the other ranking majority and minority members of that group, and Senators EUGENE D. MILLIKIN, Republican, Colorado, chairman; EDWARD D. MARTIN, Republican, Pennsylvania; JOHN J. WILLIAMS, Republican, Delaware; WALTER F. GEORGE, Democrat, Georgia; and HARRY F. BYRD, Democrat, Virginia, ranking members of the Senate Finance Committee.

Amendment intended to be proposed by Mr. MCCARRAN to the bill (H. R. 8300) to revise the internal revenue laws of the United States, viz: At the proper place in the bill add the following:

"Chapter 38 of the Internal Revenue Code is amended by adding at the end thereof a new section as follows:

"'SEC. 3815. Denial of exemption under section 101 (6) in the case of organizations making donations to subversive organizations or individuals.

"'(a) Definitions: For the purposes of this section:

"'(1) Subversive organization: The term "subversive organization" means any organization which (A) advocates, abets, advises, or teaches the duty, necessity, desirability, or propriety of overthrowing or destroying the Government of the United States by force or violence, or (B) is on the list of organizations furnished by the Attorney General pursuant to part III, section 3 of Executive Order No. 9835 of March 21, 1947, or (C) is registered (or required by a final order of the Subversive Activities Control Board to register) with the Attorney General under section 7 of the Subversive Activities Control Act of 1950.

"'(2) Subversive individual: The term "subversive individual" means any individual who (A) advocates, abets, advises, or teaches the duty, necessity, desirability, or propriety of overthrowing or destroying the Government of the United States by force or violence, or (B) is a member of any subversive organization as defined in paragraph (1) of this subsection, or (C) is registered or required to be registered with the Attorney General under section 8 of the Subversive Activities Control Act of 1950.

"'(3) Donation: The term "donation" includes (A) any gift, contribution, or grant of money, property, services, or any other thing of value, and (B) any loan of money, property, services, or any other thing of value, other than a loan in the course of a bona fide business transaction.

"'(b) Denial of exemption:

"'(1) General rule: No organization which makes a donation to any subversive organization or to any subversive individual shall be exempt from taxation under section 101 (6).

"'(2) Exceptions: The provisions of paragraph (1) of this subsection shall not apply in the case of any donation made by an organization to—

"'(A) an individual solely for charitable purposes to supply food, clothing, shelter, or other necessities for such individual or for members of his family or household; or

"'(B) an individual solely for the purpose of providing medical or hospital services for such individual or for members of his family or household; or

"'(C) an organization which furnishes to the donor organization in advance of such donation a sworn statement that it is not a subversive organization as defined in subsection (a) (1) of this section, unless the donor organization knows or has reasonable opportunity to know that such organization is a subversive organization; or

"'(D) an individual who furnishes to the donor organization in advance of such donation a sworn statement that he is not a subversive individual as defined in subsection (a) (2) of this section, unless the donor organization knows or has reasonable opportunity to know that such individual is a subversive individual.

For the purposes of this subsection, an organization shall, with respect to the making of any donation, be charged with the knowledge or opportunity to know of any officer, agent, or employee of such organization who actively participates in the making of such donation.

"'(3) Taxable years affected: A denial of exemption under section 101 (6) by reason of this section shall be effective for taxable years commencing with the taxable year during which the Secretary, after notice and opportunity for a hearing, determines that an organization has made a donation to which the provisions of this subsection are applicable.

"'(c) Future status of organization denied exemption: Under regulations prescribed by the Secretary, any organization denied exemption under section 101 (6) by reason of this section may, during any taxable year following the taxable year in which exemption is denied, file claim for exemption, and if the Secretary, pursuant to such regulations, is satisfied that there is no reason for believing that such organization will again make a donation which would be grounds for denial of exemption by reason of this section, such organization shall be exempt under section 101 (6) with respect to taxable years subsequent to the taxable year in which such claim is filed.

"'(d) Disallowance of certain charitable, etc., deductions: No gift or bequest for religious, charitable, scientific, literary, or educational purposes (including the encouragement of art and the prevention of cruelty to children or animals), otherwise allowable as a deduction under section 23 (o) (2), 23 (q) (2), 162 (a), 505 (a) (2), 812 (d), 861 (a) (3), 1004 (a) (2) (B), or 1004 (b) (2) or (3), shall be allowed as a deduction if made to an organization during a taxable year of such organization in which it is not exempt under section 101 (6) by reason of this section, unless such gift or bequest is made prior to the date of the Secretary's determination under subsection (b) (3) that such organization has made a donation to which the provisions of subsection (b) are applicable.'

"SEC. 2. (a) Section 23 (o) (2) of the International Revenue Code is amended by inserting after 'sections 3813' the following: ', 3815.'

"(b) Section 23 (q) of the Internal Revenue Code is amended by inserting after 'section 3813' the following: ', 3815.'

"(c) Section 101 (6) of the Internal Revenue Code is amended by striking out 'sections 3813 and 3814' and inserting in lieu thereof 'sections 3813, 3814, and 3815.'

"(d) Section 162 (a) of the Internal Revenue Code is amended by striking out 'section 23 (ee);' and inserting in lieu thereof the following: 'section 23 (ee). For disallowance of certain charitable, etc., deductions otherwise allowable under this subsection, see section 3815.'

"(e) Section 505 (a) (2) of the Internal Revenue Code is amended by inserting after 'sections 3813' the following: ', 3815.'

"(f) Section 812 (d) of the Internal Revenue Code is amended by inserting after 'sections 3813' the following: ', 3815.'

"(g) Section 861 (a) (3) of the Internal Revenue Code is amended by inserting after 'sections 3813' the folowing: ', 3815.'

"(h) Section 1004 (a) (2) (B) of the Internal Revenue Code is amended by inserting after 'sections 3813' the following: ', 3815.'

"(i) Section 1004 (b) of the Internal Revenue Code is amended by inserting after 'sections 3813' the following: ', 3815.'

"SEC. 3. The amendments to the Internal Revenue Code made by this act shall be applicable only with respect to taxable years ending after the date of enactment of this act. The provisions of section 3815 (b) of the Internal Revenue Code, as added by this act, shall be applicable only with respect to donations (as defined in section 3815 (a) (3)) made after the date of enactment of this act."

RULING BY INTERNATIONAL COURT OF JUSTICE ON AWARDS TO CERTAIN PERSONS DISMISSED FROM EMPLOY OF THE UNITED NATIONS

Mr. JENNER obtained the floor.

Mr. WELKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the call of the roll be rescinded.

The PRESIDING OFFICER (Mr. HENDRICKSON in the chair). Without objection, it is so ordered.

Mr. JENNER. Mr. President, the International Court of Justice at The Hague has just handed down a ruling which is of vital concern to every person in the United States. I refer to the decision that the U. N. Assembly is to pay the damages awarded to American employees of the U. N. who were asked to testify before the Internal Security Subcommittee about their membership in the Communist apparatus or about acts of subversion in support of the Soviet Union, and who refused to answer under the fifth amendment protection against self-incrimination.

Upon presentation of the evidence in our hearings, the Secretary-General, Mr. Trygve Lie, dismissed these employees on the ground that refusal to answer questions about matters that might incriminate them was conduct unbecoming to U. N. civil servants. The dismissed employees appealed. The U. N. Administrative Tribunal, set up to hear employee appeals, upheld the arguments of the dismissed employees and their lawyers. It awarded damages totaling $179,420 to 11 of the employees. Their lawyers argued that Communist membership was not political action, but private opinion. Their arguments followed the familiar Communist practice of legal sabotage of established processes, and use of judicial hearings for agitation and propaganda.

The American representative to the U. N., Hon. Henry Cabot Lodge, protested; and the Assembly refused to pay the damages, without having a judicial opinion on the matter. The International Court of Justice has now upheld the Administrative Tribunal. It has ruled in effect that U. N. employees from non-Soviet nations who refuse to deny obedience to the Soviet fifth column are proper civil servants of the U. N.

The fact that damages are to be paid to U. N. civil servants of American nationality, who have a record of pro-Communist acitivity, is important in itself. The people of the United States will have to pay at least one-third of this sum, through appropriations to U. N. The effect on loyal civil servants who have no secret ties with the U. S. S. R. is also obvious.

Far more important, however, is the legal support given by the tribunal and the Court to a fifth column within the U. N. Secretariat, governing the actions of employees who claim to be nationals of non-Communist countries.

The people of the United States and their representatives in Congress view with deep concern the disclosure of a legal network which protects such employees, against the wishes of the Secretary General, and apparently of the U. N. Assembly, in spite of the declared principles of the U. N. that their employees shall not engage in poltical activity, or acts hostile to a member nation.

The question now rests with the U. N. Assembly. It must decide whether it can insure that the U. N. administrative tribunal, in its quasi-judicial functions, will not reverse established U. N. policies, or whether the Assembly is powerless to bring its personnel policies within the commitments made to member states.

I have addressed the following letter to the American representative to the U. N., the Honorable Henry Cabot Lodge, asking him to continue the efforts he has been making so ably, to present the American point of view on this issue, and to cooperate with representatives of other non-Communist nations which object to use of non-Communist nationals in the U. N. Secretariat as a secret fifth column of the Soviet Union:

UNITED STATES SENATE,
Washington, D. C., July 15, 1954.

Hon. HENRY CABOT LODGE,
United States Representative,
The United Nations, New York, N. Y.

DEAR MR. AMBASSADOR: The Internal Security Subcommittee of the Senate is interested in the recent findings of the International Court of Justice, which upheld damage awards to the American employees of the U. N. staff, who had been dismissed by the Secretary-General because they refused to answer the committee's questions about their Communist affiliations on the ground of self-incrimination.

Our subcommittee, pursuing the duty assigned it by Congress, to investigate subversive activities by American citizens, made a thorough inquiry into the Communist connections of Americans on the U. N. staff. You were kind enough to appear at this inquiry and testify about the problems involved.

Our subcommittee found that certain American members of the U. N. Secretariat had close links with the Communist apparatus, directed from Moscow. They had, in many instances, been placed in their positions in the U. N. as part of the interlocking subversion between Government departments, private agencies, members of the U. N. secretariat and the Communist apparatus, obviously for no good purpose. When asked about these links, the U. N. employees invoked the fifth amendment and refused to answer questions, because the answer might incriminate them.

Secretary-General Trygve Lie held that refusal to answer questions on such grounds was conduct unbecoming to international civil servants and dismissed the employees involved. This position is similar to that taken by our National Government and various State governments, which dismiss civil servants who have need to invoke the fifth amendment.

The employees appealed to the U. N. Administrative Tribunal, which reversed the Secretary General in 11 cases, and ordered reinstatement, payment of awards for damages, or both, to American employees of U. N. who would not state that they were not Communists.

As you know, the indignation among our people was widespread. For one thing, approximately one-third of such payments must come from funds voted by Congress and paid by American taxpayers. Even more important, the privileges and immunities we have given to U. N. employees, if abused, constitute a highly dangerous and well-protected opportunity to undermine our Nation's security.

Our subcommittee found, in its report of March 22, 1954, that a Communist fifth column exists within the U. N. staff, and that Soviet agents use U. N. privileges as a cover for espionage and subversion.

This concerns all non-Communist nations, though our concern is greater because most of this activity occurs within our borders. The question now is whether the U. N. Assembly will adjust its personnel policies to conform to the stated U. N. principle that staff members are not to engage in political activities hostile to member states.

The position of counsel for the dismissed employees was, in general, that Communist activities were not political acts but private beliefs. This flies in the face of all the evidence that membership in the Communist apparatus imposes the obligation of continuous political activity favorable to the Soviet Union and dangerous to the existence of the United States and other non-Communist states.

The U. N. Administrative Tribunal upheld the position of the lawyers for the dismissed employees, against the position of the Secretary General. It ruled that the employees had been damaged, not by their connections with communism or subversion, but by being asked to tell of their activities openly.

The International Court has upheld the curious position of the administrative tribunal. The situation now is that the position of the American Government, the U. N. Assembly, and the U. N. Secretary General, has been reversed by a U. N. administrative agency concerned with employee grievances, and that this board, heavily biased in favor of the Soviet position, has been upheld by the International Court.

It may be too late to stop such shocking awards in the case of past services, but the United States Congress must make certain that no such awards to secret pro-Communists shall be paid again. It must also have assurance that the U. N. staff is truly nonpolitical, and does not harbor an unrecognized outpost of the Cominform, working against the interests of our country and all other free nations.

The Senate has voted, but the House has not yet approved, S. 3, which will prevent employment of Americans in the U. N. Secretariat who cannot get clearance that they have not engaged in subversive activities. Passage of this bill should remove from the U. N. Secretariat Americans who have served the fifth column. Perhaps the representatives of other non-Communist nations will wish to cooperate in efforts to remove all members of the Soviet fifth column, claiming to be loyal citizens of any non-Communist nations.

The responsibility falls on the U. N. Assembly to make clear its position on the obligations of U. N. civil servants, and to insure that its stated commitments will be carried out by all parts of the U. N. establishment.

I hope you will be able to press for a final decision by the Assembly on whether employees may remain on the staff of the U. N., if they are secret Communists, working for the ends of the Soviet Union, while asking to be accepted as loyal citizens of non-Communist states.

I trust you will urge the U. N. Assembly to reexamine the U. N. Administrative Tribunal, and decide how its policies may be brought into line with U. N.'s stated objectives.

The U. N. Assembly should make its policies on this critical issue of the integrity of its staff, clear beyond the shadow of a doubt.

If the U. N. Assembly is unable to impose its stated policies on its staff members, and the U. N. staff can be used as a beachhead for the advance of Communist power, then

Congress should know the facts. It can then reexamine its legal ties with, and its financial contribution to, an agency whose staff includes secret collaborators with the Soviet attack on free nations.

Sincerely yours,

WILLIAM E. JENNER.

Mr. WELKER. Mr. President, will the Senator from Indiana yield to me?

Mr. JENNER. I yield.

Mr. WELKER. I should like to ask the Senator from Indiana whether it is a fact that of the original administrative tribunal which made the outlandish decision which resulted in the two of us going to New York to hold further hearings, not one American was a member?

Mr. JENNER. That is correct. But in view of the way the tribunal is composed that could logically follow, because its membership is not static and permanent.

Mr. WELKER. Of course that is true.

Will the Senator from Indiana yield for a further question?

Mr. JENNER. I yield.

Mr. WELKER. In the cross-examination of some of those who have been granted the large indemnities and reinstatement——

Mr. JENNER. Indemnities, primarily.

Mr. WELKER. Yes. I should like to ask whether it is a fact that their appeal was perfected upon unsworn statements, not in the form of affidavits at all.

Mr. JENNER. That is my understanding. Furthermore, the hearing was held in this country, because those who are asking for damages were not allowed to have passports to go to Europe, where the tribunal should sit.

Mr. WELKER. Will the Senator from Indiana state why they were not allowed passports?

Mr. JENNER. I do not know that I can say that. But they were not cleared by the State Department's Immigration Service.

Mr. WELKER. Very well. I thank the Senator from Indiana.

Mr. HICKENLOOPER. Mr. President, will the Senator yield for a question?

Mr. JENNER. I yield.

Mr. HICKENLOOPER. Does the Senator feel that this strange and fantastic decision by the members of the International Court of Justice who sat in this case indicates a complete ignorance on the part of those jurists as to the nature of the international Communist conspiracy?

Mr. JENNER. Apparently it does.

Mr. HICKENLOOPER. Does not that indicate an utter naivete on the part of those persons who sat in judgment in this case, and that the international Communist conspiracy is, in fact, a political as well as a military movement for the purpose of the enslavement of all the free peoples of the world?

Mr. JENNER. It certainly does.

Mr. HICKENLOOPER. Is it not fantastic to think that men who are at least presumed to be intelligent and to have some breadth of vision could be so naive as to hold that those persons who probably had been associated with the international Communist conspiracy are only faddists in their own minds, and that they are not participating in any activity directed toward the overthrow of governments of other nations, contrary to the regulations of the United Nations Organization?

Mr. JENNER. It certainly is. That is the reason for this letter calling the subject to the attention of our Ambassador. If the matter cannot be settled within the United Nations Organization, Congress must know about it so that it can act accordingly.

Mr. HICKENLOOPER. I congratulate the Senator for bringing this extraordinary decision and action of the International Court of Justice to the attention of the country. I can only say, to put it mildly, that I am very much disappointed at the failure of the International Court to come to grips with the realities of the issue of international communism. It raises a question in my mind as to the ability of the International Court to approach realistically, judiciously, and judically the very patent facts that anyone who has any knowledge of the international Communist conspiracy knows to exist.

Mr. WELKER. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. HENDRICKSON in the chair). Does the Senator from Indiana yield to the Senator from Idaho?

Mr. JENNER. I yield.

Mr. WELKER. I know that in the Senator's letter to the Ambassador, he says that perhaps it is too late to correct the past situation. However, I wish to assure the Senator from Indiana that when and if I am called upon to vote for one dollar of indemnity or liability or damage to any individuals who are haled before the committee on which I have the honor of serving with the Senator from Indiana, I shall say, "No; never will I ask the taxpayers of America, some of whom have lost boys in Korea, and others who may lose them in other places, to spend one dime of their hard-earned money for indemnifying that class of people."

Mr. JENNER. I am hopeful that the entire Senate will take the same attitude.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. GORE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. HENDRICKSON in the chair). The Secretary will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Aiken	Hickenlooper	Millikin
Bush	Holland	Monroney
Carlson	Humphrey	Mundt
Case	Jenner	Murray
Dirksen	Johnson, Tex.	Payne
Dworshak	Kerr	Potter
Fulbright	Knowland	Russell
George	Kuchel	Schoeppel
Gore	Magnuson	Symington
Hayden	Malone	Thye
Hendrickson	Martin	Watkins

Mr. KNOWLAND. I announce that the Senator from Wyoming [Mr. BARRETT], the Senator from Nebraska [Mrs. BOWRING], the Senator from Arizona [Mr. GOLDWATER], and the Senator from New Hampshire [Mr. UPTON] are necessarily absent.

Mr. CLEMENTS. I announce that the Senator from Louisiana [Mr. ELLENDER], the Senator from Rhode Island [Mr. GREEN], the Senator from Nevada [Mr. MCCARRAN], the Senator from Arkansas [Mr. MCCLELLAN], and the Senator from West Virginia [Mr. NEELY] are absent on official business.

The Senator from Missouri [Mr. HENNINGS] is necessarily absent.

The PRESIDING OFFICER. A quorum is not present.

Mr. CARLSON. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

After a little delay Mr. ANDERSON, Mr. BEALL, Mr. BENNETT, Mr. BRICKER, Mr. BRIDGES, Mr. BURKE, Mr. BUTLER, Mr. BYRD, Mr. CAPEHART, Mr. CHAVEZ, Mr. CLEMENTS, Mr. COOPER, Mr. CORDON, Mr. CRIPPA, Mr. DANIEL, Mr. DOUGLAS, Mr. DUFF, Mr. EASTLAND, Mr. ERVIN, Mr. FERGUSON, Mr. FLANDERS, Mr. FREAR, Mr. GILLETTE, Mr. HILL, Mr. IVES, Mr. JACKSON, Mr. JOHNSON of Colorado, Mr. JOHNSTON of South Carolina, Mr. KEFAUVER, Mr. KENNEDY, Mr. KILGORE, Mr. LANGER, Mr. LEHMAN, Mr. LONG, Mr. MANSFIELD, Mr. MAYBANK, Mr. MCCARTHY, Mr. MORSE, Mr. PASTORE, Mr. PURTELL, Mr. REYNOLDS, Mr. ROBERTSON, Mr. SALTONSTALL, Mr. SMATHERS, Mrs. SMITH of Maine, Mr. SMITH of New Jersey, Mr. SPARKMAN, Mr. STENNIS, Mr. WELKER, Mr. WILEY, Mr. WILLIAMS, and Mr. YOUNG entered the Chamber and answered to their names.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. MONRONEY. Mr. President, in consideration of the bill to modernize and bring up to date the Atomic Energy Act, Congress will be taking a monumental step into a future which may be filled with a new kind of headlines.

If in the years to some the fears which may come from headlines that a new type H-bomb has been devised, either by ourselves or by the Russians, can be replaced with news of new blessings to all mankind from the peaceful release of neuclear and gaseous fusion, we shall have a different kind of world.

If in the bill before us, the blueprint for helping to create a new kind of world filled with the blessings of atomic energy, instead of a world in which the people live in the shadow of fears, is a good one, the 83d Congress will have kept the faith.

That is why the bill is of such tremendous importance as we cross the threshold of peaceful use of the atom on a scale which has not been contemplated in the present era.

The importance of the Atomic Energy Commission in the blueprint will be paramount. The members through their decisions will affect the pattern of our economics and our growth, as well as

the industrial use of this great power. Perhaps the power of the atom will far exceed the power which could be generated by harnessing all of our streams with gigantic hydroelectric projects. I do not pretend to know, and I do not feel that any other Member of the Senate can pretend to know, the future impact of the bill being considered today.

But, Mr. President, I am certainly convinced, after reading the hearings and listening to much of the debate this far on the bill, that the Eisenhower administration is taking a very great gamble in injecting into the blueprint for the future the muddle which it has created in the proposed Dixon-Yates contract.

Up to this time the Atomic Energy Commission has remained above the level of controversy over public against private power, and above partisan politics. It has maintained its dignity and fairness as it has prepared the way to lead us into a new century of atomic defense and atomic usefulness.

Now, for no adequate reason that I can see, the administration has cut loose from its moorings of nonpartisanship, it has ignored the danger signals of special privilege, and has injected the Atomic Energy Commission into a crusade in behalf of a private power monopoly.

I do not intend to discuss the intricacies of the strained thinking and queer reasoning behind this new step which takes the AEC into a political and private-power jungle fight. This is a new and unwise step that the administration forces the Atomic Energy Commission into.

I wish to question the wisdom of placing so vital an agency in this kind of position. I desire to point out the dangers of using the atom as a football in a controversy that the Atomic Energy Commission should never have been forced into.

In the past the Atomic Energy Commission has gone quietly and efficiently about its work, free of the controversies which have delayed, and in many cases stymied, the development of our natural resources.

The Commission has been able to do this because the Congress and the public had confidence in their dedication to their job, which was preserving this Nation's safety. Because of such confidence, the appropriations have been made without discussion or recrimination. No hobbles had to be placed on the Commission in our appropriation bills, and a superjoint committee of Congress was able to forget partisanship in its task of supervising and cooperating with the Atomic Energy Commission.

Certainly there have been some fights on the floors of both Houses over items which the Commission needed for its great work. But, Mr. President, the fights occurred not about the heads of the Commission members, nor about the Commission itself or its decisions; they occurred over appropriations for TVA or other suppliers of materials needed to be purchased by the AEC.

Bad as I feel this ill-conceived contract to be, dangerous as are the precedents it sets, loaded as it has been with special privilege for a giant electrical holding company, all of these dangers are secondary to the fact that the administration has now placed the AEC into the strongest whirlpool of politics.

Some of the great brains that have been brought into this administration may feel that this is only a skirmish, and that, with a few shots fired on the floor of the Senate, all the dangers of this fusion of the atom with the internal politics of the giveaway plan of our natural resources will disappear with the passage of the pending bill.

The men who believe this and those who surround the President little know the great damage they create in stripping the Atomic Energy Commission of the confidence of every Member of the Congress and all of the public which it has heretofore enjoyed.

Mr. President, I should like to read at this time an editorial from the Birmingham Post-Herald entitled "Let Atom Splitters Alone." This is one of the Scripps-Howard newspapers which gave President Eisenhower his strongest support during the last campaign.

I shall now read the editorial:

LET ATOM SPLITTERS ALONE

Last January, the President refused additional funds to the TVA for new electric power generating facilities. He said, "arrangements are being made to reduce, by the fall of 1957, existing commitments of the TVA to the Atomic Energy Commission by 500,000 to 600,000 kilowatts."

This, he went on, "would release the equivalent amount of TVA generating capacity or meet increased load requirements of other consumers in the power system and at the same time eliminate the need for appropriating funds from the Treasury to finance additional generating units."

We weren't exactly enthusiastic about this proposal; but we could see it might be a reasonable way to meet increasing TVA power needs.

Now Mr. Eisenhower has set in motion by a Presidential order, a scheme which some persons are presenting as carrying out the budget message proposal. But, in fact, it does nothing of the sort. What this order does is endanger our greatest national defense enterprise.

Mr. Eisenhower has ordered the Atomic Energy Commission to sign a contract with Middle South Utilities, Inc., and the Southern Co., for purchase of 650,000 kilowatts of power to be pumped into the TVA grid at Memphis. The new plant of the two private utilities is to be built on "made" land in West Memphis, Ark., an area once inundated by a great Mississippi River flood.

Three of the five members of the Atomic Energy Commission oppose the contract. They point out that the AEC has no power needs either at Memphis or West Memphis. The closest AEC facilities are at Paducah, Ky., where the atomic plant is served by both a private power company and the TVA.

Thomas Murray, the AEC Commissioner chiefly responsible for the fact that a private company is serving AEC with power at Paducah, is one of those who opposes the contract the President has ordered. He told the Joint Congressional Atomic Energy Committee that through the contract AEC is being used as a vehicle to supply expanding power needs of the Memphis area. He said he could not see how this contract is in the interest of the atomic program.

There apparently is no present intention on the part of AEC of canceling its power contract with TVA at Paducah. Thus, the new power it is to buy is not intended to reduce TVA's commitments to AEC, as the President promised in January.

In fact, under the Eisenhower order, as shown by Commissioner Murray's testimony, AEC is being used as a power broker for TVA. And this over the opposition of a majority of the AEC Board.

The Atomic Energy Commission was set up for a very simple and important purpose—important to this country and to all the free world. It was created to produce atomic (and now hydrogen) weapons.

Whatever the legal lights may say, we believe the President—as Commander in Chief—has no right to pitch the AEC into the midst of a bitter controversy over extraneous matters, by requiring it to negotiate and sign the contract with the private companies to furnish TVA with electricity.

President Eisenhower, for the good of our national defense, which is rooted in what we hope is our atomic superiority should immediately revoke his order to AEC to buy power at Memphis where it has no need for it.

Let the AEC buy power where it needs it, or not at all.

If other agencies need power, let them get it through some other means than the AEC.

Let the atom splitters go right on splitting atoms; keep them out of controversies where they have no business. (Birmingham Post-Herald.)

I quite agree with this editorial. If the problem of supplying added electric power to TVA is great in the Memphis area—and if the Congress will refuse to meet this need by necessary appropriations for a new plant—let the TVA contract to buy power somewhere to fill this need.

The use of the Atomic Energy Commission as an errand boy either for the TVA or for the private utility interests is a grave misuse of the power and the authority the Congress has vested in this supersensitive agency.

Not only is this misuse of the AEC bad from its political and public relations standpoint, but this step may lead—undoubtedly it will lead in the future—to the kind of controversy and restrictive legislation that would reduce the fast pace of atomic development to a slow crawl.

If, as some of the attorneys for the administration claim, the use of the AEC as an errand boy for other agencies or private power is perfectly legal, such restrictive legislation that will hamper its future development is inevitable.

I can picture the hullabaloo that would be occasioned by my Republican friends if a Democratic President had attempted to stretch the clear meaning of the act, and by devices similar to the Dixon-Yates contract endeavored to assist some municipally owned electric system in acquiring a $107 million property in 25 years with only $5 million of capital.

Mr. GORE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. PURTELL in the chair). Does the Senator from Oklahoma yield to the Senator from Tennessee?

Mr. MONRONEY. I am glad to yield to my distinguished friend.

Mr. GORE. The able and distinguished Senator from Oklahoma has just brought out in the debate a point which I have not heretofore heard expressed. In his next to the last sentence the Senator made the suggestion that if the Atomic Energy Commission is to stretch

the meaning of the words "in connection with" to include the building of a plant hundreds of miles away, unrelated to the purposes for which Congress passed the act, the Congress either might or would inevitably find it necessary to surround other activities, including those of the Atomic Energy Commission, with perhaps unduly restrictive language.

Mr. MONRONEY. I certainly feel that is the likely course which the Congress will pursue every year as the appropriation bill for the Atomic Energy Commission comes before it. If the authority contained in the law to enable the Commission to buy power directly is stretched by virtue of a 25-year contract, the Congress will go through every appropriation bill in succeeding years with a fine tooth comb, in order that it may write legislation which will be restrictive to a greater and greater degree, so it may protect the public interest and prevent the stretching of the intent of laws and authorities, which I feel has been done in this case.

Thus the freedom of movement of the Commission and the confidence the Congress and the general public have had in this vital program, and which have done so much to speed it up, will have been lost as a result of the Commission's violation of the clear intent of the law in this case; and, consequently future appropriation bills for the Atomic Energy Commission will be surrounded with riders and with the innumerable difficulties incident to attempts to incorporate such riders in the appropriation bills for the Atomic Energy Commission. As a result, the Commission, instead of having a clear line of authority, will have greatly restricted authority in connection with the expenditure of its appropriations.

Furthermore, I believe it inevitable that if this contract is signed and carried out, a cloud will hang over 95 percent of the bonds which are expected to be sold to innocent purchasers, because the funds for payment of the interest on the bonds must be appropriated by Congress, and if any Congress were to choose to decide that this action was not authorized by law, and that it was not within the authority of the Atomic Energy Commission to do such a thing, a point of order would lie against any appropriation bill item calling for the appropriation of funds for the payment of the interest on the bonds, and that would apply to the appropriation of funds for the payment of interest in connection with 95 percent of the bonds. For instance, under those circumstances, when the appropriation bill for the Atomic Energy Commission was before the House of Representatives, the Speaker of the House or the House as a whole could rule that such an item in the appropriation bill for the Atomic Energy Commission was without authority of law. Thus, one Member of the House of Representatives would be able to raise the point of order, and the result would be to strike the item from the appropriation bill.

Mr. HILL. Mr. President, will the distinguished Senator from Oklahoma be so kind as to yield to me?

Mr. MONRONEY. Indeed, Mr. President, I am glad to yield.

Mr. HILL. Of course, Mr. President, what the distinguished Senator from Oklahoma has said regarding the situation which would exist in the House of Representatives may be said equally well regarding the situation which would exist in the Senate, too. Any appropriation of that sort has, first, to be authorized by law, if the item for it is to be carried in the appropriation bill. Unless it is authorized by law, any attempt to include such an item in an appropriation bill is subject to a point of order.

I say to the distinguished Senator from Oklahoma that, as a member of the Appropriations Committee, I feel so strongly that any translation of the Dixon-Yates proposal into a contract would be absolutely unauthorized and would be absolutely without any legal basis, that I, as a member of the Appropriations Committee, would feel constrained, when the appropriation bill came before the committee, to challenge and challenge and challenge and to continue to challenge any appropriation proposed for the purpose of carrying out such an illegal contract.

Mr. MONRONEY. I thank the distinguished Senator from Alabama. I have not yet reached a discussion of the situation in the case of proposed appropriations unauthorized by statutory law. However, I know that in the House of Representatives, only one Member of the House could raise such a point of order; and, on the decision of the Chair—and I refer to the decision of the Chairman of the Committee of the Whole, not the decision of the Speaker of the House of Representatives, but the decision of the Chairman of the Committee of the Whole, which position is a revolving one, and can be filled by any Member who happens to be in the chair at the time—the entire appropriation item could be deleted from the appropriation bill.

In the Senate the situation would be approximately as difficult; for if the Vice President or any Senator then occupying the chair were to rule that the appropriation item was made under authority of law, an appeal would immediately be made to the Senate itself; and a mere majority of the Senate could override the decision of the Chair. Thus, the item calling for the appropriation of funds with which to finance the payment of interest on approximately $100 million of bonds would be removed from the appropriation bill, and the money could not be appropriated.

Therefore, I think that illustrates the lack of wisdom and the lack of sound policy in attempting to do, without authority of law, that which the Atomic Energy Commission, or, in this case, the Bureau of the Budget, is seeking to do by law stretching. If it wishes to safeguard the private contracting parties for this $107-million project, the least it could do would be to seek legislative authority for it, so that the right to pay interest on the $100 million of bonds would at least be provided in connection with future appropriations to be made by the Congress.

Mr. SPARKMAN. Mr. President, will the distinguished Senator from Oklahoma yield to me?

Mr. MONRONEY. I am very happy to yield to my distinguished friend the Senator from Alabama.

Mr. SPARKMAN. Since so many questions have been asked about the legality of the proposal, and since its legality has been questioned by the General Accounting Office, and since a majority of the Atomic Energy Commission actually voted against the wisdom of proceeding with the contract, does it not appear to the Senator from Oklahoma, who is making such a magnificent presentation, that the investment houses or investment companies which would be called upon to finance, or would be expected to finance, the undertaking would be rather slow to enter into such an undertaking?

Mr. MONRONEY. I should judge that that would be the case, because even in my own State, a small municipality that proposes to build only a $500,000 addition to its waterworks, for instance, must have the bonds it issues as a municipality approved by the attorney general of the State before the bonds can legally be issued and before the bond buyers would accept them.

Under these circumstances, in view of the very tenuous and questionable right of repayment and the stretching of authority that this operation reveals, it seems to me that the promoters of this "deal" had better check up and find some higher authority than that of an attorney in the President's Bureau of the Budget for the legality of the bonds they intend to issue, or, rather, for the legality of the expenditure of Government funds to pay the interest on the bonds.

Mr. SPARKMAN. Let me ask the Senator from Oklahoma whether, according to his understanding, any effort has been made to obtain any sort of court opinion, decision, or ruling on this matter.

Mr. MONRONEY. To my knowledge, there has been nothing other than the passing on this question by some of the attorneys in the President's Bureau of the Budget.

Mr. SPARKMAN. Does not the Senator from Oklahoma understand that when the matter was submitted to the General Accounting Office—from reading the letter, it is hard to say just what the ruling was or what it might have been—certainly there was sufficient wobbling about to make its legality doubtful?

Mr. MONRONEY. I would certainly think it would be on the basis of determining whether these appropriations were authorized by law or were not authorized by law. No one could settle that point, it seems to me, short of the courts, or, certainly, until the time when there came before Congress the bill for the appropriation of funds for the Atomic Energy Commission, which bill would include an item for the funds with which to pay the interest on this debt.

Mr. SPARKMAN. That leads me to my final question in this series: Does it not then seem to the distinguished Senator from Oklahoma that, certainly, the reasonable thing to do under the circumstances would be to submit the matter to Congress for positive legislation in order

to give the Commission the authority, which I do not believe it now has?

Mr. MONRONEY. The Senator from Alabama has stated my belief more clearly than I myself could possibly do. If this "deal" will stand the light of day and will stand the test of whether it benefits the people, instead of being of benefit to special interests, then what is wrong with asking that the law be changed, so as clearly and concisely to permit the Commission to do that which many Members of the Congress—in fact, which three members of the Atomic Energy Commission itself, I believe; and also many members of the excellent Joint Committee on Atomic Energy, composed of Members of the House and Members of the Senate—flatly and positively say the Commission has no authority to do?

Mr. HICKENLOOPER. Mr. President, will the Senator yield for a question?

Mr. MONRONEY. I am glad to yield.

Mr. HICKENLOOPER. I know of no instance in which any member of the Atomic Energy Commission has declared that there was lack of authority. I think three members expressed themselves to the effect that in their opinion it might not be wise at this time, but they did not question the authority so far as I know.

Mr. MONRONEY. Later in my speech I shall read the record of the hearings. If I correctly recall the hearings, the final legal authority has been bounced up to the Budget Office of the President, and in some cases the Atomic Energy Commission relies upon its own attorneys. I do not recall reading any statement at any place in the hearings by those three members to the effect that they feel that they have the authority. They say they believe the President has the authority to direct them, and that the Congress has such authority. I believe the strongest statement is to the effect that the Congress has authority to direct them to enter into such a contract, which I say is the right path, the clear path, the direct path, which should be followed in this case, namely, to seek congressional direction if this power is to be expanded beyond the framework of power which the Congress intended the Commission to have at the time it enacted the law.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. GORE. In other words, the Senator is not questioning the power of the Congress to confer such authority and responsibility on the Atomic Energy Commission, but he is raising the question of the propriety of the assumption of such power clearly contrary to the intent of the Congress.

Mr. MONRONEY. The Senator is exactly correct. For some 16 years I sat in one House or the other of the Congress and heard constant reiteration of condemnation and public criticism against Democratic Presidents for alleged law stretching, which to my way of thinking did not approach the big stretch which is being applied to the Atomic Energy Act. I can scarcely remember a week in which Democratic Presidents were not pilloried for doing things without submitting them to Congress, and for doing things with respect to which there was no clear legislative authority in the President or his agent.

Mr. GORE. During each of those 16 years it has been the privilege of the junior Senator from Tennessee to serve by the side of the Senator from Oklahoma. I have joined with him and with Members on the other side of the aisle in questioning any stretching of the law beyond the intent of Congress. I shall do so in the future, whether the executive branch be controlled by members of my own party or the opposition party. We must operate with confidence. I appreciate the valid point the Senator has contributed to this discussion.

To illustrate, we have before us in the Senate today a bill of 104 pages. Must we go through every line of every page of this complicated bill to find out if some action which the Congress does not intend can possibly be taken? Such meticulous examination with a fine-toothed comb would require a great legal staff in the Congress, and it would require a great deal more time than we are able to devote to it.

Mr. MONRONEY. Let me say at this point to my distinguished colleague that he might have the greatest legal staff in the world at his side, not only examining the bill with a fine-toothed comb, but examining it with a microscope, yet I still do not believe that any legal authority the Senator might have on his own staff, or any legal authority on the committee staff could pick out phrases which would eliminate or prevent the stretching of the law to the extent that it is being stretched under this strained interpretation.

If the words "in connection with" can be stretched to allow this "double play" from the Budget Bureau to the AEC, to the TVA, and if those words can be stretched so as to bring the contract within the authorization of the Atomic Energy Act, there is no use in our reading the bill, because the English language can be stretched to infinity in the direction of expansion of power if the words "in connection with" can be construed as they have been construed in this case.

Mr. GORE. How is our democratic system to work if we must operate in such an atmosphere of suspicion? Must we not operate on the basis of confidence that the laws will be interpreted and administered within a reasonable interpretation of legislative intent?

Mr. MONRONEY. I certainly agree with the Senator. The tenuous authority which is being claimed by the Budget Bureau for this "double play" illustrates the inability of Congress, as it passes this 104-page bill, to know under what limitations the Atomic Energy Commission will be operating pursuant to congressional authorization, if the English language can be stretched to the extent that it is being stretched in an attempt to justify and allegedly authorize this kind of contract.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. HILL. Is it not true that from the very beginning of our existence as a nation the courts, recognizing the importance of this very question to the preservation and maintenance of our democratic system of government, have always applied what we call the "strict construction" rule? The courts have been unwilling to permit any commission or other governmental body to read into the law authority which is not expressly declared in the language of the act. Is not that true?

Mr. MONRONEY. That is certainly true. I agree entirely with the distinguished Senator from Alabama.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. MANSFIELD. I should like to ask the Senator from Oklahoma if the members of the Joint Committee on Atomic Energy ever have an opportunity to see or pass upon the contracts which the Atomic Energy Commission enters into with private utilities and private corporations.

Mr. MONRONEY. The former distinguished chairman of the Joint Committee on Atomic Energy is in the Chamber at the moment. I wish the answer to this question to be authoritative. I would appreciate it if the Senator from Iowa would answer the question of the junior Senator from Montana. I believe there has been enough confusion in this case by reason of some of the things which have been said in defense of this contract, so I wish the discussion to be as factual as possible.

Mr. HICKENLOOPER. Mr. President, does the Senator desire to ask me a question?

Mr. MONRONEY. The junior Senator from Montana has just asked the present speaker a question which I believe could be more properly answered by the distinguished and able former chairman of the Joint Committee on Atomic Energy.

Mr. MANSFIELD. I should like to ask the senior Senator from Iowa, former chairman of the Joint Committee on Atomic Energy, if the members of the joint committee have an opportunity to look at the contracts drawn up between the Atomic Energy Commission and the companies with which they negotiate.

Mr. HICKENLOOPER. The answer is "Yes."

Mr. MANSFIELD. Does that apply to every contract?

Mr. HICKENLOOPER. Every contract, every action of the Atomic Energy Commission, is subject to the scrutiny, examination, and information of the Joint Committee on Atomic Energy.

Mr. MANSFIELD. Is that true before or after the contract is consummated?

Mr. HICKENLOOPER. So far as I know, without exception, all such matters are reported to the Joint Committee on Atomic Energy prior to final action by the Commission. However, that does not mean that every routine day-by-day housekeeping operation of the Commission must be reported to us by their informing us about it before they pick up a telephone to call up Oak Ridge.

Mr. MANSFIELD. I wish to repeat my question, so that the RECORD will be clear. If I understand the Senator from Iowa correctly, every contract of major significance is brought before the mem-

bership of the joint committee, comprised of Members of the Senate and of the House, so that they may know what is contained in the contracts, and especially may have some idea as to just what the cancellation phases of the contracts are.

Mr. HICKENLOOPER. The technical answer to the Senator's question is "Yes." However, I shall have to qualify my answer by saying that we probably have hundreds of reports and argeements and contracts and proposed actions and similar matters reported to our committee by the Atomic Energy Commission every month. The volume is tremendous.

Mr. MANSFIELD. I can well understand that.

Mr. HICKENLOOPER. The fact is that the Commission reports its actions to us. Any information that we want to ask for, we are entitled to receive. Any explanation or any information we want with respect to any action or proposed action of the Commission, we may receive. For me to say to the Senator that I, as a committee member, look over every piece of paper or every document or every report which comes to the committee from the Atomic Energy Commission would not be correct, and I would have to say, "No; I do not." I do not have the time, in the first place.

Mr. MANSFIELD. But every major contract——

Mr. HICKENLOOPER. Every major contract; yes. To give the Senator an illustration, we know about the contracts at Paducah—that is, both the Oak Ridge and Portsmouth, Ohio, contracts. Those contracts have been before the joint committee.

Some years ago we had before us a contract for a gasline coming into Oak Ridge, costing approximately $10 million. The committee knew about it beforehand. The committee appointed a special subcommittee to look into it. The subcommittee held hearings and unanimously recommended against entering into that contract. It submitted its recommendation to the joint committee. This was about 5 years ago, I will say to the Senator. The subcommittee adversely reported on the contract and recommended that it be not accepted. The joint committee unanimously voted that the Commission should not enter into the contract. In spite of that, however, the Commission did enter into the contract and consummated it. However, we knew all about it. We did not have the power to stop it.

Mr. MANSFIELD. But the committee knew about it in detail.

Mr. HICKENLOOPER. That is correct.

Mr. MANSFIELD. Major contracts, however, must come before the joint committee. Is that correct?

Mr. HICKENLOOPER. I will say to the Senator from Montana that it should not be limited or circumscribed to cases where we request it. It is the duty of the Commission to submit proposed terms of a contract to the committee.

Mr. MANSFIELD. Would the Senator from Iowa, then, favor incorporating such a provision into the law, so that every contract of major importance would have to come before the joint committee for its approval, so that it might be fully understood so far as cancellation, repayment, and items of that sort are concerned, before the execution of the contract?

Mr. HICKENLOOPER. Such a provision is already incorporated in the law. There is no use of putting in the law something which is already in it. It is the duty of the Atomic Energy Commission to keep the joint committee currently and fully informed upon all actions of the Commission. That is an all-inclusive provision. It does not apply only to contracts, but it includes contracts. It includes all actions of the Commission.

Mr. MANSFIELD. Did the joint committee have beforehand any information or advice from the Bureau of the Budget with respect to the Dixon-Yates contract?

Mr. HICKENLOOPER. The contract has not been made yet.

Mr. MANSFIELD. The contract has not been made?

Mr. HICKENLOOPER. The contract has not been made as yet. The contract is in the process of negotiation. We have reams of information about it. We have proposals and counter-proposals. That is true not only with respect to the Dixon-Yates proposal, but with respect to the Von Tresckow proposals also. We have the historic background of the steps that have been taken. We have held a number of hearings. Some of the hearings have lasted for 2 days. They were held some weeks ago. We are very fully informed. If we think the Commission have not given us detailed information, all we have to do is pick up the telephone and say to them, "Will you amplify this a little more for our understanding?"

Mr. MANSFIELD. Did the Bureau of the Budget notify the joint committee before it notified the Commission that such a contract was being considered?

Mr. HICKENLOOPER. No. I do not mean to be categorical in my answer to the Senator's question, and I cannot give the Senator an absolute answer. To my knowledge, no, the Bureau of the Budget did not contact the joint committee. There is no legal obligation on the part of the Bureau of the Budget to notify the joint committee about anything. There is a legal obligation on the part of the Atomic Energy Commission to keep the joint committee fully and currently informed. Once such a matter gets into the hands of the Atomic Energy Commission, the Commission is obligated to notify the Joint Committee on Atomic Energy. In my judgment, that has happened.

Mr. MANSFIELD. It is the duty of the Commission to present a contract to the joint committee in detail for the committee's careful and minute scrutiny. Is that correct?

Mr. HICKENLOOPER. I think it is the complete obligation of the Atomic Energy Commission to present a proposed final contract, or the draft of a proposed final contract to the joint committee for its scrutiny and examination. There is no final contract, as I understand—and I am quite sure I am right—and there is no final draft of the proposed contract. It is in a state of periodic negotiation on various terms. We can, if we wish to do so this afternoon, call up the Atomic Energy Commission and say, "What are your negotiations today? What were they this morning? What were they yesterday?" Under the law, the Commission would be bound to respond.

Mr. MANSFIELD. In detail?

Mr. HICKENLOOPER. We do not follow it quite that closely. As a rule we say to the Commission, "After you get a little further along, tell us what your progress is, and we will see where we go from there."

Mr. MANSFIELD. I should like to tell the distinguished Senator that my main interest in the question we are discussing at the present time is to make sure that congressional supervision is not overthrown by too much secrecy in this particular aspect by the Atomic Energy Commission. Is it safe to assume that if a member of the joint committee or the joint committee itself contacts General Nichols, who is—what is his title?

Mr. HICKENLOOPER. General Manager of the Atomic Energy Commission.

Mr. MANSFIELD. Contacts the General Manager of the Atomic Energy Commission and asks him to present to him or to the committee the full details of a proposed contract, General Nichols, under the law, must do so?

Mr. HICKENLOOPER. Let me clarify my answer. The Senator asked me a double-barreled question, whether either the committee or any member of the committee may do so. I know of no instance in which a member of the committee, acting as an individual member, has asked for proper information and has been refused such information by the Atomic Energy Commission.

I am not prepared to pass on the question of the individual right of an individual member, as such, to exercise the prerogatives which the law gives the joint committee. I do say that the joint committee, acting through its chairman, or through any properly designated representative of the joint committee, has an absolute right to the instantaneous production of any information on any subject which is in the official purview or responsibility of the Atomic Energy Commission. I wish to make my answer as factual as possible. The committee has the unquestioned right under the law. The joint committee is a unique committee. The committee has more power than any other committee I know of that has been created, at least in recent times.

Mr. MANSFIELD. I should hope so.

Mr. HICKENLOOPER. The committee has the right, according to the language of the statute, to the facilities, services, information, and personnel of the departments and agencies of government, and that means all of them. The committee is not set up as a standing committee of the Senate or of the House. It is not a standing committee of either House. It is a committee created by the National Legislature of Congress. It is a committee created and established by law, with its rights defined by law.

Under a strict interpretation of the law which established the Atomic Energy Commission, while I doubt if we would have occasion to go this far, yet if we should say to the Attorney General, "Detail X number of people on the staff of the FBI and have this matter investigated," I think, under the law, he would have to do it. If we determined, for instance, that the Department of Defense should perform certain acts in the interest of the furtherance of the atomic energy program, I think a strict interpretation of the law would require the Department of Defense to take our orders on that score, provided it went to the development of the atomic energy program. The committee has unique power.

Mr. MANSFIELD. The committee does have far-reaching powers, and I should like to have the committee, acting as the representative of the Congress and of the American people, see to it that the necessary powers are retained so that it will have the opportunity, as the Senator has assured me it has, to look over minutely and in detail contracts entered into over a long period of years.

Mr. HICKENLOOPER. We do have that power.

Mr. MANSFIELD. One more question. In the Senator's opinion, do the members of the Atomic Energy Commission also study these contracts in detail and know what they are doing when they make a recommendation?

Mr. HICKENLOOPER. I assume that every member of the Commission does his duty. I make no further assumption. In doing his duty he should study the terms of the contract so he can register his own judgment in voting his approval or disapproval.

Mr. MANSFIELD. If the President sends down a directive, what is the result?

Mr. HICKENLOOPER. I do not know what the result would be, because that is a matter of individual attitude. If I were a member of any commission and the President sent down a directive for me to do something I thought was beyond my conscience or that was improper for me to do, I would respectfully decline to do it, and, probably, if the head of the Government still demanded that I do it, I would say, "Here is my resignation." I would get out of office.

Mr. GORE. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. GORE. I wish at this time to commit the junior Senator from Tennessee to vote for the confirmation of the Senator from Iowa for any position to which he may be nominated.

Mr. HICKENLOOPER. I thank the Senator from Tennessee.

Mr. BUTLER. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield to the Senator from Maryland.

Mr. BUTLER. I have found this colloquy to be very interesting and most instructive. I should like to know whether the statement which the Senator from Iowa made about 10 minutes ago is completely correct, that while his committee is a joint committee of the Senate and the House, and has this vast power, it has no way of bringing that power to bear on the Commission. Is that correct?

Mr. HICKENLOOPER. There are two ways by which it can be brought to bear on the Commission. One is the moral suasion which a strong position which the joint committee has taken would bring to bear upon the attitude of the Atomic Energy Commission. We have no veto power over the action of any administrative agency. Do I make myself clear?

Mr. BUTLER. Yes.

Mr. HICKENLOOPER. The joint committee cannot say to the Atomic Energy Commission, "No; you cannot do this." That gets into the realm of the veto power of legislative committees which every President has protested from time immemorial. We do not have that power, but we do have a presuasive power if our committee takes either a unanimous or a practically unanimous stand against some proposed action of the Commission. I say to the Senator that on a few occasions the joint committee has been quite unanimous in its opinion, which was not controlling over the Commisson, but it had moral suasion over the Commission. On 2 or 3 occasions the joint committee has been quite close to unanimity or has been unanimous in beileving that the Commission should not do a certain thing or should do a certain thing. The Commission has agreed with us in the end. The moral suasion of our committee over the actions of an administrative agency is great. We attempt to maintain mutual respect between the Commission and our committee. We try not to act capriciously or arbitrarily. I think the Commission attempts to keep us informed and works with us.

We have another means of control, providing we can convince the Members of the House and Senate that we are right. If something appeals to us as being definitely wrong, we can propose legislation to the Congress and ask the Congress to enact legislation which will be a legislative curb upon action which we think the Commission should not take?

Mr. MONRONEY. In line with the Senator's thought, the joint committee also has the right, by way of a restriction of the expenditure items in appropriation bills, to exercise further legislative restraint.

Mr. HICKENLOOPER. Our committee does not have anything to do with appropriations.

Mr. MONRONEY. But with the influence, great knowledge, and prestige which the joint committee has, if it chose to take an issue to the floor in connection with a restriction on an appropriation bill, in order to save money, it could certainly exercise not only legislative power but financial power.

Mr. HICKENLOOPER. I wish to pat the joint committee on the back to the extent of saying that I believe if the joint committee went before the Appropriations Committee and said, "We do not think you should appropriate money for this"—some item in the atomic-energy field, the building of a new plant, or something like that—the Committee on Appropriations would do us the very great courtesy of paying some attention to us and consider our representations. Whether they would follow them entirely, I do not know.

Mr. MONRONEY. One of the greatest powers of a legislative body is the power of the purse, which seems to be still intact.

Mr. HICKENLOOPER. That is the Appropriations Committee.

Mr. MONRONEY. I am talking about all congressional committees. The Appropriations Committee and the Joint Committee on Atomic Energy are agents of the Congress.

Mr. MANSFIELD. Mr. President, will the Senator from Oklahoma yield further?

Mr. MONRONEY. I yield.

Mr. MANSFIELD. As the distinguished Senator from Iowa is on the floor, I should like to say that action which was taken a few years ago supports the statement just made by the distinguished Senator from Oklahoma, because I recall on one occasion when the AEC was being cut down too much with reference to some vital project, it was the Senator from Iowa who took the floor and was able to get the necessary amount restored to carry on the work which the joint committee had approved.

Mr. HICKENLOOPER. I thank the Senator from Montana for that pleasant compliment. I recall the occasion, but I am bound to say that there was a great deal of loyal support on the part of other Senators who backed me up at that time, and I could have done nothing without their support. I remember the wee small hours of that particular night ended about 4 o'clock in the morning.

Mr. MANSFIELD. If the Senator had not taken the step he took I think the Atomic Energy Commission would have taken a licking on that occasion.

Mr. HICKENLOOPER. Someone has to take the lead, and I think it is the responsibility of the members of the joint committee to do what is proper in the public interest.

Mr. MONRONEY. I think we can all be extremely grateful for the original act and for the leadership and guidance of men in the Congress who laid aside partisanship and personal ideas regarding private versus public power, thus creating a standing and reputation for the Atomic Energy Commission as one of the great independent agencies, working in step with the Congress. I intend to deal later in my speech with the tragedy confronting us when we see this independent agency now being made a puppet of the Budget Office of the President, dangling on the end of a telephone line in the chain of command, to tell the Atomic Energy Commission to do that which 3 members of the Commission feel it is not within their duty to do.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I am glad to yield.

Mr. GORE. I should like to have the attention of the Vice Chairman of the joint committee. I have listened with great interest to the able senior Senator from Iowa describe the broad powers of the joint committee. If there were stretched over the entire Government

the powers which he describes as being available with respect to the Joint Atomic Energy Committee, the committee would, indeed, be almost over the Congress. I take it that the Senator means to say that the powers of the joint committee, enormous as he has described them, are in connection with the atomic energy program.

Mr. HICKENLOOPER. Indeed. I did not mean any other understanding than that.

Mr. MONRONEY. The three little words, "in connection with," are not among the restrictions on the committee. They stay in their own jurisdiction.

Mr. GORE. I thought I understood the able Senator to use those exact words. If the Senator's committee should so stretch and distort the meaning of "in connection with," as has been resorted to in the instant case, then the power of the joint committee would, indeed, be omnipotent.

Mr. HICKENLOOPER. The Senator makes an assumption with which I cannot agree. I think the words "in connection with" constitute the very phrase which gives the Atomic Energy Commission the right to make the Memphis contract with Dixon-Yates. I do not think there is any question about it. I simply do not hold with those who say the Commission does not have the power to do it. That is merely a matter of disagreement on the interpretation of the law.

Mr. MONRONEY. Will not the Senator admit that other members of the Joint Committee on Atomic Energy have different views, and are almost as strong in their feelings as is the distinguished senior Senator from Iowa in his views?

Mr. HICKENLOOPER. Oh, other Members disagree; yes.

Mr. MONRONEY. Then, since this matter is in disagreement, and since there is a grave question whether the authority of law exists, should there not be written into the bill a provision conferring the authority, or, at least, should not a separate bill be presented to authorize contracts of this nature?

Mr. HICKENLOOPER. No; I think not. I do not think there is any necessity for writing a new law to say that what already is the law, is the law.

Mr. MONRONEY. But other Members also say that what is the law, is the law, and that, therefore, the proposed contract is illegal. There are able and experienced Members on both sides of the question.

Mr. HICKENLOOPER. The joint committee has never undertaken to take the place of the legal departments of the Government. If a question of legality comes before the committee we ask the opinion of the official legal authorities of the Government, whose duty it is to advise, and we accept the legal opinion once it is given. The members of our committee may disagree. The laymen or lawyers who may be on the committee may disagree in their opinions as to the legality of a certain situation; but we eventually rely on the opinion of the experts, the lawyers in the legal departments, with respect to such questions.

In this case there would be no exception. I am a lawyer by profession, but I have not actually practiced law in the courts for a good many years. I do not set myself up as a legal expert in matters of this kind, when there are legal departments of the Government whose business it is to study meticulously the laws involved. I accept their opinions on such questions, and that is what our committee does. We take the opinion of our legal counsel.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. GORE. As the able Senator from Iowa knows, he and I engaged in a colloquy when this amendment was adopted last year. It came up in the form of a bill on the unanimous-consent calendar. I interposed an objection—not an objection to its passage, but an objection for the purpose of asking that the measure lay over for further study.

It was called up later, and the vice chairman of the committee presented it to the Senate. After his explanation, I supported the amendment, as did the Senate. Among other explanations, I read from the CONGRESSIONAL RECORD, volume 99, part 6, page 8339, the statement of the Senator from Iowa [Mr. HICKENLOOPER], as follows:

> It takes the AEC out of the electric sales business and transfers that responsibility to private groups.

At another point, I read——

Mr. HICKENLOOPER. At what page?

Mr. GORE. At page 8338 of the CONGRESSIONAL RECORD, volume 99, part 6, I read from the remarks of the Senator from Iowa, as follows:

> Senate bill 2239 authorizes the Atomic Energy Commission to enter into cancellation-payment contracts with three suppliers of electric power for the Oak Ridge, Paducah, and Portsmouth installations of the Atomic Energy Commission.

I shall not read all the debate. Later I shall refer to it. But this amendment, I respectfully say to the able Senator, was not presented in the light in which he now would justify its being stretched. It was presented as being necessary to permit the financing of the private concerns with which contracts have been made to furnish power. There was never any intimation that in the brilliant mind of the able Senator from Iowa there was any conception that this provision would be so stretched as to include the making of a contract in southeastern Arkansas with a concern not as yet created, and to put it in business with a guaranteed profit and a tax-free bomb shelter, to furnish power through the Atomic Energy Commission to the Memphis area. The able Senator never made such an intimation of that intent when he presented the bill to the Senate.

Mr. HICKENLOOPER. I agree that I never mentioned any possibility or probability of the Memphis contract last year, because, so far as I knew, it was not under consideration. But neither can one anticipate the needs of the Commission in various fields next year or the year after. I have no crystal ball to prophesy for me what contract the Commission will necessarily have to enter into next year or the year afterward.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the distinguished junior Senator from New Mexico.

Mr. ANDERSON. I would only point out that there are 2 or 3 facts which I think are pertinent to the discussion and which might be mentioned. They relate to a matter I brought up in connection with a discussion with the junior Senator from Mississippi [Mr. STENNIS], namely, that the bill referred to only one subject. Its provisions then did not include any specific mention of the three plants to which reference has been made. Largely at the demand of the members of the committee, the specific names of the three plants were written into the bill, in order that Congress might have an opportunity to review contracts. The words of Representative HINSHAW, of California, were that if they were not included, that would be the last time Congress would have a chance to review a contract. We then wrote them in. It seems to me reasonable that if we then put them in, it was expected that Congress would have a chance to review contracts; that it was not expected that action would be taken in the fashion now proposed.

I call the attention of the able Senator from Oklahoma to page 957 of the hearings, where the General Manager of the Atomic Energy Commission, Mr. Nichols, testified. He was discussing the Presidential directive that the Commission proceed with the construction of the plant. He said:

> This directive has not yet been submitted to the Commission. I have checked with my legal people and they feel that having received a directive from the President we have the legal authority under the Atomic Energy Act.

So, I say, it was not enough to have the act on the statute books. It took a special directive from the President of the United States, in turn, to proceed with the contract.

Mr. MONRONEY. May I ask the distinguished Senator from New Mexico, who also is one of the very able members of the Joint Committee on Atomic Energy, if there has been any action taken by the joint committee, which has all of the rightful power which the distinguished vice chairman has described? Has there ever been any action taken by the joint congressional committee on a finding of fact that this action was within the purview of the authority included in the bill which was passed last year?

Mr. ANDERSON. I am sure there has not been. In contrast to that, I would say that one of the long discussions we had in connection with the bill was whether or not specific language should be written into it which would prevent anything like this happening.

If the junior Senator from Oklahoma will indulge me, I should like at this point to put into the RECORD a letter which I received yesterday afternoon from Mr. Nichols, General Manager of the Atomic Energy Commission.

Mr. MONRONEY. I always welcome any contribution from the Senator from New Mexico, because I know that he is

one of the best-informed men in the Congress on this subject.

Mr. ANDERSON. Mr. President, I ask unanimous consent to have the letter from Mr. Nichols printed in the RECORD at this point in my remarks, and then I shall read parts of the letter and comment on them.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES
ATOMIC ENERGY COMMISSION,
Washington, D. C., July 15, 1954.

Hon. CLINTON P. ANDERSON,
United States Senate.

DEAR SENATOR ANDERSON: In response to your telephone call today, I wish to submit to you the following information concerning the questions which you have raised:

1. You asked me to check the record concerning Senator FULBRIGHT's testimony on pages 10491 and 10492 of the CONGRESSIONAL RECORD and referred in particular to his statement in which he stated:

"Mr. FULBRIGHT. The statement I have in my hand was prepared today. It is the latest information I can obtain."

Answer. The information entitled "Explanation of Differences in Estimated Net Cost" was furnished to Senator FULBRIGHT. It was not signed. The statement was introduced into the CONGRESSIONAL RECORD on pages 10491 and 10492. I approved the forwarding of this statement to Senator FULBRIGHT.

2. In regard to the above-referred-to statement, you state that it is in error in that it attributes to you a statement which you never made.

Answer. The particular paragraph in question is as follows:

"In the data introduced by Senator ANDERSON on page 10379, subparagraph h, there is information to show that based on the data TVA presented as their cost to produce power, including 30-year [1] amortization and 2½-percent interest, the AEC will be overcharged by TVA, when the full contract demand at Paducah of 1,205,000 kilowatts is met, by approximately $6 million per year and that a similar analysis of the AEC-TVA contract for Oak Ridge for at least 1,030,000 kilowatts of the total contract demand at Oak Ridge, would undoubtedly reveal a similar picture."

Answer. The above paragraph is not attributed to you as a statement, but represents a summary of data introduced by you as shown on page 10379, subparagraph h, of the CONGRESSIONAL RECORD. If you will refer to page 10378 of the RECORD, second column, you will find your statement, as follows:

"I ask unanimous consent that the statement outlining the proposal may be incorporated in the RECORD at this point.

"There being no objection, the statement was ordered to be printed in the RECORD, as follows."

The statement in its entirety, as covered on pages 10378, 10379, and 10380, was furnished by the AEC to the JCAE, and I assume that you obtained it from the JCAE staff. I believe, therefore, that our conclusion that you introduced the data is a reasonable one.

3. Further, you referred to the statement on page 10492:

"Either the TVA is charging AEC too much or their representation on cost of producing power is in error.

"If the TVA representations on cost are correct, then the AEC is being overcharged. This places TVA in the position, at the expense of AEC, an arm of the Federal Government, of subsidizing other users of the TVA system at the expense of the taxpayers in the balance of the country."

You asked if this information had ever been presented to the JCAE.

Answer. If you will refer to page 1055, part II, of the published record of the "hearings before the Joint Committee on Atomic Energy," I am quoted as follows:

"Representative VAN ZANDT. Does this material relate to the information that was contained in the letter to Senator SALTONSTALL?

"Mr. NICHOLS. Yes, sir.

"We could give you an analysis of how we arrive at these various figures. I think the first one that Mr. Cook has that is pertinent is the analysis that compares our costs in the future with our present costs under the Paducah contract. That is not three million six. That is a lesser figure, because in the course of these discussions with TVA, we found that they were charging us more than costs by their own figures. It is one issue I have raised with the Bureau of the Budget and asked them what do we do about it. I would like Mr. Cook to explain this."

Neither Mr. Cook nor I ever did get back to explaining this fully and it was subsequently furnished, as I have stated above, to the JCAE in the statement which you introduced into the RECORD.

My action subsequent to learning that TVA is overcharging the AEC is that I have informally notified the Bureau of the Budget to this effect and I also prepared the letter to Mr. Strauss, dated June 11, 1954, which was introduced into the RECORD on page 10496 by Senator FULBRIGHT. We are also attempting to secure sufficient data to determine whether or not, in addition to overcharging us for permanent power, TVA has been overcharging us for interim power which they have secured from their own sources and from private utilities pending completion of new facilities under construction to serve the present contract demand at Oak Ridge and Paducah. As soon as this data is available and can be analyzed we will refer the matter to the Bureau of the Budget and also attempt to renegotiate with TVA the proper price and contract adjustments.

4. You asked if the EEI contract or the TVA contract, both signed in the summer of 1953, had ever been forwarded to the JCAE.

Answer. I can find no record of the EEI, OVEC, or TVA power contracts ever having been forwarded to the JCAE. However, the record of the hearings before the JCAE on H. R. 4905 indicates that descriptions of all of these contracts were furnished the JCAE and that they were discussed by the committee.

I hope that the above information meets your needs and, further, I regret very much that there has been a misunderstanding concerning the interpretation of your remarks before the Senate and the data introduced into the RECORD.

Sincerely yours,

K. D. NICHOLS,
General Manager.

Mr. ANDERSON. Mr. President, I had asked Mr. Nichols, general manager of the Atomic Energy Commission, to check page 10491 of the CONGRESSIONAL RECORD where the Senator from Arkansas [Mr. FULBRIGHT] was quoted as saying that the statement he had in his hand was prepared that day and that it was the latest information he could obtain. Since that communication was unsigned, and since it was referred to several times, I thought it might be well to clear up who the author of the anonymous document was. It developed that, while it was not signed, the chairman of the AEC stated in the letter:

It was not signed. The statement was introduced into the CONGRESSIONAL RECORD on pages 10491 and 10492. I approved the forwarding of this statement to Senator FULBRIGHT.

He assured me over the phone that the statement had been prepared in the Office of the Atomic Energy Commission and forwarded to the Senator from Arkansas. There are reasons why I wanted it to be known who the author was.

I had asked about the fact that it attributed to me a statement that I had never made, and I was amazed that it purported to quote me on something I had never said.

Mr. Nichols refers to that in the letter and states:

The particular paragraph in question is as follows:

"In the data introduced by Senator ANDERSON on page 10379, subparagraph (h) there is information to show—"

And so forth. I think it ought to be brought out what the information was that was introduced by me. The able Senator from Arkansas on the previous day had quoted at length from an analysis made by the Bureau of the Budget. That original analysis made by the Bureau of the Budget, supposedly, proved to be so unsound that the Bureau of the Budget withdrew it and substituted another explanation, which I put into the CONGRESSIONAL RECORD. However, in order that Members of Congress might see what had gone on, I acquired the JCAE's file copy of the original document, since I could not get any more copies from the Bureau of the Budget. I had it photostated, and put it into the RECORD at that time to show what the original statements made by the Bureau of the Budget were, and to show what the subsequent statements were as made by the Bureau of the Budget.

Those are the statements to which the letter referred. The term used was, "the data introduced by Senator ANDERSON." I introduced the data only to correct the information which had been given, but the memorandum certainly was not anything I had prepared; it was quite the reverse.

Then there appears a statement in the letter which I think is extremely interesting. I had asked where the statement in the JCAE file had come from, and the part of the reply by the general manager of the Atomic Energy Commission which is pertinent reads:

The statement in its entirety, as covered by pages 10378, 10379, and 10380, was furnished by the AEC to the JCAE—

Which is the Joint Committee on Atomic Energy—

and I assume that you obtained it from the JCAE staff.

I might say that document was designed for the assistance of speakers in Congress, and the copy which is still in the files of the Joint Committee on Atomic Energy shows that was the reason for its preparation. Yet it refers to findings by the Bureau of the Budget. It was not prepared by the Bureau of the Budget at all.

In that very interesting document, the memorandum which the Senator

[1] This figure should be 35 instead of 30. See p. 10379.

from Arkansas introduced, the following is stated:

Either the TVA is charging AEC too much or their representation on cost of purchasing power is in error.

I am very much interested in that statement, because now, in the month of July 1954, the Atomic Energy Commission has discovered that the contract it signed with EEI and with the Tennessee Valley Authority seems to provide for an eventual overcharge, and that overcharge in time could be several million dollars annually. I think that shows why contracts ought to come before committees of Congress for review. If the Atomic Energy Commission, in the first year of the contract, feels that it signed such a bad contract with TVA, and that TVA outbargained it to the extent of an overcharge of several million dollars, then somebody did not do a very good job of bargaining with TVA. That is the only point I wanted to make.

I thought TVA had charged AEC a very fair rate. I think the testimony shows that during the first 3 months of 1954 they were paying 4.86 mills to the TVA and 5.08 mills to the EEI. If TVA was overcharging when it was charging less than the private utility was, what was the private utility doing?

I want the record to show that within a year from the time this brandnew contract has been signed, here comes the general manager of the Atomic Energy Commission and says, "One of two things has happened: Either TVA is charging too much, or their representation on cost of production was in error." Either of those is a bad admission to make. It is regrettable to learn that in bargaining with the TVA the AEC got "soaked" on a contract, if it actually did.

Mr. GORE. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. GORE. But if either alternative has substance with respect to the AEC contract with TVA, then both alternatives would be worse with respect to the Joppa plant contract across the river, would they not?

Mr. ANDERSON. Precisely. Is it not remarkable that here stands the general manager of AEC, criticizing another agency of the Government for overcharging, and never saying a word about the private utility?

Mr. GORE. And becoming a partisan for the making of another contract with another outfit charging $3½ million more a year.

Mr. ANDERSON. Precisely. I think it is too bad when everyone knows that every bolt, every board, every generator, and everything owned in the title of the TVA, is the property of the Government of the United States, that the head of another agency of the Government of the United States should say that agency is overcharging the Government, but he keeps absolutely quiet about the private utility which is charging still more. I think it is too bad, and I do not like it.

Mr. KEFAUVER. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield to the Senator from Tennessee.

Mr. KEFAUVER. I think it should be pointed out, as a matter of fairness, and I do not remember the charges which the Senator from New Mexico mentioned——

Mr. ANDERSON. I am not sure I quoted the charges accurately, since I was depending on my memory. I think the figure was 4.8 mills for the AEC as against 5.08 mills. They appear at page 1036 of the hearings.

Mr. KEFAUVER. The charge of 4.8 mills was during the first part of the Tennessee Valley operations, and during the early years when power was being furnished by the TVA, the cost was higher than it is now, because the TVA, at the request of the Atomic Energy Commission, had to buy a large amount of power from other sources, and that entered into the rate. The point is that the charge is 3.56 mills per kilowatt for what the TVA is furnishing, and the cost of the private power is estimated to be something over 4 mills.

Mr. ANDERSON. On page 1036 of the hearings, in the testimony of Mr. Nichols, it is shown that in the first 3 months of 1954 the rate from TVA was 4.86 mills and the rate for EEI was 5.08 mills, so that the charge of the TVA was substantially below the other figure.

Then a little further on Mr. Nichols said the TVA rate would be approximately 10 percent below the rate of the private utility.

All I ask is, if in the contract TVA succeeded in gouging AEC, what did the private utility do to AEC?

Then, by the same token, if AEC can get such an awful gouging in the negotiation of such a contract, why should it object to bringing the contract before the Joint Committee on Atomic Energy so its members can look at it?

The record shows that I asked whether the EEI contract or the TVA contract, both signed in the summer of 1953, had ever been forwarded to the Joint Committee on Atomic Energy. Mr. Nichols' reply was:

I can find no record of the EEI, OVEC, or TVA power contracts ever having been forwarded to the Joint Committee on Atomic Energy.

In other words, the one body that is supposed to examine these things and to stand as guarantor to the Congress of the United States that everything is going along all right, has never seen either the contract with the EEI or the contract with the OVEC, which amounts to approximately $1 billion, and has never seen the proposed Dixon-Yates contract.

Mr. MONRONEY. Mr. President, after listening to the interesting colloquy regarding the various contracts and arrangements in other than the nuclear-energy field, I wish to say that I am very thankful that the Atomic Energy Commission is not so mixed up, muddled, confused, and divided regarding the making of atomic bombs as it seems to be in regard to the making of power contracts, for the world might be in very great danger if in our atomic program the same lack of precision that seems to have characterized the dealings in regard to the electrical contracts, existed.

Mr. KNOWLAND. Mr. President, at this time will the distinguished Senator from Oklahoma yield to me?

Mr. MONRONEY. I yield.

Mr. KNOWLAND. I wish to suggest the absence of a quorum before I submit a proposed unanimous-consent agreement.

Mr. MONRONEY. I yield for that purpose.

Mr. KNOWLAND. Then, Mr. President, I suggest the absence of a quorum.

Mr. JOHNSON of Texas. Mr. President, it is understood, is it not, that in yielding for this purpose the Senator from Oklahoma does so with the understanding that he will not thereby lose the floor?

Mr. KNOWLAND. Yes, Mr. President. I ask unanimous consent that in yielding for this purpose the Senator from Oklahoma will not lose the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

The absence of a quorum having been suggested, the clerk will call the roll.

The Assistant Parliamentarian proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT— APPROVAL OF BILL AND JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Tribbe, one of his secretaries, and he announced that on today, July 16, 1954, the President had approved and signed the following act and joint resolution:

S. 3291. An act authorizing the President to present a gold medal to Irving Berlin; and

S. J. Res. 165. Joint resolution to provide for construction by the Secretary of the Interior of the Glendo unit, Wyoming, Missouri River basin project.

EXECUTIVE SESSION

Mr. KNOWLAND. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGE REFERRED

The PRESIDING OFFICER laid before the Senate a message from the President of the United States submitting the nomination of Clarence A. Davis, of Nebraska, to be Under Secretary of the Interior, vice Ralph A. Tudor, resigned, which was referred to the Committee on Interior and Insular Affairs.

The PRESIDING OFFICER. If there be no reports of committees, the Clerk will state the nominations on the Executive Calendar.

THE ARMY

The Chief Clerk read the nomination of Lt. Gen. Horace Logan McBride, Army of the United States (major general, U. S. Army) to be lieutenant general.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Lt. Gen. Andrew Davis Bruce, Army of the United States (major general, U. S. Army) to be lieutenant general.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

THE AIR FORCE

The Chief Clerk read the nomination of Lt. Gen. Robert Wells Harper (major general, Regular Air Force), United States Air Force, to be placed on the retired list in the grade of lieutenant general, under the provisions of subsection 504 (d) of the Officer Personnel Act of 1947.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Lt. Gen. Charles Trovilla Myers (major general, Regular Air Force), United States Air Force, to be commander, Air Training Command with the rank of lieutenant general, and to be lieutenant general in the United States Air Force.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Maj. Gen. Glenn Oscar Barcus, Regular Air Force, to be commander in chief, United States Northeast Command, with the rank of lieutenant general, and lieutenant general in the United States Air Force.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

APPOINTMENTS IN THE REGULAR AIR FORCE

The Chief Clerk proceeded to read sundry nominations in the Regular Air Force.

Mr. KNOWLAND. I ask that the nominations in the Regular Air Force be confirmed en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

POSTMASTERS

The Chief Clerk proceeded to read sundry nominations of postmasters.

Mr. KNOWLAND. I ask that the nominations of postmasters be confirmed en bloc.

The PRESIDING OFFICER. Without objection, the postmaster nominations are confirmed en bloc.

Mr. KNOWLAND. I ask that the President be immediately notified of all nominations confirmed this day.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. KNOWLAND. I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. KNOWLAND. Mr. President, I send to the desk a proposed unanimous-consent agreement, and ask that it be read for the information of the Senate.

The proposed order was read as follows:

Ordered, That following the morning business on Saturday, July 17, during the further consideration of S. 3690, to amend the Atomic Energy Act of 1946, as amended, and for other purposes, debate on any amendment or motion (including appeals) shall be limited to not exceeding 2 hours, to be equally divided and controlled, respectively, by the mover of any such amendment or motion and the Senator from Iowa [Mr. HICKENLOOPER] in the event he is opposed to such amendment or motion; otherwise, by the mover and the minority leader or some Senator designated by him: *Provided*, That no amendment that is not germane to the subject matter of the said bill shall be received: *And provided further*, That debate upon the bill itself shall be limited to not exceeding 2 hours, to be equally divided and controlled, respectively, by the Senator from Iowa [Mr. HICKENLOOPER] and the Senator from Texas [Mr. JOHNSON].

Mr. KNOWLAND. Mr. President, I wish to make a brief statement at this point.

The bill has been under debate for a number of days. On at least one of those occasions the majority leader was prepared to ask that the Senate continue in session for an extra hour or two so that any speeches to be made might be made and amendments might be offered.

As a preface to my further remarks, let me say, as I have said publicly on previous occasions, both on the floor of the Senate and elsewhere, that I wish to express great appreciation not only to the minority leader, but also to other Members on the other side of the aisle, for the very fine cooperation they have given in expediting the public business in the common interest of our country.

When the pending bill shall have been finally disposed of, there will remain the foreign-aid authorization bill—and I am merely mentioning the major legislation, without detracting in the slightest from the importance of other bills—which has now been reported from the Foreign Relation Committee, and today was reported from the Armed Services Committee, as has been customary for the past several years.

There is also the social-security legislation to extend the coverage of social security.

In addition to that, there is other very important legislation which, after it is finally acted on by the Senate, must go to conference. Probably all the bills I have mentioned will require action by conference committees. The tax bill is now in conference and I am hopeful that the conferees may agree and submit a report on that bill in time for action on it by the Senate next week.

The bills I have mentioned will have to be followed by the foreign-aid appropriation bill, and action will also be required on a supplemental appropriation bill.

All of those bills are of major importance.

As I say, the Senate will not be limited to taking action on the bills I have mentioned, but also on a great many other bills and conference reports. I call the attention of Senators to the fact that tomorrow will be the 17th of July, and the following Saturday will be the 24th of July, and the next Saturday after that, 2 weeks from tomorrow, will be the 31st of July. Under the La Follette-Monroney Act, Congress is expected to adjourn sine die on the 31st of July. That gives us only 2 full weeks from tomorrow.

I make an earnest plea to Senators on both sides of the aisle to agree to the unanimous-consent request. I am prepared to have the Senate continue in session tonight until 10 o'clock. The Senate has already entered an order to convene tomorrow at 10 a. m. I have given advance notice for several weeks that in the closing 3 weeks of the session it will be necessary to have evening sessions and also Saturday sessions. I hope we can avoid sessions later than 10 o'clock. I do not know whether we can, because in the 9 years I have been in the Senate there always seems to be piling up proposed legislation in the final 2 or 3 days of the session, and it has been necessary to meet until midnight during the last days of a session. In view the very heavy burden that all of us have been carrying, I had hoped that we could avoid sitting later than 9:30 or 10 o'clock at night, at the latest. I do not know whether we can do it. I believe we can if we continue to have the same fine cooperation in the remaining 2 weeks of the session we have had in the past.

Therefore, I have proposed the unanimous-consent agreement because it seemed to me that under all the circumstances and with the very heavy schedule we have ahead of us, such an agreement would be reasonable and would permit us to conduct the public's business and have proposed legislation go to conference, which I am sure will be done with respect to most of it, and be able to complete our very heavy program in time.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request?

Mr. MAGNUSON. Mr. President, I was very much interested in the measures of major importance which the Senator from California thought would be brought up during the remainder of the session. I note that he omitted mentioning the Hawaiian statehood measure. Does the Senator wish to say anything with respect to whether that matter will be brought before the Senate?

Mr. KNOWLAND. I had made it very clear that I was not making the list an

exclusive list. I do not know what may come to us from the House. As yet, the proposed legislation has not cleared the House Rules Committee. Of course we will not have an opportunity to consider it unless a conference report shall be submitted to the Senate, and I do not know how many additional conference reports and how many additional bills will come before the Senate.

Mr. MAGNUSON. If the House Rules Committee should clear it and it should get through the House, the Senator from California will agree, I am sure, that the Hawaii-Alaska measure would be an item of major importance.

Mr. KNOWLAND. That would certainly be a major item that the Senate would have to consider, along with other measures, and the possibility of completing the session within the time limit I have mentioned.

Mr. MORSE. Mr. President, reserving the right to object, in my 9 years in the Senate I do not believe that there has been a single bill of more vital importance to the economic welfare of the American people for the next 100 years than the bill now pending before the Senate.

I shall speak at some length on the bill tomorrow, and explain in detail my reasons why I think the bill, which is of such vital importance to the preservation of the economic freedom of this country, would in its present form, do great damage to, and jeopardize, the preservation of a truly private-enterprise system in America.

In fact, I think it would be much better to pass no bill at all than to adopt this bill in its present form. I can say that it is one of the most undesirable pieces of legislation I have ever studied during the 9 years of my service in the Senate.

The debate now going on in the Senate is having a terrific educational impact throughout the land, and at long last some of the editors across the country are shaking off their individual lethargy on this matter and are beginning to see the dangers of many sections of the bill.

In my judgment this bill requires much more debate than we have had up to the present time, if the American people are to have ample warning of its many inherent dangers.

Therefore, Mr. President, I could not even think of giving consent to closing the debate on a subject which I believe calls for much more debate than the bill has had up to the present hour.

I do not know what is the matter with the month of August as a suitable meeting time for the Senate. Most of the political campaigns really do not start until after Labor Day. I believe there is much of the people's business that needs to be transacted before this session adjourns. Therefore I am not deeply moved by any plea to adjourn on July 31.

I object.

The PRESIDING OFFICER (Mr. REYNOLDS in the chair). Objection is heard.

Mr. KNOWLAND. Mr. President, I should like to renew the unanimous-consent request and substitute Monday, the 19th of July, for Saturday, July 17. I make the request on behalf of the minority leader, the Senator from Texas [Mr. JOHNSON], and myself, for the reasons I have previously stated, plus the fact that we shall have all day today until 10 o'clock tonight, and we will have all day tomorrow until 10 o'clock tomorrow night, and we would have Monday, under the unanimous-consent agreement, for further speeches on amendments and on the bill.

The PRESIDING OFFICER. Is there objection to the amended unanimous-consent request?

Mr. MORSE. Mr. President, for the same reasons previously advanced, I object.

Mr. KNOWLAND. Mr. President, I merely wish to say that I believe the Senator from Oregon is not only obstructing the business of the Senate, but is endangering the entire legislative program, including a very important bill which, aside from the one phase which has been a matter of considerable discussion, is important from the standpoint of the international control of atomic energy, and is important from the standpoint of the proposal of the President of the United States with relation to the pooling of atomic-energy information for peacetime purposes.

I believe the Senator's objection tends to jeopardize other portions of the President's program, which are extremely important. Under the circumstances, of course, we are at the mercy of the Senator from Oregon when a unanimous-consent request is made. Under the rules of the Senate, he has the right to be an obstructionist if he cares to be one. I shall proceed with the program. The Senate will sit until 10 o'clock tonight and until 10 o'clock tomorrow night, as scheduled.

Mr. MORSE. Mr. President, the representative of the Independent Party has had applied to him in times gone by the bewhiskered arguments made by the majority leader. I am used to them. I am perfectly willing to assume full responsibility for my course of action in the Senate, and I am perfectly willing to meet the majority leader anywhere in America, at any time, and to let the people be the judge of the course of action the Independent Party has taken in the Senate.

Let me say, Mr. President, that I have observed in 9 years that usually, in the long run, we do not save time by entering into unanimous-consent agreements. It is a pretty sound policy to let the rules of the Senate operate. There is one rule which I think is of vital importance for our preservation, and that is unlimited debate on great major issues which affect the welfare of the American people as much as this bill affects it. I am perfectly willing to stand upon my objection to limiting debate upon a bill which, in my judgment, threatens to monopolize the atomic-energy program of this country for decades to come. I do not intend to be a party to selling the American people into that kind of monopolistic bondage.

Mr. ANDERSON. Mr. President, I wish to say that I think many of us are anxious to vote upon this bill and that I am hopeful we can have an opportunity to vote on it in the very early future.

If I may have the attention of the majority leader for a moment, I should like to say that I called the majority leader and told him I felt we should be voting upon the bill, and, while it is impossible to get a unanimous-consent agreement at this time, I wanted to assure him that I was anxious to vote upon the bill at the earliest possible moment, and I thought we should vote on it on Monday. So far as I am concerned, I hope there will be an opportunity to bring up my amendment on Monday and get a vote on it. Many Members on both sides of the aisle are out of town. I was advised that many Senators who were out of town would like to have a few days' notice of a vote. That is why I thought Monday would be a convenient day.

Mr. KNOWLAND. Mr. President, I am sure the Senator from New Mexico understands that every Senator has been on notice that in the past 3 weeks we have had a heavy program and are holding evening sessions. It is bound to happen that some Members have to be absent; but in these days, with the airplane, they can return from any section of the country overnight. When the Senate is in its closing days, it seems to me that absent Senators, no matter how many may be involved—they come from both sides of the aisle—should not delay the public business and keep 80 other Senators, many of whom also have engagements or desire to go back to their home States, meeting late at night in trying to wind up the Senate's business. I might be called out of town myself, but I certainly would not expect 95 other Senators to kill time for 2 or 3 days waiting for me to return. I believe, under the circumstances, it is extremely important that we be able to conduct the public business as the debate legitimately runs out and amendments come up for consideration.

Mr. THYE. Mr. President, will the Senator from California yield?

Mr. KNOWLAND. If I have the floor, I am glad to yield to the Senator from Minnesota.

Mr. THYE. Mr. President, I should like to comment on what the majority leader has said. I have gone through campaigns since I have been a Member of the Senate, and I certainly did not expect the entire Senate to adjust itself to my absence. I recently took leave for 2 days, and the majority leader said he thought only noncontroversial bills would be considered in my absence. I was gone only 2 days, and during that time there were 5 yea-and-nay votes, and I was listed as being absent on all of them. If we conduct our business at the convenience of 3 or 4 Senators who are conducting campaigns in their States, I do not think the Senate is functioning as it should.

Mr. KNOWLAND. As I have observed closely the operations of the majority and minority leaders with reference to their responsibilities, both when I first came to the Senate, when former Senator Barkley occupied the minority leader's place, and Senator White, of

Maine, occupied the chair which I now occupy, and as I worked with the late Senator Taft and with the distinguished minority leader [Mr. JOHNSON of Texas], until a Senator has served at one of these desks I do not think he can understand the problems and the burdens that are placed upon the majority and minority leaders in trying to maintain orderly procedure, trying to accord every reasonable courtesy, particularly in the early stages of the session when there is considerable more flexibility than is possible in the closing 3 weeks, and in trying to keep Senators who are overworked from working through an entire night in order to complete the legislative program. Many Senators have expressed an earnest desire that they might be able to complete the work, as provided by the La Follette-Monroney Act, by July 31.

What I have said was said more in sorrow than in anger. I wanted to lay the matter on the line, because as we go into the later stages of the session and longer hours are required, if the period must be extended, both the Senate and the country will know where the responsibility rests.

Mr. JOHNSON of Texas. Mr. President, will the Senator from California yield?

Mr. KNOWLAND. I yield.

Mr. JOHNSON of Texas. Mr. President, I am very fearful it will be necessary to extend the date of adjournment instead of extending the hours of the daily sessions. We are now operating on a 12-hour day, and while I have no doubt the majority leader and the minority leader, for that matter, can "take it," I do not know how long we shall be justified in asking the Members and the staff to work more than a 12-hour day.

I rose to ask this question: Is it the purposes of the majority leader to call the calendar tomorrow? I should like to know in order that Members on this side of the aisle may have notice.

Mr. KNOWLAND. I have not changed the plan to have a calendar call sometime tomorrow.

Mr. MORSE. Mr. President, I should like to ask the Senator from New Mexico [Mr. ANDERSON] a question. I think the Senator knows that I have no objection to voting on any amendment on Monday if the debate runs out. But am I to infer that the Senator thinks we should place some restrictions on ordinary debate by entering into a unanimous-consent agreement to vote on Monday?

Mr. ANDERSON. No, indeed. I was only expressing the hope that as to those amendments on which we have finished debate we might vote on them. If this matter is left alone, we might proceed to vote on Monday, and if we should have a call of the calendar on Saturday we would still be making as much headway as if we had had a unanimous-consent agreement.

Mr. MORSE. I am glad to hear that observation of the Senator, although I want to make it perfectly clear that if I stood all alone on this matter I would still object. But I also wish the RECORD to show that this objection represents a substantial body of opinion within the Senate as of this hour. If I did not object, there would be plenty of others who would object, although I do not say that with any idea of detracting one iota from my full responsibility for this objection.

I shall continue to raise objection even if we get to the point where I stand as the only one who opposes an agreement to limit debate on this tremendously important bill.

Mr. ANDERSON. Mr. President, we have not debated all the angles of this bill. For example, the very able Senator from Michigan [Mr. FERGUSON] talked about the Dixon-Yates matter as a firm offer. I talked to him afterward and said I did not believe it was a firm offer, for the proposal of the Dixon-Yates group was made contingent upon three things:

First of all, a United States Treasury ruling on sinking fund depreciation;

Secondly, a ruling from the SEC, which they have not yet given, on the contracts entered into last August with EEI and OVEC; and

Thirdly, the approval of the regulatory bodies having jurisdiction and having charge of it.

If, by any chance, the Senate should fail to adopt the amendment which I have offered, which I think might stop the Dixon-Yates contract, then the Dixon-Yates contract might be permitted under the law, so we should go into what the Dixon-Yates contract really is.

We might want to refer to the cancellation provisions of the Dixon-Yates contract. They are somewhat complicated, but they involve some $40 million, and I should think that in dealing with a $40 million contract, the Senate might want to know how the $40 million obligation came about and how it was applied. Therefore, some of us have taken the time to figure out how it was applied, and to present it to Congress.

The same question applies to the cancellation provisions of the existing contract. We ought to look at them, to decide whether they are satisfactory contracts.

I do not think that a week is too long to devote to a matter of this nature. The wool bill, Senate bill 2911, was made the unfinished business of the Senate on April 15. It finally passed the Senate on April 27, after having been considered for more than a week. Is it seriously contended in the Senate that the wool bill, important as it was to the country, was more important than the atomic energy bill? Are we to hear now that having debated all that time on the wool bill, merely because it happened to be a part of an agricultural program which, I am happy to say, I supported, it was more important than a bill which deals with $12 billion worth of property and the safety of the entire Nation? I think we should bear that in mind.

Not only that, but I know that the Bricker amendment, Senate Joint Resolution 1, an extremely important piece of proposed legislation, was made the unfinished business of the Senate on January 20, 1954. I am not going back into 1953, but merely to January 20, 1954. Senate Joint Resolution 1 was rejected on February 26, 1954, after the Senate had spent 5 solid weeks on the proposed amendment. I think it was important. I know it was of supreme importance to the Nation. But I simply say that I cannot possibly persuade myself that marching our soldiers up the hill, and then marching them down again on that resolution was as important as is the consideration of the atomic energy bill, which offers great possibilities to the people of the earth and the people of this country; a bill which will do something for our economy; which will lift some of the burdens off the backs of humanity.

If the Senate could spend 5 weeks on Senate Joint Resolution 1, I think it can spend more than 5 days on the extremely important bill which, I still maintain, a great majority of the Senate do not yet understand, if I may judge from the questions which are put to me by Members of the Senate.

Finally, I refer to the Hawaiian statehood bill, which was made the unfinished business on February 26. I offered an amendment to that bill, which was agreed to on March 11, but final passage did not come until April 1. So from February 26 to April 1, the Hawaiian statehood bill was before the Senate. The Senator from Washington [Mr. MAGNUSON] has just asked about that bill. It is tied up somewhere in the other body. The Senate spent many weeks on it. Are we to say that that sort of futile effort, of marching our soldiers up the hill, and then marching them down again, is more important than the disposition of the atomic energy bill, which involves $12 billions of our money, and carries with it the hopes, dreams, and aspirations not only of the United States, but also of the whole earth.

While I have indicated that I would like to see voting begin, while I still say I want to see voting begin, and while I am still anxious to have an early vote upon the amendment I have offered, I think there must he time in which to discuss it.

We have talked about the cancellation provisions in the contracts. That raises the question whether the contracts should not be reviewed by some group.

Some Senators have said that there should be a vote upon it. I think the subject requires some discussion. I think the question is, should these very important contracts, involving millions and millions of dollars, be reviewed by the joint committee, where unusual secrecy is required, or should they be reviewed by the Committee on Appropriations or by some other group? I do not know.

But when the General Manager of the Atomic Energy Commission can send a letter, saying that he believes that the TVA is going to overcharge the Atomic Energy Commission by $6 million a year, under a contract entered into only last year, then I say maybe someone had better have a look at the contracts besides the Atomic Energy Commission.

Perhaps it might be all right to let someone else take a peek at them some time. Therefore, I think we had better look at the cancellation provisions.

No one has talked about section 21. The joint committee sat day after day discussing section 21 which at one time

provided that the Chairman of the Commission should be its principal officer. Personally, I think the joint committee, after its deliberations, came out with a good solution of the problem. I am perfectly satisfied with the language, with this exception: I believe that all information should be available to every member of the Commission. Mr. Murray, a member of the Commission, has said he believes he should be entitled to all information, and he has suggested an amendment. I placed the language of that amendment in the RECORD last night.

If no one else does so, I should like to offer it as an amendment. Mr. Murray's language might be included in the bill. It would provide that anyone who has been nominated by the President of the United States to be a member of the AEC, and whose nomination has been confirmed by the Senate of the United States to be a member of that body, should be entitled to receive all the information coming into the body.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. HICKENLOOPER. Is there any question in the Senator's mind that every member of the Commission is not now entitled to all the information, transactions, and business of the Commission?

Mr. ANDERSON. Yes, indeed, because the chairman of the committee himself said he thought there would be circumstances where it would not be wise.

Mr. HICKENLOOPER. It was the chairman of the Joint Committee on Atomic Energy who said that, not the Chairman of the Commission.

Mr. ANDERSON. Very well. I also say "committee."

Mr. HICKENLOOPER. There is nothing before our committee to indicate that any member of the Commission has ever been denied any information having to do with the business of the Commission.

Mr. ANDERSON. I shall not argue that point again. I say merely that we spent several days discussing it. I only want to say to the Senator from Iowa that I agreed fully with what was finally done by the committee. But it was pointed out that item after item had been discussed as a matter of national policy, and that when the President had made certain proposals, the members of the Atomic Energy Commission thought all of them should have known about them. But it was transmitted to only 1 member, because that man wore 2 hats: 1 as Chairman of the Atomic Energy Commission, and another as the President's personal adviser on atomic energy. When he went to the White House he wore one hat; when he was at the Commission he put on the other hat, and need not tell the other members of the Commission what was under the first hat.

Perhaps that is all right, but a member of the Commission—a very valuable member of the Commission, feels that it is not all right. He wants clarification on that point.

We should have a discussion of whether that should be clarified; or whether, as the Senator from Iowa has stated, there is no question about it. This is very good assurance to me that there is no question about it, because I think it is part of the legislative history.

Mr. HICKENLOOPER. The Senator from New Mexico is speaking on borrowed time. The Senator from Oklahoma has yielded, and I shall not transgress on his time nor that of the Senator from New Mexico, except to say that the Senator from New Mexico has raised this question in generalities today. I know he is prepared to discuss it in detail when the matter comes up. But I merely wish to say that I cannot let his ideas, as he has expressed them, stand without a statement in the RECORD that I disagree with the connotation of what he is saying, especially with regard to the two-hats matter.

I want the RECORD to show that there is certainly another and a definitely diametrically opposite side to the side as the Senator from New Mexico has expressed it, as reported to him by some members of the Commission.

Before the discussion is over, I hope we shall have an opportunity to get all the facts before the Senate and to understand the situation as it is. I shall not go into details now because I do not wish to trespass on the Senator's time.

Mr. ANDERSON. I agree with the Senator, and I think that is why there should be debate. That is why I want to have a discussion. I agree with the Senator from Iowa. I think the matter is clear. I think the only inference which can be drawn is that every Member should be entitled to all the information. But here is a member of the Commission addressing a letter in which he says that he does not think that is so, apparently, from what is going on. I have placed the letter in the RECORD.

If the statement by the Senator from Iowa, coupled with other statements will provide a legislative history which will make it certain that no member of the Commission is looked upon as a security risk and is to be prevented from having information, then I shall be satisfied. But I think those questions should be cleared up.

Mr. LEHMAN. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. LEHMAN. I am very grateful to the distinguished Senator from New Mexico for enumerating a number of the issues involved in the bill which need further clarification. I am not certain, however, that the Senator has emphasized one feature of the bill which I think is of very great importance, and that is the giveaway feature. On that subject I, and I believe some of my colleagues, wish to speak tomorrow or Monday.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from Washington.

Mr. MAGNUSON. As the Senator from New York stated, I do not think the Senator from New Mexico has enumerated all of them, but I know some of us are interested in knowing how the bill changes the power policy of the country. There has been no discussion or consideration at all of that question. If the Government goes into electric power energy development, what will be the position of the Federal Power Commission in the matter? How do the interests of the two agencies conflict?

Referring to the byproduct power, which is discussed on page 118 of the report, if the section in the bill stands as it is, the bill will not only overturn a 50-year power policy, but it will start a new power policy. I think all kinds of questions were ably raised by the two distinguished Members of the House of Representatives, contained in about five pages, in which they indicate that they themselves, as members of the committee, still were not clear after the committee reported the bill. Many of us who have a direct interest in the matter I believe desire to discuss the bill at some length. The report has been available only 3 days. It takes longer than 3 days to ascertain how the bill will affect the power policy of the country.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. HICKENLOOPER. The report has been on the desk of the Senator since early Monday morning.

Mr. MAGNUSON. Tuesday afternoon.

Mr. HICKENLOOPER. At about 10:30 in the morning.

Mr. MAGNUSON. Very well; it has been available for 3½ days, then. The bill comprises 104 pages. We are expected to be able to study the bill in 3½ days, a bill which will do more to change the entire power policy of this country than any other bill which has been passed by Congress in the past 20 years, and it is expected that those of us who have a direct interest in the matter will be able to become familiar with the bill in that time, when even the members of the Joint Committee on Atomic Energy do not understand it. What effect will the provisions of the bill have upon the power policy of the country? Will atomic power be used to create electrical energy?

I pose the question: What is the rush in trying to get the bill through Congress? I can understand the urgency of getting the farm bill, the tax bill, and appropriation bills passed; there is a need for rushing them through. Many of the members of the joint committee posed all kinds of questions which they themselves cannot answer, and I am sure very few Senators even now understand the implications and the ramifications of the bill. We are getting some light from some excellent speeches which have been made, but most of them have been directed to certain phases of the bill. There are all kinds of ramifications involved in the bill.

I do not know that July 31 is the date by which Congress must necessarily adjourn. I am sure the people of the country will not be angry if we sit here a few more weeks, if important measures are going to be thrust at us, and, with only 3 days' notice, we are to be asked to vote and express our judgment.

Mr. ANDERSON. Mr. President, I wish to make it clear that I do not want what I said a moment or two ago to appear as if I am in opposition generally to what the able Senator from Iowa has been saying. He is a former chairman of the joint committee, is an extremely conscientious member of it, and, in my humble judgment, an extremely able member. I was merely saying I did not think we should hurry the matter, because Members of the Senate generally have not had the opportunity to spend time on the bill, as the members of the Joint Committee themselves have done. I believe it takes a while to understand the various ramifications of the bill.

Mr. HILL. Mr. President, will the Senator from Oklahoma yield?

Mr. MAGNUSON. If the Senator will permit me a word, we have enough time. I want the RECORD to show that, as reflected on page 121 of the report, members of the joint committee say they cannot understand what the bill prescribes in relation to how hydroelectric resources may be used. They wonder about the safeguarding of the prior right of Federal development of resources in this particular field. They wonder about the safeguarding of prior rights of public bodies.

There is another aspect of the bill to which I should like to call attention. There is no preference clause in the bill at all. The project could be given away to private interests. We have no idea what it is going to cost, or whether the people are going to get a fair price.

Mr. LEHMAN. There is not a single element of protection in the bill.

Mr. ANDERSON. Mr. President, I desire to add there may be necessity for more discussion, because there may be some protection needed. I think the Senator from Washington should have an opportunity to examine the bill carefully, to ask his questions, and to study the points made by Representative HOLIFIELD and Representative PRICE in their long and, I think, carefully prepared minority views. I did not join them in those minority views, because I do not subscribe to all that is stated in them, but there are many statements to which I do subscribe, and I must congratulate those gentlemen for the manner in which they presented their points with respect to the bill.

Mr. HILL. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from Alabama.

Mr. HILL. In view of what has been brought out in the debate about the cancellation terms of the old AEC and EEI contracts, does not the Senator think that information alone shows the importance of the bill? That is just one signal light, so to speak, showing us how far the bill might lead us, what it might mean, what it might cost the people of the United States, and how far it might lead us away from the basic business principles to which we have always tried to adhere—a shocking revelation which the Senator from New Mexico brought to the attention of the Senate in the matter of the cancellation clause.

Mr. MAGNUSON. There is a tax feature involved in the bill, too, which the junior Senator from Tennessee brought out. I think that feature is something we should consider.

Mr. ANDERSON. I wish to say to the Senator from Washington with reference to the tax feature, that I do not think that was actually a part of the proposal made by the Dixon-Yates group. I think the tax feature came in as a suggestion from the Government agency itself. Therefore we have the situation of the sponsors of this contract being asked to defend something which they themselves did not propose.

Mr. MAGNUSON. That should be looked into also.

Mr. ANDERSON. I agree; it should be looked into.

In that connection I submitted an amendment which has to do with the cancellation provision.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from Iowa.

Mr. HICKENLOOPER. Does not the Senator from New Mexico agree with me that ever since last Tuesday the tax feature of the bill has been looked into continuously and frequently for 10 or 12 hours a day? That is all Senators have discussed. I do not want to curtail any further examination into the subject, but I say to the Senator from Washington it has been most thoroughly examined on both sides of the aisle, back and forth, up and down, morning and evening, and late into the night; so it has not been neglected. I would not want to curtail further discussion of that feature, but I would say it has not been the subject of inattention, so to speak.

Mr. ANDERSON. I am through, Mr. President. I merely wish to say that when I offer the amendment, I realize that people now holding a contract for the construction of these plants, and that includes persons at Paducah and elsewhere, might wonder if I was trying to set aside their contract. Having issued securities on the basis of a Government contract properly entered into, therefore it might be important to them that I clarify, at least for the purposes of legislative history, what was in the amendment, insofar as I was concerned.

Mr. President, in offering my amendment, I want to make it absolutely clear on the record that my amendment is to be operative only in the future. It is not the intention in any way to reach, affect, or touch the contracts already entered into by the Commission with the TVA, with OVEC, or with EEI, either in their present forms, or as they may be modified in the future. This amendment relates only to new contracts which the Commission may enter into with respect to the furnishing of electric-utility services to Oak Ridge, Paducah, or Portsmouth.

Mr. President, I make that statement because many aspects of the matter may arise, and people will wish to know the history behind the proposal. Furthermore, I make the statement on the assumption that the amendment might be adopted, and thus I wish the RECORD to show what the purpose in submitting the amendment is.

Mr. HILL. Mr. President, will the Senator from New Mexico yield for a question?

Mr. ANDERSON. I yield.

Mr. HILL. Of course, is it not the purpose of the Senator from New Mexico, among other things, to prevent the insertion into future contracts of cancellation provisions similar to the ones that were included in the OVEC and EEI contracts?

Mr. ANDERSON. Yes, I admit that; and I am glad to have the Senator from Alabama say so. But I think it would be extremely improper for the Atomic Energy Commission to contract with an individual or firm to construct a plant—an operation that is hazardous, at best, and involves a great deal of money—and let that individual or firm sell securities to any people of the United States who might wish to buy them, and then have the Congress change the arrangements or basis on which the contract was let and on which the plant was built. In other words, we have to keep our word, too.

Mr. HILL. Of course, the Senator from New Mexico knows that under the Constitution, no State can abrogate a contract. Certainly we should live up to the provisions of a contract.

But, as I have said, the contracts with OVEC and EEI are indeed shocking.

Mr. MONRONEY. Mr. President, before I yielded for this most interesting discussion and also for the announcement of the schedule of the Senate in connection with the further consideration of this important measure, I was discussing the grave danger that might threaten the people of the United States and the Government of the United States as the result of stretching statutory authority beyond the congressional intent.

In this case I think the law-stretching goes not only far beyond the intent of Congress, but also far beyond the legislative history, clearly written in the CONGRESSIONAL RECORD and clearly expressed by the Members of Congress who brought the bill to the floor and who secured its passage. If the law can be stretched to the extreme limits to which it is being stretched by attorneys, we know not whom—apparently they are not representatives of the Atomic Energy Commission, but are anonymous attorneys in the Bureau of the Budget, who say that this is all right, that the three little words "in connection with" can be used to cover the universe—if that much of a stretch is permitted, I believe it will result in grave danger to the public interest and grave danger that the clear lines of statutory authority under which the Atomic Energy Commission should operate will not be followed.

However, grave as that danger is to the public and to the following of the clear line of authority, this stretching of laws is such—and I am reminded that one of the corset companies advertises a two-way stretch—I wish to point out that if the law can be stretched to cover so broad an expanse in relation to the provision of power as the deal with the Dixon-Yates group represents, and if

that can be done within the framework of the Atomic Energy Commission, a future President of the United States, using the same powers of dictation, the same line of command, the same telephone line directly from the White House to the Bureau of the Budget to the Atomic Energy Commission, could stretch the law to cover great favoritism in behalf of public power groups. In that case, the very advocates of the presently proposed stretching of the law to benefit private utilities would find that exactly the same stretch could be used to do things—without authority of law—which the private utility companies would find would do violence to their position.

Mr. BUSH. Mr. President, will the Senator from Oklahoma yield to me?

The PRESIDING OFFICER (Mr. REYNOLDS in the chair). Does the Senator from Oklahoma yield to the Senator from Connecticut?

Mr. MONRONEY. I am very glad to yield to my distinguished friend the Senator from Connecticut.

Mr. BUSH. Mr. President, this morning the distinguished Senator from Oklahoma, in the course of the discussion on the floor, raised a question regarding accelerated depreciation.

Mr. MONRONEY. In fact, I referred to the entire question of depreciation.

Mr. BUSH. Yes, to the entire question of depreciation, and to the possibility that accelerated depreciation might be permitted under the contract. I advised the Senator from Oklahoma that I would look into the matter, and would give him whatever assurance I felt was forthcoming that such would not be the case.

I wish to say to the Senator from Oklahoma that I have discussed the question directly with Mr. Dixon, of the so-called Dixon-Yates group. He assures me that in the contract there is nothing regarding accelerated depreciation, that in the contract there is nothing that would permit it, that it is not contemplated, and that it is not even thought to be desirable or wanted or anything of the sort. So it is absolutely out. That is the information I wished to give the Senator from Oklahoma.

Mr. MONRONEY. Mr. President, I appreciate that very much, for my major concern, as I tried to express in my feeble way this morning, was not so much with accelerated depreciation—because, after all, with a 25-year contract, if the Government is allowed to take advantage of the depreciation writeoff, the Government would be in almost as good a position—my major concern was as to who will obtain advantage of the depreciation, and whether the assumption of the Federal income tax is based on the normal deductibility of depreciation in the case of this $107 million plant.

Mr. BUSH. The answer to that is "Yes."

Mr. MONRONEY. That is the important point.

Mr. BUSH. The answer to that question is "Yes."

Mr. MONRONEY. Because if the tax writeoff on this $107 million plant is deferred for 25 years, then at the expiration of the contract—the Government having paid all the taxes, without the deductibility of normal depreciation—the deductibility of $107 million would be passed on, and could be taken in 1 year, and thereby the company would be saved more than $50 million.

Mr. BUSH. Under the circumstances I have just described, and with the contract not permitting accelerated depreciation, it seems to me that the contingency the Senator from Oklahoma suggests is absolutely impossible.

Mr. MONRONEY. No, it does not matter whether the depreciation is accelerated or normal. My insistance is that unless the Government can obtain advantage of the depreciation charges that normally would be used to reduce the Federal income tax the company must pay, then the contract is a bad one and the situation for the Federal Government and for the Atomic Energy Commission would be a bad one. I do not wish to see the Federal Government or the Atomic Energy Commission pay the income taxes in this way, unless the Government and the Commission are to receive advantage of the full tax deductions a private concern would normally take in making its own tax returns. This is a separate question. It is not so important whether the writeoff is for 5 years or for 25 years. I wish to be completely sure that the plant will be written off, for tax purposes, inasmuch as the Government is assuming responsibility for payment of the taxes——

Mr. BUSH. In the normal way?

Mr. MONRONEY. Yes, in the normal way.

Mr. BUSH. Yes, I believe that is certainly the intent of the managers who make this proposal. That is all I can say to the Senator from Oklahoma.

Mr. MONRONEY. I appreciate the work the Senator from Connecticut has done on this matter. This point raised a fear in my mind, because of the language used about tax immunity, for if treated as tax immunity, at the end of 25 years someone could take advantage of a $107 million tax write-off. If the taxes were assessed in the normal way, over the normal depreciated life of the plant, the Government would obtain the same advantage a private concern would obtain in paying a reduced amount of taxes.

Mr. BUSH. I simply say that is my understanding of what would occur under the arrangements proposed by this group.

Mr. MONRONEY. Mr. President, I deeply appreciate the efforts of the distinguished Senator from Connecticut to help me in that regard.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. MONRONEY. I am delighted to yield to the distinguished vice chairman of the joint committee.

Mr. HICKENLOOPER. The Senator from Oklahoma is discussing a slightly different phase of the matter at this moment, in response to the statement of the Senator from Connecticut; but I wish to refer to the question raised by the Senator from Alabama [Mr. HILL] a moment ago he said he was shocked when he learned of the cancellation damage provision of the so-called Dixon-Yates contract. I should like to ask the Senator from Alabama——

Mr. HILL. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. HILL. I am willing to discuss the Dixon-Yates contract, but I was speaking of the cancellation clause in the OVEC and the EEI contracts. I was addressing myself to those cancellation provisions.

Mr. HICKENLOOPER. I had understood the Senator to refer to the Dixon-Yates contract. OVEC and EEI are private companies. They have cancellation damage provisions in their contracts.

I wonder if the Senator has read the cancellation damage provisions which the TVA demands in connection with the Oak Ridge and Paducah operations, where TVA has a contract. I refer the Senator to page 61 of the hearings of 1953 on House bill 4905, where it is shown that TVA demands a total of $131 million damages from AEC for cancellation, and requires notice of from 48 to 51 months, over which the damages of $131 million will be paid if the AEC cancels out on the TVA.

I refer to page 61 of the hearings before the Joint Committee on Atomic Energy on House bill 4905, the hearings having been held between April 28 and June 10, 1953. It is shown there that the TVA contract requires the AEC to pay $131 million in cancellation damages if it cancels the contract for the Paducah and the Oak Ridge installations. I merely call that to the attention of the Senator from Oklahoma to show that there is nothing unique in this cancellation clause with respect to the other companies, and there is nothing unique in the procedure with respect to the cancellation penalties in the Dixon-Yates program. TVA uses the same device, the same yardstick, to protect itself against undue and unusual loss.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. ANDERSON. I should like to make a brief comment. A part of the charge which is always made against TVA officials is that they are not good business people. I am very happy to have it shown that they are excellent business people.

Secondly, I was very happy to hear from the General Manager of the AEC the claim that the AEC was being outtraded, and that it had a contract under which AEC was overcharged.

We have never contended that termination charges are not proper in these contracts. However, there is this difference. If the $131 million in termination charges in the case of TVA were to be paid, the money would be paid into the Treasury of the United States, because the United States owns TVA. But in the case of the OVEC and the EEI contracts—and this is a matter of testimony—if the Government should close its Portsmouth plant and the other

plants and cancel the contracts, in connection with installations which cost $1 billion, then even if the companies sold every kilowatt of the power to private purchasers at a rate higher than the Government was expected to pay, and thereby suffered no financial damage whatever, the companies could collect nearly $400 million in damages from the United States Government. That is not good business.

Mr. MONRONEY. Is the Senator referring to the private utility companies in the Paducah area?

Mr. ANDERSON. Yes. That is not good business. It is not good business when it comes from the TVA. The only difference is that the TVA money goes into the Treasury of the United States.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. HICKENLOOPER. Then why put in the cancellation-damage provision at all, if it is all Government property? Why does the TVA set up $131 million worth of damage payments, if there should be no damage as between brothers, if they share everything?

Mr. ANDERSON. I think the reason is that TVA likes to get its hands on money sometimes and wants to expand its property. That may not be the sole reason. Perhaps they should not have asked for that type of damage, but they did ask for it. They got that provision in the contract properly, in open negotiation with AEC. I say only that the money goes back to the Treasury of the United States or should go back to the Treasury of the United States. I believe sometimes TVA regards some of this money as its own and forgets that TVA is owned by the Government of the United States. That is the only answer I can give the Senator from Iowa.

Mr. MONRONEY. Would it not be true, however, that a sudden cancelation of a TVA contract would work a greater hardship on TVA because of the limited area to which it is confined in its operations, while a private utility, associated with other private-utility companies, has an opportunity to pipe the power into a far greater area for consumption?

Mr. ANDERSON. I wish the Senator from Oklahoma had not asked me that question, because I think I should find myself answering it in the way he would not want it answered. I think probably TVA, with its enormous facilities, has a better opportunity to dispose of surplus power than have these two companies, which were established specifically for that purpose. ECI and OVEC were set up very specifically for that purpose, and it would be a very tragic thing to them if their contracts were canceled and they could not place the current anywhere else. All I have tried to contend is that there should be provision in the contract so that if they sell the current to someone else, the AEC will be relieved of any claim for damages.

Mr. MONRONEY. As I understand, it is a stop-loss provision which the Senator is seeking in connection with cancellation rather than damages.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. HICKENLOOPER. In order that I may make myself perfectly clear, I am not condemning TVA for making a businesslike contract on a businesslike basis. I am not saying that a damage recovery clause for early cancellation or unforeseen cancellation is a wrong or heinous thing. I am saying that it is a perfectly sound and proper area for consideration. If it is too much of a cancellation damage provision it ought to be revised. It ought to be made sound. But the fact that TVA protects itself and its own resources by a cancellation damage clause, I think, is good business. Perhaps I would disagree as to the amount or the yardstick, but the principle is a good business principle. Why condemn Dixon-Yates for doing the same thing, for establishing the same good business practice, the same good business principle, to protect its investors, just as TVA is protecting the investment of the Treasury of the United States and the appropriations of the Congress of the United States?

It is a matter of principle. What is sauce for the goose is sauce for the gander; and if it is good sauce for one it is good sauce for the other, I suppose. I am not assailing the principle that TVA protects itself by a strong cancellation damage contract. I am merely saying that if it is heinous for the EEI and the other private utilities around Paducah, if it is heinous for Dixon-Yates, it is heinous for TVA. I do not think it is heinous for any of them. I think the principle is sound.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. HILL. Is it not true that the cancellation clause for OVEC and EEI runs in terms of $400 million, whereas for TVA, which is supplying an enormous amount of power at Oak Ridge and Paducah—the enormous amount of 2,935,000,000 kilowatts—it is only $131 million?

Mr. MONRONEY. Furthermore, I should like to say that we are talking about 600,000 kilowatts of power. The TVA will gladly build a plant at Fulton to provide 600,000 kilowatts, without any cancellation clause, because the power is needed in that area. The substitute plan being offered in the Dixon-Yates contract at West Memphis, for furnishing 600,000 kilowatts, calls for a $40 million plus cancellation clause.

I do not see how we can compare the West Memphis plant necessarily with the Shawnee plant at Paducah or EEI or OVEC because they are supplying specific plants in specific locations. We are talking about 600,000 kilowatts in the Memphis area, and that is obtained without any cancellation clause. Yet Dixon-Yates would have a $40-million-plus cancellation clause.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. ANDERSON. I should like to say that I must agree fully with what the Senator from Iowa said a moment ago. There is nothing in the world wrong with a cancellation clause as such. It is proper for TVA to have one; it is proper for OVEC to have one; it is proper for EEI to have one. In my opinion, in terms of the risk, the formula used for calculating the maximum amount of damages is proper. Forty million dollars is not too much for these special plants, if their contracts were to be canceled at once, provided that if the current is used somewhere else there is no liability on the part of the Government.

If the Government were to contract with a company for the building of 100 special trucks with special dump bodies on them for a construction job, for example, and before the contract could get actually underway it was discovered that the trucks were not needed, but that a contractor somewhere else wanted them, and wanted them badly, and would pay for them the full amount the Government had agreed to pay for them, then I do not think it would be right for the manufacturer to sell them to the new purchaser and come back and extract the full penalty from the Government.

That is all I have said about the cancellation of contracts. I say it is proper to have a cancellation charge.

It is proper to have the clause in the contract. Furthermore, I think there should also be in the contract a provision that, in case the contract is canceled, the contractor selling the current shall not be entitled to damages or the application of the penalty clause, unless he can prove by clear and unequivocal evidence that he has been financially damaged, and then only to the amount of his provable financial damage.

Mr. MONRONEY. I thank the Senator from New Mexico for clearing up that point. I respectfully suggest that if the law can be stretched far beyond the contemplation of Congress for a private utility holding company, it can be equally stretched the other way as well for public power under other administrations.

It is a poor rule that does not work both ways. Because of the almost unlimited power the AEC should rightfully have in its atomic field to develop to the fullest all of the untold vistas of an atomic-energy age, its misuse once in this case will invite misuse in other fields as well, and perhaps by other interests as well at a later time.

In the proposed contract, if Congress does not act, we will arrive at this strange destination by executive dictation. I should like to cover the four specific points.

First. A new pattern of payment of taxes to municipalities, counties, and States—with the absorption of Federal income taxes—to be paid to Government contractors.

Second. Government-guaranteed contracts as a sort of FHA program for private utilities to underwrite 95 percent of their plant costs with guaranteed 9-percent return on a so-called risk 5-percent capital.

Third. An Evers-to-Tinker-to-Chance double play to furnish TVA with power by using the Atomic Energy Commission as a dummy contracting party for the alleged benefit of a third party, which does not want the deal.

Fourth. A breakdown of the traditional independent status of independent agencies and the surrender of their authority and judgment to the Bureau of the Budget of the President.

I am certain that if a bill were presented to Congress to set the new patterns of taxation payments by Government agencies which this proposed contract sets, far more consideration would be given to the ultimate complications it would lead us into than has been given to the Dixon-Yates pattern of tax absorption.

Make no mistake about it, Mr. President, once this pattern is fixed on the Federal Government to absorb taxes of so-called free enterprise, including not only local taxes, but Federal income taxes as well, it will take us into a jungle without paths or trails.

If this precedent is set—and it will be a precedent that will be certain to attract notice—how many new tax deals will it lead us into?

Already many municipalities and local units of government are crying for relief from large Government holdings of land for defense plants and other governmental installations. How many of them will be coming in, claiming that they have the same right as does the Dixon-Yates combine?

Can we in all good conscience give this tax absorption to a private utility holding company and deny it to the small local units of government who we know are suffering greatly because of large Goverment demands being made upon their local services, but for which the Government is paying absolutely no tax whatsoever to them?

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I am glad to yield to the distinguished Senator from Tennessee.

Mr. GORE. Under the terms of the analysis of the proposed contract, according to the estimates in the records, it is proposed that the Federal Government shall reimburse this corporation to the extent of more than $800,000 a year in Federal income taxes alone. How can Congress justify levying taxes upon small business, operated by people of small income, and make this reimbursement to a concern which has already been favored with a noncompetitive contract, with a guaranteed profit, and with a tax-proof bomb shelter for 25 years to the extent of approximately $800,000 a year in Federal income taxes alone?

Mr. MONRONEY. I am glad the distinguished Senator from Tennessee brought up that point, because we have barely glimpsed through a glass darkly the panorama of the special tax privilege in the Dixon-Yates contract, which will not only be offered to this company, but make no mistake about it, will also be sought by all companies that have defense contracts.

The thing that worries me is that if this 9 percent return on the $5 million of so-called risk capital is 9 percent after taxes—and I presume it is, although it is rather fuzzy, confused, and nebulous—if this 9 percent return is after taxes——

Mr. GORE. It is free of taxes.

Mr. MONRONEY. It is what a great corporation would consider to be gain after taxes. Actually we are providing a terrific return on an investment which is less than 5 percent of the cost of the plant. The plant is amortized on bonds covered by a Government contract with a cancellation guaranty. Therefore it is earning 9 percent after taxes on the risk capital and also providing for a capital accretion or a capital gain of $100 million over the 25-year life of the contract, because that money also is tax exempt. I am a little bit familiar with the rate on nontaxable municipal bonds. I am informed that they sell as low as 2½ or 3 percent because of the advantage of being exempt from Federal tax and thereby sell at a very, very rapid rate on the market today. Take, for instance, the toll-road bonds of the State of New York. They have a rate of around 3 percent because they have the advantage of being exempt from Federal taxation. If the $5 million of risk capital under this contract—and there is no risk attached at all—is able to earn 9 percent after Federal taxes, where on earth will the market price of these highly select, desirable, and juicy securities go after the contract is signed and the work is started? They will probably be the choicest and juiciest investment that has ever been offered in the history of this country—a 9 percent guaranty after taxes.

Mr. GORE. The contract has not yet been drawn, but the unusual procedure has been resorted to that the Director of the Budget has issued a directive to the Atomic Energy Commission to negotiate such a contract, and he has spelled out that it shall provide for complete repayment on the part of the Commission of all taxes of the corporation, local, State, and Federal, of whatever nature.

I inquired if such a thing had ever been done before. The Congressional Library diligently searched, and could not find any precedent. The General Accounting Office could cite no precedent. There were precedents in the case of cost-plus wartime contracts for the absorption of local taxes as an item of cost, as a reimbursable item; but one Government agency after another has held that Federal income tax is not a reimbursable item of expense of contracts of any nature, whether cost-plus, fixed-fee, or what not.

Mr. MONRONEY. I thank the distinguished Senator from Tennessee for that valuable contribution. I am thinking in terms of our $50-billion defense effort. In setting a pattern on something as commonplace as is an electric generating system, whose product is usable by every housewife and every individual in the Nation, with a guaranteed return of 9 percent after taxes, or absorption of taxes, would we be in any position morally or reasonably to deny the same tax-absorption principle to Lockheed Aircraft, or to Republic Aviation, or the United States Steel Corp., shipbuilding companies, the Du Pont Powder Co., and others? I can see no reason why having once widened the field of tax exemption we shall not have to make it universal. Why not permit everyone to get on the gravy train? We shall find that the demands will be irresistible. We can do a little fast bookkeeping and absorb the income tax of all the big defense producers and say we have saved another $10 billion. I do not know where we will stop. How can we refuse a similar advantage to the people living in small communities when we give such an advantage to Dixon-Yates and West Memphis?

Mr. GORE. The Senator is saying that this contract is to furnish power, not to the Atomic Energy Commission for national-defense needs but to the city of Memphis, which should not have priority over a defense plant——

Mr. MONRONEY. If the power is being bought admittedly by the Atomic Energy Commission, not for Paducah and not for Oak Ridge, we will be finding in the long run that we are absorbing Federal and local income tax so the AEC can sell electricity to mom and pop's hamburger stand on the outskirts of Memphis.

Mr. GORE. If it can be done for Memphis, could it not be stretched to include the city of Chicago because certain laboratories are located there?

Mr. MONRONEY. If we set such a pattern there is no telling where it may go. There are some plants in Hanford, Oreg., and in Boulder, Colo., and at other places.

Mr. GORE. What does it do to the private-enterprise theory in which I believe. The private-enterprise capitalistic system is really the goose that lays the golden eggs to keep our tax structure liquid and solvent. If we start paying the taxes of private enterprise in the name of private enterprise, what kind of "socialism" is that?

Mr. ERVIN. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. ERVIN. Does not private enterprise in the United States pass on the tax to the ultimate consumer, whether it be the Federal Government or a group of private individuals?

Mr. MONRONEY. The distinguished Senator is eminently correct in that statement. The tax is passed on to the consumer.

I can see much danger in setting this wild precedent to absorb not only local taxes but Federal income taxes on electric power which will not go into the plants of the Atomic Energy Commission but will be used by commercial subscribers to the TVA system in the Memphis area.

Mr. GORE. Mr. President, will the Senator from Oklahoma yield further?

Mr. MONRONEY. I yield.

Mr. GORE. And in this case it would be a violation of the principle which the distinguished Senator from North Carolina has pointed out, because it is not in this case passed on to the consumer in the area, but to the United States Government.

Mr. MONRONEY. I thank the Senator from Tennessee for that contribution. May I ask the distinguished Senator at this point whether the private plants with which the Atomic Energy Commission has contracts for their Paducah supply, whose lines run direct from the plant to the Atomic Energy Commission's plant at Paducah, enjoy

this strange benefit and freedom from taxation?

Mr. GORE. Not at all.

Mr. MONRONEY. So in the proposed Dixon-Yates contract, which will not reach the defense plant that the two privately owned, privately operated utility concerns serve at Paducah, we shall be passing on to the West Memphis plant, which will not serve defense industries, benefits which we have not given to the two privately owned utility plants which serve the Atomic Energy Commission's plant at Paducah.

Mr. GORE. Nor to any other concern.

Mr. MONRONEY. I thank my distinguished colleague. So it can be seen that the precedent about which I am worrying is present. Why should not the two concerns with which the Government has contracted at Paducah then ask for the same tax deal? It could not be denied to them, if it were given to the West Memphis plant. At least, I have not found in my experience in Government that, once a pattern has been established, it is possible to make fish out of one and fowl out of the other.

Mr. ERVIN. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. ERVIN. I simply do not quite understand what my friends, the Senator from Oklahoma and the Senator from Tennessee, are worrying about. Does not this illustrate the situation?

Once there was a sea captain, who returned from a voyage and gave his expense account to his employer. In the expense account was included an item for a suit of clothes for the captain.

The employer said, "We are not supposed to pay for suits of clothes for captains," and he eliminated that item from the expense allowance.

When the captain returned from another voyage he turned in his expense allowance.

The employer said, "I do not see anything in here about a suit of clothes for the captain."

The captain said, "No, you do not see any specific item for that. It is scattered around in the items for salt, pepper, and other things."

As I understand the Senator from Oklahoma and the Senator from Tennessee, they agree with me that the taxes have to be passed on by anyone engaged in private enterprise, regardless of whom their consumers may be. Am I to understand that the difference in this instance is that the cost of the suit of clothes for the captain is not being set up as a separate item, but is being scattered around among the salt, pepper, and other articles?

Mr. MONRONEY. We shall be paying the rate which will include taxation that Dixon-Yates will have to pay, for everybody else is on the same system. Every defense plant, ammunition maker, and airplane builder is on the same system. Let us not make this the only company in the country which will ride the gravy train. I think we shall be embarking upon a very, very difficult area of tax exemption which will plague, haunt, confuse, and confound Congress. Let us take that question up in a tax bill or make it uniform, but let us not allow one firm to have it, and another firm not to have it.

Mr. GORE. Our distinguished friend, the junior Senator from North Carolina [Mr. ERVIN], has related the Federal income tax to a reimbursable item of expense. That is the distinction. It has never been so treated, and it would be an extremely dangerous precedent so to treat it. If that be done, then we shall be dealing very inequitably. There is one concern which would be reimbursed, according to this proposal, $800,000 a year in taxes which it rightfully owes under the tax policy which applies alike to every other corporation in America. How can Congress justify the singling out of one corporation and say, "The tax laws of the United States will apply to every other corporation, firm, business, or person in America but you. Everyone else in America must pay a tax but you. You are favored because you have a guaranteed profit to furnish power, not to the Atomic Energy Commission, but to the TVA, and we want your rate to look as low as possible, even though we have to resort to this kind of scheme to reimburse your taxes, in order to give your rate an artificial appearance."

Mr. MONRONEY. May I ask the distinguished Senator from Tennessee, who has studied the problem perhaps far more than I have, whether the tax exemption also rides on the 3½-percent bonds which are proposed to be sold to finance the bulk of the construction? I do not think it would, but we cannot be certain because of the terrible confusion of this jungle, this new tax pattern, of which we do not know the effect.

What I was inquiring about was whether the tax exemption which rides, as I understand, on the 9-percent return guaranteed to the 5-percent investment, on the $5 million invested, also extends to the 3½-percent bonds. They certainly would not be exempt from Federal taxation, would they?

Mr. GORE. I do not think so.

Mr. MONRONEY. I do not think it would be conceivable, but there are so many strange facets, taxwise, in the bill that I think we are only beginning to see some of the difficulty in trying to work out the problem and to understand all the intricacies of the contract which is now about to be signed by the Atomic Energy Commission.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. GORE. I hold in my hand volume 26 of the Code of Federal Regulations. I wish to read from paragraph 16.8, page 189, as follows:

> Among the items which shall not be included as a part of the cost of performing a contract or subcontract, or considered in determining such costs, are the following.

Then there is a listing of certain items. I come now to this language:

> Federal and State income and excess-profits taxes, and surtaxes.

I wish to point out that during the term of the contract, no matter how great the emergency might be, requiring the raising of taxes on other corporations, and perhaps requiring a reassessment of excess profits taxes, this particular corporation would have a tax proof bomb shelter. It would have a guaranteed contract to reimburse it for all taxes, and no additional burdens could be laid upon it.

Mr. MONRONEY. Does the Senator from Tennessee think of any better treatment tax-wise than to put the stock of such a holding company at the topmost peak of the securities, plus the 9 percent guaranty which the Senator has mentioned?

Mr. GORE. I can not believe the United States will endorse or permit this kind of contract to stand.

Mr. MONRONEY. I thank the distinguished Senator.

On the second point, that of establishing again, by Executive order, a system of Government insurance on a private investment in utility construction, on a 5 percent investment basis, the executive opens the door to a new system of subsidizing private enterprise.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. GORE. I apologize to the able Senator from Oklahoma for interrupting him.

Mr. MONRONEY. I am always glad to have the contribution of the distinguished Senator from Tennessee.

Mr. GORE. I am concerned about the innovation in taxes which is now proposed. As a matter of fact, I have listed this particular feature of the proposal as being more important, in my opinion, than the invasion of the TVA service area; and the junior Senator from Oklahoma knows how important I regard the TVA.

Mr. MONRONEY. I am well aware of the distinguished record made throughout the years by the able junior Senator from Tennessee in connection with the building of TVA.

Mr. GORE. I thank the Senator. This is by no means the first time private interests have sought such favored treatment. In fact, such favored treatment has been sought at the hands of the Government over a period of years. But this is the first time that any Government agency has given it endorsement. I shall refer back to the cost-plus contracts of World War I.

Mr. HICKENLOOPER. Mr. President, will the Senator yield for a suggestion at that point?

Mr. GORE. I yield.

Mr. HICKENLOOPER. The Senator has said this is the first time a Government agency has given endorsement to such favored treatment. I again call to the attention of the Senator, as I have done repeatedly, that no endorsement has been given to this proposal. The contract has not been consummated. It is in the process of negotiation. How the tax structure would come out with the endorsement of the AEC is purely speculative at this point. The contract has not been signed. The final terms have not been arrived at. It is only a proposal on the part of Dixon-Yates for discussion and negotiation. How it will end when the contract is finally consummated I do not know, but it has not received the official endorsement of any Government agency, so far as I am aware.

Mr. GORE. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I am glad to yield.

Mr. GORE. I am happy to concur in part in the statement of the distinguished Senator from Iowa. The contract has not been signed, and therefore the Atomic Energy Commission has not put its approval upon the contract. The agency to which I referred as having put its endorsement on it is the Bureau of the Budget. The Atomic Energy Commission has been given a directive to negotiate a contract. What kind of contract? The directive tells the Atomic Energy Commission to negotiate a contract which will provide reimbursement for all taxes, local, State, and Federal, of whatever nature. Therefore I can agree in part with the able Senator's statement that the contract has not been signed and the Atomic Energy Commission has not approved it; but it is directed to do so by the Bureau of the Budget, upon the direction of the President of the United States.

Mr. MONRONEY. On that same point before the Senator leaves it, I should like to say that I find in a release from the Bureau of the Budget an expression of its intention to absorb these taxes, so apparently it is a fait accompli. There is no further question about who is going to pick up the tab not only for local taxes but for Federal income taxes. I can find nothing in the release which would indicate there is any doubt at all about that matter in the contract.

Mr. GORE. The Manager of the Atomic Energy Commission testified before the joint committee, of which the distinguished Senator from Iowa is vice chairman, that such provisions were in the proposal, and he also put into the RECORD the letter of direction from the Bureau of the Budget.

A moment ago I started to say that even back as far as World War I certain private interests were seeking a similar special privilege. The builders of naval vessels in World War I, who were constructing the vessels on a cost-plus basis, claimed that they should be reimbursed, as an item of cost, for Federal income taxes they had paid. I hold in my hand a volume entitled, "Decisions in Regard to Cost of Naval Vessels Building Under Cost-Plus Contracts to January 31, 1919." As far back as that time certain individuals and companies were trying to get special tax treatment. I inform the Senate that all the requests were turned down. I should like to read the following ruling:

> Federal income and excess-profits taxes cannot be allowed as part of costs under Navy cost-plus-profit contracts, even when the contracts include "Taxes of all kinds, including munitions taxes," because the statute commands the contractor to pay such taxes from profits.

So the item of income taxes is not treated, has not been treated, and I do not think should be treated, as an excise or a privileged tax. Income taxes are paid as a percentage of the profits, and the courts have so held. So it is an entirely different item from the captain's suit.

Mr. ERVIN. Mr. President, will the Senator yield?

Mr. MONRONEY. I am glad to yield to the Senator from North Carolina.

Mr. ERVIN. For illustration, let us assume that there are two items for which the Government has to pay the private utility if the contract is entered into. Let us say the book I hold in one hand represents the taxes, and the book I hold in the other hand represents the rates. As I understand the Senator from Tennessee, it is perfectly righteous and legitimate to take the rates and the taxes and pay them together as one item, but it is absolutely unrighteous and wrong to pay the rates as one item and the taxes as another. The difficulty I have in comprehending that argument is that in the end, what is the difference, in the final result to the taxpayers of the United States, whether both funds are paid as 1 or as 2 items?

Mr. MONRONEY. I think I can say to the Senator from North Carolina that if the same tax treatment which is sought to be given to Dixon-Yates in the proposed contract were extended to all defense prime contractors, the income of Uncle Sam would be tremendously decreased; that if taxes were absorbed as proposed in the contract, it would permit earnings equivalent to about 9 percent, but if the tax were taken off, the earnings without taxes might be as high as 18 percent.

Mr. ERVIN. If the Senator will yield for another question, I shall not interrupt him further.

Mr. MONRONEY. I am glad to yield to the Senator from North Carolina.

Mr. ERVIN. Then, the Senator no longer agrees with me in the observation that whenever private enterprise deals with either the Government or individuals it necessarily has to pass the tax on to the ultimate consumer?

Mr. MONRONEY. The fixed taxes, such as real estate and other taxes, are passed on, of course. But it is impossible to know what profits are going to be. They are going to vary in good and bad years. I am sure the Senator will agree with me that in the average retail markup the fixed costs are included, and there is an attempt to make a profit after Federal and State income taxes are paid.

Mr. ERVIN. A corporation has to pay 52 percent of its gross income in the form of taxes, and the profits are made after those taxes are paid.

Mr. MONRONEY. I certainly feel that if the junior Senator from North Carolina is advocating that this principle be extended, and he wished to have it extended to Dixon-Yates, he would want everyone else to have the advantage. I am sure he would not want a particular company to be granted a special privilege. I am sure he would then agree with me that the way to extend such a privilege is by legislation, and the way to do that is to let everyone benefit by it under a uniform tax plan, and not let the privilege be granted by executive direction in a double play—Tinker to Evers to Chance—from the Bureau of the Budget to the Atomic Energy Commission to the TVA. Perhaps the Congress may wish to do what the Senator suggests, but it ought to be done by legislation, and it ought not to be done by setting a new pattern by executive direction.

Mr. ERVIN. I am not making a suggestion. I am simply trying to find out why, if the plan is altered, one method is righteous and the other method is unrighteous.

Mr. GORE. Mr. President, will the Senator from Oklahoma yield to me?

Mr. MONRONEY. I yield.

Mr. GORE. I wish to say to my distinguished friend, the Senator from North Carolina, for whom I have very high regard, that the results are not the same. The reimbursement of taxes has two effects: First, it permits the private utility to establish an artificial rate for its electricity. Second, it insures a tax-exempt profit.

With the permission of the Senator from Oklahoma, and, I hope, with the attention of the able Senator from North Carolina, I shall indulge myself in a little simple arithmetic: If he and I were offered the opportunity of forming a corporation to be given a contract with the Government, without competition, and we formed the corporation, and set as our goal—and it would be understood by the Government, which would be giving us the contract—that we were to have a net earning of $1 million, free of taxes or after taxes, how would we go about it? If we paid a 50-percent rate on corporate taxes, in order to retain $1 million net and pay taxes our earnings before taxes would have to be $2 million. Is not that correct?

Mr. ERVIN. Yes.

Mr. GORE. Very well. Now let us take it the other way—but first let me say that, in order to earn the $2 million, the rate we would charge the Government would have to be higher than the rate in the case the other route were used.

Now let us consider the other route which is proposed in this case. Let us assume that we earn a net of $1 million. Again applying an assumed 50-percent tax to that earning, our taxes would be $500,000, leaving us a net of $500,000. But when the Federal Government reached into its other pocket and gave us back the $500,000, we would then have a net, take-home pay of $1 million, in which case the rate we could reflect to the Government would appear to be considerably lower; but it would cost the Federal Government. A profit would be guaranteed to us, and during the life of the 25-year contract, no matter whether other taxpayers had to bear a heavy burden, we could still put on our dress coat, so to speak, and not have to put on a raincoat and a slicker hat when the storms came; but we could walk with our dress coat on, because throughout the life of the 25-year contract, no additional burden would be laid upon us.

(At this point Mr. MONRONEY yielded to several other Senators, who addressed the Senate, and whose remarks, on request of Mr. MONRONEY, and by unanimous consent, were ordered to be printed in the RECORD at the conclusion of his speech.)

Mr. MONRONEY. Mr. President, we had completed discussing the very dangerous precedent which this proposal will impose upon our tax system. If all

the members of the Finance Committee were aware of or familiar with the new tax pattern the proposal may establish, I doubt if the contract would be allowed to stand. We know from past experience that the extension of special tax privileges always has a habit of becoming a precedent for general legislation which might be very detrimental to our whole tax structure. Therefore, I again wish to caution the Congress about permitting the Dixon-Yates contract to be an entering wedge for a series of demands for similar tax privileges.

On the second point, that of establishing—again by Executive order—a system of Government insurance on private investment in utility construction, on a 5-percent investment basis, the Executive opens the door to a new system of subsidizing private enterprise. This time we find this subsidy of a Government guaranty—with tax absorption—will pay for a $107 million plant in 25 years or slightly longer, to give the investors of some $5 million a clear title to the plant.

By various devices, all favorable to the private contractors, this proposed contract appears to be copper riveted against any loss to the risk capital of $5 million so invested to own a $107 million plant. The guaranteed 9-percent return, the tax absorption, and the high cancellation rate provisions all appear to me to be heavily in favor of the private contracting parties and against the Government's interest.

All this is being done by Executive direction and without legislative approval of the new system of Government guaranties that this contract sets in motion.

The third point, that of using the AEC as a dummy to the contract, and using the tenuous and doubtful AEC authority that is claimed by smart lawyers of the administration, sets even a more dangerous precedent.

Undoubtedly, wide authority must of necessity be given the AEC if it is to work untrammeled in putting the atom to peacetime work. But to misuse this authority and to stretch legislation providing for 25 years' contracting by the AEC for its own power, into such a double play of power passing—the Budget Bureau to AEC to TVA raises grave dangers ahead. These dangers will rise to haunt the AEC Commissioners of the future. They will not be only dangers to the public on special privilege, but they open up a system where any willful President by Executive direction could command the members of an independent agency to use its funds for any kind of competitive activity he so desired or felt was necessary to carry out his own program. It invites circumvention of our legislature process.

We must develop atomic energy under a system of laws, and not a system of men. Within 10 or 15 years the Atomic Energy Commission will be the most powerful force in the electrical energy field. If no holds are barred, and if the limits to its authority are defined only by the extent of an Executive directive, private enterprise itself will have real cause for worry and genuine concern.

The private utilities themselves, which have been most vocal in the past about law-stretching by Democratic Presidents, make themselves a party to such a process in their adamant support of this new concept. There is nothing in the legislative history of the section relied upon by the administration's attorneys to make lawful this purchase of power through AEC for TVA. But if this sets a pattern for atomic expansion of the clear language of the act, then is there any limit to which this, or even the earlier act, can be stretched?

The bill before us purports to have written into it definite limitations to prevent the AEC from entering the power business in competition with free enterprise or public bodies. They are denied the right to engage in building plants to serve electricity to the public.

But if the clear meaning of the present law can be flouted, have we any guaranty that by Presidential direction and strained legal reasoning these guaranties mean what they appear to say? It would seem to me that this administration should choose to remain within the clear intent of the law. If the law needs to be changed, if the power shortage is so desperate in the TVA area, and if the administration does not choose to let TVA generate this needed power, such changes in the law should be sought as will clearly spell out such contracts made by the TVA—not AEC—and provide whatever guaranties on the bonded indebtedness and on the 5-percent invested capital it is desired to give to private utility holding companies for TVA power. The administration should not try to do by indirection that which it should ask to do by direction of the Congress.

It must be recognized that the tide of power and influence ebbs and flows. While the private power groups are the darlings of this administration, this has not always been so; and unless American political life remains strangely static, it will not always be so again. Excesses beget excesses, and special deals favoring one group over the general public interest surely backfire, as election returns of the past have clearly demonstrated.

The power of the atom is clearly too grave a public responsibility to use the AEC as a dummy to a contract such as this. Its needs for adequate funds must not be crippled by making it carry the suspicion that some of the billions we pour into its appropriations on the faith of its proper use will be used to underwrite investors and to pay out without question their 95 percent bonded debt on their new plants.

Bear in mind that this guaranty is not for products having extra special use, and whose value is confined only to the AEC or to Government. This guaranteed contract is to build a long-lasting electrical generating plant in an area which is constantly outgrowing its generating capacities.

It would be difficult to find a safer investment for either "risk" capital or for the 95 percent bonded indebtedness of this enterprise than the construction of this plant. Certainly none of the members of this great combine of public utilities, with growing demand throughout their own system need any such Government-guaranty crutch. It would seem that at best the very generous writeoffs from fast amortization would serve them well enough without the additional guaranties proposed in their behalf in this contract.

Most defense plants gear to produce a specific item for our defense. Or at best their production lines specialize in the production of parts or end items which have little or no value after the defense needs are past.

Yet electricity, particularly such generation capacity in a rapidly growing industrial section, is about as stable as the gold buried at Fort Knox. Its use is not confined to the few, nor will its product be worthless if the world should suddenly come upon peaceful times again. The electrical needs of America are ever growing, ever expanding, into beneficial uses for our people. It is difficult to picture any product in such universal and continuing demand.

I wish to emphasize the fourth point, that of changing the heretofore "independent" status of an "independent commission." As bad as we may consider the proposed contract, and as one-sided as may be the guaranties, the tax privileges, and the cancellation clauses in behalf of a private utility combine, this is only one phase. It will set troublesome and dangerous precedents.

But the breakdown of the independent status of an independent agency is of far greater and of more dangerous proportions. Future Congresses may be alert enough to prevent such one-sided contracts and such willful misuse of AEC authority by a law-stretching process.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the junior Senator from Alabama.

Mr. SPARKMAN. The Senator from Oklahoma has just mentioned the question of tax treatment. I have been in attendance on a conference committee, and I am sorry I have not heard all of the speech which the distinguished junior Senator from Oklahoma has made. He may have treated the question fully, but I want to ask him this: Is not this proposal, in his opinion, a most unusual arrangement?

Mr. MONRONEY. I am glad the distinguished Senator has asked the question, because I think it certainly deserves repetition, recollection, and reconsideration.

There will be one company serving an alleged defense need, although I do not think they will be serving such a need under this contract to serve the TVA. But there will be one company, out of thousands of companies throughout the United States, which will wear a tax exemption badge, and particularly exemption from Federal income tax. On the big board, or wherever the securities of corporations are sold, there will be one company, and one alone, among all the companies of the United States, which will have a special tax deal.

As I have repeatedly said during the discussion, that one precedent will lead to pressures on the Committee on Finance, and on Congress, to extend to

other defense contractors, who have a more clear-cut tax operation than will the proposed West Memphis plant, the same tax deal.

No one wants to see one person alone ride the gravytrain. So I fear that the precedent which will be set in this case, to help one company, will lead to constant embarrassment and constant demand on the part of other corporations for the abatement of taxes to the Federal Government and to the small municipalities, which are struggling along with added expense because of such installations. Why should not other corporations have the same tax absorption principle apply to them as is written into the bill for the benefit of West Memphis and Dixon-Yates?

Mr. SPARKMAN. In recent months and recent years we have heard much about a contrast between socialism and private enterprise. I wish to ask the distinguished Senator from Oklahoma if it is not true that usually, in discussing private enterprise as against socialism or government control or government subsidy, the two features which are generally brought out are the payment of taxes by private enterprise, and the assumption of risk.

We have heard much about private enterprise in connection with this contract. I will ask the Senator from Oklahoma if either of those two basic elements of private enterprise is present, so far as this company, which is to be, is concerned. It is not yet in existence, but it is to be. Is either of those elements present in the proposed contract?

Mr. MONRONEY. As I read all the evidence I have been able to gather, and as we become aware of additional facts, we find there is a vast amount of new evidence in connection with the whole proposal of which we have not been apprised. I see present neither of the elements to which the Senator from Alabama has referred. An entirely new concept of free enterprise is being created. It is neither free nor enterprise, because there is a Government crutch under both arms, the one being tax exemption and the other being a guaranteed return of 9 percent on the investment.

Mr. SPARKMAN. And the project is not yet in existence.

Mr. MONRONEY. It is a nebulous corporation of the future. We are waiting for its birth. We have had an announcement of what it will be. It will not look too much like the free enterprise we have been raised with, which has been the bone, sinew, and vigor of this great country.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MONRONEY. I am glad to yield to the Senator from Alabama.

Mr. HILL. In other words, instead of there being involved what we call risk profits, which is an essential element in free enterprise, and something which we have had from the very beginning of the history of our country, we have involved profits guaranteed by the Government. Is that not true?

Mr. MONRONEY. I think there is involved a distinctly hybrid corporation, which has the earmarks of a socialistic pattern on the one hand, but has the face of private enterprise on the other, and it is in reality neither free enterprise nor socialism. It is a sort of Government-sponsored, Government-guaranteed, hybrid corporation which is like no other that has ever existed in the history of our great economic system.

Mr. HILL. Would the Senator want to call it socialized profits?

Mr. MONRONEY. It might perhaps be called socialized private industry, or something like that.

Mr. HILL. But certainly the profits are guaranteed by the Government; and instead of private enterprise, what is being proposed, as I said earlier today, is what might be called "private pie." Is that correct?

Mr. MONRONEY. It certainly is a strange concoction which is being proposed by apparently some of the new brains brought into the administration—not in the Atomic Energy Commission, not in TVA, but in the Budget Bureau of the President. The point I am making, however, I think goes far beyond that question, in that in acquiescing in such a proposal we would be breaking down the independence of a heretofore independent commission, and we would have instead a captive commission.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from South Carolina.

Mr. JOHNSTON of South Carolina. Speaking of pie, is not this another illustration of a giveaway to big business?

Mr. MONRONEY. It certainly has the strange earmarks of a combination of many things which take on close resemblance to special privilege.

Mr. JOHNSTON of South Carolina. Is it not true that in most instances it would be big business that would be helped by the bill?

Mr. MONRONEY. One particular big business, or a new organization which would be the product of several new businesses in a sort of new, hybrid type of quasi-public-private corporate enterprise. We are not completely clear about it, but it certainly is not in the pattern of anything which has heretofore been recognized as either private or public business.

Mr. JOHNSTON of South Carolina. Why is it not proposed merely to amend the present Atomic Energy Act in the respects it needs amendment, without injecting a new proposal which confuses everybody?

Mr. MONRONEY. Actually, the proposal is being brought forward, I think, as do most of those who have studied it, not under clear authority of the law. It is not under the authority of the old law or the proposed law.

Mr. HICKENLOOPER. Will the Senator yield for a correction? This is not something new which is being injected. Section 164, which is being assaulted—and I say that respectfully—and which is being attacked is existing law. Nothing new is being introduced in the proposed amendment. It is existing law. It is merely being carried over into the new amendment of the law. It is a part of the existing law as enacted by Congress last year.

Mr. MONRONEY. The difficulty has been, as stated by the distinguished vice chairman of the joint committee, that the existing law provides that the power shall be used to serve the three plants which were named.

Mr. HICKENLOOPER. From the standpoint of the statement I made, that is utterly beside the point. The Senator from South Carolina asked why a new issue was injected into the bill. This is not a new issue. The present law has the same provisions as section 164. It is not a new issue. The point is that the Atomic Energy Commission is proposing to act under the provisions of existing law, but it happens that the provisions of existing law are carried over into the new proposed law. It is not a novel thing.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from Alabama.

Mr. HILL. Is it not true that we are making no assault or attack on the provisions of section 164, and that what we are seeking to do is prevent that section from being assaulted, abused, and misused? Is that not true?

Mr. MONRONEY. We merely ask that the Atomic Energy Commission or the Bureau of the Budget live within the law. That is what we are urging. We say that if the law is to be stretched to such an extent as is proposed for the benefit of Dixon-Yates, the time to make amendments to the law is when the bill is before the Senate for consideration. That is my purpose in pointing out the danger which I see in the contract, and in supporting amendments which will be proposed by the distinguished Senator from New Mexico, which are now before the Senate. Unless such safeguards are written into the bill by agreeing to the amendments, then we will not know to what limits there will be a stretching of the use of atomic resources or a gaseous diffusion of the English language by the blowing up of the meaning of the three little words "in connection with." Those are the three little words by which the private interests will get into the power business through the TVA, in selling electricity which will go to mom's and pop's hamburger stand leading into Memphis. That is not a defense proposition at all; it is a civilian use of power, and the AEC is being used to supply authority for that use.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from Alabama.

Mr. SPARKMAN. The distinguished Senator from Iowa has said there was not a new issue being injected so far as the proposed legislation is concerned; but, as a matter of fact, this is the first attempt to make this kind of contract and to stretch the provisions of the law. That is certainly new; is it not?

Mr. MONRONEY. It is certainly new. This is the first time it has been attempted by any Government agency within my memory. It is a triple play, which goes from the Budget Bureau to the Atomic

Energy Commission to the TVA. It is one of those things.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from Tennessee.

Mr. GORE. As further illustration, evidence, and proof that the proposed use of this particular section of the law is far beyond the legislative intent, I wish to read from the CONGRESSIONAL RECORD, volume 99, part 6, page 8339. After the junior Senator from Tennessee had engaged the senior Senator from Iowa in debate, I asked the senior Senator from Iowa this question:

As I understand the pending bill—

And the pending bill was the amendment to the act now under discussion—

the immediate question has to do with the problem of financing the construction of the huge steam plants.

Referring to the private company steam plants—

Is that not correct?

Mr. HICKENLOOPER. Yes. I may say that in the absence of legislation of the nature of the bill the Senate is now considering, it is impossible, without the cancellation damage contracts, to get the capital financing for these companies, because the hazard in building the plants is so great.

The bill was clearly presented for that purpose, and it was so stated. That is why I have been so positive in my opinions as to the legislative intent. I originally objected to the bill on the call of the consent calendar, because I had not had a chance to study it. During the intervening days I did study it. I read the committee report. I talked to members of the committee personally, and then engaged in debate, as recorded in the RECORD of July 9, 1953. There the intent is spelled out, and no mention is made of an intended purpose unrelated to the three named plants.

Mr. MONRONEY. I thank the distinguished Senator for that elaboration of the clear intent and legislative history of the act.

Mr. GORE. Mr. President, will the Senator from Oklahoma yield?

The PRESIDING OFFICER (Mr. ERVIN in the chair). Does the Senator from Oklahoma yield to the Senator from Tennessee?

Mr. MONRONEY. I am glad to yield.

Mr. GORE. I wish to join the junior Senator from Oklahoma in expressing a word of caution to the financial houses and the prospective purchasers of bonds, in case this contract should, unfortunately, be consummated. I wish to warn them that they will purchase at their own risk, in the light of the fact that in the Senate of the United States there is very strong sentiment that no legal authority exists for the Atomic Energy Commission to execute a contract of this particular type.

Mr. MONRONEY. And that if one Member were to raise a point of order on the floor, during the consideration of the appropriation bill relating to the Commission, he would be able to prevent the appropriation by Congress of funds with which to pay off the bonds or with which the pay the interest on the bonds that were so purchased. Is not that correct?

Mr. GORE. That is correct.

Mr. MONRONEY. Mr. President, although this discussion of tax "gimmicks," and the use of the corporation as a tax dummy, and so forth, is very important, I think after the contract is carefully examined it will be determined to be not a good one in the general interest. However, the worst thing of all about this matter is the destruction of the independent status of the Atomic Energy Commission. We might live the other down; we might say it does not set a precedent with which we shall have to live.

On the other hand, if we break down the independence of such agencies and convert them into mere adjuncts of the President's Bureau of the Budget, we shall face far more serious consequences.

I have studied the hearings, and I am amazed to note from the record of the hearings the numerous times that White House and Bureau of the Budget direction has overridden the clearly expressed opinion of at least three members of the Atomic Energy Commission, in connection with this matter.

Mr. LEHMAN. Mr. President, will the Senator from Oklahoma yield to me?

Mr. MONRONEY. I am glad to yield to my distinguished colleague from New York.

Mr. LEHMAN. I fully subscribe to everything the Senator from Oklahoma has said regarding section 164 and the uncertainty as to whether it is legal under the Constitution or the law.

I am also very deeply impressed with what the Senator from Oklahoma has said regarding the infringement on the statutory duties of the Atomic Energy Commission. I wonder whether the Senator from Oklahoma will agree with me that an equal threat, if not a greater one, is contained in the bill, namely, that despite the fact that $12 billion of the money of the taxpayers of the Nation has been expended in the development of atomic energy and, unfortunately, atomic weapons for the United States—and I emphasize that that money has been provided by all the taxpayers, not by one small group of them—yet nothing contained in the bill will in any way safeguard the preferences and protections that have for so long been a policy of the Nation—during a period of more than 50 years, I believe—in connection with the development of and the use of hydroelectric power. All of us hope very definitely, I believe, that within a relatively few years atomic power will be a tremendous factor in the development of electric energy in the United States. Yet what we propose by means of this bill is a complete reversal of the power policies of the Nation which, as I have said, have been built up over a period of 50 years. So far as I can ascertain—and in remarks which I shall make on tomorrow to the Senate, I shall enlarge upon this point—the bill contains no safeguards which would protect the rights of the Nation, the rights of all the people, to enjoy the benefits from the development of power resources belonging to all the Nation, to all the people.

Mr. MONRONEY. Mr. President, I am very glad to have that comment by the distinguished junior Senator from New York. I shall follow with great interest his remarks on the bill. I know of no one who has provided greater leadership in trying to provide the blessings of electrical energy at the lowest possible rates, and therefore to bring about the greatest possible consumption of it, than has my distinguished colleague, the Senator from New York; and I look forward to hearing him develop more fully that phase of this matter.

Mr. President, in all my reading of the old act and even of the new act, no provision I have read would indicate that the Atomic Energy Commission was intended to be other than an "independent agency," to serve in much the same manner that other independent, regulatory bodies serve. The other Commissions—such as the Federal Communications Commission, the Interstate Commerce Commission, and the Federal Power Commission—in my judgment were intended to be independent from dictation by the Executive.

The members of the Atomic Energy Commission—like the members of other independent commissions — are appointed for a definite term, and are required to have certain qualifications for office. These have been carefully spelled out by the Congress. The members of the Commission must be confirmed by the Senate of the United States, and they cannot be removed at will by the President.

If I correctly read the act, it seems to me that additional safeguards are thrown around the Atomic Energy Commission, so as to make it even more independent in status, as compared with some of the other commissions.

From a careful reading of the act, I find that only when a difference of opinion regarding atomic weapons exists within the Commission, is an appeal to the President provided for. If it were meant that the President would have day-to-day dictation regarding the companies which would obtain power contracts and regarding the kind of arrangements the Atomic Energy Commission was to work out—if it were meant that the President was to have such authority—I believe the act would have specifically placed the President on the Atomic Energy Commission, as an ex-officio member, as in the case of the National Security Council, of which the President is ex-officio Chairman. If the purpose had been to have the Atomic Energy Commission dictated to, controlled by, and subservient to the President and to the orders of the Bureau of the Budget, I think that would have been definitely spelled out in the act. However, in only one place in the act do I find that it spells out that an appeal to the President may be taken, and that is only when the members of the defense panel find themselves in disagreement with the members of the Atomic Energy Commission, or when the members of the Commission are in disagreement among themselves, over the production of nuclear weapons. Then they do have a direct appeal to the President.

This further indicates to me that the Atomic Energy Commission was fully intended to be completely in the nature of an "independent commission," and not in the direct chain of command from the White House.

This is further stressed by the care with which the Joint Committee on Atomic Energy has been set up and its powers carefully defined by statutory law. Surely, if the AEC were to be merely an adjunct of the Budget Bureau or of the White House, there would be no provision in the Atomic Energy Act for the elaborate supervision by the joint committee.

Thus, it seems to me that the violation of the independent nature of the Atomic Energy Commission through Budget Bureau directives in ordering the acceptance of a 25-year contract which relates, not to the provision of power for the Atomic Energy Commission, but to the provision of power to take care of a power shortage in the case of the TVA, constitutes a step toward a breakdown of the independent concept of the Commission.

If any Senators have doubt about that, let me quote briefly from the hearings the testimony showing that the Commission did lose its independent status and was treated as a puppet and was treated as being in the executive chain of command, and subject to that chain of command in the way that a Cabinet officer or an executive department is subject to it. I do not think any study of the law or any study of the concept of independent commissions of Government would lead any reasonable man to believe that the Congress, in creating the Atomic Energy Commission, intended it to be so treated.

I read from a letter from Commissioners Smyth and Zuckert to Roland Hughes, Director of the Budget, dated April 16, 1954, found on page 958 of part II of the hearings:

> The present proposal would create a situation whereby the AEC would be contracting for power not one kilowatt of which would be used in connection with the Commission production activities. The creation of such a contractual relationship would place upon the Commission a continuing responsibility during the 25-year life of the contract for stewardship in respect to matters irrelevant to the mission of the Commission.
>
> It has been our observation in Government administration that arrangements which are obviously incongruous at the outset tend to become even less clearcut because no one can foresee what contingencies may arise over a long term of years. * * *
>
> * * * Of course, if the President or the Congress directs the Commission to accept such a responsibility we will endeavor to discharge it fully.

Does that sound like an independent commission? Does that sound like these two fine members of the Commission in their wisdom entering into a contract because they believe it is proper for the development of atomic energy, or they believe it is in line with their statutory duties? These are two fine members, yet they say:

> Of course, if the President or the Congress directs the Commission to accept such a responsibility we will endeavor—
>
> As good soldiers, I interpolate—
>
> to discharge it fully.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. GORE. I respect the members of the Commission. I have respect, regard, and appreciation for the particular members to whom the Senator has made reference, but I should like to call to their attention the fact that there is a difference between a direction from the President of the United States and a direction from Congress. A direction from Congress takes the form of law, and this is a government of law. If the Commissioners read this debate, I should like to have them search out the remarks of the senior Senator from Iowa [Mr. HICKENLOOPER] today. As I recall, he said that if he were a member of a commission and were ordered to do something contrary to his conscience and conviction, he would not do it. Upon that statement I applauded him.

Mr. MONRONEY. And in that feeling he would have preserved what Congress intended when it established this agency as an independent commission. The same thing should apply to other so-called independent commissions; but in the vital field of atomic energy I think it is of even greater importance.

Mr. GORE. There is an area in the Atomic Energy Act in which the President can properly give directions. That is spelled out in the law. I take it the Senator will make reference to it.

Mr. MONRONEY. I have just made reference to it. I believe the Senator was not present in the Chamber. If it was intended that there could be an appeal to the President, or presidential direction, in other fields than that of weapons development, would not the law so state? We find only one place in the law where such direction or supervision is spelled out; and the President is excluded—at least by absence of language—from being brought into the Atomic Energy Commission's activities either as an ex-officio member, or in any way. Yet we find the Budget Bureau assuming to direct the Atomic Energy Commission not to do something for itself, but to make a contract to help the TVA sell power in the Memphis area, none of which will necessarily go to the atomic energy installations. I have just read the position of the two members as strong proof of dictation by the Budget Bureau that they do this and that—thus the loss of the status of an independent commission.

I read from page 1004, part II of the hearings, from the testimony of Commissioner Murray before the Joint Committee on Atomic Energy on June 17, 1954:

> Since our program is not advanced by these negotiations and the subsequent administration of this 25-year contract, I do not believe that it is desirable for the Atomic Energy Commission to perform a function that another agency of Government could perhaps more logically perform.
>
> Since, however, as I understand here today, there has been a directive from the Bureau of the Budget, approved by the Executive Department, we will of course proceed.

Where is the independence of the so-called independent agency? Where do we find the use of the qualifications, skill, and understanding of these matters which are possessed by three fine members of the Atomic Energy Commission? We find it in a member of the President's official family in the Budget Bureau on the other end of a direct White House wire. This man has not had experience in developing atomic energy. He has not had experience in the public relations problems involved in the mighty force with which the Atomic Energy Commission deals.

Does not this constitute direction?

> Since, however, as I understand here today, there has been a directive from the Bureau of the Budget, approved by the executive department, we will, of course, proceed.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. GORE. Not only is he lacking in experience, but he is also lacking in legal authority or responsibility. The responsibility is vested by law in the members of the Commission, and it is upon the Commission that the Congress relies for the administration of this vast and important program, and for decisions in this vital field.

Mr. MONRONEY. The Commission is under the supervision of the Joint Committee on Atomic Energy. Why was not this question brought by the Atomic Energy Commission to that committee, as these negotiations were started? Why did the supervision and direction originate from the other end of Pennsylvania Avenue, in the Budget Bureau, in a directive saying to the Commission, "Do this, Atomic Energy Commission. Find a way. Here is the order. Salute and obey."

Is that the way we intend our independent agencies of Government to operate? Certainly I recognize the clear and well-defined line of Executive authority throughout the Cabinet and throughout the other Government departments, because the President is clearly the head of the executive department under the law. But when the Congress takes a segment of Government operation and places it in the hands of a quasi-judicial body such as the Federal Communications Commission, the Federal Trade Commission, the Interstate Commerce Commission, or the Federal Power Commission, that is another matter. Those are called independent Commissions. They were not intended to be under the thumb or direction or dictation of the Bureau of the Budget. Many times they exercise quasi-judicial functions of Government.

I read from page 1006, part II, of the hearings, from the testimony of Commissioner Thomas E. Murray:

> Representative PRICE. Now, Mr. Murray, is the authority for the management of the Atomic Energy Commission vested in the Commission or in the Budget Director?
>
> Mr. MURRAY. I think it is vested in the Commission, of course.
>
> Representative PRICE. In this case it looks like it is vested in the Director of the Bureau of the Budget. You would not say that this was an act approved by the Atomic Energy Commission, would you?

Mr. MURRAY. Well, let me answer you a little differently. I would say it is not an act initiated by the Atomic Energy Commission. It was initiated by the administration. We all know that.

Representative PRICE. Would you say that it was in the interests of the atomic-energy program?

Mr. MURRAY. Well, as I see it now, I can't see that there is the advantage. There may be some national overall advantage that I do not at the moment conceive, but as you know, we have a big job to do in the atomic energy business, and I did not or never felt that the administration of long-term contracts for areas such as the Memphis area ever came within our jurisdiction.

That is the third member of the Atomic Energy Commission clearly saying that he did not feel it came within his jurisdiction. His power over this independent agency is assumed by the Bureau of the Budget.

I have before me some excerpts from the testimony of General Nichols before the Joint Committee on Atomic Energy, given on June 17, 1954, at page 957, part II, of the hearings:

This directive has not yet been submitted to the Commission. I have checked with my legal people and they feel that having received a directive from the President we have the legal authority under the Atomic Energy Act and I would therefore in due course submit a recommendation to the Commission that we proceed in accordance with this directive.

That is a new stretch.

I have checked with my legal people—

These are lawyers in the Atomic Energy Commission, and they feel that, having received a directive from the President, they now have legal authority under the act. This is a new statement of the law. This is a new system of passing authority down from the White House. It is made legal regardless of what the statute says. I recommend that before any Members of the Senate vote on the Anderson amendment they read that quotation from page 957 of the hearings of June 17.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. JOHNSTON of South Carolina. Does that not sound like a military order?

Mr. MONRONEY. Martial law.

Mr. JOHNSTON of South Carolina. It sounds like that.

Mr. MONRONEY. This is really the most strange of all the many queer methods of arriving at a destination that I have noted in my study of the subject.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I am glad to yield to my distinguished friend.

Mr. GORE. I hope what I say will not be regarded as being said in bitterness or particularly in criticism, but it occurred to me, when I heard the remarks of the Senator from South Carolina [Mr. JOHNSTON], that the three people most directly involved in the decision were a general, who is the manager of the AEC, an admiral, who is chairman, and a general who is in the White House. Perhaps to those gentlemen an order seemed appropriate.

Mr. MONRONEY. It is certainly a strange bit of law. I should like to read another excerpt from page 959, part II, of the hearings, continuing the examination of General Nichols by Representative PRICE:

Representative PRICE. General Nichols, was this action initiated by the AEC?

Mr. NICHOLS. No, sir. Not that I know of.

Representative PRICE. Have you given any consideration to a proposal of this type?

Mr. NICHOLS. As I understand, this action was initiated by Mr. Hughes in a conference with Mr. Strauss back around December, a meeting called in the office of Mr. Dodge. It originated in the Bureau of the Budget as an administration policy. That was December 2.

Again here the idea of an independent agency, independent judgment, and independent reaction is gone with the wind, and as a result the careful experience over the years is overridden by the Bureau of the Budget in taking command of the Atomic Energy Commission, an independent agency of Government.

I read another excerpt from General Nichols' testimony before the Joint Committee on Atomic Energy, shown at pages 1054 and 1055 of the hearings:

Representative PRICE. It does not justify the Atomic Energy Commission serving as a broker in the power business for another agency.

Mr. NICHOLS. No. As we stated yesterday, and as I prepared the letter which was passed on by all of the Commission, we forwarded this to the Bureau of the Budget with the assumption that the President could only make that determination or Congress that this is in the best interests of the United States.

Representative PRICE. The Commission is now in the position of attempting to justify an untenable situation.

Mr. NICHOLS. I consider what I am trying to do here, sir, is to give facts that have come out and how the Commission arrived at its opinion, and as to what the opinion of the individual Commissioners are, and what facts we presented to the Bureau of the Budget.

I also had authority yesterday to read certain letters into the RECORD which gave the opinion of the budget.

Representative PRICE. Wouldn't that put the Atomic Energy Commission in the position of supplying power as a broker?

Mr. NICHOLS. As indicated, three of the Commissioners would not prefer to be in such a position. All five have stated that having received a legal order that they say it is the appropriate thing to do to carry it out.

The legal order is based only on the fact that it comes from on high at 1600 Pennsylvania Avenue, blessed by whatever legal talent some legal mind in the Bureau of the Budget has, and, without question, the Commissioners seem to think that they should carry out that directive.

Mr. LEHMAN. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. LEHMAN. It is perfectly clear from what the Senator has stated, that nothing in the statute gives the President of the United States the legal right to issue orders to the Commission. Is that correct?

Mr. MONRONEY. I can find nothing in the statute that would indicate by even a greater stretch of the imagination than the stretch placed on the three little words "in connection with," under which the plant is to be built, that the President is given the power of dictating policy and dictating a contract through the Bureau of the Budget to an independent commission of the Government.

Representative PRICE. I think it has been pretty well established here that is the situation.

Mr. NICHOLS. That is, sir. There is no denying of that. We have received instructions indirectly, but we know that they came from the President of the United States.

In other words, the Commission does not have an opportunity to talk to the President, but the order filters down through layers of bureaucrats, and the Commission is told, "The President has said that you shall do this."

Representative PRICE. In other words, the Commission is being used in this?

Mr. NICHOLS. For the best interests of the United States as expressed by the Bureau of the Budget.

There we have another determination by the Bureau of the Budget.

I quote from the letter of Roland Hughes, Director of the Budget, to Chairman Strauss of the Atomic Energy Commission, dated June 16, 1954, found at page 952, part II, of the hearings:

The President has asked me to instruct the Atomic Energy Commission to proceed with negotiations with the sponsors of the proposal made by Messrs. Dixon and Yates with a view to signing a definitive contract on a basis generally within the terms of the proposal. He has also requested me to instruct the Commission and the Tennessee Valley Authority to work out necessary contractual, operational, and administrative arrangements between the two agencies so that operations under the contract between AEC and the sponsors will be carried on in the most economical and efficient manner from the standpoint of the Government as a whole.

I ask Senators to consider that language:

The President has asked me to instruct the Atomic Energy Commission to proceed—

Is there anything in the law which gives the Bureau of the Budget or the President the right to instruct the Commission to proceed on a line of activity which three Commissioners, by their testimony and by their letters, say they should have nothing to do with?

Here we have an assumption of authority, under an assumed ability to command an independent agency to do exactly what they are bid, regardless of their experience and regardless of their determination, when the word comes on that private line from the White House.

I quote from page 956 of the hearings, from the letter the Director of the Budget, Mr. Hughes, sent to the Senator from Massachusetts [Mr. SALTONSTALL] on June 16, 1954:

I have been asked by the President to instruct the Atomic Energy Commission to proceed with the negotiations of a definitive contract. Such instructions have been given this agency. The Commission and the TVA have also been instructed to work out the necessary interagency arrangements to assure the most favorable operation under the contract from the standpoint of the Government.

Where is the independence of an independent agency? Where is the independent status that Congress thought it was giving to these men?

What good is it for us to enact laws if the Commission is to be under dictation from the other end of Pennsylvania Avenue?

Mr. GORE. Why have a Commission?

Mr. MONRONEY. I think we need a Commission, but when the Commissioners are asked to do something that goes beyond the purview of the law, they should at least be sure that the law is clear in allowing them to proceed on their own volition, instead of relying on the Budget Bureau and the President saying, "Do this." The President does not make the laws.

Mr. HILL. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. HILL. The Senator has made a magnificent presentation of this very serious threat and danger to an independent commission, not only to this most sensitive and vital Commission on Atomic Energy, but to all our independent commissions. I wonder if the Senator has had an opportunity to think about what this proposal means from the standpoint of the Tennessee Valley Authority. The Tennessee Valley Authority is a wholly owned and controlled Government corporation. We are all, of course, interested in having it managed and operated in the most economical and efficient way. What does this proposal do, so far as the Tennessee Valley Authority is concerned?

Does the Senator think the Atomic Energy Commission would have the same incentive, the same interest, or the same stimulation in making the best possible contract for TVA that the TVA would have to make a contract for itself? Would the Atomic Energy Commission have the experts or technical men or the intimate knowledge and experience necessary to make a contract for TVA that TVA has to make a contract for itself?

Mr. MONRONEY. I certainly cannot see that the AEC is qualified to be a contracting agent for the supply of electricity for TVA, which is what the contract would require. It seems to me that under this new line of command we have the AEC acting as mess sergeant and the TVA acting as corporal—or maybe just a buck private.

Mr. HILL. It seems to me that the functions of the TVA are relegated to the AEC.

Mr. MONRONEY. Why have commissions? Why have commissioners confirmed? Why not merely have somebody stay on the other end of the White House line to do the directing? If this is going to be the result, we negate the whole process of our independent commissions.

Mr. HILL. The Senator will agree that the operations of the AEC and its functions, business, and purposes are different from those of the TVA, will he not?

Mr. MONRONEY. They are far different.

Mr. KEFAUVER. Mr. President, will the Senator from Oklahoma yield for a question?

Mr. MONRONEY. I yield.

Mr. KEFAUVER. Does not this mixing up of authority of executive agencies result in a complete distortion of any legislative program, not only as it affects these agencies, but as it affects legislation which has been passed pertaining to them? In the present case is it not a rather unusual situation for Congress by enactment to require the TVA to operate efficiently and amortize its investment over a period of 40 years, and then to place an additional burden upon it and make it subject to the private power companies for its power supply, which might make it impossible to perform the duties which the Congress itself has placed upon TVA?

Mr. MONRONEY. I certainly think TVA is placed in a very bad position. If this pattern is to be followed, the Budget Bureau could direct the Atomic Energy Commission to purchase power in Chicago if it wanted to and direct the TVA, under this salute-and-obey system, to charge anything it wanted to.

Mr. KEFAUVER. If this pattern is going to be extended to other operations, Congress may as well go home and turn the whole thing over to the President of the United States.

Mr. MONRONEY. Not only the Congress, but all independent agencies. Apparently we might as well do away with the Attorney General, because we are getting laws passed down from the White House, according to the letters which I have just read.

Mr. KEFAUVER. We have a personal government, without regard to any rules or regulations or without regard to what Congress may say or without regard to the will of a majority of the Commission.

Mr. MONRONEY. I think it sets a very bad precedent.

The contract, bad though it is, would be minor compared with the destruction of the independence of such an agency. I would grant that if the AEC were of the status of a department of the executive branch, with a Cabinet officer at its head, it would then be under the chain of command of the President. But, lacking this position in our governmental organization, and with clearly spelled out independent authority, together with the statutory authority for its activities, the Joint Committee on Atomic Energy is in fact and in law an independent agency.

I was very pleased this morning when the distinguished vice chairman of the Joint Committee on Atomic Energy went at great length to explain the power which the act gives the joint committee. Yet, in spite of its power, we find someone in the Budget Bureau is far more powerful. He is not only able to express his idea that it is within the law, but he says, "If I say it is within the law, it must be." He can start in motion this chain of events and reduce an independent agency to complete subserviency.

Section 202 of the bill provides:

> The joint committee shall make continuing studies of the activities of the Atomic Energy Commission and of problems relating to the development, use, and control of atomic energy.

This section further spells out the duties of the Atomic Energy Commission with these words:

> During the first 60 days of each session of the Congress, the joint committee shall conduct hearings in either open or executive session for the purpose of receiving information concerning the development, growth, and state of the atomic-energy industry.

Because of this strong language setting up the statutory joint committee it is inconceivable to me, Mr. President, that the act intends that a telephone call from the Budget Bureau should replace the carefully considered position of a majority of the members of the Commission itself or override the statutory authority of supervision and advice given under statutory law to the able members of the joint committee who have devoted years of time and who have been eminently successful in bringing the atomic-energy program this far.

Mr. HICKENLOOPER. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. HICKENLOOPER. I wish to make abundantly clear the fact that the joint committee has no power to direct the Commission what to do. It has no power to veto any act of the Commission which is charged with the responsibility of study and receiving information. It is charged with the responsibility of reporting its actions to the joint committee. The only power the joint committee has, other than the power of moral suasion by argument——

Mr. MONRONEY. Or the power of appropriations.

Mr. HICKENLOOPER. No. We do not have any authority in that respect.

Mr. MONRONEY. Moral suasion on appropriations.

Mr. HICKENLOOPER. The only authority we have is that of reporting proposed legislation to both Houses of Congress on matters affecting atomic energy. We submit our proposals to the Congress, and if Congress sees fit to enact them, they become law. That is our authority, the authority of control. We have vast authority for the acquisition of information. I do not mean to insinuate that the joint committee have control over the Commission by means of a veto or an affirmative order to the Commission to do something.

Mr. MONRONEY. I appreciate that; but the lengths to which the distinguished vice chairman of the committee went to sketch the seriousness, the care, the study, and the time which the joint committee has given to the proposal, to the development of atomic energy, and the success which the committee has had, and the courage which the vice chairman had, to drive through, at the conclusion of the last session of Congress, appropriations for a hydrogen-bomb plant, to save the Government 6 months or more in getting into production on that weapon, all go to show the vital role the joint committee has played, and will continue to play, either by moral suasion or by advice and consent in the field of atomic energy.

I cannot find from my reading of the act that the President is given a like responsibility, except in one case, and that is where the Atomic Energy Commission is directed, in the case of disagreement on nuclear weapons, to take the case to the President of the United States.

It is the violation of the independent status, being mindful of the care with which the joint committee has participated and has walked side by side with the Commission in the great progress which has been made in the atomic-energy program, which affords an example of the value of the independent status of the Commission. So I regret to see its independence becoming lost, and the Commission being placed in a position of subservience, to take whatever dictation someone may wish to give it from the other end of Pennsylvania Avenue, at the White House.

Mr. HILL. Is it not true that the one place where the Executive was brought into the law, with power to make any kind of decision, or anything of that kind, was when a disagreement occurred within the Commission as to nuclear weapons?

Mr. MONRONEY. That is the only place in the act.

Mr. HILL. The very fact that the Executive was brought in there, and does not appear anywhere else in the act, shows how clearly it was the intent and purpose of Congress to leave the Executive out, and to prevent any such occurrence as is now being attempted under his directive.

Mr. MONRONEY. I completely agree with the distinguished Senator from Alabama.

Mr. HILL. Is it not true that there was a very good and special reason for bringing in the Executive when there was a disagreement on the question of nuclear weapons? Not only is the President the Chief Executive of the Nation, but he is the constitutional Commander in Chief of the Armed Forces. Therefore, whenever there was a disagreement as to nuclear weapons, it was thought that the disagreement should be settled perhaps by military advice; and as the constitutional Commander in Chief, the President is the supreme military person, so to speak, with the Chief of Staff and the other military commanders being under him. Is not that correct?

Mr. MONRONEY. I think that is true. One interesting facet of the situation, which the distinguished Senator from Alabama has raised, is that nowhere in the picture can I find that the President assumed the duty to command the AEC to make this contract under the powers of the Commander in Chief. There is quite a difference in law as to which one of the powers is being used.

Mr. HILL. The President can act only in the very limited matter in which there is disagreement within the independent Commission over nuclear weapons—that is, over military weapons. Is not that true?

Mr. MONRONEY. That is my understanding; and I think a clear reading of the act would indicate to any reasonable person that such independence certainly was supposed to be guaranteed by the statute which created the Commission.

Mr. HILL. The distinguished Senator from Oklahoma was a Member of the House of Representatives, as I was a Member of the Senate, at the time the Atomic Energy Act was passed. Is there any question in the Senator's mind, any more than there is in my own mind, that what the Congress was doing was establishing an absolutely independent commission, with full authority to discharge the functions, duties, and responsibilities of the commission; and that if any Member had risen on the floor and had said that the Bureau of the Budget could send a directive to order the Commission, against the judgment of the majority of its members, to do something, it would have seemed simply ridiculous, absurd, and foolish on the face of it? Is not that true?

Mr. MONRONEY. As I understand, it is completely true. If Congress had intended that the President should have the power to direct the Atomic Energy Commission, the Commission would have been made a Presidential agency. Its offices would have been lodged in the Executive Office of the President.

Mr. HILL. In the executive branch of the Government.

Mr. MONRONEY. Exactly. We would have expected a chain of command to exist. But that was not done; the Commission was made an independent agency. Provision was made for a board of five members, and the act provided for their qualifications. Provision was made for the confirmation of their nominations by the United States Senate. It was spelled out in the law that the Commission could be removed only for cause. If they were to have served under the thumb of the President, they would have served at the will of the President, and would not have been subject to being removed only for cause.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. JOHNSTON of South Carolina. I believe the Senator from Oklahoma has stated that the President did call and tell the Commission what to do in an instance in the past.

Mr. MONRONEY. Apparently the President does not speak over the White House lines to the members of the Atomic Energy Commission or to its manager. That is accomplished by a sort of triple play. The President calls, apparently, someone in the Budget Bureau who has contact with him, and that person passes it through the Budget Bureau. The Budget Bureau then tells the Atomic Energy Commission to do this or do that.

Mr. JOHNSTON of South Carolina. The Atomic Energy Commission then carries out the President's wishes. Is that correct?

Mr. MONRONEY. That is apparently true. Evidently the Atomic Energy Commission, through advice received, perhaps, as a result of the Presidential visits of Admiral Strauss, Chairman of the Atomic Energy Commission, has doubled-checked to make certain that the Bureau was correct in saying, "The Chief Executive wishes you to do this or that."

Mr. JOHNSTON of South Carolina. Following the same line of thought, and applying it to the bill, I believe the bill would make of the AEC a power broker. Is not that true?

Mr. MONRONEY. As I consider it, the Atomic Energy Commission would be in the power brokerage business in a big way.

Mr. JOHNSTON of South Carolina. Then, following in the same channel of thought, the President, by passing his wishes from one person to another, until it reaches the Commission, can tell the Commission what rates should be charged by the TVA. Is not that true?

Mr. MONRONEY. There is some language in the letters which indicate that the chain of command goes through the Bureau of the Budget to the AEC and the TVA. Whatever is ordered by the generals and the admirals, the TVA will have to salute and obey, because the TVA is the "end guy" on the line; it is "low man on the totem pole." It is the one which will have to do the work.

Mr. JOHNSTON of South Carolina. The Senator from Oklahoma knows that that is military practice. The Senator knows, does he not, that when anyone down below does not obey the orders from above, he is court-martialed.

Mr. MONRONEY. There has certainly been strict obedience to the orders from the Budget Bureau, and the chain of command has worked, although it does not seem to be in the pattern of the statutory authority creating the Commission.

Mr. JOHNSTON of South Carolina. It sounds more like the military.

Mr. MONRONEY. It certainly is not in the usual pattern of civilian declarations. It sounds somewhat like a command, and the privates, corporals, and sergeants seem to salute and obey.

Mr. President, I have tried to outline some of the consideration of some of the points which I feel are important, as the Senate considers the bill. I think it is important that we clear away the misunderstanding, the underbrush, the fuzzy thinking, and a lot of other things, which the Dixon-Yates contract has done to the consideration of a bill which has been long worked on by the Atomic Energy Commission. The Dixon-Yates contract is not a part of the bill before the Senate; but in the absence of clear legislative authority in the bill, either one way or the other, the problem is left unsolved. I do not think anything which is so important as atomic energy should be left in a muddle. I think that someone should be straightened out. Either Congress by law should more clearly define the statutory authority of the AEC and give the Commission the right to enter into this kind of contract, if it sees fit to do so; or, if it does not agree to do that, then let Congress provide a kind of law which will tell the Commission that it cannot perform this kind of function.

In the Anderson amendment, which will be presented tomorrow, or on Monday, an amendment carefully drawn and prepared by a distinguished member of the Joint Committee on Atomic Energy, the Senate will have an opportunity to go on record one way or the other, as to

whether we believe the law should be made clear. If we make the law clear, then I certainly feel that Congress has the right to expect and to demand that the independent status of the Atomic Energy Commission will be observed, and that the Commission will follow the intent of Congress as it will be clearly written as a result of the Anderson amendment.

Mr. GORE. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield to the Senator from Tennessee.

Mr. GORE. I congratulate the junior Senator from Oklahoma for one of the most masterful addresses I have ever heard. He has eloquently and effectively pointed up what I believe to be the major issue in this controversy, namely, the integrity of the independent agencies of the Government. I congratulate him and thank him.

Mr. MONRONEY. I thank the distinguished Senator from Tennessee.

Mr. President, I yield the floor.

BENNETT CHAMP CLARK

During the delivery of Mr. MONRONEY'S speech.

Mr. SYMINGTON. Mr. President——

Mr. MONRONEY. Mr. President, I ask unanimous consent that at this time I may yield to the distinguished Senator from Missouri, without losing my right to the floor, and with the understanding that his remarks will appear in the RECORD following the conclusion of mine.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Missouri is recognized.

Mr. SYMINGTON. Mr. President, I thank the distinguished Senator from Oklahoma for yielding to me.

Mr. President, all of us were greatly saddened by the news of the death on July 13 of our good friend the former Senator from Missouri, Judge Bennett Champ Clark.

My distinguished colleague and friend the senior Senator from Missouri [Mr. HENNINGS] has said:

> It was with deepest regret that I learned of the unexpected death of Judge Bennett Champ Clark. As a lawyer and as a judge, he was distinguished for his brilliance and independence; as a Senator, he was honored and respected; and as an American, he was great. His passing is a loss to the country, to the Federal judiciary, and to the bar. In history, along with his eminent father, he has made indelible the name of Champ Clark.

Mr. President, I should like to associate myself in every way with those remarks by my distinguished senior colleague.

Bennett Clark was less than 3 years old when his famous father was first elected to the House of Representatives, from Missouri, in 1892. Like so many children of Congressmen, he divided his time between Washington and his hometown, Bowling Green.

Bennett attended the public schools of both places, graduating from Eastern High School, here in Washington, in 1908. He immediately returned to Missouri for 4 years' study at the State university.

While at the university his father was elected Speaker of the United States House of Representatives, so young Bennett came back to Washington and enrolled in George Washington University Law School. He was admitted to the Missouri bar in 1914. He served as Parliamentarian of the House for 4 years, 1913–17, while his father was Speaker.

He saw active service during World War I. He attended the first Officers' Training Camp at Fort Myer, Va., in 1917, and was commissioned as captain. He was elected lieutenant colonel, 6th Regiment, Missouri Infantry, and until September 1918, he served as lieutenant colonel of that regiment, which later became the 140th Regiment, United States Infantry.

He was assistant chief of staff of the 88th Division from September 1918 to March 1919, and of the 35th Division from March 1919 until he was discharged in May 1919. Three months prior to his discharge he had been promoted to colonel of Infantry.

Bennett Champ Clark had a great love and respect for the military tradition of his country. He took great pride in being 1 of the 17 charter members and an incorporator of the American Legion, and he was chairman of the Paris caucus which formally organized The Legion. He became its national commander, as well as commander of the 35th Division Veterans' Association, and president of the National Guard Association.

Upon his discharge from the Army he opened a law office in St. Louis, thus beginning a distinguished legal career that was to establish him as the illustrious son of an illustrious father. His father, Speaker Champ Clark, had been a lawyer, college president, and Speaker of the House from April 8, 1911, to May 19, 1919.

Both the son and father took a lifetime interest in politics. Both were strong Democrats, and were high in the councils of the party. The elder Clark was chairman of the Democratic National Convention in 1904, and in 1912 was the leading candidate for the Presidential nomination on 29 ballots. The son attended every Democratic National Convention held after 1900, and was parliamentarian on numerous occasions.

Bennett Champ Clark was elected to the United States Senate in 1932, and served with distinction in this body until 1945. In 1945, he was appointed Justice of the United States Court of Appeals for the District of Columbia.

His long career of public service has now come to an end. Missouri and America have lost a fine citizen and a capable and distinguished public servant.

Mr. President, I thank my colleague, the distinguished Senator from Oklahoma, for yielding to me.

Mr. MONRONEY. I have been very glad to yield.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Oklahoma yield to me, with the same understanding?

Mr. MONRONEY. Yes; if I may obtain unanimous consent for that purpose.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, it was with a deep sense of shock that I learned of the death of Judge Bennett Champ Clark.

Bennett Champ Clark was a great Democrat and a great American whose name was intimately attached to the history of Congress. He was the great son of a great father, and his place in the annals of our country is assured.

I was not sufficiently fortunate to have served in the Senate with Bennett Champ Clark. But in the days when I was serving in the House, I did have the good fortune to work with him on a number of occasions.

He had a keen grasp of the basic structure of Congress. His knowledge of history was unsurpassed. His contributions to the welfare of our country were great.

Bennett Champ Clark has gone to his eternal reward, and America is the poorer for his passing.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the Senator from Oklahoma may yield to me, under the same understanding.

Mr. MONRONEY. Mr. President, I ask unanimous consent for that purpose.

The PRESIDING OFFICER. Without objection, it is so ordered; and the Senator from California is recognized.

Mr. KNOWLAND. Mr. President, I wish to join in the tributes that have been paid to Bennett Champ Clark.

Like the distinguished minority leader, I did not have the privilege of serving in the Senate during the time when Bennett Champ Clark was a Member here. But my father served in the House of Representatives with Bennett Clark's father, Speaker Champ Clark. Although they were on opposite sides of the aisle, I think I can say without fear of contradiction that I know of no man in American life for whom my father had a higher regard than he did for Champ Clark.

The distinguished son followed a career of service to the people of his native State and to the people of the Nation, both in a legislative and in a judicial capacity.

Mr. President, speaking on this side of the aisle, I should like to express our deepest sympathy at the loss of a distinguished American.

THE ADMINISTRATION'S FARM PROGRAM

During the delivery of Mr. MONRONEY'S speech.

Mr. BEALL. Mr. President——

Mr. MONRONEY. Mr. President, I have been asked by the distinguished junior Senator from Maryland [Mr. BEALL], who has an important engagement which he must keep, to yield to him for approximately 5 minutes. I now ask unanimous consent, in order to be able to accommodate him, that I may yield to him at this time, with the understanding that I shall not thereby lose the privilege of the floor, and also that his remarks will be printed following my remarks in the RECORD.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The junior Senator from Maryland is recognized.

Mr. BEALL. Mr. President, the administration's farm record of the past 17 months proves that it is a champion of the American farmer. The Department of Agriculture has expanded storage facilities, administered price supports faithfully, provided effective drought relief, presented the beef promotion and purchase program, intensified effort to promote foreign trade, expanded research and education, and reorganized the Department of Agriculture to promote efficiency and reduce costs.

Congress has a tremendous responsibility to give farmers and the Nation improved laws that will permit and encourage more profitable and sound farming. President Eisenhower's farm program recommendations are designed to point our future agriculture program toward better balanced production, increased consumption, and greater freedom of action for farmers in making their own management decisions.

Farmers and the Nation are entitled to a more common sense price-support program. The proposals made by this administration are part of our effort to help agriculture market its production, not stock it away in warehouses at a cost of $5 million a week for storage, alone.

The removal of artificial price barriers would encourage the movement of crops to market, at home and abroad. Over a period of years the results would be higher and more stable income for agriculture, larger and more permanent markets, and more efficient and balanced farming.

Flexible price supports would enable agriculture to recapture some of the markets which we have lost to synthetic and substitutes, both at home and abroad, largely because of unrealistic prices. They would also permit us to compete with other exporting nations, particularly in the world wheat and cotton markets.

The new farm program will bring more prosperity to American farmers. It will generate more business for our merchants, dealers, bankers, and industries. Labor will have more work and higher incomes if the recommended farm program is adopted.

The Eisenhower farm program will encourage better farm management. Good crop rotations will tend to be established when there is more assurance that crop acreages will be less drastically controlled. Many farmers now overplant and distort sound management of their farms, in order to maintain a big historic crop base as protection against the governmental crop controls. Farmers will be more prosperous when induced to make best use of their land over a period of years and to follow sound management programs.

To get more farm profits there must be increasing production—and increasing consumption.

Farmers are greatly dependent upon full employment and a vigorous, productive, and prosperous America.

As Secretary Benson has pointed out on many occasions, a system of flexible price supports, coupled with direct attack upon industrial unemployment, is essential for the maintenance of a healthy agriculture. Fundamentally, a healthy agriculture depends upon maintaining a healthy nonagricultural sector of our economy. In a few words, our agricultural program must be geared into the general economic policies of this country relating to such matters as money and credit, taxation, wages, social security, public works, and many other fiscal and monetary programs. Demand for agricultural commodities—desire plus purchasing power—fluctuates severely with fluctuations in industrial activity. Therefore, national policies such as those mentioned above, which aim at keeping employment stabilized at a high level—and not a system of high fixed supports—offer the best guaranty of a healthy agriculture.

President Eisenhower has recommended to Congress farm legislation that will require less restriction on farm production, and hence less slowing down of the national economy. The road to prosperity for farmers and the Nation is through abundant production, expanded consumption, good living—not through scarcity, unnecessary unemployment, and unnecessary slow-down in the great widespread agricultural industry.

Price supports are needed for farmers, but they must be extended through a sound workable system. We must get rid of the arbitrary and inequitable features in the present laws.

Secretary of Agriculture Ezra Taft Benson in his report at the close of 1953 said:

> The retreat of farm prices and farm incomes has been stopped. Now is the time to reorganize the forces of agriculture—build renewed confidence to go forward in a resolute battle to build a stronger and more stable agriculture for all the American people.

Under the rigid price support plan the agriculture industry is encouraged to produce more commodities than the Nation can use. And now it is reaching the point where the big surpluses are a real danger and threat to the agriculture economy. The very fact that surpluses exist tends to depress the normal market.

High rigid price supports have been the stimulus for overproduction and the people must foot the bill in taxes. If the surpluses were released for use in this country, the amount consumed would soon be replaced by new surpluses. Arbitrary dumping abroad would dislocate foreign markets and production, and lose American friends there rather than make them.

Mr. President, we will soon take up the farm bill as reported by the Committee on Agriculture. Unfortunately, the committee reported out a bill containing high, rigid price supports, contrary to the recommendations of the President, the Secretary of Agriculture, and the action adopted by the House of Representatives.

During the last year and a half I have had many communications and many conversations with Maryland farmers, and representatives of farm organizations. They are overwhelmingly supporting the administration's program. Recently I reported to the Senate that many businessmen, including chambers of commerce whose membership includes many real farmers, are also supporting the Eisenhower-Benson farm program.

The Maryland Farm Bureau has just called to my attention five specific changes they would like to see in the bill as reported by committee, so that it will, in the farm bureau's opinion conform to what is best for agriculture and the Nation.

The farm bureau recommendations are:

First. Strike out rigid 90 percent supports for basic crops and insert a flexible support provision.

Second. Include a mandate from Congress that diverted acres taken out of the price-supported crops be effectively controlled.

Third. Eliminate the section that raises dairy supports and authorizes something like the Brannan plan for dairy products.

Fourth. Eliminate a provision that would require supports for small grains.

Fifth. Eliminate the two-price plan for wheat.

These recommendations represent the best thinking of the Maryland Farm Bureau, and is truly representative of the wishes of Maryland farmers. Last fall the farm bureau held 260 meetings throughout the State, attended by 6,000 farmers, for the purpose of discussing the farm program.

The suggestions which resulted from these meetings were embodied in resolutions and formally adopted by the 220 delegates—1 for each 50 members—at the farm bureau's annual State meeting.

The farmers in Maryland, and I am sure from the great part of this country, are supporting the administration program and I sincerely hope that the bill finally acted on by the Senate will contain the recommendations submitted to me by the Maryland Farm Bureau.

Mr. President, the following article entitled "India Ends Rice Control" is from the New York Times:

> INDIA ENDS RICE CONTROL—ACTION RESTORES FREE ECONOMY IN RESPECT OF FOOD GRAINS
>
> NEW DELHI, INDIA, July 8.—The Ministry of Food and Agriculture announced today the abolition of all controls over price, procurement, and the movement of rice throughout the country.
>
> Wheat having been decontrolled already, the effect of the announcement is the restoration of free economy in respect of food grains.
>
> Controls on most other essential commodities are being gradually relaxed.
>
> Rice production this year is estimated to reach the record level of 27 million tons, representing an increase of 5,500,000 tons over the previous 5-year period. Officials said there was a comfortable carryover of 1,300,000 tons of rice, besides 900,000 tons purchased from Burma this year.
>
> Thus the Government is fully prepared to meet any emergency. The overall food portion has become so satisfactory that statutory rationing has been ended.

PLANT DISPERSAL—THE UPPER COLORADO RIVER STORAGE PROJECT AND NATIONAL DEFENSE

During the delivery of Mr. MONRONEY's speech,

Mr. MONRONEY. Mr. President, I have been asked to yield to my distinguished colleague the Senator from Wyoming [Mr. CRIPPA] for a very important speech he would like to deliver at this time. Under the circumstances under which other similar requests have been heretofore granted, and with the understanding that his remarks will follow mine, and that I will not lose the floor, I should like to yield to him for that purpose.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Wyoming may proceed.

Mr. CRIPPA. Mr. President, there has been a good deal of talk in this Chamber during the past decade on the urgent need for industrial dispersal in the interests of national defense.

During World War II we were given an object lesson on this matter during the strategic bombing of Germany. As you recall, Germany was showered—one could even say "plastered"—with the greatest amount of high explosives ever unleashed upon a modern nation.

This heavy bombing of industrial centers undoubtedly cut deeply into her war-making potential and contributed largely to Germany's ultimate defeat. And yet our invading troops were impressed to find within that shattered country many industrial plants still in operation, some of them established in caves and tunnels that the Allied bombs could never reach. Too late Germany had learned the lesson of industrial dispersal for staying and winning power in a modern war.

An object lesson of a different sort was provided in Japan. Here the dropping of only two atomic bombs hastened the surrender of a nation which had not been invaded by land forces and which still had intact a considerable amount of its war-making potential. In Japan we saw demonstrated what could happen to America if A-bombs were dropped or carried by guided missiles to such strategic industrial centers as Detroit, Pittsburgh, Rochester, Cleveland, Chicago, Seattle, and Los Angeles.

And within recent months this atomic nightmare of our military strategists was heightened by reports of the extended area of destruction from the H-bomb.

Today scarcely anyone will deny that this country is highly vulnerable to atomic attack and that we should accelerate the dispersal of our industrial targets. But industrial dispersion is something like the weather. Everybody talks about it, but does little about it, with one significant exception, which I will discuss later.

Back in 1951, a very fine Senate document was published, entitled "The Need for Industrial Dispersal." It was prepared by the Joint Committee on the Economic Report. This document contains this logical declaration:

Since there is no known defense against the atomic bomb itself except space, dispersion is one of the first considerations for strategic safety of industrial facilities.

It also recommended that this country "establish new or expanded facilities in areas which have greater geographic security from enemy attack" and "in areas which have the potential transport, labor, and other requirements so as to economize by avoiding undue or over-concentration in already congested areas."

That was sound advice, and I am sure that equally sound advice will emanate from agencies now studying this problem for the present administration in the light of new developments. But from observing what happened during the unprecedented industrial plant expansion since 1950, I take a dim view toward publicized programs for industrial dispersion. Our Detroits and our Pittsburghs seem to grow ever larger, while the industrial have-not areas content themselves with a few industrial handouts.

However, I am pleased that the present administration acutely realizes the unique peril in which this country has been placed by atomic and hydrogen bomb developments. As evidence of that, I hereby ask for unanimous consent to introduce as part of my remarks an article which appeared in the New York Times of June 16, 1954.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLANT DISPERSAL CALLED UNITED STATES MUST—CASUALTIES IN ATOM TEST RISE TO 13 MILLION, PETERSON TELLS CHAMBER PARLEY

(By Elie Abel)

WASHINGTON, June 15.—Civil defense and mobilization officials warned today that the Nation's survival in war demanded a more rapid scattering of its industrial might.

Val Peterson, Federal Civil Defense Administrator, announced that the toll of imaginary casualties in yesterday's countrywide defense rehearsal for an atomic attack was approaching 13 million.

"The awful arithmetic of civilian unpreparedness," he said, "is being compounded day by day."

The increasing urgency of industrial dispersal was emphasized by Arthur S. Flemming, Director of the Office of Defense Mobilization. Mr. Flemming said he had asked the Defense Department, the Atomic Energy Commission, and the Federal Civil Defense Administration to restudy the problem of defense plant dispersal in light of the recent hydrogen bomb tests in the Pacific.

His investigations so far indicate that the current 10-mile radius of immediate danger is adequate, Mr. Flemming told a luncheon of more than 200 businessmen. They are attending an industrial defense conference called by the United States Chamber of Commerce.

Nevertheless, Mr. Flemming said he had asked other Federal agencies to submit reports on whether the radius should be widened.

PRESIDENT SEES "UNIQUE PERIL"

President Eisenhower, in a letter read to the conference this morning, said the subject of how to defend the Nation's industrial complex was one of "grave importance" involving inconvenience and expense.

"These are days of unique peril to civilian populations, to the security of our cities, our industries, and our people," the President said.

A program for effective industrial defense, he added, "may constitute the most valuable investment you can make toward assuring our survival as a free Nation."

Mr. Peterson, addressing the conference, said it would not be too difficult for the United States to lose a short war at a time when a single flight of enemy planes could deliver more destructive power than the total bombload dropped on Britain during World War II.

"To lose a short war, you lose enough productive people and plants, quickly enough, to demoralize the rest of the nation's defense production and destroy the nation's will to resist," Mr. Peterson declared.

GERMAN CAMPAIGNS CITED

He recalled that the effectiveness of such a campaign had been demonstrated by the Germans in Poland and the Netherlands. With the advent of atomic weapons and greatly improved planes, he warned, a potential aggressor today could deal comparably staggering blows on the United States.

Calling on industry to put hard money into protection programs that would guard their plants and employees against such disaster, Mr. Peterson asserted:

"The balance of victory between two military powers may well rest with the nation whose civilian population can best minimize the effects of an atomic attack and get up off the ground organized and ready."

Clem D. Johnston, president of the Chamber of Commerce, urged industry to recognize its responsibility for insuring continuity of production if war came.

"I regret to say that, until quite recently, some segments of industry have been ducking that responsibility," he said.

MEETING HEARS QUARLES

The businessmen received from Donald A. Quarles, Assistant Secretary of Defense for Research and Development, an estimate of Soviet air capabilities.

For the first time since 1812, he said, the continental United States was threatened with direct attack. Mr. Quarles warned that the United States might be "only a few years ahead" of the Soviet Union in jet bomber development.

"The new heavy bomber and the nine medium jet bombers flown over Red Square in Moscow on May Day," he said, portend "a real increase in the Communist capability of attack, especially against targets in the United States."

"Charles F. Honeywell, head of the Commerce Department's Business and Defense Services Administration, and Lt. Gen. Willard S. Paul (retired), Assistant Director for Non-Military Defense in the office of Defense Mobilization, outlined the programs of their agencies for strengthening the defenses of American industry.

"The conference also heard a report from John H. Redmond, assistant production manager of the Koppers Co., Inc., of Pittsburgh, on that concern's disaster plan, one of the first to be developed privately."

Mr. CRIPPA. I mentioned previously that there was one significant exception to this type of industrial concentration in the face of international A-bomb and H-bomb threats. That exception, I am sorry to say, is Russia, a country which is not noted for any extreme fondness for the United States. As far back as October 27, 1952, an article in the New York Times gave this summary of Russian industrial dispersion:

Postwar geographic dispersion of Soviet heavy industry has made the Soviet Union far less vulnerable to land or air attack than ever before in that country's history, analysis of detailed data released at the recent Communist Party Congress in Moscow indicates. * * *

Today, these data indicate, the heart of Soviet heavy industrial production is in the Volga Valley and in the Urals, 1,000 miles

and more farther east than in 1940. At the same time, Soviet heavy industry is now so widely spread over the country that enemy capture of any one major area, or its complete destruction from the air, would not represent nearly the threat now that the loss of the vital Ukrainian coal and metallurgical complex posed in the early months of World War II.

Apparently the masters in the Kremlin have taken to heart the lessons the United States should have learned from World War II.

In academic discussions of industrial dispersion in this country, the statement is often made that the United States, too, should build its own industrial defense bastion behind the protective peaks of our own "Urals," the great Rocky Mountain Range. There is much good sense in this proposal.

The Rocky Mountain West contains the largest and most varied supply of natural resources in the United States. It has a well-developed transportation network of highways, railroads, and airlines. Its strategic location gives it access to the manufacturing and population centers of the west coast, and to Texas and the Midwest. This is evidenced by the establishment in Utah of large military supply installations, which serve a large area of the western half of the United States.

Colorado and New Mexico also have large defense installations extremely important to the welfare of the country.

Furthermore, this area has a great natural advantage that has been virtually ignored in our national defense planning. In addition to its insular position as a protection against attack from the air and from guided missiles, the Mountain West has thousands of feet of solid rock in mountain and canyon walls which can be utilized to protect vital industries and Government installations from atomic attack. We find that to be the fact in reading the history of Hitler and his military campaigns during World War II. These natural bomb shelters can be located in the ribs of the aptly named Rocky Mountains. Tunnels and caves could be developed in these mountains at widely separated locations to give this Nation an impregnable industrial bastion that would be secure even against the awesome weapons of the atomic and hydrogen bombs.

I am not suggesting that we move our defense industry underground at this time. But if such industry is located in dispersed locations, its safety is greatly enhanced. And if these dispersed plants are accessible to planned underground locations, their removal to complete safety in time of national emergency would be greatly expedited.

Another advantage of industrial dispersal would be that less reliance would have to be placed upon long-distance rail hauls in an emergency. It is obvious that key rail centers would be priority targets for atomic bombing. Regional industrial self-sufficiency is the answer.

In this regard, I would like to point out that although Arizona, Utah, New Mexico, Montana, Wyoming, and Nevada produce the great majority of this Nation's copper, the bulk of the copper and brass fabrication industry is concentrated in other areas. Establishment of copper and brass mills in the producing area, within easy access of mine smelters and copper refineries served by the Nation's largest copper mines, would be a major step forward in industrial self-sufficiency for national defense. This is just one example of the need for industrial dispersal.

However, before any of us gets too enthusiastic about the prospects for our own "industrial Urals area" in the shelter of the Rockies, we should heed this fact: Industrial expansion in the Mountain West is limited only by the supply of water for industrial and community consumption, and by available power.

Athough many of the country's great rivers originate on the backbone of the Rocky Mountains' Continental Divide, much of the mountain area is semiaird in nature. Firm water supplies for communities and industry in this area have to be obtained by constructing storage reservoirs to catch and hold the water as it comes from the snow pack in the high mountains. Of course every drop of water that is lost is never returned.

Many such water-producing projects have been built and the easily developed waters of the West have already been appropriated and put to consumptive use.

The waters in the upper Colorado River Basin can be developed and utilized only with great difficulty and at great expense. For this reason the four States of the upper basin of the Colorado River still have nearly two-thirds of their assigned half of the water of the river yet to be developed for future use within those States. This water supply is sufficient to take care of the foreseeable needs in those States—Colorado, New Mexico, Utah, and Wyoming—for many years, including any reasonable requirements for an increased role in the country's industrial economy and national defense. Under the Colorado River compact of 1922, these States were assigned half, or roughly 7,500,000 acre-feet annually of the water produced in the Colorado River drainage basin above Lee Ferry.

Since the 1920's the internationally known engineers of the United States Bureau of Reclamation have been conducting extensive engineering studies to determine how the upper basin States could develop and utilize the water assigned to them. These studies were financed partially from an appropriation out of the revenue derived from Hoover Dam, which is located in the lower basin of the Colorado.

From this intensive 32-year study has come the recommendations for a long-range development of the upper basin, as outlined in the upper Colorado River storage project bill, now under consideration by the Senate Interior and Insular Affairs Committee.

These basin-wide engineering studies have shown that a series of storage dams and reclamation works will provide for the area the following:

First. New or supplemental irrigational water for nearly three-quarters of a million acres of farmland.

Second. Supplemental water supplies for municipalities, totaling approximately 160,000 acre-feet.

Third. Generating capacity for nearly 1¼ million kilowatts of hydroelectric power.

Furthermore, the reports show that for the project units recommended by the Bureau of Reclamation, all but 0.8 percent of the total construction investment would be returned to the Federal Government. That small percentage of the total project costs has been assigned to nonreimbursable public benefits such as flood control. Operation, maintenance, and replacement charges are borne by the project beneficiaries, and after repayment is completed, the project facilities will provide an income to the Government of from $15 to $20 million per year forever after.

People who know the geography of the semiarid country of the upper Colorado River Basin are genuinely pleased that these badly needed water and power supplies can be delivered to that area in such a sound, well-planned program.

Furthermore, the project represents coordinated, long-range planning of the type that should be applied to all our river basins so that water resources can be utilized effectively and economically.

In addition, the project will provide the water and the power required for this country to fully utilize the defense potential of the great Rocky Mountain west to provide needed industrial self-sufficiency in case of atomic attack. This defense feature gives added incentive for prompt favorable action on this project, which is eminently sound and feasible as a long-range project to develop the resources of four Mountain States and to contribute to the economic progress of the West and the Nation as a whole.

This strong case for decentralization emphasizes the absolute necessity for action. Two basic elements are required—water and power. These, plus mountains to decrease the impact and devastating effect of H-bombs dictate that this Nation should immediately authorize the full development of the water and power resources in the Colorado River in the upper basin Mountain States. This project will provide a defensible industrial economy and an area to which people in case of atomic attack could be evacuated from the thickly populated west coast.

Mr. WATKINS. Mr. President, will the Senator from Wyoming yield?

Mr. CRIPPA. I yield.

Mr. WATKINS. Mr. President, I should like to say that in his first speech in the Senate the able Senator from Wyoming has called attention to one of the most important matters before the American people. I invite the Senator's attention to the fact that since the last hydrogen bomb test in the Pacific the planners have come to the conclusion that in the cities and towns where great industries are concentrated or where great populations are concentrated there is no way people can go underground and be safe from the effects of the hydrogen bomb. They have decided that the moving of the population probably will be

necessary rather than trying to protect them in places where they live, and that if it is necessary to protect them at those points other than by the Air Force, the planes delivering hydrogen bombs must be intercepted.

I think the Senator has invited attention to the great possibilities in our own Rocky Mountains, which he designated as our Urals, where we could take care of a great population. Also of importance is the fact that we could produce, with water and power, immense quantities of materials and weapons necessary for the national defense. If we ever do have to go underground, that is an excellent place in which to do it. It is a long way from Russia, whose planes would have to travel across the country where they could be intercepted.

I congratulate the Senator upon his very fine statement. I should like to ask the Senator if the State of Wyoming is greatly interested in this project to which he invites attention?

Mr. CRIPPA. Yes, indeed. Once we get it started it will afford protection. It has been discussed many times with respect to the upper and lower river compacts. I assure the Senator that if we can grow in the State of Wyoming according to our plan, 14 percent of the water will not be sufficient to enable us to develop as we should. If we do not tie up this water, we will lose our rights by 1962.

Mr. WATKINS. The right is supposed to have been guaranteed by compact, but the rule of the West usually is that he who is first in time is first in rights.

Mr. CRIPPA. That is correct.

Mr. WATKINS. Are the people of Wyoming actually interested in this project?

Mr. CRIPPA. I should say the people of Wyoming are 100 percent back of this project.

Mr. WATKINS. I think that is evidenced by letters from the Governor, by the statement of the senior Senator from Wyoming and also, now, by the statement of the junior Senator from Wyoming.

Mr. CRIPPA. That is correct.

FOSTER CREEK DIVISION OF CHIEF JOSEPH DAM PROJECT, WASHINGTON—CONFERENCE REPORT

Mr. WATKINS. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 4854) to authorize the Secretary of the Interior to construct, operate, and maintain the irrigation works comprising the Foster Creek division of the Chief Joseph Dam project, Washington. I ask unanimous consent for the immediate consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report, as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 4854) to authorize the Secretary of the Interior to construct, operate, and maintain the irrigation works comprising the Foster Creek division of the Chief Joseph Dam project, Washington, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendments of the Senate and agree to the same with an amendment, as follows: In lieu of the matter inserted by the Senate, insert the following:

"That, as an initial step in supplementing the Act of July 17, 1952 (Public Law 577, Eighty-second Congress), and in order to provide water for the irrigation of approximately six thousand acres of land along the Columbia and Okanogan Rivers in the vicinity of Chief Joseph Dam, Washington, the Secretary of the Interior is authorized to construct, operate, and maintain the Foster Creek division of the Chief Joseph Dam project substantially in accordance with the report of the Secretary of the Interior dated January 7, 1954, and printed as House Document No. 374, 83d Congress.

"SEC. 2. In the construction, operation and maintenance of the Foster Creek division, the Secretary shall be governed by the Federal reclamation laws (Act of June 17, 1902, 32 Stat. 388, and Acts amendatory thereof or supplementary thereto) except that (a) the period provided in subsection (d), section 9, of the Reclamation Project Act of 1939 (53 Stat. 1187), for repayment of construction costs properly chargeable to any block of lands and assigned to be repaid by the irrigators may be extended to fifty years, exclusive of a development period, from the time water is first delivered to that block or to as near that number of years as is consistent with the adoption and operation of a variable payment formula as hereinafter provided; (b) any repayment contract entered into may provide that the amounts to be paid annually thereunder shall be determined in accordance with a formula, mutually agreeable to the parties, which reflects economic conditions pertinent to the irrigators' payment capacity; and (c) all construction costs which are beyond the ability of the irrigators to repay as hereinbefore provided shall be charged to, and returnable to the reclamation fund from, net revenues derived from the sale of power from the Chief Joseph Dam project which are over and beyond those required to amortize the power investment in said project and to return interest on the unamortized balance thereof. Power and energy required for irrigation pumping for the Foster Creek division authorized shall be made available by the Secretary from the Chief Joseph Dam powerplant and other Federal plants interconnected therewith at rates not to exceed the cost of such power and energy from the Chief Joseph Dam taking into account all costs of the dam, reservoir, and powerplant which are determined by the Secretary under the provisions of the Federal reclamation laws to be properly allocable to such irrigation pumping power and energy.

"SEC. 3. Reports on additional reclamation units in the vicinity of the Chief Joseph Dam project proposed to be constructed as units of the project shall be submitted by the Secretary from time to time in accordance with the provisions of the Act of July 17, 1952, supra.

"SEC. 4. There are hereby authorized to be appropriated out of any moneys in the Treasury not otherwise appropriated, $4,798,000 plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in the cost of said type of construction without endangering the economic feasibility of the Foster Creek division of the Chief Joseph Dam project, Washington."

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the report was considered and agreed to.

POST OFFICE DEPARTMENT FINANCES

Mr. JOHNSTON of South Carolina. Mr. President, I address the Senate today on a subject which, in some quarters, would appear to be an inconsequential matter—$100 million.

Now, I well realize that in these days of inflated economics and a generally asteroidal atmosphere, $100 million is not quite the staggering amount it once may have been. However, I cannot but feel that, even today, $100 million should not be treated with disdain. Mr. Summerfield, our esteemed Postmaster General, apparently is one of those who looks upon it as a rather paltry sum, unworthy of mentioning, certainly unworthy of bothering to account for.

I am sure that we have all been made aware that Mr. Summerfield is a man of great and diversified talents. We have all listened to, and watched, with rapt attention, the boasts, the claims, the activities of Mr. Summerfield in his current avocation as Postmaster General.

We know that Mr. Arthur Summerfield is considered one of the Nation's great industrialists. We know that he was the owner and operator of one of the world's largest General Motors' agencies—also that he is a former chairman of the Republican National Committee. And I assume there is pretty much general agreement that both General Motors and the Republican National Committee are financially sound organizations, with assets running well into the billions. So perhaps it is only natural that Mr. Summerfield, with this rich economic background should have a somewhat less awesome regard for $100 million than would the average citizen.

But, Mr. President, I as a taxpayer, and also as a Member of the United States Senate which has the great responsibility of passing on Post Office Department and other departmental expenditures and appropriations, and particularly as a member of the Senate committee having to do with postal affairs, consider $100 million as a very substantial amount of money. The people of my great State of South Carolina, who have selected me to help represent their interests, surely must consider it a most sizable amount of money.

But Mr. Summerfield, our active Postmaster General, though repeatedly he has demanded increased mailing rates, and who right this very moment is pressuring the Congress for legislation that would make the people of this country pay a higher rate of postage on their letters, does not consider a mere $100 million worth mentioning.

Mr. President, I think it is worth mentioning, so much so that I am going to turn this place inside out, if need be, to find out what has become of it.

I have made a personal survey around this country concerning many aspects of the postal service and its operations and I have discovered some highly interesting facts.

As we all know, the postal budget and the department's requests for appropriations are based generally on the anticipated volume of mail to be handled. For example, in the fiscal year 1953 the post office based its requests for funds on the assumption it would be called upon to handle somewhere in the vicinity of 52½ billion pieces of mail. At the end of that fiscal year, 1953, however, the department found it had handled only slightly less than 51 billion pieces. Naturally, this drop in actual mail handling from the anticipated volume was reflected in a decrease in operational costs to the department. This dip in operational charges was achieved mainly because the department was required to pay for fewer hours of temporary and substitute clerk and carrier and mail handler hire.

Perhaps I should explain here that a sizable percentage of the mail handling is done by substitute and temporary workers. These are part-time workers who are paid only by the hour, and whose employment is determined by the volume of mail actually on hand to be serviced. When the volume of mail is down, fewer hours of substitute and temporary labor is required. It is apparent, therefore, that a drop of 1 million pieces in the mail to be processed and delivered will reduce sharply the number of substitute and temporary man-hours that will be needed. And it is easy to see that at an average pay rate of $1.60 an hour the savings will be considerable.

Now, let us take a look at the fiscal year 1954. I am most reliably informed, Mr. President, that the volume of mail handled during that fiscal year, just closed, was almost 2 billion pieces less than that estimated by Mr. Summerfield, and on which he based his appropriations request for 1954. In other words, Postmaster General Summerfield asked for and received from Congress sufficient money to handle over 54 billion pieces of mail during fiscal 1954. Actually, however, the Department handled slightly over 52 billion pieces.

I am not censuring the Postmaster General because the people of this country used the mails nearly 2 billion times less than Mr. Summerfield guessed they would. But I do want to know what became of the additional money Congress approved and appropriated to meet the Department's anticipated needs.

Based on my conservative estimates, Mr. Summerfield should have at least $100,000,000 left from his 1954 appropriations which he has not used.

Where is it?

Why has Mr. Summerfield not come forth in his usual manner and repeated his worn-out claims of saving the taxpayers millions of dollars through efficiencies and economies? It would seem to me that he has dubbed a wonderful opportunity.

Is it because he does not think the time is politically right?

Is it because his high-powered public relations men and speech writers have not yet put together the right words and proper phrases for a claim of savings due to greater economy, efficiency and management under Mr. Summerfield's guidance?

Perhaps it is because even our versatile Postmaster General finds it difficult to reconcile his insistent demands for higher postal rates and at the same time admit that the so-called postal deficit is somewhat less than he has reported it to be?

Perhaps Mr. Summerfield is waiting to see if part of this money will be needed to pay the expenses and travel costs of postmasters brought to Washington to help influence the Members of Congress in fighting discharge petitions on pay bills he is so strongly opposing.

Could it be that this money, at least in part, is scheduled to be allocated to pay the salaries of men to staff the enormous regional and district offices the Department is establishing throughout the country? That point was brought out when representatives of the Department appeared before the committee in connection with the discussion of the very matter of setting up the regional offices, and when it was stated that that would cost an additional $5 million. Incidentally, Mr. President, I understand that there has been much political trading in selecting personnel to staff these regional offices. At a later date I shall have considerably more to say on these two subjects.

Right now, Mr. President, I want to direct to the Postmaster General an inquiry about this $100 million. I want to know whether he has notified the Treasury Department about this unused portion of his 1954 appropriation, and whether the Postmaster General has turned it back or intends to turn it back.

That is a simple question, one that can be answered in one short word—either "Yes" or "No"—assuming, of course, that Mr. Summerfield considers the subject worth mentioning. I believe the Senate will hear from him on this subject.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. KEFAUVER. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment submitted by the Senator from Tennessee will be stated.

The LEGISLATIVE CLERK. On page 23, in line 9, it is proposed to strike out the period and insert a colon and the following: *"Provided, however,* That preference in the sale of such energy shall be given municipalities and public bodies."

THE BUDGET BUREAU EXPLANATION OF JULY 9, 1954

Mr. KEFAUVER. Mr. President, on July 9, the Bureau of the Budget issued its explanation of the proposed Dixon-Yates contract with the Atomic Energy Commission. In all my political career, I have never seen a document so basically unsound as that one. I am sure that other Members of the Senate during their political careers have never seen a document so basically unsound as that one, either. Throughout it, the truth is frequently avoided and, instead, fictitious reasons are given. However, Mr. President, I do not wish to have the Senate merely take my word for it. Let us analyze the contract—a document which I think will become historic for its duplicity.

The contract begins by stating the three things the proposed deal will accomplish. It says that, first, it will provide for national-defense needs, which are paramount. Mr. President, if there is anything at all that is clear in this proposed deal, it is that none of the power will be used for any national-defense needs. At Paducah, where the AEC has the installations for which it claims to be buying this power, the AEC already has firm contracts for the full amount of power it will need. It has a contract with a utility group, the EEI, and it has another contract with the TVA. The AEC does not intend to release either the EEI or the TVA from their commitments to serve the AEC installations at Paducah. The AEC does not need another single kilowatt of power for those installations. What is more, not a single kilowatt from the proposed new plant, hundreds of miles away—at West Memphis, Ark.—will ever be used to serve the Paducah installations.

The President of the United States himself has said, indeed, everyone has said, that the power from the proposed new plant will be used by the TVA to serve its customers in the Memphis area. Yet the Bureau of the Budget has the gall, the unabashed audacity, to tell the Congress and the people of the country that it is doing this to provide for national-defense needs.

Mr. President, I deeply resent this type of duplicity. We, the Congress, and the people of the Nation are entitled at least to receive fair treatment from the members of the executive branch. But we are not getting it. I resent this attempt to mislead us; but I resent even more the shabby method the executive branch is using in trying to win public support and in trying to cut off discussion, by talking about the national-defense needs.

Mr. President, let us make the record straight, once and for all. There is absolutely no connection between the proposed contract and the defense needs of the country. Let us put an end to such an approach and to such a continuous attempt to mislead.

The second result the Bureau of the Budget expects to accomplish by means of this deal is to "promote the best interests, not only of the people of that area, but of all the people."

Mr. President, this is the first time I have heard of promoting a person's interests by cutting his throat. The executive branch is going to promote the interests of the people of the Tennessee Valley area by taking the first long step toward restricting, and finally destroying, the greatest development that has ever taken place in the entire area—a development that has brought a new life and new prosperity to the people of the area, to the betterment of the economy of the entire Nation.

Let it be remembered that when visitors from foreign nations come to the United States anxious to ascertain how they can best develop the resources and build up the economy of their own countries, the first section of the United States they almost invariably visit, in order to observe an example of what people working together can do for the betterment of their country and for the development of its resources, is the area of the Tennessee Valley Authority.

Mr. President, it must be remembered that the welfare of the people outside the Tennessee Valley is not improved by hurting the people in the Tennessee Valley. To the extent that we in the Tennessee are made stronger, the country as a whole is made stronger. We are not a country of separate sections. We cannot maintain our strength as a Nation by isolating one section of the country from another. Our strength is the strength of unity, and the strength of each section strengthens the whole.

The strength of the TVA has also helped the entire country, by furnishing a necessary yardstick with which to measure electric-power costs.

I still believe that the best judges of what is good for the people are the people themselves. I can tell you, Mr. President, that the people of the Tennessee Valley are up in arms over this attempt to destroy their TVA power source and, through that, their economy.

I should like to have those in the executive branch who are responsible for this "deal" appear before the people of the Tennessee Valley and tell them how the proposed arrangement will result in "benefiting" them. I make this open offer to them to go to the Tennessee Valley and explain. I shall be very happy to arrange the meetings, and I can assure the ones in the executive branch who are responsible for this proposal that they will have a very big attendance at those meetings.

Of course, Mr. President, I know that the invitation will not be accepted. Very few people have the nerve to go before those they would destroy and tell them that they are in fact helping them. Besides, members of the executive branch know only too well that this whole deal is easily seen through by anyone who knows the facts; and the people of the Tennessee Valley know the facts. So those in the executive department will not go down there, where they cannot fool anyone.

The only "best interest" this bill would serve would be the best interest of the power trust. It would help only the predatory power trust, which has become impatient in its hunger to defend monopolies and destroy all public installations.

The third and last purpose the Bureau of the Budget says the Dixon-Yates deal would serve is to permit amortization of the cost of the facilities over a 25-year period, and thereby avoid an immediate capital outlay of $100 million, and reduce the pressures against the ceiling on the national debt.

When we reach the point where we cannot enter into a good proposition which will save the people of the Nation $142 million and save the integrity of the Government, which would be destroyed by having a department perverted to some use for which it was not created, in order to finance a $100 million deal, the Government of the United States has come to a bad situation. The Congress is asked to raise the debt ceiling $15 billion. It would certainly seem that $100 million, which would be a good investment, which would be repaid, and which would save the integrity of the Government, would certainly be a justified payment out of the money which the Treasury now has on hand.

The executive branch is trying to tell us that it is good business for the Government to pay higher interest rates on bonds than it has to pay, to pay unnecessary profits to the power monopolies, and assume huge extra costs, amounting at the lowest to $3,800,000 a year, and at the highest to $142 million. This is supposed to be a business administration. Mr. Hughes, Director of the Budget, and before that a vice president of the National City Bank of New York, seems to be spearheading this deal, although he does say that he is acting under orders from the President.

I wonder what Mr. Hughes would say to a customer of his bank who came to him with this type of proposal and said, "Mr. Hughes, I need a new plant. I can build it myself, and I will have no trouble raising the money. I can borrow the money at 2½ or 3 percent, or I can let X company do it for me, and all I have to do is to pay all their costs, taxes, and profits, because they have to pay 3½ percent for the money. Also I will have to pay them 9 percent profit on the little bit of money they put up themselves. There will be many extra charges, too, because the plant will not be located exactly where I want it. In fact, I will have to spend some extra money myself to be able to use the plant, so it might cost me about $150 million extra over a 25-year contract period. But just think, I will not have to build the plant, which would cost me around $100 million."

Cannot Senators imagine a banker's reaction to that type of business deal?

NATURAL GAS PRICES

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield.

Mr. HUMPHREY. I ask unanimous consent to make a brief statement without the Senator from Tennessee losing his right to the floor.

Mr. KEFAUVER. If it is agreed that I will not lose the floor, I yield for that purpose.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Minnesota may proceed.

Mr. HUMPHREY. Mr. President, I have just noticed on the Associated Press ticker a statement to the effect that the Federal Power Commission has issued regulations temporarily freezing natural gas prices in all producing areas at the June 7 level. The statement reads as follows:

> The FPC issued regulations temporarily freezing natural gas prices in all producing areas at the June 7 level.
>
> Some 41,000 independent producers and gatherers of natural gas are affected. Those affected were brought under FPC jurisdiction by the Supreme Court decision in the Phillipps Petroleum case.
>
> The court ruled on June 7 that the FPC must price, at the well head, all gas sold in interstate commerce. Both Phillipps and the FPC had argued that production was strictly a State function, regardless of where their gas was consumed.
>
> The regulations apply to transactions and operations conducted on and after June 7, the date of the court's decision. Sales contracts which were in effect as of that date must be filed with the FPC by October 1. No increase in those rates can be made unless first filed with the Commission, which can suspend proposed higher rates pending hearing and decision.
>
> The regulations also require the producers to file applications for certificates authorizing the transportation and sale of natural gas in interstate commerce. The certificate applications must be filed by October 1.

I rise to herald and applaud the action of the Federal Power Commission. First of all, I point out that the Supreme Court ruled, as I believe in the only way it could have ruled under the terms of the legislation which controls the sale of gas and oil. We were all, of course, very much pleased on June 7 that the Supreme Court protected the public interest. We recall very vividly the extremely heated discussion and prolonged debate over the so-called Natural Gas Act. In that case we were saved, so to speak, by the veto of the President, the President then being Mr. Truman.

Now we find the Supreme Court of the United States protecting the interest of consumers and interpreting the public law, namely, the Natural Gas Act, as it should be interpreted.

I have just stated that the Federal Power Commission has required that all the independent producers and all other producers now come under the regulation of the Federal Power Commission, with prices to be fixed at the level of June 7.

I also note that the Commission has made provision for cases involving undue hardship. The release points out:

> The FPC said there may be areas of uncertainty and a few situations where independent producers have, in good faith, endeavored to invoke a price increase provided in a sales contract executed prior to June 7, or in good faith taken other steps since said date without Commission approval.

The Commission pointed out that any action which requires its approval is not effective without it. But the FPC added that it will do all it can to assist in adjusting any such matters, without unnecessary punitive action, to the end that all independent producers will receive like treatment as of June 7 henceforth.

The Power Commission will attempt to make whatever adjustments are possible under the law.

This means savings of literally millions of dollars to the consumers of natural gas throughout the United States. We in the great Midwest who have been deeply concerned about what was apparently the prior ruling of the Federal Power Commission are now relieved to see that the Power Commission will act under the order of the Supreme Court.

Mr. President, I have one other matter to discuss at this time.

The PRESIDING OFFICER. The Senator from Minnesota has the floor, under the unanimous-consent agreement.

THE HOUSING PROGRAM

Mr. HUMPHREY. Mr. President, I hold in my hand a press release with respect to the conference report on the housing bill. I serve warning now that if the conference report comes back to the Senate with the provision in it pertaining to public housing which the conferees have agreed upon, I shall vote against it, and further, I shall do all I can to see that the conference report is sent back to the conference committee.

The features of public housing which were included in the Senate were very limited. As a matter of fact, the distinguished Senator from Illinois [Mr. DOUGLAS] attempted to amend the committee bill by providing for a minimum of 75,000 public housing units a year for 4 years. As we know, that effort was defeated, and finally we had to go back to 35,000 public housing units for each of 4 years. This is not a program at all. At best, it is a pilot plant operation. At best it is merely a facsimile of a program. But even that has been emasculated by the conference committee.

I think it is about time for Congress to start acting in the public interest. It seems that we are having a most difficult time taking care of the needs of the people. We have a bill before us at the moment which ignores the needs of the people and places a great premium upon the special needs of special interest groups.

I say that is a pattern which will lead to defeat and to great political and economic disaster for those who continue to promote it.

I conclude by saying that the Congress had better direct its attention toward the fulfillment of the promise which was made in the Housing Act of 1949—a decent home for every American. We have now, by the action of the conference committee, slammed the door shut upon that promise. We have ignored the mandate of the Congress. As one Member of the Senate, I do not intend to stand idly by and see that happen when I know that there are hundreds of communities in America looking to the Congress for leadership, looking for action in the field of housing, particularly in the field of slum clearance and low-cost or low-rent public housing.

ATTORNEY GENERAL BROWNELL'S STAND ON TEXAS OFFSHORE OIL CLAIMS

Mr. DOUGLAS. Mr. President, I hate to intrude on the good nature of my colleague from Tennessee, but I wonder whether he would be willing to yield to me for a few minutes?

Mr. KEFAUVER. I am very happy to yield to the Senator from Illinois.

Mr. DOUGLAS. With the understanding, of course, that he will not lose the floor.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Illinois may proceed.

Mr. DOUGLAS. Mr. President, while I have not noticed any similar reports in midwestern or eastern papers, I have been much interested in news and editorial comments in Austin and Dallas papers to the effect that Attorney General Herbert Brownell is resisting Gulf State claims to offshore oil lands beyond the historic 3-mile boundary limit.

I hope these reports are correct and that the Attorney General will stand fast in protecting as much as possible of the rights which many of us believe the American people have in the submerged lands.

Such a stand is apparently bringing anguished complaints from Texas partisans of the broadest State claims. I ask unanimous consent to have printed at this point in my remarks two editorials from Texas papers expressing these views.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Austin American of July 13, 1954]

NEW SNATCH

Attorney General John Ben Shepperd's complaint at Federal Government designs on the Texas tidelands suggests that you can't trust anybody any more, no matter how friendly his protestations.

Texas' course in the last presidential race was determined, on the record, by the pledge of the Republican nominee to restore the tidelands to the State. This pledge was based on the grounds the tidelands had been unjustly confiscated by a Democratic administration.

Now, Attorney General Shepperd says that the same national administration which gave Texas back its tidelands, because that was the right thing to do, proposes again to snatch back more than two-thirds of what it said belonged to Texas all the time.

The offshore State boundaries of most other States extend 3 miles out into the water. Texas, admitted into the United States by Federal law, later wrapped in the validation of a treaty, had acquired possession of offshore submerged areas extending 3 marine leagues, or 10½ miles, from the coast.

Texas legitimately and properly owned it all, or none. Florida is in the same situation as to part of its tidelands, restored at the same time the Federal grab of Texas submerged land was rubbed out, or promised to be canceled.

The Texas legal officer said he has no doubt of success in the courts, in defending from Federal Government court attack the full effect of the Federal tidelands law.

If Shepperd has got the right dope, it has exposed a new and glaring instance of bad faith on the part of the United States Government. The proposed course of action naturally projected the tidelands controversy back into State politics.

Texas Democratic Party nominees and leaders balked at the refusal of candidate Adlai Stevenson to support the State demands, and turned support to Eisenhower, who made an unqualified pledge to approve legislation restoring the tidelands. They succeeded in carrying Texas for Eisenhower.

Nothing was said then about trimming Texas of two-thirds of what it had possessed, and what the law said was to be returned.

How the United States Department of Justice, through the leadership of that brilliant but difficult-to-follow Attorney General, Herbert Brownell, now could take the official attitude that the law meant only a third of what it said is beyond the reasoning of any Texan. Why President Eisenhower doesn't promptly slap down any subordinate efforts in his administration to nullify his own pledge to Texas and the other coastal States also is beyond Texas understanding.

[From the Dallas Morning News of July 11, 1954]

TEXAS TIDELANDS STILL IN DANGER

The news that the Department of Justice is refusing to recognize the Texas ownership of the Texas tidelands out to the full limit of 3 marine leagues from the shore may have profound effect upon the Governor's race in the Texas Democratic primary.

Attorney General Shepperd announces that the contention of the Attorney General is that oil leases within the offshore waters of Texas will be recognized only where the well is within the 3-mile zone. The area in the band between the 3-mile zone and the 3-league zone—an area 7.35 miles wide stretching from the mouth of the Sabine to the mouth of the Rio Grande—is United States property, he claims.

The Submerged Lands Act, as passed by Congress and signed by the President, declared: "The United States hereby releases and relinquishes unto said States * * * all right, title, and interest of the United States, if any it has, in and to all such lands."

The lands were declared to be "all lands permanently or periodically covered by tidal waters but not above the line of mean high tide and seaward to a line 3 geographical miles distant from the coastline of each State and to the boundary line of each such State where in any case such boundary line as it existed at the time each State became a member of the Union, or as hitherto approved by Congress, extends seaward (or into the Gulf of Mexico) beyond 3 geographical miles."

If Shivers is nominated, Attorney General Brownell is apt to conclude that Congress meant what it said about tidelands. If Yarborough is nominated, Brownell would be endorsed by the Texas vote.

Mr. DOUGLAS. Mr. President, despite these cries of bad faith against the administration which won Texas' vote on this issue in 1952, I think the reported position of the Attorney General is legally sound and basically just. And we know from the expressed views of Mr. Brownell during the hearings on the submerged lands bill in 1953, that his present stand against any giveaway beyond the 3-mile limit is consistent with the legal doubts he then voiced.

I only wish he would go further and support the offshore oil repealer I have introduced. But let us give him credit for the stand he apparently has taken. I have criticized him on some other

occasions and think it only fair to laud him when he takes such a sound position.

Whatever its effect on the local primaries may be, I am confident there are many who hope the Attorney General's position is correctly reported and that he will maintain it strongly. This will at least reduce the attempted surrender of the rights of all the people in the great oil and mineral resources of the submerged lands.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. Does the Senator from Illinois recall that only within the week—and I believe it was yesterday—one of our distinguished colleagues visited the White House, and later he was reported as stating that the President is of the opinion that the legal boundary of the great State of Texas was 10 miles, or 3 leagues, from shore?

Mr. DOUGLAS. I am certain, if the President expressed that point of view—and I do not know whether he did—that it was due to inadvertence, or perhaps to a lack of opportunity to consult with his chief legal officer, the Attorney General. If he were to study the question in detail, I am sure his conclusion would be that the State of Texas, like the other States of the Union, has the same boundary as the other States.

Mr. HUMPHREY. Mr. President, will the Senator yield further?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. I want the record to be clear by saying that I do not know that the President said it. I know only that it is what press reports indicated one of our Members quoted the President as having said. I would accept it, of course, as being an honorable and true statement. I am sure that the Attorney General is doing what the record reveals he would do, in view of his testimony.

Mr. DOUGLAS. I, too, am sure we can depend upon the veracity of the Member's report. But I do want to commend the Attorney General and to say to this soldier in the ranks: Stand fast, stand fast.

Mr. HUMPHREY. I fully agree.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. KEFAUVER. Mr. President, can anyone imagine a banker's reaction to the type of business deal represented by the Dixon-Yates contract? Probably, instead of commenting on the proposition, Mr. Hughes would simply pick up his phone and send out an emergency call for a psychiatrist.

There are other points that have to be mentioned to complete the picture, but I shall deal with them later.

At the moment, I simply wish to point out how completely distorted is the explanation which has been given by the Bureau of the Budget. The $100 million that would be required by TVA to build the plant it needs, at the place it is needed, would have no appreciable effect on the national debt ceiling, or the need for raising it. It would certainly reduce the Government's cost over a 25-year period by perhaps $150 million. Certainly any businessman faced with such a problem as the Government is faced with would build the plant himself. He would not make an unnecessary expenditure of 150 percent more than it would cost him to do it himself, just to give the power trust a break.

Mr. President, something which has been overlooked in this discusion to some extent is that if there is a determination on the part of the administration—a mistaken decision, to be sure—not to let TVA build its own steam plant to furnish power for its customers, as any other utility ought to be able to operate, there was still no reason in the record why it was necessary to give the Dixon-Yates company $142 million extra, to give them the plant at the end of the 25-year period, to build it in Arkansas, where it would not be as near to the TVA grid system, and where it would throw ashes all over the city of Memphis and require the building of expensive transmission lines.

I believe the conclusive evidence that it was desired to work out a deal with the Dixon-Yates Co. in order to satisfy the greed of the private power monopoly is shown by the fact that not even passing consideration was given to a really worthwhile proposal, an alternative which was offered. The alternative would have enabled the plant to be built at Fulton, where it should be built, and it would have cost the Government $100 million less. It would have been built by private capital, and it would not have been necessary for the Government to appropriate any money.

It was a proposal under which, after the expiration of the 25-year period, the steam plant would have been owned by TVA. It would not have destroyed or tended to destroy the Tennessee Valley Authority. That was the proposal which was offered by a group that knows its business and has the means to carry out such a contract.

The group could not even get a hearing before the Atomic Energy Commission. The Atomic Energy Commission apparently was so anxious—or some of its members were so anxious—to deal with the Dixon-Yates group, that they did not even wait for Dixon-Yates to get the specification as to what kind of steam plant was wanted.

It is one of the most unusual situations in history that a reliable group which had a real offer, which would have met all the objections that even the bitterest enemies of the TVA have made, could not get any consideration of their proposal.

I want no misunderstanding about it. I believe that TVA ought to build its own steam plant. I think it would be morally wrong not to let it build it. I believe it would be in violation of the congressional intent in giving TVA a certain service area. I think it would be destructive of the Government's own property to shackle and cut up the TVA, as some people propose. Therefore, I think TVA ought to build its own steam plant. If it is not going to be able to do it, an alternative was offered. Of course, that is the proposal made by a private group headed by Mr. Walter von Tresckow, of New York City.

So cursory was the AEC's consideration of the von Tresckow proposal that many of us have been led to suspect that the desired power contract was tailor-made for only one concern: the Dixon-Yates combine.

Mr. President, I should like first to state that the von Tresckow group was represented by one of the outstanding members of the Bar of the State of Tennessee, Mr. Lucius E. Burch, Jr., the senior partner of the firm of Burch, Porter & Johnson, 1006 Exchange Building, Memphis, Tennessee.

The integrity and professional competence of Mr. Burch cannot be questioned by anyone. His firm has an a. v. rating in the Martindale-Hubbel Lawyers Directory, which is the highest rating which is given to a law firm by this authoritative publication.

Mr. Burch is the district attorney for the Illinois Central Railroad System, division counsel for the Esso Standard Oil Co. and represents many other substantial interests in the States of Tennessee.

He is one of the outstanding trial lawyers in the State.

Testimony given by Mr. Burch under oath at the hearings before the Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary establishes conclusively the substantiality of the proposal made by the von Tresckow group.

Being jealous of his reputation as a lawyer, Mr. Burch refused to file a bid on behalf of the group until he had satisfied himself as to their ability to make good on any proposal submitted.

Mr. Walter von Tresckow headed the syndicate which made the proposal. For Mr. Von Tresckow's background, Senators are referred to page 297 and the transcript of the hearings of the Subcommittee on Antitrust and Monopoly of the Committee of the Judiciary held July 2, 1954.

To get a picture of the outstanding business careers of the other members of the syndicate, Senators are referred to Mr. Burch's sworn testimony commencing at page 66.

Mr. Von Tresckow has been a financial consultant for the last 20 years. During that period he has also acted as an officer and director of various financial companies, such as vice president and director of Niagara Shares Corp.; president and treasurer of Young & Ottley and is a partner in an engineering company. Also during the last 3 years, he has been a consultant to the city of Burlington, Vt.; has been active in planning and financing the powerplant for that city. The utility company supplying the city was going to increase its wholesale cost of power by 50 percent. As a result of von Tresckow's activities that increase has been avoided.

Prior to becoming a consultant in 1934, for a period of 30 years, Mr. von Tresckow had been first an officer of the Detroit Trust Co., Detroit, Mich. and then of the Central Hanover Bank, New York City.

Other members of the syndicate were Mr. Harvey Weeks, a retired vice president of the Central Hanover Bank in New York City; Robert W. Larrow, the corporation counsel of the city of Burlington, Vt., Mr. John Mitchell, the senior partner of the law firm of Caldwell, Marshall, Trimble & Mitchell, New York City. This firm is one of the leading municipal bond law firms in the United States. Mr. George Schwartz and Mr. Zeliz Nathanson, members of a New York law firm that specializes in corporate finances and reorganization and other matters before the Securities and Exchange Commission; and Solomon Bros. & Hutzel, the largest bond firm of its kind in the world.

In view of the type of individuals who were associated with this proposal and in view of the standing of the bond firm of Solomon Bros. & Hutzler, it is of course fantastic for anyone to question the bonafideness of the proposal which was made.

General Nichols himself made this very significant admission:

My check on those six groups confirms Mr. Burch's statement. They are all very reputable firms. In other words, I have no question whatsoever about any of them (p. 23 of the joint committee transcript).

General Nichols also admitted that he had checked on Mr. Burch and learned of his a. v. rating in Martindale-Hubbel.

What kind of treatment did this group, represented by one of the most reputable lawyers in my State, and composed of the eminent men I have heretofore mentioned, receive from the Atomic Energy Commission?

Mr. Burch's sworn testimony again is very illuminating. As he described it, his group was permitted only to meet with the "Indians" while the Dixon-Yates group dealt with the "Chiefs."

On page 87 of the transcript, Mr. Burch tells how his group was received by Mr. Thaxton, the Chief of the Power Division of AEC.

He said:

The high man that we saw, according to this testimony, Mr. Nichols did not even know.

Now, this developed in the testimony, too: Not only did Mr. Nichols and the Commissioners personally negotiate with the Dixon-Yates group, but the AEC initiated the proposal to the Dixon-Yates group. The negotiations went on for a period of some 6 months. They were carried on in a very friendly fashion, as all negotiations should be and as ours should have been, with cutting and trimming and trying to get a better deal and to smooth out the rough spots and reduce the uncertainties.

Quoting further what Mr. Strauss said:

Incidentally, this meeting was arranged after an original one had been canceled and Mr. Burch had to furnish the AEC the names of all the members of the syndicate as well as its engineers. Contrast this with the fact that AEC initiated the proposal with the Dixon-Yates group. General Nichols personally participated in the negotiations with them. In the hearings of the joint committee, General Nichols admitted he did not even know who Mr. Thaxton was. It was brought out that Mr. Thaxton, who studied the von Tresckow proposal was not asked for an opinion as to which proposal should be accepted and had nothing to do with the Dixon-Yates proposal (pp. 2256 and 2257 of the joint committee report).

The Antitrust and Monopoly Committee Hearings demonstrate that great pressure was placed upon the engineers for the von Tresckow group and as a result of such pressure the engineers withdrew. While the firm in its testimony tried to minimize such pressure the letter which the firm wrote to Mr. von Tresckow made it clear where the pressure had come from.

Mr. von Tresckow testified also under oath that the head of the engineering firm had made it clear to him that he was being pressured to back out of his engineering association group because he feared he might use his utility business (p. 316 of the transcript).

Mr. President, I ask unanimous consent to have printed in the RECORD at this point in my remarks the letter which the engineering firm wrote to Mr. Von Tresckow, which appears at pages 54 and 55 of the transcript.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR MR. VON TRESCKOW: In our original discussion we had no knowledge of the fact that any private utilities were interested in the construction and operation of a generating station in the Tennessee Valley area for the Atomic Energy Commission.

It now develops that unauthorized use of our name has been made in connection with a proposal to the Atomic Energy Commission counter to one submitted by Middle South Utilities and the southern companies.

On April 28 we pointed out to you that Gibbs & Hill, Inc., could not afford to have its name linked with any endeavor contrary to the interests of any privately owned public utilities in this country.

The use of our name has come to the attention of Mr. Dixon, president of Middle South Utilities, and through him to Mr. England, president of Atlantic City Electric, one of our clients, and to a number of electrical equipment and boiler manufacturers. One of the subsidiaries of Middle South Utilities is the New Orleans Public Service Co., with whom we have been endeavoring to negotiate an agreement for the design and/or construction supervision of their new station.

In view of the foregoing, it would seem necessary to have statements issued in such newspapers as Gibbs & Hill's name has been mentioned in connection with this project to this effect:

That we will not participate in any activity detrimental to the privately owned public utility industry in the country.

Any personal names or company names used above are confidential and have been mentioned for the sole purpose of adequately presenting Gibbs & Hill's position.

Mr. KEFAUVER. On page 79 of the transcript, Mr. Burch testified with reference to the difficulty the group experienced in carrying on its negotiations after the engineers withdrew as a result of the pressure brought upon them. Here is Mr. Burch's statement:

This was the greatest difficulty.

Gibbs & Hill was a top class outfit and when they publicly put in the paper that they did not know anything about the deal it gave sort of an off-color tinge to the whole proposition. It made it sort of smell, just to be candid about it.

Senator KILGORE. In other words it looks like skulduggery was afoot.

Mr. BURCH. It sure did.

I refer you to pages 89 and 90 of the transcript for the comparison made by Mr. Burch of the Von Tresckow proposal with the Dixon-Yates proposal.

Mr. President, anyone who will read the comparison of the two proposals cannot but feel that there is involved a special favor for a big utility monopoly. Substantially the difference is that under the Von Tresckow proposal over $100 million would be saved, and the Government in the end would own the steam plant. It would be closer to the grid system of the TVA. It would not affect the integrity of the Atomic Energy Commission, which has been asked to act as a power broker. It would not violate the independence of the executive departments. It would not be in a location where it would throw dust and ashes on the city of Memphis. It would not be in a location where a very expensive cable line would have to be built across the Mississippi River.

The interest of the Government is not being served under the Dixon-Yates proposal. It is very strange that an administration which is so anxious to save money would not even give a second examination or fair consideration to a group who had good financiers and engineers of experience and with respect to whom no one had said they could not carry out a contract. Under the Von Tresckow proposal, the plant would be built at Fulton, where TVA needed it to serve its load for which there was a demand.

Mr. Burch testified that under the lowest estimate the Von Tresckow proposal would cost the Government over the life of the contract $90 million less than the Dixon-Yates proposal, and would save more than $150 million under the highest estimate. It would always be integrated into the TVA system. Under the Dixon-Yates proposal, the plant would be located clear across the Mississippi River, and at all times it would belong to private utilities. There would be no profit to the Von Tresckow group other than $4 million for obtaining the money. Any other profit would be returned to the Government.

The Burch testimony made it clear that if the AEC and the Budget Bureau were active in the interest of the taxpayers and the consumers of electricity in the area, a very careful study should have been made of the Von Tresckow proposal. It is possible that such a careful scrutiny might have developed weaknesses in the proposal, but it appears obvious that in any event it was far superior to the proposal made by Dixon-Yates.

While I cannot say that the von Tresckow proposal should have been accepted, I do know that the manner in which it was brushed off by the AEC and the Budget Bureau in order to push through the giveaway of at least $3½ million a year of the taxpayers money to the Dixon-Yates interests, was disgraceful.

Here we have the situation of the executive department straining every effor to work out a deal with Dixon-Yates which could be approved, and at the same time refusing to give any consideration to a counterproposal which was highly preferable from a Government standpoint.

The record is clear that the Von Tresckow group was given a complete

brushoff, while the power companies were received royally, and much time was spent by the Government employees at the taxpayers' expense to work out a plan satisfactory to Dixon-Yates. The latter group was not required to satisfy any specifications prepared by the Government; as a matter of fact, the Dixon-Yates proposal was used by the Government to develop specifications which the von Tresckow group was required to meet. The specifications were so written that no one other than the particular utility in the area could comply with them.

Mr. President, the testimony shows that after Gibson-Hall quit as engineers, apparently as a result of pressure from some private power interests, other good engineers were obtained, as to whose competence no one has any doubt. No objections were made to the soundness of the Von Tresckow proposal, to the engineers, or to the financiers whom they had engaged. As of now, the Von Tresckow group are ready to sit down and work out a plan which will offer competition to the Dixon-Yates group. They are ready to negotiate, and they say that if they cannot give the Government a much better deal, they would be very much surprised.

On page 320 of the hearings before the Committee on the Judiciary, on July 2, 1954, after he had given the name of Burns & McDonald, of Kansas City, as the engineers, and the Long Construction Co. when asked whether they were now ready to consider bidding for the contract. Mr. Von Tresckow said, "They are."

I then asked him: So far as this contract is concerned, if you got the contract, you are in a position to proceed immediately?

Mr. Von Tresckow said: "Yes, sir; we are."

Mr. President, this shows the kind of background; it shows the reason why Congress should not approve the Dixon-Yates contract. This is proof in addition to what has been overwhelmingly shown, that the Dixon-Yates proposal is wholly a perversion of the Atomic Energy Act, simply for the purpose of trying to do a favor for a private power group. Those in authority did not want competition; they did not want to receive bids from anyone else. Congress should not put up with that kind of business. It is not fair; it is not good government. Congress, especially, should not stand for it, when the agency is being illegally and wrongfully used for the purpose of simply benefiting and helping one particular group.

I think it is about time that the good business people in the administration begin administering as business people. Let them treat the Government as the business which they have to administer, and let them remember the business they are supposed to administer is the Government's business, not the business of the Power Trust. The administration is working as representatives of the people. Let them act in the people's interest, in accordance with the best judgment they are supposed to have, not use the people for the benefit of the best interests of the Power Trust. Those are the very things which the Dixon-Yates deal will accomplish. God save us from such accomplishments.

After telling about the great things which will be accomplished, the Bureau of the Budget's statement continues with explanations.

One cannot breathe anything good into a proposal of this kind, which is bad from start to finish. It is simply bad from any angle it is looked at. It is bad for Congress, bad for the executive departments, bad for TVA, bad for the Atomic Energy Commission, and bad for the Nation.

This is one issue upon which there should not be a partisan division. On this issue, the Members of the Senate on both sides of the aisle should be interested in seeing that a great Government property is preserved. They should be interested in seeing to it that there is competition in bidding. They should be interested in seeing to it that an organization set up for dealing with atomic energy is not used simply as a power broker, for the purpose of trying to scuttle the Tennessee Valley Authority.

Mr. President, these are great issues in the controversy, issues which have far greater effect than simply how the proposal will affect the Tennessee Valley Authority. I hope that Members on both sides of the aisle will take a long look at what the eventual effect of this kind of business will have upon orderly Government in the United States.

I am thoroughly convinced that if anyone will consider the proposal with a fair mind, with respect to what is right, what is orderly procedure, and what will protect the prerogatives of Congress and the departments which it creates, he will vote for the amendment of the Senator from New Mexico [Mr. ANDERSON] which would prohibit this kind of contract.

Mr. President, I ask unanimous consent that the remainder of the statement I had prepared in support of my amendment be printed at this point in the RECORD.

There being no objection, the remainder of Mr. KEFAUVER'S statement was ordered to be printed in the RECORD, as follows:

They refer to the President's statement at his press conference on June 30, 1954, that the Dixon-Yates deal will meet immediate needs and allow additional time for the study of the question as to how the future power needs of the area should be met. It seems to me that somebody got a little mixed up here. It looks like the solution is coming before the study.

You don't take a program that has been operating as successfully as TVA has been operating and suddenly change the whole pattern of operation, on the ground that you want to study the program and you are buying time by changing the pattern. There is only one way to buy time for study here, and that is to let TVA continue to operate as it has always operated; and during that period the study can be made. Only when and if the study clearly shows that there should be a change in the pattern, should that change be made.

What the President is saying here is this: If you have a business which has been operating smoothly and extremely successfully over the years, but you nevertheless want to make a study to see whether changes in the operations might improve the business, what you do is make a complete change immediately, before you start your study, and in that way you get time for your study. It would seem to me that what any business of that kind would do would be to continue its successful pattern while it makes the study, and only when the study is completed, and if clearly shows that certain changes might profitably be made, will these changes be made. That's how any businessman would do it. It would be suicide for a businessman to operate in any other fashion. So how can the President and his administration of business people justify this radical change in the method of obtaining power needed in the TVA area on the ground that it will give him time for study? It would make as much sense to deliberately innoculate a healthy patient with some dangerous germ so as to give you more time to study ways to make him healthier.

This in itself shows how preposterous this whole thing is—the complete hypocrisy of an explanation that gives reasons that cannot be true. But we cannot be fooled that easily. It is only too clear that the administration does not want time to study TVA; it wants time to destroy TVA—and this marks the first important step in that direction.

The Bureau of the Budget goes on to say that the President's decision was taken only after the matter had been subjected to the most careful consideration. That, I think, is a correct statement as far as it goes. But I don't think it is a complete statement. They do not tell you who did the considering and what purposes they had in mind. Let me tell you, although it shouldn't be necessary for anyone to have to tell anyone else. The careful consideration was given by the Power Trust and the purpose is clearly to fool the people into accepting this horrible deal by making them think it is something other than what it is. Yes, I agree; a tremendous amount of consideration was given to the Dixon-Yates proposal, but I doubt they had the welfare of the Government or of the people in mind.

As a matter of fact, I can tell you that so much consideration was given to this deal, that the people in the Government agencies wouldn't even write memoranda to their superiors without getting the advice of the Power Trust representatives. Yes; that is exactly what happened. When the Bureau of the Budget employees wanted to write a memorandum to their own boss, to Mr. Hughes, they had to work the actual memoranda out with the Power Trust people. Talk about the Government cooperating with industry. In this case they turned over the Government to industry. They even turned over the Government staff and the Government functions.

This deal is a Power Trust deal and the actions and explanations purporting to come from the executive branch employees and representatives are nothing but the words of the Power Trust, put by them into the mouths of the Government employees and representatives. I repeat: yes; there has been the most careful consideration, but only by and on behalf of the Power Trust.

Then the Bureau of the Budget says that the attempts to distort the purpose and effect of the contemplated arrangement cannot change the essential facts. How true. In fact, a lot of their statements of this nature are true, except not in the way they mean it. I agree, and any fair-minded person would have to agree, that no matter what you call this Dixon-Yates deal, it is still an attempt to force the Atomic Energy Commission to be a power broker against the interests of TVA, and against the welfare of the people in the Tennessee Valley and of the entire country. Those are the essential facts and nothing that the Bureau of the Budget has said, or will say, can change those facts.

Then the Bureau of the Budget talks about shifting from the Government to the private

power interests the risk of AEC suddenly deciding that it did not need all of the power it was now placing under contract. That risk does not seem to be very realistic, but let's assume that there is a risk. How is it assumed by the power trust when the Government has to pay a huge cancellation fee? We are talking about a $107 million plant. The Government would have to pay a cancellation fee up to $40 million and, of course, the power trust would still own the plant. It could have a $107 million plant for $67 million and, remember, we are talking about an electric generating plant in an area where the normal uses of electricity are growing rapidly and are expected to grow as far ahead as we can see. The power trust would be building plants of its own for its own uses anyway. It would be a marvelous deal for it if it could take over this plant and use it for its regular customers without having to build other plants for those customers, at a discount or saving of $40 million.

It is perfectly ridiculous to talk about the risk of the power companies in this case. The risk is all on the Government's part. In other words, the Government is, in effect, telling the power companies "We will either take your power for 25 years and pay you a handsome profit, as well as substantial additional costs, or will make you a gift of $40 million so that you can have this plant for your own operation at bargain rates."

Remember, what we are dealing with here is electric power, one of the most essential elements of modern life. We are dealing with a product whose use has been growing at a rapid pace and whose use must continue to grow at a rapid pace. Throughout the country, the power companies have been adding to their generating facilities, and are constantly planning to install additional facilities. So the risk that the Bureau of the Budget talks about so glibly is more in their imagination than in the facts. There is no risk to Dixon-Yates—and there would be no risk to the Government if TVA built the Fulton plant. Increasing loads remove the risk.

This fiction, which has been introduced as one of the reasons for this deal, is one of the most misleading of a whole series of incorrect statements issued in justification of the deal. Let me repeat, and let me make it as strong as I know how to, there hasn't been and there is not now any plan for TVA to build any powerplants for the purpose of delivering power out of its area. The Fulton steam plant which was proposed for TVA was solely for the purpose of enabling TVA to meet the growing needs of the people and the area that it is now serving, and it is completely dishonest to say that one reason for going ahead with the Dixon-Yates deal, instead of allowing TVA to build the Fulton plant, is so that TVA should not be permitted to deliver power beyond its area. Let us nail this funny business now—and let it not be used again. Let us try to stick to the fact hereafter.

The Bureau of the Budget says that there was ample opportunity for interested parties to come forth with proposals to supply the Government's needs. Now, let us see what that ample opportunity was. They tell us that even before the President submitted the budget message they had been carrying on discussions with representatives of private utilities. It would be interesting if they would tell us the names of those representatives with whom they discussed the matter so far back. It seems to me that it is perfectly apparent that it was the representatives of the Power Trusts that formulated this policy, which has as its immediate goal the curtailment and hamstringing of TVA, and as its ultimate goal the destruction of all public and cooperative power installations.

Now what possible opportunity did they expect to give other interested groups to make proposals, when even the policy that was stated in the budget message was worked out with the power trust before it was made public? And from then on, Budget Bureau people worked closely with these representatives of the Power Trust. These representatives of the Power Trust did not have to guess what the Government was going to do, they were deciding what the Government was going to do. The only thing that was made public was the statement in the budget message that the President hoped to work out some way of relieving TVA of some of its power commitments to AEC so that TVA could better take care of its growing, normal loads.

Do you see the picture? On the one hand we have the representatives of the Power Trust helping to work out the Government's power policy and then continuously working with Government people to come up with some kind of deal like the Dixon-Yates deal. On the other hand, as far as everybody else is concerned, all that they could possibly know was that the President was going to try to work out some way of relieving TVA of some of its commitments to AEC. The Budget Bureau argues that the President's budget message was sufficient notice to the world that they were open to proposals to build a plant hundreds of miles away from the atomic-energy installations. They want us to believe that everyone knew what was going on merely from that one general unexplained statement in the budget message. They claim, therefore, that the suggestion that bidding was restricted is entirely without foundation. Again, their statement is correct, but it just doesn't go far enough. It is true that bidding was not restricted. Instead, bidding was entirely eliminated. No bids were called for. No information was disclosed upon which any bids could be based. In fact, as far as anyone knew, there wasn't a single indication that any offer or discussion with anyone was desired or intended. Everything was done in the utmost secrecy, in the hope that they could prevent opposition and investigation by suddenly coming forward with an accomplished fact.

Now it is customary that when you want the best price, the best offer, the best deal, you make your wishes fully known to everyone who might want to make an offer. You publish your specifications and you make yourself available for discussion in case interested parties want more information. And, of course, you set a time for the submitting of bids. Nothing like this was done. Also, you don't use language which, if interpreted at all, means that you don't want bids, because you are only going to deal with certain parties who are already operating in a given area. Yet the Budget Bureau itself, straining hard at this late date to find some explanation for its unbusinesslike behavior, can only say that it is obvious that the President's message meant that AEC would make a contract with the existing utilities operating in the Paducah area. And this is given as its explanation as to why everyone must have known it was in the market to buy power for TVA in the Memphis area. I defy Rube Goldberg to come up with a stranger explanation than this.

I might note at this point that careful as the Budget Bureau has been to try to make this look like an AEC deal, it is unable to stick closely to that reasoning. Every now and then, despite its care, it shows clearly that the whole transaction is for the purpose of buying power for TVA. For example, in trying to explain why it ends up with a deal for a West Memphis, Ark., plant, it says that "The TVA need is in the Memphis area, rather than at Paducah." But AEC is at Paducah. I suppose the Budget Bureau's reasoning runs something like this: "AEC uses power at Paducah. It has all of the power that it needs there. But TVA needs power at Memphis. So we'll let AEC buy the power for TVA that TVA needs at Memphis, but we'll just say that AEC is buying it to use itself at Paducah and no one can question what we say, regardless of how far it is from the truth." Fortunately, we can and do question it. Fortunately, we still have the right to bring the truth to the people. This we shall continue to do at every opportunity, so that the people will know the truth.

The Budget Bureau then goes on to say that the construction of a plant by the power trust near Memphis would benefit both TVA and AEC. Let us look at these benefits. AEC would benefit by paying a much higher rate for its power. Admittedly, that is a benefit for someone, but not for AEC or the taxpayers of the country. And TVA, I suppose, would benefit by spending $9 million for a transmission line from its system to the middle of the Mississippi River a line that would have absolutely no other use than to carry this power trust power to its system. Nine million dollars down the drain. TVA would also benefit by having to rely upon the antagonistic power trust for its source of power. That is a benefit that I am sure every businessman will appreciate. Just imagine having your worst enemies control the materials you need for your business. To the Budget Bureau this may be a benefit, but not to anyone else. TVA would have further benefits of the same kind. It would have to spend money all the time to maintain this unnecessary transmission line across half the Mississippi; and it would suffer unnecessary transmission line losses in addition. These are the benefits TVA would derive from this deal.

In the name of honesty and decency, let us stop talking this nonsense. There is no benefit in this deal for the Government or for the people. The only benefit is for the Power Trust.

The Budget Bureau then mentions, just in passing, that the first proposal it received from the Power Trust was in February 1954. It very carefully avoids mentioning what that proposal contained. Well, let me tell you what it contained. It was based upon an estimated construction cost of $200 a kilowatt. Now they are talking about an estimate of $165 a kilowatt. That, if you please, would mean a difference of $22,750,000 in the cost of constructing the plant. And even the $165 a kilowatt that they are now talking about is much too high—but more about that later. What I want to stress is that this Power Trust magnanimously offered to build this plant for $200 a kilowatt, even in the face of TVA having constructed its plant at Paducah for about $145 per kilowatt. But I do not suppose you can really blame the Power Trust representatives. After all, they had done all the work here. They had formulated the policy. They had decided where they wanted to put the plant. They had helped write the Budget Bureau's memoranda. Why shouldn't they make a real killing while they were about it? Isn't that always the way monopoly works? You eliminate competition, you take complete control, and then you "take" the Government and the people for all you possibly can.

But this was apparently too much for the Government people to try to get by with. After all, they did have their jobs to think about—and there might be an investigation. No, it would have been too bad to attempt. And the Power Trust boys must have realized this, too. Because it did not take them too long to come in with a revised proposal.

The revised proposal is based upon an estimated cost of $165 a kilowatt. This is a very high estimate. For a plant of the size under discussion a more reasonable and realistic "target" figure would be $150 a kilowatt.

TVA will beat $145 a kilowatt for its Shawnee plant. And examination of TVA's estimate and actual cost record shows that it has consistently beaten its estimates. Also, the cost records of plants built in the Middle South area justifies this statement.

Of course, I realize that the power trust intends to have the plant built by Ebasco, the old Electric Bond & Share Co. crowd. They are the ones who are responsible for the famous "Ebasco fiasco" at the Joppa plant which EEI is building to serve Paducah. Ebasco estimated that it could build the Joppa plant for $145 a kilowatt, and then did such a bad job that it will now cost about $200 a kilowatt. And yet right across the river from Joppa, TVA is building its Shawnee plant to serve AEC at Paducah. TVA estimated it would cost $147 a kilowatt, and its actual cost is going to be less than $145 a kilowatt. No wonder Mr. Murray, of the Atomic Energy Commission, who assumes full responsibility for having initiated the EEI plant, now calls it the Ebasco fiasco. Even in the face of this experience at Joppa, the power trust still wants to use its favorite Ebasco boys to construct the plant in this Dixon-Yates deal. Maybe that is why the estimated costs have been stuck up so high.

But frankly, I think that even Ebasco will have no difficulty beating the $165 per kilowatt estimated cost for the Dixon-Yates plan. That is what makes all this talk about ceiling price on construction sound so ridiculous. It should not be difficult to beat this $165 figure. So let us stop talking about the protection the Government is getting from the ceiling price in the Dixon-Yates proposal. It just doesn't mean a thing.

It is just as though you wanted to build a house that everyone knows can be built for $10,000 or less. Would you want to pay a heavy premium for protection against it costing $13,000 or $14,000. Instead of talking about the ceiling price protection, let us talk about the hidden gravy in the proposal. Remember, if the construction costs are less than $165 a kilowatt, the power trust gets the benefit of half of the savings. Since they should have no difficulty whatsoever beating the estimated cost of $165 a kilowatt, they stand to make a substantial additional profit through this device. There might be an additional profit of as much as $5 million for them.

Let us go back to my house illustration. If the house you want to build can easily be built for $10,000, would you consider it a good deal if the contractor said, "I'll charge you what the house actually costs, but we'll work it this way: We'll put in an estimated cost of $11,000. Then if it goes over $11,000, you and I will split the extra costs up to $12,000 and I will pay all costs over $12,000. On the other hand, if it goes under $11,000, you and I will split the savings." Obviously, that would be a device whereby the contractor would be insuring himself a higher price than the $10,000 he knows he can build the house for. When he built it for $10,000, he'll get $10,500 for it, instead of only $10,000.

That's the way this proposal is set up. This plant should be built for $150 a kilowatt. But by using an estimated figure of $165 a kilowatt for it, the Dixon-Yates group will end up getting $102,000,000 for a $97,500,000 plant. So let us stop talking about fictitious protection through the ceiling price, and let us instead look more closely at the hidden profits for the Power Trust in the high estimated cost price. And, remember, since AEC will pay all Federal income taxes for Dixon-Yates, the Power Trust will get this windfall tax free.

We now come to one of the better pieces of sophistry used by the Budget Bureau. It tries to justify the location of the new plant at West Memphis, Ark., more than 200 miles from Paducah, by saying that TVA has done the same thing itself. It says that this practice is entirely consistent with what TVA itself has done. It even tries to tell us that the location of plants has "only an incidental relationship to the locations at which the power is used." This is plainly misleading.

In the first place, no electric system is planned without determining just where the loads are going to be used, and the plants are always located so that there will be the least possible amount of transmission between the plants and the load centers. The location of the loads is not an incidental factor—it is one of the controlling factors. Secondly, it is the height of unfairness to compare the purchase of power for a single installation with the purchase of power for an integrated system. Certainly, if TVA were to be buying this power, it would buy it for delivery at or near the Memphis area, because that is where it is needed. It is not a question of a system paying no attention to the places where the power is needed. It is just the opposite of that—it is a question of getting the power at the place where it is needed. But we are not talking here of TVA buying power for its system requirements. We are talking of AEC buying power for its installation at Paducah, more than 200 miles from the site of the proposed plant. They insist that AEC has the legal authority to make this deal, and then they proceed to justify it on the basis of what TVA would do if TVA were buying the power. Do we need any clearer illustration of the fictitious nature of this entire deal? Do we need any further proof that it is nothing more than a device for getting around the law and making AEC a power broker to do for TVA what the law does not permit TVA to do for itself?

It is very interesting to note that the Budget Bureau, so anxious here to hurt TVA, must admit, though grudgingly, that TVA cost estimates have been sufficiently accurate to afford a satisfactory basis for comparison. Therefore, they cannot avoid using TVA's estimated costs as a yardstick with which to compare the Dixon-Yates estimates. This intrigues me. TVA has become a yardstick for the rates which the power companies charge their consumers. It has been very successful in that respect. As a result of the yardstick which TVA has furnished, electric rates to consumers for many miles outside the TVA area have been reduced. So this yardstick has saved the electric consumers of other areas countless millions of dollars. I might add at this point that even while saving these millions, for the electric consumers, there has been no damage to the power companies—they have prospered and prospered and are making more money than ever before.

But now we find that TVA is useful not only as a yardstick to measure the rates which power companies charge their consumers, but it is useful as a yardstick for comparing the cost of construction of plants by the power trust. I rather suspect that the real reason that the original outrageous proposal of the power trust in this case was reduced at all was because it could not stand any kind of comparison with that TVA yardstick. Yet this is the yardstick that the Budget Bureau would destroy. By not letting TVA build the plants that it needs, it destroys the TVA construction yardstick. And by compelling TVA to enter into an uneconomical arrangement for its power, it will destroy the TVA yardstick on consumer power cost. This proposal would return us to the days of the Insulls. We cannot allow that to happen.

Then the Budget Bureau enters into a discussion of the higher cost of the Government through the Dixon-Yates proposal as compared with a TVA plant at Fulton. The Budget Bureau consistently uses the figure of $3,685,000 as representing the added annual cost of the Dixon-Yates plan as opposed to the TVA plan. This difference of $3,685,000 a year is a tremendous difference in itself. Over the 25-year contract period, it would amount to more than $92 million. Thus, even on this basis, the Government would be paying extra charges in an amount almost equal to the cost of the plant itself. However, the $3,685,000 figure should not be accepted as any true measure of the difference in cost. The difference is bound to be much higher than that.

I do not want to get too technical in this, so I will not take each of these items that the Budget Bureau agreed was correct in the first instance, but then eliminated completely in their anxious attempt to beautify the Dixon-Yates proposal. Let me just point out that TVA estimates that the difference in cost to the Government between the TVA plant and the Dixon-Yates plant would be $5,667,000 a year, or $141,665,000 over the 25-year contract period. And TVA tells us that its estimates are on the low side. In other words, this $141 million difference is a conservative estimate and will probably run more.

Remember, now, the Budget Bureau itself had to admit that TVA's record in connection with estimates has been excellent, and, grudgingly, felt compelled to use TVA's estimates as a yardstick. Yet when it was found that even TVA's conservative estimate resulted in such a large figure in the difference of cost, the Budget Bureau deliberately changed some items and eliminated others.

Of course, there is another matter that should not be overlooked. Under the Dixon-Yates plan the power trust will own the plant at the end of the contract period. If TVA builds it, the Government will always own it. True, the Dixon-Yates plant will not be fully amortized at the end of the 25-year period, but the plant will have a useful life of at least 10 more years and it will be worth considerably more than the unamortized balance. So here is another windfall for Dixon-Yates and another extra payment by the Government.

The Budget Bureau, in its anxiety to make the Dixon-Yates proposal look good, stresses the fact that part of the extra costs in the Dixon-Yates proposal represents moneys that they will not keep, such as payments for State and local taxes and higher interest rates which Dixon-Yates will pay on their bonds. This is strange reasoning. What difference does it make to the Federal Government and to the Federal taxpayer that Dixon-Yates will not keep all of this extra payment? The Government will still have to pay it, and the Government will still have to raise the money with which to pay it from the taxpayer.

This argument that since Dixon-Yates will have to pay a higher interest rate on their bonds than the Government pays on its bonds, makes everything all right, is most unusual. Following that reasoning, I am waiting for Mr. Hughes, Director of the Budget, out of the wealth of his banking experience as vice president of the National City Bank of New York, to come forward with the proposal that the Government no longer borrow directly from the people, but, instead, it should let the banks take care of the borrowing for it. The fact that it will cost the Government more money that way could then be justified on the basis that it costs the banks more money to borrow money from the public and, therefore, everything is fine.

There is one more item that I want to mention regarding what I must call the completely misleading analysis submitted by the Budget Bureau. And that is they have based their major analysis upon the cost before escalation, rather than after escalation. This is not normal Government practice. It has been my experience that when the Government takes bids on contracts containing escalator provisions, the bids are compared on the basis of the ceiling price, rather than on the estimated price.

In other words, if the bid calls for: (1) an estimated price, and (2) an escalator provision, and (3) a ceiling price, as the Dixon-Yates proposal does, then in figuring out what it will cost and comparing it with other estimates, the ceiling price will be used and not the estimated price. That is what the practice has been, and, to the best of my knowledge, still is. But that is not the practice followed by the Budget Bureau in this case. Because that would mean an extra $285,000 a year in the Government's cost.

There is much more to be said about the Bureau of the Budget's figures. There is, for example, a hidden, windfall profit of hundreds of thousands of dollars a year in the energy charge of 1.86 mills per kilowatt-hour. This energy charge was determined after arbitrarily assuming a very high heat rate. And although this high heat rate was the basis for fixing the kilowatt-hour charge so high, there is no provision for reducing the kilowatt-hour charge if the heat rate is lower—as it is sure to be. This will give the power trust additional hundreds of thousands of dollars of profit each year—and it will be profit that will be free and clear of all income taxes, because AEC will have to pay those taxes for the Power Trust.

This is only a partial analysis of the Budget Bureau's explanation of July 9. There is much more to be said. I will not say it now—perhaps I will say it later. Or others may want to complete the analysis. But I do not want to say this: In all sincerity and in all frankness, I cannot conceive of a more misleading presentation than the Budget Bureau has been guilty of here. It is my earnest hope that an appropriate committee of the Congress will look into this matter closely. We cannot conduct the business of Government if members of the executive branch give us misleading facts and statements. The persons responsible for this outrage must be found—and must be called to account for their actions.

And in the meantime, we must stop this Dixon-Yates deal. The inability of the executive branch to give us any reasonable explanation of its shows in itself how unsavory it is. We must not let AEC do this illegal act. We must not let the Budget Bureau use this illegal act to destroy TVA.

Mr. KEFAUVER. Mr. President, I withdraw the amendment I earlier submitted.

The PRESIDING OFFICER. The Senator from Tennessee withdraws his amendment.

Mr. LENNON. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LENNON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. FERGUSON in the chair). Without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, I submit several amendments intended to be proposed by me to the pending bill, S. 3690, and request that they be printed and lie on the table.

The PRESIDING OFFICER. The amendments will be received and printed, and will lie on the table.

Mr. LEHMAN. Mr. President, I submit several amendments intended to be proposed by me to the pending bill, S. 3690, and request that they be printed and lie on the table.

The PRESIDING OFFICER. The amendments will be received and printed, and will lie on the table.

Mr. SPARKMAN. Mr. President, I have listened to a great deal of the debate which has taken place on the pending measure, and particularly that part dealing with the proposal to have the Atomic Energy Commission enter into a contract with a group of utilities which are proposing to join together for the purchase of power with which to supply the needs of the people of Memphis. I have had some chance to participate in questions and answers, although most of my time during the period of debate has been taken up in conference committees. However, I desire to say something in my own time before the debate comes to an end.

Mr. President, last January, I believe it was, when President Eisenhower delivered his message to Congress, in which he first proposed to relieve the TVA of the obligation to supply to the Atomic Energy Commission about half a million kilowatts of power, I recall that a newspaper reporter asked me what I thought of the proposal.

I said, "Of course, any proposal that promises to assure flexibility of power in the Tennessee Valley, sounds good. But I want to emphasize the point that it sounds good. I think we must wait to see what the actual proposal is, before we can really size it up."

Mr. President, my making of that statement may have been due to my sensing a need for caution. But how well it was that we did wait to see what kind of proposal would be made. I must say in all frankness that I never thought any such proposal as the one that broke forth would ever be sent to Congress in a Presidential message.

Mr. President, this matter has been hashed and rehashed in the course of the debate. Yet I feel that it is of such great importance that it will not hurt to review and re-review it.

I desire to associate myself with those of my colleagues who have said in all sincerity, in their remarks on the floor of the Senate, that this fight is not related primarily to TVA. It has been suggested, during the course of the debate, that this is a matter about which the Senators from the TVA area are objecting, because in some way it relates to the TVA. I wish to say in all sincerity, as did the able junior Senator from Tennessee [Mr. GORE] earlier today and yesterday—he has said it repeatedly in the course of the debate—that whereas the TVA is affected, that is not the primary concern we have regarding this proposal.

Mr. HUMPHREY. Mr. President, will the Senator from Alabama yield to me?

The PRESIDING OFFICER (Mr. FERGUSON in the chair). Does the Senator from Alabama yield to the Senator from Minnesota?

Mr. SPARKMAN. I yield.

Mr. HUMPHREY. I am pleased to hear the Senator from Alabama make the comment that this issue is not one relating only to the future or the well-being of what is known as the TVA. As a matter of fact, many of us who serve in the Senate realize that is not the full issue, although we realize the importance of the TVA aspects of the matter, and particularly the importance of the recent contract which was ordered to be drawn, and which would affect the Tennessee Valley Authority.

However, when the pending bill, comprising approximately 104 pages, is examined, it will be found that it would completely revise or modify the standards the Federal Government has had for years, in regard to the development of electrical energy and other forms of power. It will be found that, by means of the bill, many of the accepted standards pertaining to the development of public power under what we commonly call the hydroelectric or public power facilities of the Nation would be completely eliminated.

So what we are really talking about in this case is protection of the public interest. I think it fair to say that no single development in the Nation is more public in nature than the atomic development, for it has been paid for by all the taxpayers. Therefore, in the Senate there are many, including myself, who intend to cover thoroughly not only the TVA aspects—which already in the debate have been brilliantly covered—but also the provisions regarding instructions to the Atomic Energy Commission in regard to its dealings with private interests. In that connection, we intend to go through the bill page by page.

A few moments ago the Senator from Tennessee submitted and sent to the desk an amendment directed to that specific objective, namely, in this development to protect the public interest and to make sure that the standards developed in the United States over a period of 50 years are not suddenly done away with. His amendment was not at all for the purpose of prohibiting the use of this development by private industry.

I submit that if the bill is examined in the way the Senator from Alabama has examined it so carefully, it will be found, as both he and I know, that the preference clause, for example, which is so traditionally and essentially a part of the entire power policy of the Nation, is not provided in the bill and that protection for competing groups who may wish to be heard in connection with the issuance of licenses is not to be found in the bill. Yet in this measure we are dealing with a matter representing billions of dollars of public investment and untold future developments which no Member of the Senate can possibly appraise and determine. That is my interest in this measure.

So, Mr. President, I shall support the efforts of the distinguished Senator from Alabama [Mr. SPARKMAN] and the efforts of my friend, the distinguished Senator from Tennessee [Mr. GORE] in their struggle and battle against the unconscionable proposed contract relating to the Tennessee Valley Authority and the Atomic Energy Commission. But I am equally interested in the other phases of the pending bill, and I am delighted that the Senator from Alabama has referred to them.

Mr. SPARKMAN. I thank the Senator from Minnesota for his remarks. Of course he is correct; he is entirely correct in pointing out the various fields of activity and the various interests that are affected by the bill.

For instance, let me say that I have had correspondence, as I am sure the Senator from Minnesota and practically all other Members of the Senate have had, with small business people throughout the country who are wondering where they will be in regard to the matter of licensing, when the time comes that electric power will be generated from atomic energy. In view of all the considerations, they wonder where they will find themselves in respect to that situation.

Mr. HICKENLOOPER. Mr. President, will the Senator from Alabama yield to me?

Mr. SPARKMAN. I yield.

Mr. HICKENLOOPER. Mr. President, in response to the suggestions made by the Senator from Minnesota [Mr. HUMPHREY], I wish to state that, in all my experience during the past 10 years, I have never observed a bill which protects as well as this bill does those who are interested in obtaining licenses. The most profound and exhaustive protection is provided. So the Senator from Minnesota need not have any fear whatsoever that the bill will foreclose the rights of anyone, either in connection with hearings or in any other connection. That subject was treated with meticulous care by the committee. I do not mean to discuss it now; I do not wish to trespass on the time of the Senator from Alabama, who now has the floor.

However, I can not permit the insertion in the RECORD, without contradiction by me, of statements that the bill will foreclose anyone in connection with any rights in respect to licensing or in respect to any other matters dealt with or affected by the various provisions of the bill. Under the bill there will be the fullest rights in connection with the hearings, under the Administrative Procedure Act and under the functioning of the Commission.

So far as the public-power problem is concerned, it is not even touched in the bill; in the bill there is no provision for the development by the Commission of public power. The only place in the bill where that subject is touched is in the section that provides that if, in connection with research and development, the Atomic Energy Commission produces some incidental power—power which is not primary in its operations—and if the Commission has an opportunity to sell the power, it may sell a few kilowatts which otherwise might be wasted.

The question of the direct production of competitive power by the Atomic Energy Commission is not raised in this measure, and it is not authorized. If the Congress ever wishes to authorize it, now or at any time in the future, that question can be taken up at the proper time. There is no basis for concern about the two things which the Senator has mentioned. We shall discuss them later, but I want the RECORD to show that the fears of the Senator from Minnesota are utterly groundless.

Mr. SPARKMAN. Mr. President, let me say in answer to the able Senator from Iowa that the mere fact that we say we are interested in this subject or that subject, or concerned about how it is being treated, does not necessarily mean that we feel that everything in the bill is bad. But certainly there are things which need to be carefully considered.

I remember when the first atomic-energy bill ever came before Congress. I was in the House of Representatives at the time. I was a member of the Military Affairs Committee. It was our committee which handled the bill on that side of the Capitol.

I remember the tremendous fight we had at that time over the question of who should control atomic energy. The question arose to some extent then as to whether or not it should go out to private industry or should remain solely under Government control, also whether it should be controlled by the military or by civilians. It required a long time to devise the original act. It was a pretty good act. It did a pretty good job over the years. By the way, I wish to pay my compliments to the Joint Committee on Atomic Energy. I think it has done a fine job over the years. I do not criticize it for having written this bill, with all its features. I do not understand that the Senator from Minnesota was doing so. He was simply pointing out that there were contained in the bill many things of interest to the people of the country, and not merely the one thing about which we have been talking so much, namely, the proposal to enter into a power contract which involves both the Atomic Energy Commission and the TVA, and one which I believe is without basis of authority either in the act as it now exists or in the bill as it comes before us at this time.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. HUMPHREY. I wish to make my position perfectly clear. I am not condemning every feature of the bill. I will be quite candid with the Senator from Alabama. It was only yesterday that I had an opportunity to go through every article and every line of the bill carefully. Later this afternoon I spent more time on it. I have read the RECORD. I have listened to some of the debate. I must say that the RECORD I have read thus far shows that it is one of the finest debates we have had in the Congress for many months.

I do say, however, that the proposal before us, Senate bill 3690, is new. It would basically alter the Atomic Energy Act. It would open up an entirely new area of public policy, as it relates to atomic power and atomic development, and it would enter into a field of contractual relationships or licensing relationships between an agency of the Government and private investors or private corporations, the like of which the Government has never entered before.

If that is the case—and I do not think anyone can dispute it—the bill should certainly have the most careful scrutiny.

Further, I make the point that while it is true, as the Senator from Iowa points out, that theoretically, or in terms of the exact language of the bill, no one is denied the opportunity for participation in the so-called benefits of the measure, the fact is that, because of the cost involved in the development of reactor plants for the production of electrical energy, the licensing would be applicable or practicable only in a certain limited number of instances. I say it becomes a matter of public policy as to whether or not the Atomic Energy Commission itself should be empowered to enter the field of atomic energy development for the purpose of developing electrical energy.

If that be the case, then we come to the matter of the preference clause, or the preference treatment for public bodies, rural electric cooperatives, public power districts, and so forth. That is what we are talking about here. If we are thinking only in terms of what the language of the bill authorizes, in a practical sense we are talking about a handful of huge corporations which have the financial support, the credit, and the resources to enable them to utilize a license for the purpose of creating or developing electrical energy.

I do not recall what the figure was that the Senator from New Mexico [Mr. ANDERSON] used, but to develop an output of 250,000 kilowatts of power might involve costs of hundreds of millions of dollars. How many firms could afford such an investment? Of course, we shall have to discuss the question, and it will be a matter of considerable argument and debate, but it may be desirable or necessary, for example, if there is a necessity for more electrical energy for an atomic energy plant, to have the Atomic Energy Commission itself develop its own electric power as an incident to the development of atomic bombs or weapons, or other atomic materials. It may be that we shall need a pilot plant which may be required to be of considerable size, and which can be best developed by the Atomic Energy Commission in order really to pioneer in the field of low-cost energy output.

I am worried because up in the Duquesne project near Pittsburgh we may have a reactor plant which, because it is small, and because the process being used may not be the best process, will finally develop electrical energy at such a high cost as to make it seem that the use of atomic energy to develop electricity would be too expensive. I do not want that to happen. I wish to see something in the law which would permit the Atomic Energy Commission, either by itself or through a contract, to test every known process for the development of electrical energy, and to test it in large enough proportion or in a large enough installation so that we can get the maximum results with the amount of money we put into the plant.

Those are only ideas. I am not an expert in this field. I do not have to be an expert, however, to be concerned with the public interest. This bill consists of 104 pages. It is as new as the atom bomb itself was when it was discovered. It involves a fundamental departure from the basic Atomic Energy Act. I am not saying that it is not a good departure. I am saying, however, that we are now beginning to talk about the civilian commercial use of atomic energy for peacetime purposes, and we are discussing the field of licensing, into which the Federal Government will be entering

in ever-increasing measure. We are doing it without what I call the ordinary, traditional safeguards which we have developed over 50 years of history and progress under the Federal Power Act. Perhaps the Federal Power Act does not apply all the way. Undoubtedly there are differences, but I say that we ought not to discard the legislative and administrative development which has taken place over half a century when we move over into an area of electrical output such as is proposed in Senate bill 3690.

That is my view. I think I can make a pretty good case for that view, and I intend to do so before the debate is concluded.

Mr. SPARKMAN. Mr. President, I appreciate the remarks of the Senator from Minnesota. I think I am in agreement with what he has said regarding the bill and regarding the subject matter generally.

From the layman's standpoint, up to this point we have more or less discussed atomic energy in the field of weapons. Of course we knew that there were great possibilities with atomic energy, and that atomic energy had a tremendous potential for peacetime uses. Many of us have spoken on the subject on the floor of the Senate. We well remember the very able and distinguished late Senator from Connecticut, Brien McMahon, who time after time took his place on the floor of the Senate to remind the country of the great potential of atomic energy and the great danger which might result from it unless it were handled properly.

We are now moving to the point where the layman is beginning to think how this tremendous power, which man has learned how to use, can be managed in such a way as to provide mankind with all the blessings from the tremendous power potential it is capable of releasing.

Mr. HUMPHREY. Mr. President, will the Senator yield further?

Mr. SPARKMAN. I yield.

Mr. HUMPHREY. The Senator from Alabama may recall that at the time the Senate was debating the appropriation bill for the Rural Electrification Administration, the junior Senator from Minnesota engaged in a colloquy with the distinguished junior Senator from North Dakota [Mr. YOUNG], who was chairman of the subcommittee that had handled that appropriation. At that time I was very much concerned about the possibility of the utilization of atomic energy for private plant development, for purposes of rural electrification.

I want to be sure when we venture off into a licensing procedure which unlocks and unfolds and opens the great research facilities of our Government to the extent of over $12 billion—at least that is the actual expenditure made, all of which is not for research—and when we open this great new area of progress and development, that the REA's will be able to share.

Mr. President, there are areas in this country that have high power costs. I happen to come from one of those areas. Our REA's, in the main, have from the second to third highest cost for electrical energy of any rural electric cooperatives in the United States.

Let us consider our friends in the New England States. They are deeply concerned with this measure, because I believe the one hope our friends of New England have for cheap electrical energy or low-cost electrical energy may be found in the development and use of atomic energy for the creation of electric energy.

We should make it crystal clear in any bill we pass that it includes protection for the public interest, and we should make sure that we do not violate the preference clause. We should also make sure that we do not penalize the rural electric cooperatives. We should make sure that municipalities which have their own municipal power systems can share.

I want to be sure, Mr. President, that the small private utilities can share. I do not want to be a party to driving them out of a legitimate business.

From all that I have been able to understand, that should be made clear, if for no other purpose than for the legislative history, so that we will know exactly how we are proceeding.

The Senator from Alabama mentioned the interest of small business in the pending bill and in the whole atomic energy civilian development program.

I have before me a letter from my distinguished colleague, the senior Senator from Minnesota [Mr. THYE], who is chairman of the Senate Select Committee on Small Business. He has been kind enough to present to me—as I am sure he has to other Members of the Senate—some observations on the measure before us, and as to what he believes to be the responsibilities of the Select Committee on Small Business. No doubt the distinguished Senator from Kansas [Mr. SCHOEPPEL] has received a copy of this letter, because he is a member of the Select Committee on Small Business, as is the Senator from Alabama, who is the ranking Democratic member of that committee.

If the Senator will permit me to do so, I think it might be well to have the letter placed in the RECORD at this point, unless it was printed previously, in which case it may be deleted from the RECORD.

I ask unanimous consent that at this point the exchange of correspondence between the junior Senator from Minnesota and the senior Senator from Minnesota, and the report of the senior Senator from Minnesota, as chairman of the Select Committee on Small Business, be placed in the RECORD.

There being no objection, the correspondence and report were ordered to be printed in the RECORD, as follows:

JULY 8, 1954.

The Honorable EDWARD J. THYE,
Chairman, Senate Select Committee on Small Business,
United States Senate,
Washington, D. C.

DEAR ED: Within the last few days the Joint Committee on Atomic Energy has reported to the Senate S. 3690, designed to make extensive changes in the Atomic Energy Act. These changes appear on their face to have a serious effect on American small business as well as on the rural electrification cooperatives which are so numerous in the Nation, particularly in our State of Minnesota.

It appears to me that this bill ought not to be considered by the Congress until the Senate Select Committee on Small Business has had an opportunity thoroughly to examine the bill and hold hearings on its possible small-business and REA impact. It has been encouraging to me that within the last few days an increasing number of our Minnesota citizens and rural electrification associations in our State and elsewhere have written me urging hearings and the same course of action.

In view of the fact it is likely that the Senate will be asked by the leadership to consider the new atomic energy bill within the next few days, it is my hope that you will announce the intention of our Senate Select Committee on Small Business to hold hearings quickly and thus urge postponement of floor action until we have had an opportunity to consider the bill and carry out our responsibilities to the Senate.

I look forward to hearing from you.

Sincerely,

HUBERT H. HUMPHREY.

UNITED STATES SENATE,
SELECT COMMITTEE ON SMALL BUSINESS,
July 14, 1954.

The Honorable HUBERT H. HUMPHREY,
United States Senate,
Washington, D. C.

DEAR HUBERT: This is in reply to your letter of July 8, 1954, concerning the amendments to the Atomic Energy Act as incorporated in Senate bill 3690 currently being discussed on the floor of the Senate.

You indicated in your letter that you had received communications from citizens of Minnesota and rural electric cooperatives in Minnesota concerning certain amendments which could affect these co-ops in future years.

I have also received a total of eight such communications. The specific part of Senate bill 3690 to which these communications are directed is that part of the bill which deals with compulsory licensing of patents.

Both as a United States Senator from the State of Minnesota and as chairman of the Senate Small Business Committee, I felt it my duty to explore this matter carefully and thoroughly. In view of your interest in this matter, I am attaching herewith a review of my actions and a statement of my thinking on the matter.

I trust that this will be helpful to you in your consideration of Senate bill 3690.

Sincerely yours,

EDWARD J. THYE, *Chairman.*

As chairman of the Senate Small Business Committee, I have been concerned within the past month with eight telegrams and letters I have received from certain rural electric cooperatives on the subject of amendments to the Atomic Energy Act. These amendments are currently under discussion on the Senate floor in the form of S. 3690.

The communications I have received have been concerned primarily with those provisions in the present bill which deal with the compulsory license provisions as contained in section 152 of S. 3690. It is the contention of the co-ops that the bill does not contain sufficiently stringent provisions which will prevent private utilities from gaining a monopoly in the all-important field of development of nuclear power.

I want to make clear that both as an individual Senator and as chairman of the Senate Small Business Committee, I will continue to fight against any form of monopoly which would serve to weaken our free enterprise economy. I also feel compelled to add that as one who has spent his entire life fighting for a healthy and strong agricultural economy in this country, I am fully aware of the future potential which the production of nuclear power holds for the rural areas of the Nation.

During the past few weeks I have personally studied carefully all the information I have been able to receive on the subject of atomic energy. The staff of the Small Business Committee has also been working on this matter for the past 3 or 4 weeks. I have kept in constant touch with the staff to keep abreast of their activities, I have read the proposed bill, and I have gone over the report of the Joint Committee on Atomic Energy which was issued on July 12, 1954.

In considering whether the Small Business Committee should hold hearings on the amendments to the atomic energy bill, it had to be determined that such hearings would be in the best interests of all parties concerned.

In the course of our study, we found that section 15 (b) of the atomic energy bill and section 201 of S. 3690, we found the following language: "All bills, resolutions, and other matters in the Senate or the House of Representatives relating primarily to the Commission or to the development, use, or control of atomic energy shall be referred to the joint committee."

That immediately raised the question of the jurisdiction of our committee. A study of this point reveals that it was the clear thinking of both Houses of Congress that the subject of atomic energy was of such great importance to the American people that it demanded the appointment of a joint congressional committee which would devote all of its time and energies to this subject. There has been no dispute as to the soundness of that decision. The Senate has nine Members on the joint committee chosen from both political parties. The nonpartisan character of the work of the joint committee has impressed me on many occasions. The work of the committee and its staff has always been of the highest caliber and has earned the deep respect not only of the Congress but of the American people.

When I read the law quoted above, I immediately instructed the staff of our committee to contact the staff of the joint committee in an effort to accomplish the following:

1. To determine if all parties interested in the amendments to the atomic energy bill had been given an opportunity to appear before the committee to present their views.

2. To relate to the joint committee the nature of the complaints we had received.

3. To determine if the same subjects had been discussed in hearings held by the joint committee.

4. To determine whether careful study had been given to these complaints.

The staff of our committee has reported to me as follows in line with my instructions:

1. The parties who have written to this committee were represented before the joint committee and testified on S. 2690.

2. The Small Business Committee staff did relate to the joint committee the nature of the complaints we had received.

3. These same complaints were registered with the joint committee.

4. A most careful study was given to these complaints by the joint committee.

In line with point 4 above, I call your attention to the fact that the subject of compulsory licensing was one of the most controversial subjects taken up by the joint committee. That is evidenced by the minority reports presented in the joint committee Report, No. 1699. One minority report took the position that there should be no compulsory licensing provisions contained in the bill. Compulsory licensing was attacked as being unconstitutional, unnecessary, dangerous, and in conflict with current patent laws and procedures.

The other minority report stated that the bill did not go far enough in providing for compulsory licensing and that the bill placed too many requirements for obtaining such a license.

It is interesting to note that no Senator of either party wrote a minority report on any subject contained in the bill. In other words, the nine most capable Senators whom we have designated to represent the Senate of the United States on the joint committee are recommending that we adopt the provisions as written in S. 3690. That does not mean that we are obligated in any way to accept these provisions. The floor debate on this bill has already demonstrated that there are certainly many questions which must be explored and debated on the Senate floor. However, the fact that compulsory licensing was a major topic of discussion within the joint committee, the fact that both extremes on this subject are ably set forth in the report, and the fact that none of the Members of the Senate on the joint committee filed a minority report must weigh heavily when you consider whether or not another committee of the Senate should open public hearings on the same subject matter.

Should another committee of the Senate hold hearings on these provisions, it is logical to assume that the same parties would appear and the same arguments would be advanced. The question of needless duplication of effort immediately comes to mind.

It would appear that the joint committee in reporting out S. 3690 took into consideration all of the arguments proposed and have come to us with a carefully thought-out compromise.

I also feel impelled to add that the staff of the Senate Small Business Committee has also contacted the REA concerning this matter. We have been assured that REA, under the direction of Ancher Nelsen, has already taken measures that will insure that the agency will be kept abreast of all developments in the nuclear power field and will be in a position to work with the Atomic Energy Commission in those matters which will be of future benefit to the Rural Electric Cooperatives of this Nation.

Returning to the subject of compulsory licensing, it must also be realized that there are many businessmen represented by our committee in the Senate who are opposed to such a provision. We have a situation where the same arguments at both extremes of this subject would present themselves just as they did before the joint committee.

I strongly believe that this field of nuclear power development must be closely watched by all Members of the Senate, and every effort must be made by the Congress, by the Department of Justice, by the Atomic Energy Commission, and by the Federal Trade Commission that the small-business concerns and the rural electric cooperatives and other parties in interest are not frozen out by anyone who has monopolistic designs on this development.

In line with that thinking, I can assure you that as long as I am chairman of the Small Business Committee and as long as I am a Member of the United States Senate, I will do all that is in my power to insure to future generations the fullest development of atomic energy for peacetime use, free from the encroachments of monopoly. I have, therefore, instructed the staff of the Senate Small Business Committee to make the subject of atomic energy a continuous part of the work of this committee. We have been assured the fullest cooperation from the joint committee, the Atomic Energy Commission, the REA, the Justice Department, and the Federal Trade Commission.

Mr. SPARKMAN. Again I should like to thank the able Senator from Minnesota for the fine contribution he has made. Since he has brought up the subject of power to be generated by atomic energy, I noticed in the exchange of remarks a little while ago with the distinguished former chairman of the Joint Committee on Atomic Energy and now vice chairman of the joint committee, the Senator from Iowa [Mr. HICKENLOOPER] that he stated there was no provision in the law at present, nor in the bill before us, for the generation of power by atomic energy.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. HICKENLOOPER. For the generation of competitive commercial power.

Mr. SPARKMAN. What is that?

Mr. HICKENLOOPER. For the generation of competitive commercial power.

Mr. SPARKMAN. I understood the distinguished Senator to say that there was no provision in the law at the present time, nor in the bill before us, for the Atomic Energy Commission itself to establish powerplants for the generation of power.

Mr. HICKENLOOPER. Commercial power.

Mr. SPARKMAN. For commercial uses.

Mr. HICKENLOOPER. In connection with research and development, occasionally some power is produced.

Mr. SPARKMAN. That is casual power.

Mr. HICKENLOOPER. Yes.

Mr. SPARKMAN. That is true. If I recall correctly, that is in section 44.

I was interested a few days ago when in discussing the bill the Senator from Rhode Island [Mr. PASTORE] said something about section 44, the Senator from Colorado [Mr. JOHNSON] expressed surprise that the Atomic Energy Commission did not have the right, and certainly was not being given the right in the pending bill, to establish and operate its own powerplants.

I may say that I have heard a good many persons express concern over the fact that there was not some kind of work to be carried on by the Atomic Energy Commission, of sufficient size to make certain that a proper conclusion would be arrived at on the question of the cost of generating electric power from atomic energy.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. HUMPHREY. Is it not rather strange that we should be considering the passage of legislation which would be so restrictive that it would not permit the Government of the United States to protect its own interests and its own investments in the great field of atomic energy, by being denied the right, let us say, of producing power?

I am not saying that the Government should produce it, but I certainly do not want the Government of the United States denied the right to produce power.

There is a great power shortage today in America. Certain areas of America have dire power shortages.

As I understand, we are going into the field of atomic energy development by private resources, and justly so. We want to share this great development with our private enterprise system. However, I want to say that we have something more than a private enterprise system in this country. We have a private enterprise system and, I hope,

a competitive enterprise system, and a free enterprise system.

Sometimes people stop at just "private enterprise system." A monopoly is private in a sense, but it is not competitive or free. What I am interested in is that if the Government of the United States is to take action in this great commercial field—and that is what we are talking about, we are talking about commerce—we should try to implement what is the avowed policy of the Government, namely, the maintenance of free and competitive enterprise.

We have on the statute books the Sherman Antitrust Act, the Clayton Act, the Federal Trade Commission Act; and we have public bodies after public bodies, and public law after public law, dedicated to one proposition, namely, competitive free enterprise, and to keeping it strong and alive.

If we are to legislate in this area we should make sure of two things; namely, that the Government of the United States itself is not restricted to a point where it cannot protect its investment, or where it cannot perform an adequate and proper service; and second, that in the private area we do not legislate so that only a few private developers can enter that area. Instead, we should make every effort to make participation as broad as it is humanly possible to make it, because it is a great new frontier. Mr. President, this is a great new frontier. It is as great a frontier today as was the first railroad 100 years ago. It marks a great new area of progress. It is greater than the development of the incandescent lamp or the discovery of electricity itself.

Certainly we need to make sure that we do not write into the law language which is so restrictive or in any way so prejudicial to the interests of free enterprise that it denies the widest participation.

So I have two standards. One, Can the Government protect its own interests and the public interest under this proposed legislation? Two, Will the adoption of this proposed law provide the widest participation on the part of the largest number of possible participants? That would include REA's, public bodies, private utilities, private corporations, and so forth.

I think those are fair standards. If we fulfill those standards, we shall have done a great service for our country. We do not wish to keep the secret of the atom locked up or keep it as only a destructive force. The dream of the late Senator McMahon was that we might use this tremendous discovery for the good of all mankind. Let us not use it for the good of only some of mankind. Let us make it available as broadly as is possible.

Mr. SPARKMAN. We must be very careful lest it fall into the hands or into the control of a few who can afford the expensive facilities necessary to develop it and get the full use of it. So I think there is something to the suggestion made a couple of days ago by the distinguished Senator from Colorado, a member of the Joint Committee on Atomic Energy, who expressed surprise that we were not giving the Atomic Energy Commission the right to build powerplants. I got the impression at that time that the Senator might propose an amendment in order to carry out that very purpose. The Senator from Minnesota will remember that the Senator from Colorado made some remarks on the floor regarding the need of that kind of program being written into the law.

Mr. HUMPHREY. Mr. President, will the Senator from Alabama yield?

Mr. SPARKMAN. I yield.

Mr. HUMPHREY. I recall that very vividly, and I recall reading the Senator's remarks. I think the distinguished Senator from Colorado has proposed or is about to propose an amendment which will accomplish the purposes about which he was concerned. I have proceeded forthwith to do the same. Since it has been discussed, it appeared to me that it would be only prudent and wise, conservative and constructive, to protect the public interest in that manner.

Mr. SPARKMAN. Of course, this discussion arose really from the suggestion of the Senator from Minnesota that the bill contains many things which we need to consider. We have mentioned particularly the item of small business, and now we want to make sure that the general public gets the benefit of everything that is done.

On yesterday the distinguished Senator from Rhode Island [Mr. PASTORE] made a very fine presentation of the international problem involved and gave us the recommendations of President Eisenhower when he delivered his famous speech that gave a lift to the entire world on the question of using the great secret of atomic energy for the purpose of bringing about a better standard of living and a better chance in life not only in this country but all over the world.

Mr. President, it was my intention to spend most of my time in discussing something which I think is a dangerous precedent. I know many other Senators feel the same about it as I do. I refer to the directive from the President of the United States through the Budget Bureau to the Atomic Energy Commission, to go into the market and become a powerbroker, to buy power not to be used at any of the Atomic Energy Commission's installations, but, instead, to be used in and around the city of Memphis for the purpose of supplying power to people in the Memphis area.

I have tried to find some legal basis for such an order being given, but I must admit that I have not been able to find it. I have not found a place where anyone else has said with definiteness and certainty that there is such authority granted by the law.

Mr. HICKENLOOPER. Mr. President, will the Senator from Alabama yield?

Mr. SPARKMAN. I yield.

Mr. HICKENLOOPER. I hold in my hand an opinion of the general counsel of the Atomic Energy Commission in which he quotes section 12 (d) of the Atomic Energy Act and states that this gives the Commission the necessary authority to make contracts.

Mr. SPARKMAN. Yes; I have heard that opinion referred to. I heard it in the debate on the Senate floor. I have read that section of the law. While I have not seen the letter which the counsel wrote, I have heard quotations read from it, and I must say it seems to me he went far out of the way in his effort to find legal authority.

Mr. Davis, counsel to the Antimonopoly Subcommittee of the Committee on the Judiciary, requested General Nichols of the Atomic Energy Commission to furnish that committee with all legal opinions of the counsel relating to the legality of the Atomic Energy Commission's entering into such a contract. The answer was a single legal memorandum. I assume it is the same memorandum which has been referred to by the able Senator from Iowa.

That memorandum was from the counsel of the Atomic Energy Commission, and it was dated June 22, if I remember correctly.

According to the record, the Atomic Energy Commission began negotiating for this contract last December, or somewhere about that time. It had been negotiating and working on the contract for 6 months before any legal opinion had been given or reduced to writing. Apparently there was no such legal opinion reduced to writing until the request to the Atomic Energy Commission from the Antimonopoly Subcommittee of the Judiciary Committee of the Senate. Apparently it was not until a few weeks ago that the Atomic Energy Commission did actually look into the question, after the thing was done, after 6 months of negotiations had been carried on.

One thing which has been quite noticeable to me has been the fact that the General Accounting Office, when the question was submitted to that Office, certainly raised a considerable doubt as to the legality of any such proposal or any such contract.

I still say, Mr. President, that from my viewpoint it is illegal, and from my viewpoint it establishes a dangerous precedent in our governmental setup to have an order issued to an independent agency to do something which that agency does not believe ought to be done. Of the 5 Atomic Energy Commissioners, 3 of them testified openly that they did not believe it should be done. As a matter of fact, when the plan began to develop they wrote letters protesting against it and saying it should not be done; that it was carrying the Atomic Energy Commission far afield.

Mr. GORE. The fact that the Commissioners felt sufficiently strong in their views to go to the extent of writing the strongly worded letters indicates that the precedent is of considerable importance. If Congress permits, without protest, without action, an independent agency so important as is the Atomic Energy Commission to be overruled, directed, and ordered, over its objection, to take action unrelated to its program, then does not the Senator from Alabama think that other independent agencies will look to the example and wonder whether, if the test comes to them, Con-

gress will back them up in the exercise of their sworn duty as they interpret it?

Mr. SPARKMAN. I certainly agree with the statement made by the distinguished junior Senator from Tennessee. That is the reason why I consider this proposal to be a dangerous precedent. Congress, from time to time, sets up agencies—administrative agencies, quasi-judicial agencies, and agencies which are independent. We call them independent because they are not a part of one of the departments; they are not presided over by a member of the President's official family; they are not in the direct line of command. They are supposed to be independent. That is exactly what we mean when we call them independent agencies.

Mr. GORE. During the years I have been in Washington and have been observing government, and even before I came to Washington, it has seemed to me that the creation of a so-called independent agency follows the recognition of a particular function. The Atomic Energy Commission is an example of a new independent agency following the recognition of a new field of activity.

The Federal Communications Commission followed the development of radio, a functioning field of activity which no established governmental agency had the facilities and the experience with which to deal.

Great store has been placed upon the independent agencies. Some of them are quasi-judicial in power and character.

Of course, I would not deny to the Chief Executive his rightful powers. The budgetary powers of the President are not challenged by this amendment. They are not challenged at all. I think no power of the President is challenged by this amendment. I think the independence and integrity of the independent agency involved is reasserted by the amendment.

Mr. SPARKMAN. I agree with the Senator from Tennessee, of course. I am not certain, but I believe that the Interstate Commerce Commission certainly was one of the very first independent agencies. It does not decide cases or set policy in accordance with orders from the President. It takes the laws which Congress enacts, and then sets a policy in keeping with those laws. It is not responsive to orders from the President; and the President does not give the Interstate Commerce Commission orders.

I have always felt that when Congress set up the Atomic Energy Commission, it tried to set up, if I may say so, the No. 1 independent agency. Congress wanted it to be independent. It provided that the Commissioners should serve for a definite term of years, and not to be subject to removal except, as I understand, for cause.

Mr. GORE. Specific cause.

Mr. SPARKMAN. On specific charges. Congress made the Atomic Energy Commission independent. But certainly if the Commission knuckles down, or if it is made to knuckle down, to the present directive which is given to it, it will lose its independence. As the Senator from Tennessee has so well said, it will set an example for other independent agencies; and the directive certainly lends temptation to the Executive to handle those independent agencies in the same manner.

Yet the Commissioners thought strongly enough of the directive that they wrote letters voluntarily. No one asked them to write the letters. So far as I know, that was done before anyone else protested. I do not remember the date of the letters, but I assume it was before the matter actually became aired to the public. Because they saw that the directive was an infringement upon the independence of the Atomic Energy Commission, the Commissioners sat down and wrote letters saying, "Do not impose this upon us, because it is not our function to go out into the market and to bargain for power for use by someone else; power not for our use, either in connection with construction or operation."

As I recall the statute, it provides that the Atomic Energy Commission shall have the authority to contract for power to be used in connection with the construction and operation of the atomic energy installations at three places—Oak Ridge, Portsmouth, and Paducah. It is under that provision, I assume, that the legality of the Dixon-Yates contract is attempted to be supported.

Yet to me it seems so farfetched that I simply cannot understand how any legal mind could come to the conclusion that an order from the President of the United States to an independent agency to go into the open market and buy power for the purpose of supplying the needs of private citizens in the Memphis area, not in connection with operations or construction, as laid down in the law, but for an entirely different purpose, was a legal action.

Mr. President, many protests have been raised about this deal since word got out all over the country of just what was involved in it. I have been impressed, and I believe others have been impressed, with the various editorials which have been placed in the RECORD, some of them during the course of the debate, and many of them, by the way, from newspapers published outside the particular area concerned.

Some of our friends continue to try to make it appear that this is a TVA fight, but I think some of the strongest editorials which have been seen anywhere have come from great newspapers entirely removed from the TVA area.

The able Senator from Oklahoma today read into the RECORD an editorial which I placed in the RECORD 2 or 3 days ago, which was published in a Scripps-Howard newspaper.

It happened that the newspaper from which the particular editorial was taken was the Birmingham Post-Herald of Birmingham, Ala. It is part of the Scripps-Howard chain. The same editorial may have been published in other Scripps-Howard papers throughout the country. We know that that often is done.

The able Senator from Oklahoma pointed out that the Scripps-Howard newspapers were among the strongest supporters of President Eisenhower in his campaign for the Presidency in 1952.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. HICKENLOOPER. I have not seen such an editorial in any other Scripps-Howard newspaper. I call the attention of the Senator from Alabama to the fact that that particular editorial appeared in a newspaper which is published in the heart of the TVA area.

Mr. SPARKMAN. That was the next point I was about to make. Birmingham is not in the TVA area, and never has been.

Mr. HICKENLOOPER. It is shown in the map of the area as being located there.

Mr. SPARKMAN. As a matter of fact, Birmingham does not use TVA power, it never has, and it never will.

Mr. HICKENLOOPER. It will if TVA has its way.

Mr. SPARKMAN. No; Birmingham is completely removed from the TVA area. That is the point I was about to make. I had started to say that the Birmingham Post-Herald was the first newspaper outside the TVA area to publish such an editorial.

Mr. HILL. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. HILL. Is it not true that a Scripps-Howard publication which carried the strong editorial was the Washington Daily News in the Capital of the Nation, which is not in the TVA area?

Mr. SPARKMAN. That is correct.

As I said in the beginning, while the editorial was published in the Birmingham Post-Herald, I do not know which other Scripps-Howard newspapers may have carried it. I do not believe the Washington News carried that exact editorial, but carried one that probably was even stronger.

Mr. HILL. It carried perhaps as strong an editorial as did any other newspaper in the country.

Mr. SPARKMAN. Yes, it certainly did. The New York Times was one of the strong supporters of President Eisenhower, but it has editorially urged him to reject the unreasonable proposal he has suggested. The same is true of the Washington Post, which supported President Eisenhower.

Mr. HILL. The Denver Post was also one of the strong supporters of President Eisenhower.

Mr. SPARKMAN. Yes, and that newspaper is located in the same State in which the President's summer home is located. I was about to say that the Denver Post is a Scripps-Howard newspaper. I am not sure that is correct.

Mr. HICKENLOOPER. Mr. President, will the Senator from Alabama yield?

Mr. SPARKMAN. I yield to the Senator from Iowa.

Mr. HICKENLOOPER. Does the Senator know whether the ownership of the Chattanooga Times has any relationship to that of the New York Times? Does it belong to the same group of owners?

Mr. SPARKMAN. Yes. I have not mentioned the Chattanooga Times, because that is published in the TVA area.

The Chattanooga Times is a subsidiary of the New York Times.

Mr. HICKENLOOPER. And it is published in the TVA area?

Mr. SPARKMAN. Yes.

Mr. HICKENLOOPER. So the views of the New York Times on that particular issue are bound to be connected with its commercial interests in that area, are they not?

Mr. SPARKMAN. I do not think so, but if the distinguished Senator from Iowa wants to eliminate the New York Times from consideration, that is satisfactory to me, because, goodness knows, we can find considerable support elsewhere. As a matter of fact, it is remarkable that great newspapers all over the country have pointed out the danger of the President's using the Atomic Energy Commission in the manner contemplated by the Dixon-Yates proposal.

I have stated before, and I want to state again, that a most unusual thing has happened. It was a directive from the President of the United States to an independent agency to make a contract with a company that has not even been organized, for the purchase of power from a plant that has not been built. As a matter of fact, I am not certain the company will ever be organized, because I am of the opinion that when the matter comes to the Securities and Exchange Commission, they are going to look into the proposal very carefully. It is not going to be one of these casual legal opinions after certain action has been taken. Certainly they are going into the question from the beginning. I doubt that the company will ever be organized.

Mr. President, there are many comments I should like to make about the Dixon-Yates proposal. I must say, in all frankness and all earnestness, that I do not know of anything that I could say which has not already been said. Every phase of the proposal has been covered. The debate has been excellent, and, in my opinion, it has been a highly educational one.

Mr. GORE. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield to the Senator from Tennessee.

Mr. GORE. Before the Senator closes his remarks, I think it would be worth noting that whereas during the first day of debate a preponderant amount of the discussion was with regard to the TVA, which was thoroughly put to trial, in the debate today the TVA has been mentioned only incidentally. Today's debate has been relative to the big issue presented by this controversy, namely, the independence and integrity of the Atomic Energy Commission——

Mr. SPARKMAN. And, impliedly, every other independent agency of the Government.

Mr. GORE. That is correct; and there have been covered questions of the validity or illegality of the contract, the improvidence of the contract, and the tax immunity proposed to be granted. I believe those three questions have been the center of debate today. I think there has been an improvement in the quality of the debate since the TVA has not been at issue. Today's debate has related to the issues presented by the amendment of the junior Senator from New Mexico.

Mr. SPARKMAN. The Senator from Tennessee is exactly right. I have joined with him from the very beginning in saying that this was not primarily a TVA fight. The primary question, and the most important question, is the preservation of the integrity of independent agencies in this Government of ours.

Mr. GORE. While the majority leader is present, I want to bring up one question. I am not sure he was present on the floor when the question was debated.

Does the Senator from Alabama find any justification or any basis upon which we can justify the approval of a contract which would select one corporation in all of America and provide that it shall have immunity from taxation and, no matter what emergency may arise in the next 25 years, which is the term of the contract, although we may have to raise corporate taxes and may have to reimpose excess profits taxes, we will say to this one company, "You are something special. You will bear no additional burden. You have a taxproof bomb-shelter"?

Mr. SPARKMAN. There is no justification, and the Senator from Tennessee properly pointed that out. Earlier in the day the distinguished Senator from Oklahoma [Mr. MONRONEY] discussed that point, and I brought out, in a colloquy with him, that whereas we have heard a great deal about the contract being one which would help private enterprise, it would actually strip away from the company that is supposed to exemplify private enterprise the two basic elements of private enterprise—payment of taxes and the element of risk.

Mr. GORE. And competition.

Mr. SPARKMAN. Yes. I go back to the statement I made in the beginning: It is a most unusual proposal.

Mr. President, I had intended to say something about the monopoly features of the bill. As we all know, an antimonopoly subcommittee has been holding hearings on the question. The hour is growing late, and I shall not go into that phase. It is my understanding that the majority leader is ready to move a recess. I hope that before the debate concludes, one of our colleagues will discuss the antimonopoly features of the bill, because I think that is an important question and one which should be discussed in the course of the debate. However, Mr. President, I shall not impose upon the Senate any longer, so at this time I yield the floor.

Mr. FERGUSON. Mr. President, I send an amendment to the desk and ask for its present consideration.

The PRESIDING OFFICER (Mr. THYE in the chair.) The clerk will state the amendment.

The LEGISLATIVE CLERK. On page 80, after the period in line 9, it is proposed to insert the following:

The authority of the Commission under this section to enter into new contracts or modify or confirm existing contracts to provide for electric utility services includes, in case such electric utility services are to be furnished to the Commission by the Tennessee Valley Authority, authority to contract with any person to furnish electric utility services to the Tennessee Valley Authority in replacement thereof.

Mr. KNOWLAND. Mr. President, obviously at this hour we do not wish to proceed to debate and vote on the amendment.

Mr. FERGUSON. I have requested the immediate consideration of the amendment.

Mr. KNOWLAND. I understand that the Senator from Michigan wishes to have the amendment made the pending question, and he also wishes to have the amendment printed, so that copies of it will be available to all Members of the Senate.

Mr. FERGUSON. That is correct.

The PRESIDING OFFICER (Mr. THYE in the chair). The question is on agreeing to the amendment of the Senator from Michigan.

Mr. KNOWLAND. Mr. President, the amendment of the Senator from Michigan is now the pending question. I understand that the Senator from Michigan also desires to have the amendment printed, so that copies will be available to all Members of the Senate.

The PRESIDING OFFICER. The amendment of the Senator from Michigan is the pending question; and the amendment will be printed. That is the order of the Senate.

Mr. FERGUSON. Of course, Mr. President, I also wish to have the amendment printed in the RECORD.

The PRESIDING OFFICER. The amendment has been read into the RECORD, and will be printed.

RECESS

Mr. KNOWLAND. Mr. President, in pursuance of the order previously entered, I now move that the Senate stand in recess.

The motion was agreed to; and (at 9 o'clock and 11 minutes p. m.) the Senate took a recess, the recess being, under the order previously entered, until tomorrow, Saturday, July 17, 1954, at 10 o'clock a. m.

NOMINATION

Executive nomination received by the Senate July 16 (legislative day of July 2), 1954:

DEPARTMENT OF THE INTERIOR

Clarence A. Davis, of Nebraska, to be Under Secretary of the Interior, vice Ralph A. Tudor, resigned.

CONFIRMATIONS

Executive nominations confirmed by the Senate July 16 (legislative day of July 2), 1954:

IN THE ARMY

The following-named officers to be placed on the retired list in the grade indicated under the provisions of subsection 504 (d) of the Officer Personnel Act of 1947:

To be lieutenant generals

Lt. Gen. Horace Logan McBride, O4430, Army of the United States (major general, U. S. Army).

Lt. Gen. Andrew Davis Bruce, O5857, Army of the United States (major general, U. S. Army).

IN THE AIR FORCE

Lt. Gen. Robert Wells Harper, 53A (major general, Regular Air Force), United States Air Force, to be placed on the retired list in the grade of lieutenant general, under the provisions of subsection 504 (d) of the Officer Personnel Act of 1947.

Appointment to the positions indicated under the provisions of sections 504 and 515, Officer Personnel Act of 1947:

Lt. Gen. Charles Trovilla Myers, 37A (major general, Regular Air Force), United States Air Force, to be commander, Air Training Command, with the rank of lieutenant general, and to be lieutenant general in the United States Air Force.

Maj. Gen. Glenn Oscar Barcus, 87A, Regular Air Force, to be commander in chief, United States Northeast Command, with the rank of lieutenant general, and lieutenant general in the United States Air Force.

APPOINTMENTS IN THE REGULAR AIR FORCE

The nominations of Charles E. Cook, Jr., and 275 other persons, for appointment in the Regular Air Force, in the grades indicated, which were confirmed by the Senate today, were received by the Senate on July 8, 1954, and appear in full in the Senate proceedings of the CONGRESSIONAL RECORD on that date, under the caption "Nominations," beginning with the name of Charles E. Cook, Jr., which is shown on page 10057, and ending with the name of Jean E. Phillips, which appears on page 10058.

POSTMASTERS

ALABAMA

Claud Russel Robison, Odenville.

ARKANSAS

Ivan L. Kleinbeck, New Edinburg.

FLORIDA

Louis Raymond Adair, Davenport.

INDIANA

Lyle J. Fowler, Bloomington.
Earl B. Schwanke, Demotte.
Norman L. Bent, Fort Branch.
Fred L. Scarce, Fountain City.
Chelcie J. Bebout, Freetown.
Gerald K. Carr, Greentown.
Vernon Hockemeyer, Hoagland.
Dean M. Wakeland, Idaville.
Garrett W. Gossard, Kempton.
Earl R. Reid, Lakeville.
Paul E. Frantz, Liberty Center.
Dewayne Hamilton, Morgantown.
Clyde M. Matthews, North Vernon.
Eldora L. Weigle, Otterbein.
Dean O. Neff, Rochester.
Louie C. Neu, Shelbyville.
Arnold O. Hipskind, Urbana.
Herbert B. Harrison, Winchester.

IOWA

Ralph H. Pilgrim, Greeley.
Frederick D. Lursen, Kesley.
Robert F. Graham, University Park.

MAINE

Charles W. Rogers, Old Town.

MASSACHUSETTS

Donald M. Stacey, Marblehead.

MICHIGAN

Edward C. Schmidt, Springport.
Kenneth L. Patten, Tekonsha.

MINNESOTA

Joseph J. Kovach, Ely.

MISSOURI

Donald L. Davis, Adrian.
Elbert P. Petty, Arbyrd.
William E. Richter, Gilman City.
William C. Pevestorff, Higginsville.
Garfield L. Darnell, King City.
Lloyd H. Thomas, Larussell.
Gussie C. Henneke, Leslie.
Roy O. F. Weber, Lohman.
Otis M. Clouser, Marshall.
Clyde M. Temple, Miller.
Hugh M. Lower, Mountain Grove.
Forest R. Leamer, Polo.
Peter A. Baechle, Ste. Genevieve.
Oren B. Peterson, Urbana.
Willard R. Emo, Vandalia.

MONTANA

William A. Parrish, Paradise.

NEW JERSEY

Gerald E. White, Mount Holly.

NORTH CAROLINA

Blanche T. Nelson, Atlantic.
Daniel F. Sawyer, Jr., Blounts Creek.
Richard W. Hannah, Clyde.
Tullie M. Alexander, Cooleemee.
Elmo S. Orr, Mountain Home.
Floyd Graham Hinnant, Pine Level.
Claude Harris, State Road.

OKLAHOMA

George M. Beeby, Marshall.
Bert A. VanBuskirk, Ripley.
Robert L. Nunn, Stuart.

OREGON

Harold G. Prestel, Grants Pass.

PENNSYLVANIA

James C. Kleckner, Audenried.

SOUTH CAROLINA

Chalmers M. Butler, Hartsville.
George F. Dailey, Society Hill.

TEXAS

Mattie R. White, Avoca.
Ernest M. Spence, Bonham.
Clifton B. Duhon, Buna.
Howard A. Hunt, Dodson.
Arba E. Petty, Farmersville.
Bradley O. Burk, Jr., Kress.
Dorothea B. Hice, Midlothian.
Delmas P. Seidel, Orange Grove.
Fred G. Howard, Pearsall.
Kenneth L. Lee, Perrin.
Claude Irvin Wood, Richards.
Fred W. Lunsford, Rusk.
Joe P. Spalding, Sadler.
William H. Castleberry, Telephone.
Harry Reast, Whitesboro.

VERMONT

Warren Lester Barnett, Cabot.
Paul S. Hinman, Wells River.

WISCONSIN

Elmo C. Cooper, Madison.

WYOMING

Burchal I. Kelley, Reliance.

SENATE

SATURDAY, JULY 17, 1954

(Legislative day of Friday, July 2, 1954)

The Senate met at 10 o'clock a. m., on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

O Thou whose throne is truth, frail creatures of dust serving out our brief day on the world's troubled stage, we would set our little lives in the midst of Thine eternity and feel Thy greatness and Thy peace: For—

"We fear no foe with Thee at hand to bless,
Ills have no weight and tears no bitterness."

We beseech Thee to keep strong everywhere all souls who strive to maintain the insights of human brotherhood. In this land of liberty may our own lives, freed of pettiness and prejudice and radiant with good will which leaps all barriers, be open channels through which Thy saving grace may flow for the healing of the nations. Amen.

THE JOURNAL

On request of Mr. KNOWLAND, and by unanimous consent, the reading of the Journal of the proceedings of Friday, July 16, 1954, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Tribbe, one of his secretaries.

POSITION OF SENATOR HOLLAND ON CERTAIN AMENDMENTS TO THE EMPLOYMENT SECURITY ADMINISTRATIVE FINANCING ACT OF 1954

Mr. HOLLAND. Mr. President, on July 13, 1954, during the Senate consideration of H. R. 5173, the Employment Security Administrative Financing Act of 1954, certain amendments were offered by the junior Senator from Massachusetts [Mr. KENNEDY], and were considered en bloc, and were rejected by a yea-and-nay vote of 48 to 31, as shown on page 10363 of the RECORD.

On that date, the senior Senator from Florida was absent by leave of the Senate, attending the Sixth Pan-American Highway Congress at Caracas, Venezuela. I note from the RECORD that my position is shown on other amendments that day and on the bill, but not with respect to this particular vote. Had I been present, I would have voted "yea"; and I want the RECORD to so show.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. KNOWLAND. Mr. President, I ask unanimous consent that immediately following the quorum call there may be the customary morning hour for the transaction of routine business, under the usual 2-minute limitation on speeches.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. KNOWLAND. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

Routine business is now in order.

FEDERAL UNEMPLOYMENT COMPENSATION STANDARDS — RESOLUTION

Mr. GILLETTE. Mr. President, I present for appropriate reference, and ask unanimous consent to have printed in

the RECORD, a resolution adopted by the Black Hawk County CIO Industrial Union Council, Waterloo, Iowa, favoring prompt enactment of House bill 9430, and Senate bill 3553, relating to Federal unemployment compensation standards.

There being no objection, the resolution was referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

RESOLUTION IN SUPPORT OF IMMEDIATE ACTION BY CONGRESS ON THE FORAND-DOUGLAS BILLS, H. R. 9430 AND S. 3553, SPONSORED BY 86 REPRESENTATIVES AND 12 SENATORS FOR FEDERAL UNEMPLOYMENT COMPENSATION STANDARDS

Whereas present unemployment compensation payments to insured unemployed wage and salary earners are woefully inadequate as to weekly amount and number of weeks duration; and

Whereas substantial and prolonged unemployment in Iowa and in Waterloo and inadequate unemployment compensation payments have caused increases in expenditures for relief purposes resulting in increased drain upon revenues depleted by slackening business activity and income in the community; and

Whereas the amounts of such unemployment payments in Iowa range from a minimum of $5 to a maximum of $26 and are limited to 20 weeks, with weekly payments averaging only 40 percent of the State's average weekly wage of $60; and

Whereas this is far below the average of 50 percent and the maximum of 66⅔ percent recommended to the States last February by President Eisenhower, Secretary of Labor Mitchell, the Federal Advisory Council on Employment Security, and the National Conference on Labor Legislation; and

Whereas President Eisenhower, Secretary of Labor Mitchell, and others recommended that the States extend the duration of payments to 26 weeks, but long-term unemployment has resulted in 600,000 insured workers exhausting their rights to payments before being reemployed and such exhaustions continue at the rate of 40,000 a week, making plain the need for an extension to 39 weeks, as proposed in H. R. 9430 and S. 3553, introduced by Representative FORAND, Senator DOUGLAS, 85 other Representatives, and 11 other Senators; and

Whereas these companion bills, if enacted by Congress before adjournment, would implement President Eisenhower's recommendations as to amounts of unemployment compensation payments and would extend the duration beyond his recommended 26 weeks, to 39 weeks, and, at presently anticipated continuing unemployment, would get approximately $2 billion a year of additional purchasing power into the hands of insured unemployed workers and their families for instant high-velocity spending and distribution throughout our entire economy; and

Whereas the House Ways and Means Committee has recently completed hearings on proposed amendments to the Federal unemployment compensation law and has recommended a bill to the House for passage before adjournment; and

Whereas President Eisenhower, at his June 16 press conference, stated that he has no intention of urging Governors to call special sessions of their legislatures to implement his own recommendations, now more than 4 months old; and

Whereas this puts upon the Congress the last hope and full responsibility for action to carry out this vital part of President Eisenhower's legislative program in any way that will mean anything to the unemployed, to our economy and to the budgets of our States, cities, and other political subdivisions: Now, therefore, be it

Resolved, That the Black Hawk County CIO Industrial Union Council, meeting on this 13th day of July 1954, urgently requests our Representative and Senators to use their influence and good offices to persuade the House Ways and Means Committee and the Senate Finance Committee to adopt and recommend the provisions of H. R. 9430 and S. 3553 so that action in both Houses may be completed before the present Congress adjourns; and be it further

Resolved, That we urge President Eisenhower at this session to make congressional action to implement his unemployment compensation recommendations a must item in his immediate legislative program; and be it further

Resolved, That if either committee fails or refuses to report out favorably the provisions of H. R. 9430 and S. 3553, our Representative and Senators support appropriate action such as discharge petitions or the addition of the provisions as a rider to other legislation; and be it finally

Resolved, That copies of this resolution be sent to our Representative, Senators, the President of the United States, the Speaker of the House, and the Vice President as the Presiding Officer of the Senate, with the request that it be treated as a petition under the Constitution and, as such, printed in the CONGRESSIONAL RECORD.

Presented this 7th day of July 1954.

CARL G. DAHL,
Legislative Secretary, Black Hawk County Industrial Union Council.

CONSTRUCTION OF COUGAR DAM AND RESERVOIR ON SOUTH FORK McKENZIE RIVER, OREG. (PT. 2 OF REPT. NO. 1761)

Mr. MORSE. Mr. President, on behalf of myself, and a minority of the members of the Public Works Committee, I submit minority views on the bill (H. R. 7815) to provide for the construction, operation, and maintenance of the Cougar Dam and Reservoir on the South Fork McKenzie River, Oreg., with participation for power by the city of Eugene, Oreg., and request that they be printed.

The VICE PRESIDENT. The minority views will be received, and without objection, will be printed as requested by the Senator from Oregon.

REPORTS OF COMMITTEES ON PERSONNEL AND FUNDS

Pursuant to Senate Resolution 123, 80th Congress, 1st session, the following reports were received by the Secretary of the Senate:

JULY 9, 1954.

COMMITTEE ON AGRICULTURE AND FORESTRY

To the SECRETARY OF THE SENATE:

The above-mentioned committee, pursuant to Senate Resolution 123, 80th Congress, 1st session, submits the following report showing the name, profession, and total salary of each person employed by it and its subcommittees for the period from January 1, 1954, to June 30, 1954, together with the funds available to and expended by it and its subcommittees:

Name and profession	Rate of gross annual salary	Total salary received
Harry R. Varney, to Jan. 31, 1954, chief of staff	$11,646.00	$970.50
Harker T. Stanton, counsel	11,646.00	5,823.00
Edward P. Guinane, investigator	11,646.00	5,823.00
James M. Kendall, chief clerk	8,824.17	4,412.04
C. M. Mouser, assistant chief clerk	8,735.34	4,367.64
Harriet D. Willey, to June 8, 1954, clerical assistant	4,856.61	2,131.47
Therese R. Lepine, from May 12, 1954, secretary to the chairman	$4,091.85	$556.93
Betty M. Mason, clerical assistant	3,996.26	1,998.12
Frances I. Edwards, clerical assistant	4,283.04	2,141.52

Funds authorized or appropriated for committee expenditure, 83d Cong	$10,000.00
Amount expended, 83d Cong	8,501.05
Balance unexpended	1,498.95

GEORGE D. AIKEN,
Chairman.

JULY 9, 1954.

COMMITTEE ON AGRICULTURE AND FORESTRY

(Making investigations under S. Res. 127, agreed to July 10, 1953, and S. Res. 218, agreed to March 10, 1954)

To the SECRETARY OF THE SENATE:

The above-mentioned committee, pursuant to Senate Resolution 123, 80th Congress, 1st session, submits the following report showing the name, profession, and total salary of each person employed by it and its subcommittees for the period from January 1, 1954, to June 30, 1954, together with the funds available to and expendcd by it and its subcommittees:

Funds authorized or appropriated for committee expenditure, 83d Congress	$15,000.00
Amount expended, 83d Congress	10,253.80
Balance unexpended	4,746.20

GEORGE D. AIKEN,
Chairman.

JULY 1, 1954.

COMMITTEE ON APPROPRIATIONS

To the SECRETARY OF THE SENATE:

The above-mentioned committee, pursuant to Senate Resolution 123, 80th Congress, 1st session, submits the following report showing the name, profession, and total salary of each person employed by it and its subcommittees for the period from January 1, 1954, to June 30, 1954, together with the funds available to and expended by it and its subcommittees:

Name and profession	Rate of gross annual salary	Total salary received
Everard H. Smith, chief clerk	$11,646.00	$5,823.00
Thomas J. Scott, assistant chief clerk	11,646.00	5,823.00
Francis S. Hewitt, assistant clerk	10,732.07	5,365.98
Edmund T. King, assistant clerk	10,732.07	5,365.98
Jarlath M. Slattery, Director, professional staff	11,646.00	5,795.22
Raymond K. Perkins, counsel	11,644.54	5,822.22
Kenneth J. Bousquet, professional staff member	10,649.11	5,324.52
Earl W. Cooper, professional staff member	10,732.07	5,365.98
Herman E. Downey, professional staff member	10,732.07	5,365.98
Richard W. Eddy, professional staff member	10,068.45	5,034.18
John J. Gaines, professional staff member	10,068.45	5,034.18
G. E. Johnson, professional staff member	8,990.07	4,495.02
H. Maurice Joyce, professional staff member	10,068.45	5,034.18
William J. Kennedy, Jr., professional staff member	10,068.45	5,034.18
Cecil C. McDaniel, professional staff member	10,068.45	5,034.18
Joseph T. McDonnell, professional staff member	10,068.45	5,034.18
Harold E. Merrick, professional staff member	10,732.07	5,365.98
Gordon A. Nease, professional staff member	10,068.45	5,034.18
Stanley L. Sommer, professional staff member, from Apr. 1	11,644.54	2,911.11
Ernest R. Underwood, professional staff member	10,068.45	5,034.18
Lawrence H. Wendrich, professional staff member	10,732.07	5,365.98

Name and profession	Rate of gross annual salary	Total salary received
William W. Woodruff, professional staff member	$10,068.45	$5,034.18
Herman M. Zahl, professional staff member, from Feb. 25 to June 15	10,068.45	3,104.40
Gloria S. Butland, clerical assistant	4,569.81	2,284.86
Pauline T. Connell, clerical assistant	4,378.64	2,181.32
Leon DeVille, clerical assistant	4,091.85	2,045.88
Elva Glaser, clerical assistant	4,378.64	2,189.28
Lois A. Glines, clerical assistant	4,378.64	2,189.28
Laura A. Hawley, clerical assistant	4,378.64	2,141.48
Carolyn Macy, clerical assistant	4,378.64	2,189.28
E. Marea Marshall, clerical assistant	4,378.64	2,173.35
Mary T. Savage, clerical assistant	4,378.64	2,189.28

STYLES BRIDGES,
Chairman.

COMMITTEE ON POST OFFICE AND CIVIL SERVICE

To the SECRETARY OF THE SENATE:

The above-mentioned committee, pursuant to Senate Resolution 123, 80th Congress, 1st session, submits the following report showing the name, profession, and total salary of each person employed by it and its subcommittees for the period from January 3, 1954, to June 30, 1954, together with the funds available to and expended by it and its subcommittees:

Name and profession	Rate of gross annual salary	Total salary received
Paschal, Frank A., chief clerk and staff director	$11,646.00	$5,823.00
Johnson, R. W., counsel	11,646.00	5,823.00
Brawley, H. W., professional staff member	11,646.00	5,823.00
Irwin, Mary, professional staff member	11,646.00	5,823.00
Bobo, Virginia, clerical assistant	5,716.93	2,858.46
Homan, Colette E., clerical assistant	6,481.67	3,240.78
McElroy, Marty, clerical assistant	5,143.38	2,571.66
Paramore, Mary Anne, clerical assistant	5,334.57	2,667.24
Sutherland, Mary H., clerical assistant	4,856.61	2,428.26
Yutenkas, Alice,[1] clerical assistant (from Apr. 12)	4,846.61	1,065.73

[1] Under authority S. Res. 221 agreed to Apr. 7, 1954.

Funds authorized or appropriated for committee expenditure	$10,000.00
Amount expended	4,132.66
Balance unexpended as of June 30, 1954	5,867.34

FRANK CARLSON,
Chairman.

COMMITTEE ON POST OFFICE AND CIVIL SERVICE
INVESTIGATING THE POSTAL SERVICE

(Under S. Res. 49, agreed to March 6, 1953, and S. Res. 197, agreed to February 1, 1954)

To the SECRETARY OF THE SENATE:

The above-mentioned committee, pursuant to Senate Resolution 123, 80th Congress, 1st session, submits the following report showing the name, profession, and total salary of each person employed by it and its subcommittees for the period from January 3, 1954, to March 31, 1954, together with the funds available to and expended by it and its subcommittees:

Name and profession	Rate of gross annual salary	Total salary received
Compton, Glenn C., investigator-analyst (to Jan. 31)	$11,646.00	$970.50
Fadely, Catherine E., clerical assistant (to Feb. 28)	4,856.61	809.42
Healey, Frank G., investigator-analyst (to Mar. 31)	6,003.71	1,500.90
Kitchen, Annelle, clerical assistant (to Mar. 15)	4,856.61	1,011.77

Funds authorized or appropriated for committee expenditure	$100,000.00
Amount expended	76,377.58
Balance unexpended as of Mar. 31, 1954	23,622.42

FRANK CARLSON,
Chairman.

O'Connor, Blake, professional staff member (to Apr. 7)	10,068.45	2,684.89
Woodruff, Franklin, professional staff member (from Mar. 14)	9,321.88	3,029.60

Funds authorized or appropriated from June 12, 1952, to June 30, 1954, for committee expenditure (S. Res. 329 and 115)	$92,000.00
Amount expended	78,335.24
Balance unexpended	13,664.76

EDWARD J. THYE,
Chairman.

BILL AND JOINT RESOLUTION INTRODUCED

A bill and a joint resolution were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. MURRAY (for himself and Mr. HUMPHREY):

S. 3766. A bill to provide that the referendum with respect to the national marketing quota for the 1955 crop of wheat shall be held not earlier than August 14, 1954, nor later than August 28, 1954; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. MURRAY when he introduced the above bill, which appear under a separate heading.)

By Mr. CASE:

S. J. Res. 178. Joint resolution to establish a Federal Highways Commission to make recommendations with respect to transcontinental and midcontinental highways; to the Committee on Public Works.

REFERENDUM RELATING TO NATIONAL MARKETING QUOTA FOR 1955 WHEAT CROP

Mr. MURRAY. Mr. President, the Agricultural Adjustment Act, as amended, requires that a referendum be held to determine whether our farmers favor marketing quotas on wheat. To qualify for price supports, a farmer must comply with the wheat acreage allotments established by the Secretary of Agriculture.

This year's referendum is scheduled for July 23, and, as yet, the American wheat farmer does not know at what level wheat price supports will be established. I feel that our farmers are entitled to know what they will be offered in the form of price supports if they choose to accept marketing controls. Such information should be available before the farmer votes on the referendum.

Several days ago I requested Secretary Benson to postpone the referendum until the Congress has completed action on the farm bill. The Secretary advises me that he has no authority under the law to extend the referendum date.

Therefore, on behalf of the Senator from Minnesota [Mr. HUMPHREY], and myself, I introduce for appropriate reference a bill which will serve to delay the holding of the referendum until Congress acts on the question of price support levels.

It is our hope that the Committee on Agriculture and Forestry will consider this proposed legislation without delay.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 3766) to provide that the referendum with respect to the national marketing quota for the 1955 crop of wheat shall be held not earlier than August 14, 1954, nor later than August 28, 1954, introduced by Mr. MURRAY (for himself and Mr. HUMPHREY), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

REVISION OF ATOMIC ENERGY ACT OF 1946, AS AMENDED—AMENDMENT

Mr. GILLETTE (for himself, Mr. MAGNUSON, Mr. MORSE, Mr. MANSFIELD, Mr. MURRAY, Mr. HUMPHREY, Mr. LANGER, Mr. YOUNG, Mr. KEFAUVER, Mr. HENNINGS, Mr. LEHMAN, and Mr. JOHNSON of Colorado) submitted an amendment intended to be proposed by them, jointly, to the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes, which was ordered to lie on the table and to be printed.

GRANT OF RETROCESSION TO A STATE OF CONCURRENT JURISDICTION OVER CERTAIN LAND—CHANGE OF REFERENCE

Mr. MARTIN. Mr. President, I ask unanimous consent that the Committee on Public Works be discharged from the further consideration of the bill (H. R. 7111) to authorize the grant or retrocession to a State of concurrent jurisdiction over certain land, and that the bill be referred to the Committee on the Judiciary. I make this request for the reason that after initial study by the Committee on Public Works, it was believed that the bill deals with a matter which should properly come before the Committee on the Judiciary.

The VICE PRESIDENT. Is there objection to the request of the Senator from Pennsylvania? The Chair hears none, and it is so ordered.

EXECUTIVE MESSAGE REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting several nominations, which were referred to the Committee on Armed Services.

(For nominations this day received, see the end of Senate proceedings.)

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD as follows:

By Mr. KEFAUVER:

Statement prepared by him containing extracts from a report and appraisal entitled "Anti-Semitic Activity in the United States," the report prepared and issued recently by the American Jewish Committee.

NEED FOR REINSTITUTION OF BEEF PURCHASING PROGRAM

Mr. CARLSON. Mr. President, the recent extreme heat and lack of rainfall in Kansas are causing the forced marketing of cattle and for this reason the market on these cattle is being forced to ruinously low prices.

Last year our section of the country went through a very disastrous period as far as the livestock producers were concerned and for the very same reason, and I sincerely hope we will not have to go through it again.

So far as the purchase of livestock is concerned, during the past few days I have received many telegrams, letters, and calls from people in our State urging that the Federal Government immediately reinstitute the beef purchase program.

I have discussed this subject with the Secretary of Agriculture, and am advised that the Department is greatly concerned about the situation and that it is sincerely hoped that we may expect some action in the very near future.

In my opinion, the beef purchase program, in order to be effective, should start at once. It would do much to sustain the price of cattle at our livestock markets. I am urging the Secretary to take immediate action.

Mr. President, I wish to include in the RECORD as a part of these remarks a copy of a recent telegram from Mr. M. J. Flynn, president of the Kansas City Livestock Exchange, and a copy of a

letter from Mr. A. G. Pickett, secretary of the Kansas Livestock Association.

There being no objection, the letters and telegram were ordered to be printed in the RECORD, as follows:

KANSAS CITY, MO.

The Honorable FRANK CARLSON,
Senate Office Building:

Recent high temperatures and low rainfall resulting in large number cows and calves coming to our market. Water shortage contributing to forced movement of livestock. Some 5,500 cows received at our market this week as large number as any week in June or July 1953. Values on cows and other young cattle in canner and cutter flesh approaching the lows of last year. This can rapidly develop into a very bad situation on this class of cattle. It would seem some plans for emergency action should be under consideration.

M. J. FLYNN,
President, Kansas City Livestock Exchange.

TOPEKA, KANS., *July 13, 1954.*

Senator FRANK CARLSON,
Senate Office Building,
Washington, D. C.

DEAR SENATOR CARLSON: The following night letter was sent to Secretary of Agriculture Ezra T. Benson, July 13:

"Record heat 114° common yesterday. No rain past 2 weeks in most of Kansas. Crops and grass are burning. Stock-water situation becoming critical. Forced cattle marketing started. Some truckers report bookings 2 weeks ahead. Beef purchase program, to be effective, should start at once. Price paid for beef should warrant stronger cattle prices. Contracts should be for delivery dates requiring immediate purchase by processors."

KANSAS LIVESTOCK ASSOCIATION,
A. G. PICKETT, *Secretary.*

The VICE PRESIDENT. Is there further morning business? If not, morning business is closed.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Michigan [Mr. FERGUSON].

THE ATOMIC GIVEAWAY

Mr. LEHMAN. Mr. President, the remarks I am about to make are based on such study of the bill as I have been able to make since the report on the bill was submitted on Tuesday afternoon.

The bill is a highly complex and highly technical one. I believe its provisions and implications are not understood by the great majority of the Members of the Senate. I believe the bill is so far-reaching in effect, and will so greatly control the destiny of the utilization of atomic energy in the United States for so long a period, that it should be studied most carefully by the Senate, not during a period of 2, 3, or 4 days, but for many times that period. During the short length of time that has been available or will be made available to us for study of the bill, there has not been, and will not be any means by which anyone could acquaint himself, even reasonably well, with all the highly technical provisions of the bill, or could evaluate with any degree of usefulness the widespread and long-term implications of this measure.

Mr. President, I am afraid that the American people have little conception of the far-reaching issues and the long-range impact of the proposed amendments to the Atomic Energy Act.

This bill before us, Mr. President, completely rewrites the McMahon Atomic Energy Act of 1946. It contains scores of provisions which will affect our lives and our children's lives and the lives of generations yet to come. It will set an entirely new pattern of atomic energy control and development, radically different from that set forth in the McMahon Act.

This is in spite of the fact that in his special message of February 17 to Congress, President Eisenhower stated that, in general, the McMahon Act "is still adequate to the Nation's needs."

President Eisenhower recommended two separate sets of amendments, one providing for a broader exchange of atomic information with our allies, and another to provide for greater participation by private industry in the atomic-energy-development field.

I have no quarrel with either of these two objectives, although obviously the most urgent question is that of permitting a freer flow of essential atomic information between ourselves and our allies. This is essential to our national security. This is essential to the maintenance of our precious unity with our allies. This is necessary in order to build up atomic military strength within the free world.

I agree that legislation accomplishing this purpose should and must be enacted at this session; it cannot wait; nor is the proposed legislation to accomplish this purpose so complicated that it cannot be carefully considered, debated, and enacted without delay. In this respect, the pending bill, in its present form, does not satisfy me; nor does it satisfy the Senator from Rhode Island [Mr. PASTORE], as is brought out by that distinguished member of the joint committee in his statement of separate views. The provisions dealing with exchange of atomic information with our allies should be appropriately amended and passed.

But, Mr. President, the other aspect dealt with by President Eisenhower in his message of February 17, and dealt with in the sweeping proposed legislation before us, namely, the peacetime development of atomic energy, is far more complex. It also has a far wider range of implications for the welfare, prosperity, and economic development of our country. It can, and may very well, determine the complete direction of our economic institutions.

This, Mr. President, is not a matter to be considered lightly, briefly, or superficially. This is a matter in which each Member of the Senate bears a heavy responsibility, of which he cannot divest himself, and which he cannot pass on, in the last analysis, to any committee or group of Senators.

This affects my State so powerfully that I cannot let this proposed legislation go by without the most searching analysis, without the most comprehensive study on my part, without demanding and insisting upon the most comprehensive debate on each jot and title of this aspect of the legislation.

Mr. President, the whole economic form and structure of the Nation, the foundation of the American economic way of life, the assembly line, mass production, mass transportation, mass communications—all depend on the availability, in vast amounts, of low-cost sources of energy. To meet this need we have been using wood, coal, petroleum, natural gas, and falling water.

For most purposes these sources of energy are converted into electric power, and, by and large, electric power is the driving force of our entire economy and is the basis of the comforts and conveniences we enjoy in our home lives as well.

Now we have this new source of energy, of still unplumbed potentialities, beyond the scheme and dream of any of us even today—atomic energy.

In 10 short years, atomic energy has been translated from a theoretical concept, a mathematic equation, to a pressing reality, the most overriding fact of our present age.

The legislation before us deals with atomic energy, and the development of its peacetime uses, in a definitive, a patternmaking manner. The provisions of the McMahon Act dealing with this subject were rudimentary. In the pending bill these aspects are given such concrete form and substance as to control and determine the management and uses of atomic energy for many years in the future, perhaps for all time. The pattern we set today may and probably will, control what we can practicably do in the future.

The technological and industrial developments in the atomic energy field may come so fast—just as they have come in the past few years—that even the next Congress may be unable to unmake and reverse or radically modify the pattern that is being laid down so specifically—and so mistakenly in my judgment—in the pending bill.

Mr. President, we are dealing with a matter so vast in importance that I feel it requires, as I have already said, not a hasty 3 or 4 or 5 day debate, following within 24 hours of the submission of the bill, itself, and the majority report thereon, but rather a debate of weeks, following an opportunity of several months, if possible, of study, not only by us, but by all the experts in this field in the country, and by all those who are or might be affected—and by that I mean the whole American people.

Mr. HICKENLOOPER. Mr. President, will the Senator yield for a statement?

Mr. LEHMAN. Yes.

Mr. HICKENLOOPER. I hope the Senator will not misunderstand me. I think this bill should be the subject of satisfactory and full debate, but I wish to invite the attention of the Senator to a fact which, undoubtedly, he knows, namely, that the bill and all its provisions are, in effect, the cumulative effort of approximately 8 years of intensive and continuous study by the Joint Committee on Atomic Energy, and that the verbiage of the bill is the result of intensive hearings devoted specifically to these revisions. The hearings began in the

early part of last year and have continued up to this time.

I am not in any way saying that the Senate should not debate the bill fully and understandingly, but I wish to give assurance that the legislation now proposed is not the result of any hasty or precipitate action on the part of the Joint Committee on Atomic Energy.

Mr. LEHMAN. Let me say to the distinguished Senator from Iowa that I have the highest respect for and confidence in the members of the Atomic Energy Commission, as well as the members of the Joint Committee on Atomic Energy. I know how conscientious they are. But, after all, even in the report, a very considerable difference of opinion is expressed with regard to many of the most important issues involved. Every Member of the Senate has a very heavy responsibility. The report on the bill was submitted to the Senate on Tuesday afternoon, I believe, and the debate began the following day. I cannot help but emphasize again the complexity and importance of this proposed legislation.

Mr. HICKENLOOPER. I do not mean to minimize that attitude at all. As I say, the bill should be thoroughly understood and debated by Members of the Senate. The only point I am speaking to is that I want the assurance to appear in the RECORD that, so far as the joint committee is concerned, this subject has not been approached lightly. The action of the joint committee has not been precipitate. It is the result of a cumulative study of 8 years of constant observation; and the verbiage of the bill is the result of hearings which began last year and have continued to this time.

By no stretch of the imagination would I want to be considered as urging that the Senate not give ample time and discussion to one of the most vital problems in the world today. So I am not objecting to discussion. I merely wish to reassure the Senate and the Senator that the bill itself is not the result of precipitate action.

There are some fundamental disagreements. I say "fundamental." They are not really fundamental. They are disagreements on the question of the present expediency of taking or not taking certain action. The subject has been given considerable thought by the committee, and I earnestly hope the Senate will give it adequate thought.

Mr. LEHMAN. The remarks made by the Senator from Iowa are exactly what I would expect him to say. I know of his very great consideration for his colleagues in the Senate and his desire to see that every question of importance is debated for such length of time as may be necessary in order that a wise resolution of the problem may be made. I mention that fact merely to show that even though I have the highest respect for members of the Atomic Energy Commission and members of the Joint Committee on Atomic Energy, there are differences of opinion, as outlined in the report.

Essentially, we are debating a question of what the basic energy and power policy of the United States is to be for decades to come. It is a fact that in the unleashed energy of the atom there is more power potential than that contained in all the unmined coal in the United States, more than that contained in all of the developed and reserve oil pools in the United States, more than that produced by all the hydroelectric plants now in existence.

Yes, Mr. President, the policies and programs which we are asked to establish through the passage of this bill will directly affect every man, woman, and child in our Nation as long as they may live—and certainly our actions will be judged by unborn generations when they consider whether we, in 1954, fulfilled our obligations in this field or avoided them because of the complexity of the subject and the pressure to pass something before adjourning.

In my opinion one of the fundamental questions before us is whether the Congress of the United States, in setting the policy for the unleashing of electric power from the atom, is planning for the welfare of all of our people, or for only a privileged few.

I am afraid, Mr. President, that the bill now before us contains one of the greatest giveaways of the people's investments and rights in a fundamental power source that has ever been proposed in the Congress.

This bill, in its fullest implications, far transcends the infamous giveaway of the offshore oil bill. The power potential of the atomic-power giveaway transcends a million times the threatened giveaway of the water-power resources of the Niagara Falls development—a giveaway against which I have been fighting for many years.

Mr. President, this is not a million-dollar giveaway, or a billion-dollar giveaway. This is a giveaway of such proportions as to dwarf the imagination, and to beggar any numbers which are used to describe it.

I say, Mr. President, on the basis of what study I have been able to give this bill in the limited time at my disposal, that we are giving away the public's right in a source of energy which was discovered and developed by the accumulated brains and resources not only of all the people of the United States, but of other nations, too.

To refer to the financial investment in atomic energy, the American people have invested $12 billion in this development. It has been officially estimated that when the Atomic Energy Commission completes its present expansion program, it will have a gross capital investment, in property and equipment, value at $8 billion. This is more than the combined investments of Du Pont, General Motors, and United States Steel.

Yet it is here proposed that the Congress surrender and give away the public's rights in the peacetime development of atomic energy to a few private monopolies.

Oh, Mr. President, how will we answer to the American people, and to the generations still to come, for the action that is here proposed, for this vast surrender, for this act of unconscionable divestment of the rights of the American people.

Mr. President, I am not opposed—far from it—to private participation in the development of atomic energy for industrial uses. I am strongly in favor of it. I believe in private enterprise, in its genius, and in its unlimited horizons. But I am opposed to unjustified public subsidy of private enterprise. I am opposed to abdication of the public interest in favor of private profit.

The public has original and prior rights in atomic energy. The rights to its development are the property of all the people. It is perfectly proper to share those rights with private enterprise, but the Government must at all times protect the public interest and reserve those powers over atomic energy, in any of its aspects, which are necessary to protect the public interest.

In this bill, Mr. President, it is proposed to grant licenses to private companies—to a very few very large and monopolistic private companies—to develop industrial atomic power, from what is, by its nature, a public domain—atomic energy, made possible—and I emphasize this—by public investment and national genius mobilized in the public service.

It is proposed to grant these licenses, Mr. President, without even a recapture clause, without the right to recapture from private enterprise that which fundamentally belongs to the public. In every license granted to a private company for the development of hydroelectric power, there is such a recapture clause. In every license granted to a radio or TV station for the use of the ether, there is a renewal and cancellation clause.

Yet in this bill, there is no provision for recapture, by the Government, of the rights granted by the license for the development of atomic energy.

This bill provides further, Mr. President, for compulsory patents on developments in the atomic-energy field, to remain, to some extent, under public control. But there is in this bill a 5-year limitation on the public control of such patents. That is an utterly inadequate protection of the public interest.

Mr. DOUGLAS. Mr. President, will the Senator from New York yield?

Mr. LEHMAN. I am glad to yield.

Mr. DOUGLAS. Is the understanding of the Senator from Illinois correct that with respect to private patents there is a normal 16-year limitation?

Mr. LEHMAN. That is correct.

Mr. DOUGLAS. Therefore, the 5-year limitation is approximately a third of the length of time which is granted on private patents.

Mr. LEHMAN. Yes; and the hands of the Government are completely tied at the expiration of 5 years. I thank the Senator from Illinois. We have only scratched the surface in the atomic-energy development field. The reservation of the public interest should be of indefinite duration, pending a further review and determination by Congress. I would accept, although with mental qualms on my part, a 10-year or somewhat longer limitation, as proposed in the minority views. Beyond that I would not go. I desire to say, however, that my very definite preference would be to have no limitation on the reservation on patents.

Mr. President, these provisions in the bill, in themselves, constitute a giveaway which is intolerable and unjustifiable. This is a giveaway in the grand manner, in comparison with which any other giveaway this Congress has enacted pales in magnitude.

And this is just a beginning of the evils, the unjustifiable shortcomings in this bill.

The bill practically prohibits the Atomic Energy Commission from developing power even for its own uses, as well as for commercial uses.

Mr. DOUGLAS. Mr. President, will the Senator yield further?

Mr. LEHMAN. I am glad to yield.

Mr. DOUGLAS. I ask the Senator whether his statement is borne out by section 44 of the committee report, issued by the majority, which on page 15, line 5, provides:

> This section * * * does not permit the Commission to enter the power-producing business without further congressional authorization to construct or operate such commercial facilities.

Mr. LEHMAN. I thank the Senator from Illinois for his contribution. I shall refer to that point later in my speech. That is what would tie the hands of the Atomic Energy Commission in connection with the use of power resources without further congressional action, and would set a pattern which would be controlling, undoubtedly, for years, if not decades and generations to come.

Mr. DOUGLAS. Mr. President, will the Senator from New York further yield?

Mr. LEHMAN. Gladly.

Mr. DOUGLAS. I should like to have a comment from the Senator from New York on the argument which is made, that since this material, presumably uranium, will be leased to private power-producing facilities, such leasing will lead to competition, and that the competition will be self-regulating and will serve to keep prices to consumers down.

Mr. LEHMAN. There is no provision with respect to a competitive basis in this bill. So long as the Government is prevented from producing atomic power for the use of all the people of the Nation, there cannot be any yardstick or any actual competition with private industry.

Mr. DOUGLAS. Mr. President, will the Senator from New York further yield?

Mr. LEHMAN. I am glad to yield.

Mr. DOUGLAS. I wonder if the Senator from New York would check my understanding as to the cost of installing atomic power facilities. Does he understand, as does the Senator from Illinois, that the probable cost of an efficient reactor to produce power is somewhere around $900 to $1,000 per kilowatt, and that probably a plant which would produce power most efficiently would have to have a capacity of somewhere around 200,000 kilowatts or 250,000 kilowatts? Therefore, the minimum investment required to produce electric power from atomic materials would be in the neighborhood of from $180 million to $250 million. Does the Senator from New York believe that the figures cited by the Senator from Illinois are approximately correct?

Mr. LEHMAN. I have no knowledge of the exact figures. However, the figures given by the Senator from Illinois have been repeated time and time again by others, many of whom are experts in this field. Therefore, there is no doubt in my mind that, generally speaking, the figures given by the Senator from Illinois are accurate. There is also no doubt in my mind that the cost of installing a reactor would be very great.

Mr. DOUGLAS. Under those conditions can we picture great numbers of people in large cities, such as in New York City, rushing forward with $180 million or $250 million in their pockets and saying, "We want to get a license to lease fissionable materials with which to produce electricity"?

Mr. LEHMAN. No; I certainly cannot imagine that. My experience would teach me that I would be unreasonably optimistic if I believed anything like that. There is another reason why there would be no benefit to the people of the State of New York, because there is no provision in the bill for preference, or any safeguards, which are so necessary in order to obtain power at a reasonable price.

Mr. DOUGLAS. Is it not a fact that the leasing provisions of section 44 would, therefore, result in the Atomic Energy Commission's leasing this material, presumably uranium, to a series of regional monopolies and that there would not be competition within any one of the regions?

Mr. LEHMAN. The Senator from Illinois is completely correct in that premise. I wish to point out another thing, namely, that as I interpret this bill, the Government guarantees to sell uranium at fair rates to private customers and to buy plutonium at reasonable rates in return. That, in my opinion, constitutes a built-in subsidy for the large companies who might avail themselves of this privilege.

Mr. DOUGLAS. It is sometimes said, I believe, by the senior Republican member of the Joint Committee on Atomic Energy that the leasing provisions of the bill provide for free competition under the private-enterprise system. Would they not have the effect of providing monopolistic private enterprise?

Mr. LEHMAN. There is no doubt about that. They would inevitably, in my opinion, ultimately tend to foster the development of monopolistic enterprise.

Mr. DOUGLAS. From a sentence which the Senator from New York dropped, in which he spoke of the value of a public plant as a yardstick, I take it that what the Senator from New York is arguing is that the Atomic Energy Commission should at least have the authority to produce power if, in the opinion of the Commission and the Congress, that seemed to be desirable, so that the cost could be compared with the price charged by private utilities and a greater degree of competition could be introduced into the manufacture of power and its distribution.

Mr. LEHMAN. I fully agree with the Senator from Illinois.

Mr. DOUGLAS. What the Senator from New York is advocating is a competitive system of enterprise rather than a monopolistic system of enterprise.

Mr. LEHMAN. I am; and in order to consummate that objective and make it a reality I have an amendment, which is on the desks of Senators, and which I intend to call up, providing for exactly the considerations which have been outlined by the Senator from Illinois.

Mr. DOUGLAS. A similar amendment has been drafted by the Senator from Colorado [Mr. JOHNSON], which I hold in my hand, identified as 7-16-54-C. The amendment of the Senator from New York is, I believe, identified as 7-15-54-D. So the same idea seems to be occurring to a number of Senators.

Mr. LEHMAN. Yes. The amendments are all very similar, and any one of them, I believe, would further the purposes outlined by the Senator from Illinois.

Mr. DOUGLAS. I take it that the Senator from New York is not opposing the leasing of this material, presumably uranium, to private industry. He is merely saying that when it is done it should be under proper conditions, and that should not be the only way in which this material should necessarily be used.

Mr. LEHMAN. I have already said that I am not opposed to private enterprise. I should like to see private enterprise share in this development, but under the proper safeguards. What I particularly object to is any surrender on the part of the United States Government of the interests of the people of the country whose sacrifices have alone made this development possible.

Mr. DOUGLAS. Is it not true that if Congress did not wish to have the AEC sponsor an electric powerplant it could always prevent such action by refusing to appropriate?

Mr. LEHMAN. To go further than that, I think it would require congressional approval for any change in policy, but certainly, under any circumstances, Congress could control it through appropriations.

Mr. DOUGLAS. So we should not put a legislative prohibition in the bill which would tie the hands of the Atomic Energy Commission for all time or until such time as the present act could be amended or repealed.

Mr. LEHMAN. Exactly. There is no question about that. The Senator from Illinois has stated the problem very clearly. I thank the Senator for his very useful contribution to this debate.

Mr. President, the only power the AEC is permitted to develop is that which is developed incidental to its research activities. Yet the AEC is the greatest consumer of power in the world.

Here the AEC has developed the potentialities of atomic power. But this bill prohibits the AEC from utilizing its own discoveries to develop atomic power to help meet its own power needs. This is an unconscionable provision, Mr. President, another giveaway provision.

The AEC should have the right, and should even be directed to develop power to help meet its own power needs. This

would be a healthy check on private power development. I shall dwell more on this aspect, in relation to commercial power development, in a moment.

The accomplishments of the Atomic Energy Commission to date have been most impressive. We know the great strides in the development of strategic and tactical atomic weapons—a development which surely has helped preserve the safety of the free world, and which act as a powerful deterrent to would-be aggressors. We have learned of the wonderful application of atomic byproducts in the treatment of disease and in medical research.

Only recently we have been told of the development of an atomic engine which has operated for a time equivalent to powering a submarine around the world without refueling. These and many more inventions and products are the public's dividends resulting from the great public investment in atomic research and development.

Not the least of these developments is the potential development of atomic power reactors which will be able to produce electric power in commercially usable quantities, and at rates which will permit sale of this power to the public.

How does the present bill plan to open this new electric power source for the benefit of the American public? What guaranties are there that the great investments which the public has already made will be for the public interest?

What is to be the true nature of the economic relationships between those companies and groups which will be licensed to produce electric power from atomic energy and the Atomic Energy Commission which will act on behalf of the Government and the people in licensing these companies?

These are questions which must be answered—and, in my opinion, must be answered in legislation which will clearly protect the long-range interests of the American people.

Mr. DOUGLAS. Mr. President, will the Senator from New York yield further?

Mr. LEHMAN. I yield.

Mr. DOUGLAS. I congratulate the Senator from New York for having put his finger on what I consider to be the essential point at issue in the pending bill. The discussion during the past few days has concentrated itself almost exclusively upon the so-called Dixon-Yates contract. With criticisms of the contract I have found myself in agreement, but it seems to me to be unfortunate that so much attention has been concentrated on that and so little attention has been fastened on the important question of how atomic energy is to be used and the consequences of such use. I wish to congratulate the Senator from New York for bringing the debate of the Senate at last to the crucial issue presented by this bill.

Mr. LEHMAN. I thank the distinguished Senator from Illinois. I have felt that although the Dixon-Yates contract was important as an administrative matter, its importance is small as compared with the vital considerations which I have described and which the Senator has been good enough to emphasize, because these considerations go to the heart of the subject, and we must realize that they will affect the American people for generations to come.

I thank the Senator for his great contribution.

Mr. President, we have a detailed and workable precedent available to us in measuring the standards set by this bill against a sound public policy in the utilization of sources of electric power which belong to the public. I speak of the precedents found in the Federal Power Act which prescribes how hydroelectric resources may be developed and utilized. In my opinion, this act—and the historical developments behind its adoption—provide the clearest parallel with the problem we are now faced with in legislating for power produced from atomic energy. We should look to the Federal Power Act as a partial standard against which we can measure the proposed atomic-energy bill.

We know that the Federal Power Act was designed to protect and safeguard the public's interest in the energy resulting from falling water on the rivers and streams of our Nation. The safeguards established in that act and in the Flood Control Act of 1944 were based on the fundamental assumption that the water resources of this Nation are a public resource and must be conserved and developed for the best possible use for all the people.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LEHMAN. I am glad to yield.

Mr. DOUGLAS. Is it not true that the late Senator George W. Norris, who, I think, with the passage of time, is coming more and more to be regarded as perhaps the greatest Senator of the last generation, if not of the whole history of the United States, always referred to the question of the Federal control of falling water in streams in this way: First, that the water came as rain from heaven; that it was the gift of God, not the property of any individual. Second, that the water moved in streams which had been adjudged navigable and, therefore, fell under the control of the Federal Government.

Mr. LEHMAN. I share the very high opinion of Senator Norris which has been expressed by the Senator from Illinois. I may say that one of the things in which I take the greatest pride in my service in the Senate is that I am one member of a group of Senators, of whom the distinguished Senator from Illinois, the distinguished Senator from Montana [Mr. MURRAY], and the great Senator from Oregon [Mr. MORSE] are members, who are fighting, day and night, to conserve the natural resources of the United States, than which there is nothing more important, and without which this country will not continue to go forward.

On page 121 of the separate views on S. 3690 filed by Representatives HOLIFIELD and PRICE, we find a listing of the safeguards set forth in the Federal Power Act which prescribe how hydroelectric resources may be used. They are worth repeating here:

First. Safeguard for the prior right of Federal development of the resource in any specific case where this will best serve the public interest.

Second. Safeguard for the prior right of public bodies and cooperatives, as against a private applicant for a license for any specific development of the resource.

Third. Safeguards for the right to public hearing in connection with any application, with specific provision for admission of interested States, State commissions, municipalities, representatives of interested consumers, or competitors as parties. That is covered in an amendment which is now on the desks of Senators.

Fourth. Safeguards for the right of Federal or other public recapture of any development by a private licensee at the end of the license period on payment of no more than the licensee's net investment in the project. I wish to point out again that the bill which we are now considering is completely lacking in any such provision.

Fifth. Safeguards for reasonable rates to consumers by provision requiring licensees as a condition of any license to agree to Federal regulation where States have provided no regulation of electric rates, with further provision that in any rate proceeding the licensee can claim no more than net investment in the development for rate base purposes.

Sixth. Safeguards for the preferred position of public and cooperative electric systems to obtain power supply from Federal development of the resource.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LEHMAN. I yield.

Mr. DOUGLAS. In order that my position may be made clear, I wonder if the Senator from New York would permit me to make a brief statement at this point?

Mr. LEHMAN. I should be very glad to do so.

Mr. DOUGLAS. I do not go so far as Representative HOLIFIELD and Representative PRICE in saying that the Federal Government must have a prior and preferred position in the use of fissionable material which is used for electrical energy, but I say that the Federal Government should have an equal position. As a matter of fact, I look forward to the development of electrical energy from atomic power primarily by private companies, since approximately four-fifths of the electrical energy now produced in the United States is generated and distributed by private companies. But I would not foreclose the field to the Federal Government to develop it. It would seem to me that the amount of Government development would be a minor share of the total development, but it would be a very valuable yardstick by which the actual costs of private companies could be checked.

I mention this because words are tricky things, and failure to demur at this point might be regarded as acceptance.

Mr. LEHMAN. I thank the Senator from Illinois. I am in agreement with

what he has said. I certainly do not wish to see private enterprise eliminated from this field. What I have been trying to emphasize—and I am very glad indeed the distinguished Senator from Illinois is in full agreement with me—is that the Federal Government must not surrender its rights or yield its rights beyond recovery.

Mr. DOUGLAS. That is correct.

Mr. LEHMAN. As stated by Representatives HOLIFIELD and PRICE, the amendments to the Atomic Energy Act which we are now debating in this bill are wholly lacking in any of the above-listed safeguards.

To me this fact alone is sufficient reason to vote to send ths bill back to the joint committee for further study and revision.

I would hope, Mr. President, that my State of New York—the power authority of New York State—as well as the many publicly owned municipal electric utility companies throughout the State of New York—would be given a preference in the consideration of a license for the construction of nuclear power reactors to be built in New York State.

I would hope that there would be placed in the bill a provision for due notice to the power authority of the State of New York, and other State, municipal, and nonprofit groups, prior to the issuance of any license to produce commercial power from atomic energy. There are no such requirements in the bill as it is now written.

I believe that where the interests of any State, municipality, or cooperative come in conflict with a private interest wishing to develop a nuclear power plant, preferred consideration should be given to the public body.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LEHMAN. I yield.

Mr. DOUGLAS. I demur slightly at this point and emphasize that what I desire is not preferred consideration, but equal consideration to be given to public bodies.

Mr. LEHMAN. I can see that that question is very fully open to argument. I feel that in the development of a public resource some preference, at least, should be given to public bodies, and that safeguards should be thrown around the issuance of licenses.

It is inconceivable to me that the public, having invested over $12 billion in the great undertaking which has now provided the opportunity for nuclear energy to be transformed into usable electric energy, is now going to be placed in the position of having to take second place to private utility companies in the granting of licenses for atomic power plants. Certainly the State and local agencies which are presently established to produce electric power—agencies owned by all the people—should be the primary benefactors of these new discoveries.

I understand the Senator from Illinois is objecting, as I am, to the elimination or surrender of the Government's rights.

Mr. DOUGLAS. Mr. President, will the Senator yield for a further question?

Mr. LEHMAN. Yes.

Mr. DOUGLAS. The Senator from New York has referred to the enormous public investment of $12 billion in the great undertaking of the development of atomic energy, which was originally designed, of course, to produce weapons. But the development may have, as a by-product, the utilization of atomic and thermonuclear energy for industrial purposes. Is it not true that it would have been impossible for private industry to have made any such investment as this?

Mr. LEHMAN. Oh, quite impossible, of course.

Mr. DOUGLAS. Since sometimes Government officials are censured for the mistakes they make, is not great credit due to President Roosevelt, who authorized, I believe, the expenditure of more than a billion dollars, almost $2 billion, for experimental purposes in order to determine whether the development of atomic energy would be a success.

Mr. LEHMAN. I cannot emphasize too strongly my full agreement with the comments of the distinguished Senator from Illinois. I have often said that, in my opinion, among the most heroic, among the most courageous acts in all history was the personal direction given by President Roosevelt to the development of the atom bomb. If it had failed—and there was a great possibility of its failure—President Roosevelt would have been damned from one end of the country to the other. It would have been said that he had acted beyond his authority, and that he was responsible for the waste of almost $2 billion. But that did not deter him. I have never known a more courageous man than Franklin Delano Roosevelt. He went ahead, almost on his own initiative, of course, taking advice from a certain number of experts, and authorized the expenditure for and the development of this powerful weapon. I am very grateful to the Senator from Illinois for bringing that fact out in the debate.

Mr. DOUGLAS. Is it not true that many persons would have probably demanded impeachment of the President if the experiment had failed? Since the experiment succeeded, have we noticed that much praise has been given to former President Roosevelt for that contribution to our national welfare?

Mr. LEHMAN. No, I have not noticed that much praise has been given to him for that and for many other actions which took great courage.

Mr. DOUGLAS. May the Senator from Illinois inject a local note into this general theme?

Mr. LEHMAN. Yes.

Mr. DOUGLAS. As the Senator from New York probably knows, experiments were carried on at the university to which I was formerly attached, the University of Chicago. The first successful atomic reaction was developed at that university. If that experiment had failed, the university would have been blown completely to pieces, and a large portion of the south side of Chicago would have been destroyed. So I should like to point out that my university took a great deal of risk in that experiment also and hazarded its very physical existence upon the success of the experiment.

Mr. LEHMAN. I am very much interested in that bit of history. I had not heard it before, and I was not acquainted with that fact. I congratulate the university and my distinguished colleague for the part both of them took in that development, which has been a great asset to the country.

Mr. DOUGLAS. I took no part in that experiment.

Mr. LEHMAN. Mr. President, it is important that this need for preferences to public agencies be established for another reason. At present there is no yardstick by which the cost of developing and producing electric power from nuclear energy, and the charges made for that power, can be measured. The bill prohibits the AEC or any other Federal agency from entering the field of powerplant reactors and commercially selling the electric power. I think this is wholly wrong. I think it is a dangerous prohibition. If we do not make provision for some publicly developed electric power from the atom, there will be no yardstick against which the privately owned systems can be measured. Thus, we may be retarding and hampering the ultimate development and utilization of atomic electricity for many, many years.

Mr. GORE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. CRIPPA in the chair). Does the Senator from New York yield to the Senator from Tennessee?

Mr. LEHMAN. I am glad to yield to the Senator from Tennessee.

Mr. GORE. I share the able Senator's concern regarding the prohibition against the Commission. I am not sure that it would not be the better part of wisdom to create another agency with the specific assignment of the task of developing experimentally the generation of power from atomic energy in commercial quantities. I have not given that possibility sufficient thought to reach a final conclusion. I share the concern of the able Senator over the prohibition of the Commission's entering this field unless at the same time there is established some agency, instrumentality, or means for doing so. The question I raise with the able Senator is whether it would be the better part of wisdom for the Commission itself to enter into such activity, or to create another agency and give it that specific assignment.

Mr. LEHMAN. I have not explored that possibility at all. It seems to me that such an arrangement might have great merit; I do not know. What I am trying to emphasize in my speech is my great distress and fear that, under the bill, if it should be enacted, the United States Government would, to a great extent, yield whatever rights it may have now or at some future time to develop atomic energy for industrial and other purposes. If it were proved or shown to be in the interest of the public, there might be another agency than the Atomic Energy Commission which might enter into that activity. Perhaps the

TVA would be competent to do so. Certainly the matter should be explored.

Mr. GORE. I did not mean in any way to suggest that the TVA would be the proper agency to enter into that activity, and I think the able Senator from New York was using that agency only as an example by way of reference. I share fully the concern of the distinguished Senator from New York that at the time this resource, which has cost us such vast amounts of money, is to be made available to those concerns that have sufficiently large financial resources to enable them to enter the field, we may at the same time refuse the Commission authority to do so and fail to create any other agency to enter into this activity. It seems to me when those two possibilities are coupled together, we are not providing sufficient protection for small business concerns that cannot invest $250 million in a plant such as is contemplated, and at the same time we are not giving protection to the municipal power systems and the rural-electrification systems of the country.

Mr. LEHMAN. I am in entire agreement with the Senator from Tennessee. Those are matters which have disturbed me ever since I started to study the report, which was only a few days ago. Members of the Senate, except members of the committee, have not had a chance to study the report. However, I think the danger which has been mentioned should be uppermost in the minds of the American people, because it is very real. It is being proposed, by reason of conditions which exist, to give a virtually monopolistic control to a few powerful interests, and at the same time to shut off the possibility of any governmental action if it should prove to be necessary.

I thank the Senator for his contribution.

In conclusion, Mr. President, it is my hope that the Congress will withhold its action on this all-important legislation until the Congress and the people of the Nation have had an opportunity fully to comprehend and understand the issues and problems involved in this far-reaching legislation, only a few aspects of which I have touched in my remarks today.

I have not discussed such vital aspects of the pending bill as the special authority proposed to be vested in the Chairman of the Commission, thus tending to break down the present pattern of organization.

I have not discussed the patent provisions, the antimonopoly aspects, the military control provisions, and many, many others.

This is a bill of almost numberless issues, each one of which should and must be carefully considered.

I agree that the provisions of the bill dealing with the pooling of international information on atomic energy should be passed at this session. I have not dealt with this aspect, but I subscribe to many of the views expressed in this matter by the Senator from Rhode Island [Mr. PASTORE]. These provisions should be debated. They should be amended. They should be passed.

Mr. HILL. Mr. President, will the Senator from New York yield?

Mr. LEHMAN. I yield.

Mr. HILL. I wish to commend the Senator from New York for the very able and strong speech he has made. He has emphasized and made most clear that the pending bill is, first and foremost, a power bill. Of course the international arrangements and features of the bill are most important; but the bill is primarily a power bill, and many of its provisions indicate that it is in line with the policy of the administration to break down, impair, chip off, and, in the end, destroy the great power policy we have had, and which we have been building and strengthening through the years since the days of Theodore Roosevelt and Gifford Pinchot. Is not that true?

Mr. LEHMAN. That is absolutely true.

Mr. HILL. The Senator from New York, in the course of his very timely and eloquent speech this morning has raised a warning signal. Certainly we should beware, and should stop, look, and listen, before we enter into this great, new, vast, almost undreamed of field of power, to make sure that we do not tear down the great power policy which had its beginning 50 years ago, and which we have sought to carry through, build upon, and strengthen through the years.

So, Mr. President, I wish to heartily congratulate the Senator from New York.

Mr. LEHMAN. Mr. President, I express my sincere thanks to the Senator from Alabama.

Mr. President, let me say a final word. The other aspects of the bill, aside from those dealing with the pooling of international information, are too pregnant with danger to be approved with so little study, consideration, and debate. Too much is at stake. We dare not trifle so superficially with the public interest in this most fundamental aspect of the problem of atomic energy. It is for this reason that I shall feel compelled to vote against this bill, or at least to vote to recommit it, hoping, however, that we shall have an opportunity to vote separately on the provisions dealing with the international pooling of atomic information, as recommended by President Eisenhower.

Mr. President, let me say that I have been very glad to be able to participate in the debate. I hope to have at least stimulated some thinking. What has been done and what is being done on the floor of the Senate, under the leadership of such Members as the junior Senator from Tennessee [Mr. GORE], the senior Senator from Alabama [Mr. HILL], and the junior Senator from New Mexico [Mr. ANDERSON], among others, have been of tremendous service to the thinking of the people of the United States and, what is just as important, if I may say so, to the thinking and education of the Members of Congress, for I believe that on last Wednesday morning, at the beginning of this debate, which these Members have largely carried on, only a handful of the Members of the Senate really knew the implications of the bill and its dangers and ramifications, and how it would affect the lives of hundreds of millions of persons in the United States over the next several generations.

As a result of the debate, I believe that today a very substantial number of the Members of this body have at least a reasonably good appreciation of what is contained in the bill and its implications. So I desire to express my very great appreciation for the manner in which the debate has been conducted.

Mr. GORE. Mr. President, will the Senator from New York yield?

Mr. LEHMAN. I am very glad to yield.

Mr. GORE. At the moment, the junior Senator from Tennessee happens to be the only one of the three members to whom the able Senator from New York has made such generous reference, who is on the floor. So, upon my own behalf, and I presume upon behalf of the senior Senator from Alabama [Mr. HILL] and the junior Senator from New Mexico [Mr. ANDERSON], I wish to thank the able Senator from New York for his generous remarks. Although I fear they are undeserved, particularly on the part of the junior Senator from Tennessee, nevertheless they are very much appreciated.

I, in turn, wish to thank the senior Senator from New York for his able and valuable contribution to the debate.

Mr. LEHMAN. I thank the Senator from Tennessee.

Mr. MARTIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Aiken	Ervin	Lehman
Anderson	Ferguson	Lennon
Bennett	Flanders	Martin
Burke	Goldwater	Morse
Bush	Gore	Mundt
Capehart	Hayden	Murray
Carlson	Hendrickson	Payne
Case	Hickenlooper	Robertson
Clements	Hill	Schoeppel
Cooper	Holland	Smith, Maine
Cordon	Ives	Smith, N. J.
Crippa	Johnson, Colo.	Sparkman
Dirksen	Johnson, Tex.	Stennis
Douglas	Johnston, S. C.	Thye
Duff	Knowland	Watkins
Dworshak	Kuchel	Williams

Mr. KNOWLAND. I announce that the Senator from Wisconsin [Mr. WILEY] is absent on official business.

The Senator from Wyoming [Mr. BARRETT], the Senator from Nebraska [Mrs. BOWRING], the Senator from Ohio [Mr. BRICKER], the Senator from New Hampshire [Mr. BRIDGES], the Senator from Michigan [Mr. POTTER], the Senator from Massachusetts [Mr. SALTONSTALL], and the Senator from New Hampshire [Mr. UPTON] are necessarily absent.

Mr. CLEMENTS. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from Louisiana [Mr. ELLENDER], the Senator from Delaware [Mr. FREAR], the Senators from Rhode Island [Mr. GREEN and Mr. PASTORE], the Senator from Washington [Mr. JACKSON], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr.

KENNEDY], the Senator from Montana [Mr. MANSFIELD], the Senator from South Carolina [Mr. MAYBANK], the Senator from Nevada [Mr. MCCARRAN], the Senator from Arkansas [Mr. MCCLELLAN], and the Senator from West Virginia [Mr. NEELY] are absent on official business.

The Senator from Missouri [Mr. HENNINGS] is necessarily absent.

The PRESIDING OFFICER. A quorum is not present.

Mr. KNOWLAND. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

After a little delay, Mr. BEALL, Mr. BUTLER, Mr. CHAVEZ, Mr. DANIEL, Mr. FULBRIGHT, Mr. GEORGE, Mr. GILLETTE, Mr. HUMPHREY, Mr. JENNER, Mr. KERR, Mr. KILGORE, Mr. LANGER, Mr. LONG, Mr. MAGNUSON, Mr. MALONE, Mr. MCCARTHY, Mr. MILLIKIN, Mr. MONRONEY, Mr. PURTELL, Mr. REYNOLDS, Mr. RUSSELL, Mr. SMATHERS, Mr. SYMINGTON, Mr. WELKER, and Mr. YOUNG entered the Chamber and answered to their names.

The PRESIDING OFFICER. A quorum is present.

LONG-TERM CHARTER OF TANKERS

The PRESIDING OFFICER laid before the Senate the amendments of the House of Representatives to the bill (S. 3458) to authorize the long-term time charter of tankers by the Secretary of the Navy, and for other purposes, which were to strike out all after the enacting clause and insert:

That the President is hereby authorized to undertake the construction of not to exceed 20 tankers. The tankers shall be of approximately 25,000 deadweight tons each, shall have a speed of not less than 18 knots, and shall be constructed in private shipyards within the continental United States. The construction of the tankers shall be, so far as practicable, of materials and equipment produced or manufactured in the United States.

SEC. 2. There is hereby authorized to be appropriated not to exceed $150 million for the construction of the foregoing vessels.

And to amend the title so as to read: "An act to authorize the construction of tankers."

Mr. HENDRICKSON. Mr. President, at the request of the chairman of the Committee on Armed Services, who is absent on official business, I move that the Senate disagree to the amendments of the House to the bill (S. 3458) to authorize the long-term time charter of tankers by the Secretary of the Navy, and for other purposes, request a conference with the House of Representatives thereon, and that the Chair appoint conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. SALTONSTALL, Mr. BRIDGES, and Mr. RUSSELL conferees on the part of the Senate.

CALL OF THE CALENDAR

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the Senate proceed, as previously announced, to a call of the calendar of bills to which there is no objection, beginning where the last call ended, which was Calendar No. 1797, Senate bill 2601, and that we now begin with Calendar No. 1798, H. R. 6882, in addition to two bills which have been added to this week's calendar call.

The PRESIDING OFFICER. Without objection, it is so ordered. The first bill which is in order will be stated.

FLOYD C. BARBER—BILL PASSED OVER

The bill (H. R. 2815) for the relief of Floyd C. Barber was announced as first in order.

Mr. HENDRICKSON. Mr. President, I ask that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

LIMIT ON TAXICAB LICENSES IN DISTRICT OF COLUMBIA—BILL PASSED OVER

The bill (S. 880) to amend the license law of the District of Columbia was announced as next in order.

Mr. ERVIN. Mr. President, I desire to speak for about 3 or 4 minutes in opposition to the passage of the bill.

The PRESIDING OFFICER. The Senator has 5 minutes.

Mr. ERVIN. The bill provides, in proper legal language, that the Public Utilities Commission of the District of Columbia shall be vested with power to restrict the number of taxicabs which may be operated in the city of Washington.

One object of the bill is to create a monopoly in favor of those who are now engaged in the taxicab business, as against those who may hereafter wish to engage in the business.

This is the fifth time I have been a member of a legislative body, and the same arguments have been made on this occasion in support of the bill as I have heard on all other occasions. Whenever a group of persons is already engaged in a business, attempts are made to create a monopoly by excluding other persons from the business.

The first argument is that if the number of taxicabs in Washington is limited, those already operating taxicabs will make more profits. I believe that is not a valid argument. If I and 99 other persons were given the exclusive privilege of practicing law in North Carolina, I agree that I and the other 99 would be much better off.

The next argument is that if the number of cabs is limited, the character and ability of those who operate the cabs will be of a higher standard. I do not object to the desire to promote better character and ability, but I do not believe Congress has a right to deprive a person of his right to earn a livelihood. Everyone has the right to his choice of occupation in order to make a living.

The third argument is that taxicab operators are engaged in operating a public utility. I do not think they are engaged in the operation of a public utility in the real sense of the term. I admit that the operation of a taxicab is an occupation clothed with a public interest, and the public has a right to have the industry regulated to the extent to which it is necessary in order to protect the public.

In the city of Washington, so far as taxicab operation is concerned, I think the public is sufficiently protected by the existing laws which require the carrying of liability insurance, which prescribe the fares to be charged, and which provide for the examination of drivers. I do not think it is necessary, in the public interest, to go any further.

In closing, I say that if a Senator believes that Congress should create a monopoly for those already engaged in a business, by excluding from that business, which is one of the ordinary avocations of life, those who may hereafter desire to enter into the business, then such Senator should vote for the bill.

But if a Senator shares the view which I hold, that Congress should not bar from one of the ordinary occupations of life those who may hereafter desire to enter into that occupation, he should vote against the bill.

Mr. GORE. Mr. President, will the Senator yield?

Mr. ERVIN. I yield.

Mr. GORE. The Senator from North Carolina is speaking in behalf of free enterprise. As I understand the able Senator, he says that somewhere, somehow, some avenue of activity should be left open into which the ordinary citizen can enter.

Mr. ERVIN. That is correct.

Mr. GORE. I share the Senator's feelings in that regard.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. PAYNE. Mr. President, I merely wish to say that, contrary to any opinion which may have been expressed, the committee held extensive hearings in connection with the measure. The committee heard witnesses from almost every field of activity. The bill received the support of the Public Utilities Commission and, if my memory serves me correctly, of the representatives of the governing bodies of the District generally.

The committee was exceptionally careful to make certain that amendments were written into the bill to the extent that the full protection would be provided to the individual operators—the independent operators—and that those who chose to continue in the business would not, in any way, shape, or manner, be deprived of that right.

The committee, through its staff, also wrote into the bill protective features, so that the larger companies operating in the District would never be able to develop a monopoly in the taxicab business, because it was the feeling of members of the committee that such a situation definitely should not obtain under any conditions.

The text of the bill does protect the rights of the independent operator, and does maintain the same relationships and ratios between the number of so-called large operators and so-called independent operators within the District of Columbia. I do not have available to me at this moment the figures, but the

number of taxicabs available per capita in the District of Columbia, as compared with other communities throughout the country, is greatly out of proportion. If my memory serves me correctly, under the present licensing system, in the District of Columbia the ratio is 1 taxicab for every 94 persons, whereas, generally speaking, in cities of comparable size throughout the Nation the ratio is 1 taxicab for as many as 900, 1,000, or 1,200 persons.

So the bill does not in any way, shape, or manner provide for a monopoly for the large operators. It protects definitely the relationship and existing ratio between the large operators and the independent operators who are presently licensed.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, by request I object.

Mr. KNOWLAND. Mr. President, will the Senator from Tennessee withhold his objection?

Mr. GORE. I withhold my objection.

Mr. KNOWLAND. For the information of the Senate, this is one of the bills which has been cleared by the majority policy committee. So at an early date, when the unfinished business has been disposed of, it is my intention to move the consideration of the bill.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. I object.

The PRESIDING OFFICER. The bill will be passed over.

CONSTRUCTION OF VERMEJO RECLAMATION PROJECT

The bill (H. R. 6882) to amend the act of September 27, 1950, relating to construction of the Vermejo reclamation project was announced as next in order.

Mr. HENDRICKSON. Mr. President, reserving the right to object, and I shall not object, may we have an explanation of the bill for the purpose of the record?

Mr. ANDERSON. Mr. President, this bill would permit a reclamation district, newly organized, to take bonds which it had heretofore pledged to the RFC and transfer that indebtedness to the regular reclamation fund, and make payments in regular fashion, the same as any other reclamation district. This would comply with the usual reclamation law.

This district was a specially organized district.

This is in accord with the usual, customary practice, and it has been endorsed by the Secretary of the Interior and other agencies.

Mr. HENDRICKSON. Am I correct in understanding that the effect is to waive interest?

Mr. ANDERSON. Yes. The reclamation fund law provides for 40 years without interest, whereas the bonds held by the RFC bear interest, but that is a very small amount compared with the total indebtedness.

Mr. HENDRICKSON. I thank the distinguished Senator.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to a third reading, read the third time, and passed.

HELIUM-BEARING GAS LANDS, NAVAHO RESERVATION, N. MEX.

The bill (H. R. 130) to amend section 1 of the act approved June 27, 1947 (61 Stat. 189), was announced as next in order.

Mr. GORE. Reserving the right to object, may we have an explanation of the bill?

Mr. ANDERSON. The purpose of the bill is to resolve a controversy between the Navaho Indians and the Federal Government as to the rights of the Indians under a helium lease. At the time the original helium lease was granted, very little was known about the commercial possibilities of helium. The United States was interested in certain types of aircraft. There was no other source of helium in a satisfactory amount. The Government asked the Navaho Indians to let its agents go upon the reservation and extract the helium. The Government paid the Indians $40,000 in cash and $30,000 or $40,000 in advance rentals and proceeded to operate from that time on.

A part of the lease was assigned to one of the oil companies for the purposes of development. When the lease expired the oil company surrendered the lease to the Government instead of to the Navaho Tribe, and a controversy followed which resulted in a loss of some money to the Navahos. They want to go into the Court of Claims and assert their rights. The Department of the Interior agrees the procedure is proper. Section 3 of the bill provides for a special privilege, and was written exactly as the Department of the Interior and the Department of Justice wanted it written, so the Navaho Tribe will have an opportunity to assert their rights. However, the rights of the Federal Government are fully protected.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, will the junior Senator from New Mexico indicate to what extent, in his opinion, the United States Government may have either violated or trespassed upon its proper fiduciary responsibilities back in 1942?

Mr. ANDERSON. That is a little difficult to answer, but I shall try to respond by saying that the Navaho Indians at that time did not have as good legal services as they now have. They have become wealthier from uranium leases, oil leases, and from various other sources, and they now have several million dollars on deposit in the Treasury of the United States. They now have enough business to enable them to maintain a business advisory council composed of persons outside the tribe.

At the time the lease was made in 1942, the advisory council was not checking the lease, and when the Continental Oil Co. surrendered it, it surrendered the lease to the United States Government. If the Indians had had proper legal advice from the Government, they would have been advised that the lease should have been surrendered to the Navaho Indians and not to the trustee. It was because of that conflict, the surrendering of the lease to the Government when it should have been surrendered to the Navaho Indians, that the controversy arose. The Government admits it made a mistake, and that it should have advised that the lease should have been surrendered to the Navaho Indians; but, somehow, no one noticed it.

The Department of the Interior is willing to concede the case should be handled in the way provided in the bill. The provision will permit the Navaho Indians to go into the Court of Claims and assert the rights which they would have had if the Federal Government had properly protected their rights and seen to it that the lease was properly surrendered.

Mr. GORE. The Senator from New Mexico is seeking to justify the waiver of the statute of limitations on the ground that the Government of the United States in 1942 was delinquent in its fiduciary responsibility to the Navaho tribe?

Mr. ANDERSON. Exactly. I may say that the law of 1947 was relied on as being sufficient. It was not until the Navahos proceeded under the law of 1947 that the council discovered the surrender had been improper. Then it was too late to proceed under the law of 1942. Had it been known at the time the 1947 law was being considered that an improper transfer had been made in 1942, that mistake would have been taken care of in the 1947 legislation.

Mr. GORE. As I understand, no attempt is being made to waive the statute of limitations in other respects, but the bill would merely permit the Navaho Indians to go into the Court of Claims because of the deficiency in advice on the part of the Government at the time the lease was surrendered?

Mr. ANDERSON. The Senator is absolutely correct.

Mr. GORE. Mr. President, I have no objection.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill (H. R. 130), to amend section 1 of the act approved June 27, 1947 (61 Stat. 189), which had been reported from the Committee on Interior and Insular Affairs with an amendment, on page 3, after line 23, to insert:

SEC. 2. Said act approved June 27, 1947 (61 Stat. 189), is hereby further amended by adding at the end thereof a new section to be designated section 3 and to read as follows:

"SEC. 3. Jurisdiction is hereby conferred on the Court of Claims to determine, notwithstanding any statute of limitations or laches, in any suit instituted pursuant to section 1 of this act, (1) whether the assignment dated December 1, 1942, accepted and approved December 17, 1942, of oil and gas lease 149-ind-5337, covering the land denominated '1942 lands' in section 4 of said

agreement dated December 1, 1945, as amended, should in law or in equity, taking into consideration such fiduciary relationship as may exist between the United States and the Navaho Tribe, have been accepted by the United States for the account of the Navaho Tribe instead of for its own account, and, if such assignment should have been so accepted, whether the property interest or any part thereof covered by such assignment was taken by the United States from the said tribe at any time prior to the effective date of said agreement; (2) whether, and in what amount, if any, the Navaho Tribe is entitled on the basis of such determination to compensation for the acquisition or taking, by the United States, of the property interest or any part thereof covered by such assignment; and (3) whether, and in what amount, if any, the United States is entitled to credit against such compensation for rentals on such lease or for other expenditures, borne by the United States, for the benefit of such lease prior to any such acquisition or taking by the United States; and to enter judgment in accordance with such determinations. No offsets shall be deducted by the court from any net sum, and the interest thereon, if any, that the court awards under this section. The provisions of the last two sentences of section 1 of this act shall be applicable to any judgment entered pursuant to this section."

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "An act to amend the act approved June 27, 1947 (61 Stat. 189)."

CONVEYANCE OF CERTAIN LANDS TO THE SISKIYOU JOINT UNION HIGH SCHOOL DISTRICT, CALIFORNIA

The bill (H. R. 6975) authorizing the Secretary of the Interior to convey certain lands to the Siskiyou Joint Union High School District, Siskiyou County, Calif., was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, may we have an explanation of the bill?

Mr. KUCHEL. Mr. President, this bill would authorize the transfer, without compensation, of about 27.58 acres to Siskiyou Joint Union High School District, California, which land would be used only for public school purposes, with the provision that the land shall revert to the United States if used for any other purpose.

The land in question is a portion of a tract uncovered by the lowering of Tule Lake in connection with a Federal reclamation project. All such land was ceded by the State of California to the United States without compensation.

Favorable reports have been made by the Department of the Interior to the House committee and by the Bureau of the Budget to the Senate committee.

Mr. MORSE. Mr. President, I shall not object to the bill, but for the record, I wish to say that it does not conflict with the Morse formula. This was land owned by the State of California, and it is land which is going back to the State of California. There has been no investment whatsoever on the part of the Federal Government. In my judgment, the bill meets the Morse formula.

The PRESIDING OFFICER. Is there objection to the consideration of the bill?

There being no objection, the bill (H. R. 6975) was considered, ordered to a third reading, read the third time, and passed.

BILL PASSED TO NEXT CALL OF THE CALENDAR

The bill (H. R. 2235) to authorize the Secretary of the Interior to construct the Santa Maria project, Southern Pacific Basin, Calif., was announced as next in order.

Mr. MORSE. Mr. President, I should like to have the bill go over until the next call of the calendar.

The PRESIDING OFFICER. The bill will go over to the next call of the calendar.

BILLS PASSED OVER

The bill (H. R. 4213) to authorize works for developing and furnishing of water supplies for waterfowl management, Central Valley project, California, was announced as next in order.

Mr. MORSE. Mr. President, this is another bill I desire to study between now and the next call of the calendar, and I ask that it go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 620) to provide authorization for certain uses of public lands, which had been reported from the Committee on Interior and Insular Affairs with amendments, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MORSE. Mr. President, I should like to study this bill also. I object.

The PRESIDING OFFICER. The bill will go over.

LANDS IN THE OWL CREEK UNIT OF THE MISSOURI BASIN PROJECT—BILL PASSED OVER

The bill (H. R. 4721) to provide that the excess-land provisions of the Federal reclamation laws shall not apply to lands in the Owl Creek unit of the Missouri Basin project was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MORSE. Mr. President, this is another bill I should like to study between now and the next call of the calendar. I give the Senators from California assurance I shall study the bill over the week end, and will be ready at the next call of the calendar.

Mr. HENDRICKSON. Mr. President, I wonder if the distinguished Senator from Oregon thinks we ought to have a unanimous-consent agreement that the bills to which he has objected be included in the next call of the calendar.

Mr. MORSE. I have no objection to a unanimous-consent request that they be included in the next call of the calendar.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. Objection being heard, the bill (H. R. 4721) will be passed over.

TRANSFER OF TITLE TO MOVABLE PROPERTY TO IRRIGATION DISTRICTS

The bill (H. R. 8026) to provide for transfer of title to movable property to irrigation districts or water users' organizations under the Federal reclamation laws was announced as next in order.

THE TENNESSEE VALLEY AUTHORITY

Mr. JENNER. Mr. President, when Mussolini came into power in Italy, he started vast public-works projects for draining the Pontine marshes and other unhealthy areas of land. The only difficulty was that constitutional Italian governments which preceded him had also been carrying on great drainage projects, except that they chose to drain the land which it was important to reclaim for farmland, while Mussolini chose to reclaim the marshes which were closest to the main highways where everyone could see them.

When Lenin became the ruler of Russia, members of the inland Asian tribes came to Moscow and worked out in tribal dances the coming of the "Lenin light" to their dark cabins. The only difficulty was that the "Lenin light" was the familiar electric light which had been developed not by a man named Nikolai Lenin, but by a man named Thomas Edison.

When the New Dealers came into office in 1933, they set up a vast project for control of the floods in the Tennessee River Valley, and manufacture of power as a sort of a side line. The only trouble was that the United States was far ahead of all the nations of the world in its development of what Europe called "white coal." All of that progress, from the kerosene lamp and the gas light, had been achieved by private citizens, working under American conditions of political and economic liberty, without any help from Government.

The TVA started with some modesty to build a few dams on one river system, but the limitations were soon lifted, and the original chairman of the board was summarily released to make room for Board Member David Lilienthal as Chairman.

I do not believe anybody really knows what are the ramifications of the original today, and what powers they exercise, beyond the sight of Congress, through the use of war funds and other unchecked funds appropriated to the President but spent by the bureaucracy.

President Eisenhower has attempted to reverse the colossal growth of TVA, and to increase the role of the private enterprises, working without tax funds or Government direction of their employees.

Naturally, the supporters of socialism have protested bitterly against this interference with unlimited growth of their favorite showpiece of what Govern-

ment spending can do. Every foreign student, foreign journalist, and visiting potentate who comes to this country as a guest of the United States is taken sooner or later to TVA, to see how completely the United States is committed to Lenin's doctrine that the Government must control the commanding heights of the Nation's economy, or free enterprise will quickly grow stronger than Government enterprise.

My people in the State of Indiana are not fooled by the propaganda and stage management of the welfare state. They know that TVA is a great showpiece of the Socialist economy because the people of 44 States have been taxed to make a monument to Government management of the economy.

The Socialists believe the people are too dumb to be bothered with state industrialization, if the story can be all mixed up in balance sheets, hidden costs, technical terms, and general undesignated appropriations. They do not guess how wrong they are. My people in Indiana, and the people in most of our States, have learned that a dollar taken in taxes from our people and sent to Washington shrinks on the way. The benefits we receive add up to only a very small part of what we pay.

President Eisenhower's proposal to bring private industry into the TVA picture means that private citizens in my State and the other States can keep their own earnings, invest them as they please, and build industrial enterprise which may have economic power but do not have the police power. Such enterprises can never be assembled, when the crisis comes, by ambitious men who have made the legal and financial network of TVA into potentially very dangerous forms of unseen governmental power

The people of my State, and the American people generally, I believe, are unreservedly behind President Eisenhower in his efforts to dismantle part of the colossus on the Potomac, and restore to the American people the right to control their own economic activities.

TRANSFER OF TITLE TO MOVABLE PROPERTY TO IRRIGATION DISTRICTS

The PRESIDING OFFICER (Mr. PAYNE in the chair). Is there objection to the present consideration of House bill 8026, to provide for transfer of title to movable property to irrigation districts or water users' organizations under the Federal reclamation laws?

Mr. GORE. Mr. President, reserving the right to object, let me say that if I felt the Tennessee Valley Authority needed defense from an attack such as the one we have just heard, I would be delighted to supply such a defense. Not entertaining such a feeling, I now request an explanation of House bill 8026.

Mr. WATKINS. Mr. President, the purpose of this bill is to clarify the authority of the Department of the Interior to transfer title to movable equipment and similar property to water users' organizations at the time these organizations take over the operation and maintenance of works constructed under Federal reclamation laws.

The Bureau of Reclamation normally operates a project or distribution system for a few years after construction is completed, prior to turning it over to the water users; and the equipment and property referred to in this bill is that which has been acquired by the Government during the time it operates the project works. Although arrangements can be made to transfer use of the equipment to the organization, it would be to the advantage of the Government to transfer title, as by so doing, the maintenance of property and accounting records could be dispensed with. With respect to the financial arrangements relating to title transfers under this bill, the value of the property would be repaid to the Federal Government under a contract with the organization except in those cases where the property was purchased by funds originally advanced by the water users.

Under this arrangement, provision is made that title to the property shall always remain in the United States, even though the entire cost of the project is repaid.

In connection with the construction and operation of these projects, the Government has on hand certain movable property which has been paid for or will be paid for by the water users' associations. Title to this movable property also remains in the name of the United States. Being in the nature of personal property, it is, of course, very difficult to have it repaired and taken care of, even though it is turned over for the use of these associations and districts. Such property involves a great deal of bookkeeping.

It is to avoid the bookkeeping and to permit the water users who have title to the property to use it, that the bill has been introduced. It has been reported favorably by the Committee on Interior and Insular Affairs, and favorable reports on the bill have also been received from the Bureau of the Budget and the Department of the Interior.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill (H. R. 8026) was considered, ordered to a third reading, read the third time, and passed.

CONVEYANCE OF CERTAIN PROPERTY TO THE ARMORY BOARD, STATE OF UTAH

The bill (S. 3561) authorizing the Administrator of Veterans' Affairs to convey certain property to the Armory Board, State of Utah, was announced as next in order.

The PRESIDING OFFICLR. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, may we have an explanation of the bill?

Mr. BENNETT. Mr. President, in the year 1867 the Federal Government set aside in Salt Lake Valley a tract of land, which was known as Fort Douglas. After the end of World War II the Federal Government decided that that fort, one of the old Indian war forts, no longer would be maintained by it; and in 1946, the Federal Government transferred 260 acres of the reservation to the Veterans' Administration. On the 260 acres, the Veterans' Administration has constructed a very large neuropsychiatric hospital; but, obviously, 260 acres are not required in order to provide space for a hospital.

The National Guard of Utah has asked for 35 of the 260 acres, to be set aside as a site upon which it can build an armory and drill hall, supply warehouses, four motor vehicle storage buildings, and a maintenance shop. The purpose of the bill is, with proper provisions and restrictions, to transfer the 35 acres to the Utah State Armory Board, for the purpose of the construction of an armory.

Mr. GORE. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I yield.

Mr. GORE. I am in sympathy with the purpose of the bill, particularly so since last year I introduced a similar bill regarding a veterans' facility in my own State.

However, the bill I introduced contained—and I believe such a provision is customary in the case of such bills—a reservation of the mineral rights to the Federal Government. I should like to have the Senator from Utah state his reaction to that suggestion.

Mr. BENNETT. I have no objection to having such a reservation included in the bill. Certainly it was not my intention to try to alienate the mineral rights of the United States Government.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Finance with an amendment on page 1, line 9, after the word "reservation" to insert "Fort Douglas Station."

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. GORE. Mr. President, I offer the amendment which I sent to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 2, in line 21, before the word "contain", it is proposed to insert "shall reserve all mineral rights, including gas and oil, to the United States, and."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Tennessee [Mr. GORE].

The amendment was agreed to.

Mr. MORSE. Mr. President, I wish to say that I took up the bill with the office of the Senator from Utah; and the bill is in line with the so-called Morse formula, because—as I have said in the past, in the case of similar bills—in my judgment the Federal Government derives a great benefit in the field of national defense from the development of State guard activity of the type involved in this bill.

The PRESIDING OFFICER. The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the

engrossment and third reading of the bill.

The bill (S. 3561) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That the Administrator of Veterans' Affairs is authorized and directed to convey, without monetary consideration and subject to the conditions in section 2 of this act, to the Armory Board, State of Utah, all right, title, and interest of the United States in and to a tract of 35 acres of land, more or less, situated in the western end of the Veterans' Administration hospital reservation, Fort Douglas Station, Salt Lake City, Utah, the exact legal description of which shall be determined by the Administrator of Veterans' Affairs.

SEC. 2. The deed of conveyance authorized under the provisions of this act shall—

(a) provide that such tract shall not be alienated in whole or in part by the Armory Board and shall be used only for training, civic, and related purposes;

(b) provide that, if such tract is so used in any manner that, in the judgment of the Administrator of Veterans' Affairs or his designate, interferes with the care and treatment of patients in the Veterans' Administration hospital located on land contiguous to such tract, such interference shall cease immediately upon notice thereof to the Armory Board by the Administrator or his designate;

(c) provide that, if either of the conditions prescribed in clauses (a) and (b) of this section are violated, title to such tract shall revert to the United States; and

(d) shall reserve all mineral rights, including gas and oil, to the United States, and contain such additional terms, conditions, reservations, and restrictions as may be determined by the Administrator of Veterans' Affairs to be necessary to protect the interests of the United States.

CONVEYANCE OF CERTAIN LANDS TO THE CITY OF MUSKOGEE, OKLA.—BILL ORDERED TO FOOT OF CALENDAR

The bill (H. R. 8983) to provide for the conveyance of certain lands by the United States to the city of Muskogee, Okla., was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, I request an explanation.

The PRESIDING OFFICER. An explanation is requested of Calendar 1807, House bill 8983.

Mr. GORE. Mr. President, I ask that the bill go to the foot of the calendar, to be called at the conclusion of the call today.

The PRESIDING OFFICER. Without objection, it is so ordered.

BILL PASSED OVER

The bill (H. R. 9709) to extend and improve the unemployment compensation program, was announced as next in order.

Mr. HENDRICKSON. Mr. President, this bill obviously is not calendar business. So I ask that the bill go over.

The PRESIDING OFFICER. Objection being heard, the bill will be passed over.

NICOLE GOLDMAN

Mr. GORE. Mr. President, at this point, while the majority leader is on the floor—and let me say I have spoken to him regarding the measure to which I shall now refer—I ask unanimous consent that Calendar 1698, House bill 7012, for the relief of Nicole Goldman, a bill to the consideration of which I objected at the last call of the calendar, be considered at this time.

The PRESIDING OFFICER. Is there objection to the present consideration of House bill 7012?

Mr. KNOWLAND. Mr. President, reserving the right to object, though I shall not object to the consideration of the bill, I want it to be understood—and I am sure the Senator fully agrees with me—that my action is not based on the merits of the bill. I have not had an opportunity to study it. I made no commitment on behalf of our Calendar Committee or anyone else, but I merely wish to extend to the Senator from Tennessee the courtesy of having called today a bill to which he objected at the previous call of the calendar.

Mr. GORE. I thank the Senator. I have also discussed the matter with the majority Calendar Committee, and have related to them the humane element involved in this case.

Mr. HENDRICKSON. Mr. President, in the light of all the circumstances involved in this case, I think the bill should be considered at this time.

Mr. GORE. Mr. President, I should like to state the reasons for my objection when the calendar was last called.

Perhaps in the eyes of some, the junior Senator from Tennessee has been arbitrary, but in the consideration of measures on the calendar it is necessary to have some broad rules. I have been objecting to the passage of bills which admit to this country female immigrants of fertile age who are feebleminded. I believe that is a proper protection for the United States. In this particular case there are unusual circumstances involved. As the case has been described to me, this young lady is not feebleminded in the usual sense of the word. She is not feebleminded by inheritance, but rather because of internment during the war in a camp in Germany. A head infection ensued, and the result is her present mental condition. It is the result of an infection, rather than an inherited feebleminded condition.

Her family is now here. They vouch for her care. Without her admission to this country her care would not be vouched for.

Because of the unusual circumstances, and because the case calls for humane treatment, I withdraw my objection.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill (H. R. 7012) for the relief of Nicole Goldman was considered, ordered to a third reading, read the third time, and passed.

EXECUTION OF AMENDATORY REPAYMENT CONTRACT WITH THE PINE RIVER IRRIGATION DISTRICT, COLORADO

The bill (H. R. 7466) to authorize the Secretary of the Interior to execute an amendatory repayment contract with the Pine River Irrigation District, Colorado, and for other purposes, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, may we have an explanation of the bill?

Mr. CORDON. Mr. President, Calendar 1809, House bill 7466, represents one of a series of actions taken by the Department of the Interior in amending contracts for repayment of construction charges. Over the years, since the enactment of the Reclamation Act of 1902, there have been a number of such instances. They were more frequent in the earlier years. As experience has been gained, such cases have become less frequent.

Congress has recognized the condition, and has provided authority for the Secretary of the Interior, when a contract made with a district for repayment of charges has been found to have been based upon erroneous information as to the character of the land, the kind of crops a particular land will produce, the capital invested, or the ability of the water user to repay, to amend the contract. Whenever errors are made, the present law permits the Secretary of the Interior to amend the contract on the basis of an offer to the district, which may or may not be accepted. In this instance, such an offer was made to the Pine River Irrigation District in Colorado, and by an election, the offer was accepted.

In this case there is more at issue than merely an error with respect to the type and characteristics of the soil. There was a misunderstanding between the district and the Government with respect to what should be reimbursable and what was nonreimbursable. The question has been before the Congress on a number of occasions. The present contract determines that question, because an election has been held and an amount has been agreed upon. The present contract provides for the payment of the reimbursable portion so agreed upon, except for one-sixth of it, and as to that, it applies to portions of the reclamation project which are located within an Indian reservation, and are therefore nonreimbursable under general reclamation law.

Mr. GORE. As I understand the bill, it reduces the obligation of repayment by $250,000. Do I correctly understand?

Mr. CORDON. It reduces the amount that was contended for by that sum.

Mr. GORE. What does the Senator mean by "contended for"?

Mr. CORDON. I refer to that portion of my explanation with respect to the contention between the district and the Interior Department as to the reimbursable figure.

Mr. GORE. The Senator means that there was a disagreement between the reclamation district and the Government?

Mr. CORDON. That is correct.

Mr. GORE. As I read the report, the Department acknowledges that the contention of the reclamation district is not without merit, though it does not concede its correctness.

Mr. CORDON. One might place that interpretation upon it. The Department agrees that, under the circumstances, and for the purpose of obtaining a settlement which will avoid the necessity of litigation, this particular figure, in the opinion of the Department, represents a sound basis for reimbursement.

Mr. GORE. Even so, the Department does not recommend against the bill.

Mr. CORDON. No. The Department is in favor of the bill.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill (H. R. 7466) was considered, ordered to a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (H. R. 8027) to amend the act of March 6, 1952, to extend the time during which the Secretary of the Interior may enter into amendatory repayment contracts under the Federal reclamation laws was announced as next in order.

Mr. LANGER. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3114) to improve the public health by encouraging more extensive use of the voluntary prepayment method in the provision of personal health services was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. HENDRICKSON. This is obviously not a calendar bill, although I agree that it is a very fine piece of legislation. It should be brought up on motion and debated. I ask that the bill go over.

The PRESIDING OFFICER. The bill will go over.

PURCHASE OF OR PAYMENT FOR REMOVAL OF IMPROVEMENTS ON PUBLIC LANDS IN THE PALISADES PROJECT AREA, IDAHO

The bill (H. R. 6786) authorizing the Secretary of the Interior to purchase improvements or pay damages for removal of improvements located on public lands of the United States in the Palisades project area, Palisades reclamation project, Idaho, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, reserving the right to object, I notice on the floor the distinguished Senator from Idaho [Mr. DWORSHAK]. I wonder whether he will explain the bill.

Mr. DWORSHAK. The report of the committee explains the purpose of the bill, which is to authorize the Secretary of the interior to make payment in two specific cases to persons who in good faith placed improvements on Government lands which will be inundated by the Palisades Reservoir, now under construction by the Bureau of Reclamation. As introduced, the bill was general in nature. Upon advice from the Department that there were only two cases involved, the bill was amended to so limit it. In involves a payment of $400 to one person, and a payment of $3,000 to another person. The Department of the Interior makes no objection to the enactment of the bill and the Bureau of the Budget has no objection.

Mr. GORE. Mr. President, will the Senator yield?

Mr. DWORSHAK. I yield.

Mr. GORE. From the Senator's explanation it seems clear that these citizens for whose benefit the bill is sought to be passed suffered injury either through misrepresentation on the part of an agent of the Federal Government or because of an erroneous survey. Is that correct?

Mr. DWORSHAK. That is correct. The report states that in the second case an inaccurate survey was made by a Forest Service ranger at the time the house was built. The Senator is entirely correct.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. HENDRICKSON. Mr. President, will the Senator from Idaho yield?

Mr. DWORSHAK. I yield.

Mr. HENDRICKSON. Would the Senator from Idaho object to an amendment to place a prohibition on attorneys' fees?

Mr. DWORSHAK. I would not.

Mr. HENDRICKSON. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The Secretary will state the amendment.

The LEGISLATIVE CLERK. On page 2, immediately before the period in line 2, it is proposed to insert a colon and the following:

Provided, That no part of any payment provided for herein shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection therewith, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The PRESIDING OFFICER (Mr. BENNETT in the chair). The question is on agreeing to the amendment offered by the Senator from New Jersey [Mr. HENDRICKSON].

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill (H. R. 6786) was read the third time and passed.

INTERSTATE COMPACT BETWEEN KENTUCKY AND VIRGINIA RELATING TO THE BREAKS INTERSTATE PARK

The bill (S. 3168) granting the consent and approval of Congress to an interstate compact relating to the creation, development, and operation by the States of Kentucky and Virginia of a park to be known as The Breaks Interstate Park was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, reserving the right to object, I notice on the floor the able senior Senator from Kentucky [Mr. CLEMENTS]. He is one of the coauthors of the bill. I wonder whether he will be kind enough to explain the bill and the necessity for it.

Mr. CLEMENTS. Mr. President, the bill proposes to grant the consent and approval of Congress to an interstate compact relating to the creation, development, and operation by the States of Kentucky and Virginia of a park to be known as The Breaks Interstate Park. This compact has been accomplished pursuant to authority granted by an act of the 83d Congress, Public Law 275, approved August 14, 1953, wherein the 2 States were authorized to negotiate and enter into a compact. The interstate compact now before the Senate is the result of that authorization, and has been approved by the Legislatures of Virginia and Kentucky.

The Department of the Interior, in commenting on this proposed legislation, states that such a compact should lead to the development and operation in the public interest of a desirable interstate park. The proposed park area possesses high scenic qualities and has considerable tourist appeal. The Department further comments that every encouragement should be given to the States of Kentucky and Virginia to develop this park area so as to serve that particular region.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill (S. 3168) granting the consent and approval of Congress to an interstate compact relating to the creation, development, and operation by the States of Kentucky and Virginia of a park to be known as The Breaks Interstate Park which had been reported from the Committee on the Judiciary with an amendment, to strike out all after the enacting clause and insert:

That the consent of the Congress is hereby given to The Breaks Interstate Park Compact between the Commonwealth of Kentucky and the Commonwealth of Virginia. Such compact reads as follows:

"BREAKS INTERSTATE PARK COMPACT

"Pursuant to authority granted by an act of the 83d Congress of the United States, being Public Law 275, approved August 14, 1953, the Commonwealth of Kentucky and the Commonwealth of Virginia do hereby covenant and agree as follows:

"Article I

"The Commonwealth of Kentucky and the Commonwealth of Virginia agree to create, develop and operate an interstate park to be known as The Breaks Interstate Park, which shall be located along the Russell Fork of the Levisa Fork of the Big Sandy River and on adjacent areas in Pike County, Ky., and Dickenson and Buchanan Counties, Va. Said park shall be of such area and of such character as may be determined by the Commission created by this compact.

"Article II

"There is hereby created The Breaks Interstate Park Commission, which shall be a body corporate with the powers and duties set forth herein and such additional powers as may be conferred upon it by subsequent action of the appropriate authorities of Kentucky and Virginia. The Commission shall consist of 3 commissioners from each of the 2 States, each of whom shall be a citizen of the State he shall represent. Members of the Commission shall be appointed by the Governor. Vacancies shall be filled by the Governor for the unexpired term. The term of one of the first commissioners appointed shall be for 2 years, the term of another for 3 years, and the term of the third for 4 years. Their successors shall be appointed for terms of 4 years each. Each Commissioner shall hold office until his successor is appointed and qualified. An officer or employee of the State, a political subdivision or the United States Government may be appointed a Commissioner under this act.

"Article III

"The Commission created herein shall be a joint corporate instrumentality of both the Commonwealth of Kentucky and the Commonwealth of Virginia for the purpose of effecting the objects of this compact, and shall be deemed to be performing governmental functions of the two States in the performance of its duties hereunder. The Commission shall have power to sue and be sued, to contract and be contracted with, to use a common seal and to make and adopt suitable bylaws, rules, and regulations. The Commission shall have the authority to acquire by gift, purchase or otherwise real estate and other property, and to dispose of such real estate and other property. Each Commonwealth agrees that it will exercise the right of eminent domain to acquire property located within each Commonwealth required by the Commission to effectuate the purposes of this compact.

"Article IV

"The Commission shall select from among its members a chairman and a vice chairman, and may select from among its members a secretary and treasurer or may designate other persons to fill these positions. It may appoint, and at its pleasure remove or discharge, such officers and legal, clerical, expert and other assistants and employees as may be required to carry the provisions of this compact into effect, and shall fix and determine their duties, qualifications and compensation. It may establish and maintain one or more offices for the transaction of its business, and may meet at any time or place. A majority of the commissioners present shall constitute a quorum for the transaction of business. The commissioners shall serve without compensation, but shall be paid their expenses incurred in and incident to the performance of their duties. They shall take the oath of office required of officers of their respective States.

"Article V

"Each Commonwealth agrees that the officers and departments of each will be authorized to do all things falling within their respective jurisdictions necessary or incidental to the carrying out of the compact in every particular. The Commission shall be entitled to the services of any State officer or agency in the same manner as any other department or agency of this State. The Commission shall keep accurate records, showing in full its receipts and disbursements, and said records shall be open at any reasonable time to the inspection of such representatives of the two Commonwealths as may be duly constituted for that purpose. The Commission shall submit annually and at other times as required such reports as may be required by the laws of each Commonwealth or by the Governor thereof.

"Article VI

"The cost of acquiring land and other property required in the development and operation of The Breaks Interstate Park and constructing, maintaining, and operating improvements and facilities therein and equipping same may be defrayed by funds received from appropriations, gifts, the use of money received as fees or charges for the use of said park and facilities, or by the issuance of revenue bonds, or by a combination of such sources of funds. The Commission may charge for admission to said park, or make other charges deemed appropriate by it and shall have the use of funds so received for park purposes. The Commission is authorized to issue revenue bonds, which shall not be obligations of either State, pursuant to procedures which shall be in substantial compliance with the provisions of laws of either or both States governing the issuance of revenue bonds by governmental agencies.

"Article VII

"All money, securities and other property, real and personal, received by way of gift or otherwise or revenue received from its operations may be retained by the Commission and used for the development, maintenance, and operation of the park or for other park purposes.

"The Commission shall not pledge the credit of either Commonwealth except by and with the authority of the general assembly thereof.

"Article VIII

"This compact may be amended from time to time by the concurrent action of the two Commonwealth parties hereto."

SEC. 2. The right to alter, amend, or repeal this act is expressly reserved.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill granting the consent of Congress to The Breaks Interstate Park compact."

Mr. CLEMENTS. Mr. President, there is a companion House bill to the bill just passed by the Senate.

The companion bill is H. R. 8549, granting the consent of the Congress to The Breaks Interstate Park compact. I ask unanimous consent that the Committee on Interior and Insular Affairs be discharged from the further consideration of H. R. 8549, and that the Senate proceed to its consideration at this time.

The PRESIDING OFFICER (Mr. BENNETT in the chair). Without objection, the Committee on Interior and Insular Affairs is discharged from the further consideration of House bill 8549. Is there objection to the present consideration of the House bill?

Mr. CLEMENTS. Mr. President, the procedure suggested is agreeable to the chairman of the Committee on Interior and Insular Affairs and to the ranking minority member of the committee.

Mr. COOPER. Mr. President, I wish to take this opportunity to commend my distinguished colleague and good friend, the senior Senator from Kentucky [Mr. CLEMENTS], for his initiation of this proposal, which is very important to the State of Kentucky and to Virginia.

The PRESIDING OFFICER. Is there objection to the present consideration of the House bill?

There being no objection, the bill (H. R. 8549) granting the consent of Congress to The Breaks Interstate Park compact was considered, ordered to a third heading, read the third time, and passed.

Mr. CLEMENTS. Mr. President, in view of the passage of H. R. 8549, which is a companion bill to S. 3168, I ask unanimous consent that the vote by which S. 3168, granting the consent and approval of Congress to an interstate compact relating to the creation, development, and operation by the States of Kentucky and Virginia of a park to be known as The Breaks Interstate Park, was passed be reconsidered.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CLEMENTS. Mr. President, I ask that S. 3168 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

INVESTIGATION OF CRITICAL RAW MATERIALS

The resolution (S. Res. 271) providing for an investigation of critical raw materials by the Committee on Interior and Insular Affairs was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution, which had been reported from the Committee on Interior and Insular Affairs without amendment, and subsequently had been reported from the Committee on Rules and Administration with amendments, on page 3, line 5, after the numerals "1953", to insert "and Senate Resolution 171, agreed to January 26, 1954", and in line 9, after the word "committee", to insert "for obligations incurred during the period July 1, 1954, to January 31, 1955, inclusive", so as to make the resolution read:

Resolved, That the Senate Committee on Interior and Insular Affairs, or any duly authorized subcommittee thereof, is authorized and directed (1) to (continue) investigate and study the accessibility of critical raw materials to the United States in time of war and for the expanding economy in time of peace; (2) to make a full and complete investigation and study of new developments and discovery of matetrials including synthetics which may be used as substitutes and replacements of critical materials, and further to study the progress of research programs, pilot-plant operations, processing and beneficiating methods of critical materials and minerals including fuels; (3) to make a full and complete investigation and study of the best means, methods, and devices to foster the greatest measure of self-sufficiency of critical materials that can be produced within the United States and the Western Hemisphere and to expand and develop the strategic minerals industry; (4) to make a full and complete investigation, and study the status of the stockpile program, its goals, methods, and amounts of acquisition, storage, warehousing, and rotation programs; (5) to make a full and complete investigation and study the available fuel reserves of the United States and the

Government regulations affecting such resources and to formulate and recommend a national fuel policy to assure maximum availability to meet the needs of the peacetime economy and for the national security in time of war; and (6) to report to the Senate at the earliest possible date, not later than January 31, 1955, the results of its investigation and study, together with its recommendations.

SEC. 2. For the purposes of this resolution, the committee, or any duly authorized subcommittee thereof, is authorized to employ upon a temporary basis such technical, clerical, and other assistants as it deems advisable, and is authorized, with the consent of the head of the department or agency concerned, to utilize the reimbursable services, information, facilities, and personnel of any of the departments or agencies of the Government, or of qualified private organizations and individuals. The expenses of the committee under this resolution, which shall not exceed $34,000, together with any unexpended balances remaining from the authority of Senate Resolution 143, agreed to July 20, 1953, and Senate Resolution 171, agreed to January 26, 1954, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee for obligations incurred during the period July 1, 1954, to January 31, 1955, inclusive.

The amendments were agreed to.

Mr. MALONE. Mr. President, my attention has been called to the fact that there is a misprint in the resolution on page 2, line 7. The word "minerals" should read "materials."

The PRESIDING OFFICER. Does the Senator from Nevada offer that as an amendment?

Mr. MALONE. I ask that the resolution be amended on page 2, line 7, by striking out the word "minerals" and substituting in lieu thereof the word "materials."

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

The resolution, as amended, was agreed to.

INVESTIGATION OF EMPLOYEE WELFARE AND PENSION FUNDS

The Senate proceeded to consider the resolution (S. Res. 270) to amend Senate Resolution 225 of the 83d Congress relative to investigation of employee welfare and pension funds under collective bargaining agreements, by increasing funds therefor, which had been reported from the Committee on Labor and Public Welfare without amendment, and subsequently had been reported from the Committee on Rules and Administration with an amendment, in line 8, after the word "thereof", to strike out "$201,100" and insert "$125,150", so as to make the resolution read:

Resolved, That Senate Resolution 225, 83d Congress, agreed to April 28, 1954 (authorizing an investigation of employee welfare and pension funds), is amended (1) by deleting "funds under collective-bargaining agreements" in the first sentence of the first section and inserting in lieu thereof "plans and funds subject to collective-bargaining", and (2) by deleting "$75,000" in section 2 and inserting in lieu thereof "$125,150."

The amendment was agreed to.

The resolution, as amended, was agreed to.

STANDARDIZATION OF RATES ON HOUSEHOLD GOODS SHIPPED BY THE GOVERNMENT—BILL PASSED OVER TO NEXT CALENDAR CALL

The bill (S. 904) to standardize rates on household goods shipped by the United States Government for its employees was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. HENDRICKSON. Mr. President, I wonder if we could have an explanation of the bill?

Mr. SCHOEPPEL. The purpose of the bill is to standardize rates on household goods shipped by the United States Government for its employees.

Section 22 of the Interstate Commerce Act provides special shipping privileges of many varieties to the Federal Government. Among them is the privilege of having household goods moved by the lowest bidder irrespective of the published rates of common carriers. This amendment would not eliminate bidding, but it would prohibit rates lower than published rates.

Mr. GORE. Mr. President, will the Senator yield?

Mr. SCHOEPPEL. Gladly.

Mr. GORE. Why should rates lower than the published rates be denied the Government if the Government is able to contract for the shipment of household goods at such rates? I do not quite understand the necessity for the bill, or why the Government should be prohibited from contracting for the shipment of household goods in the most economical manner. Was the Senator going to explain why that is the case?

Mr. SCHOEPPEL. I was going to continue with the explanation of the bill. However, I may say to the distinguished Senator from Tennessee that, while the bill was considered by the subcommittee of which I am chairman, the distinguished Senator from Colorado [Mr. JOHNSON], who is on the floor, is the author of the measure. When I finish my remarks I shall be very happy to have the Senator from Colorado join in a further explanation of the one feature of the bill to which the Senator from Tennessee has referred.

In the Transportation Act of 1940, section 321, the Congress stated in substance that it was no longer necessary to secure bids from lawfully operating motor carriers; however, this left a purely permissive situation under section 22 for the obtaining of bids.

In 1946 the 79th Congress adopted Public Law 600. The net effect of such law was to remove the Federal Government as shipper of household goods for its employees of civilian departments and substituted therefor an allowance for such expense. Public Law 600 has proven successfully but only in its limited application to civilian departments of government.

This same Congress adopted Public Law 604 providing that household goods shipments may be made for members of the armed services by rail, water, or van without regard to comparative costs. Public Law 604 was adopted at the request of the armed services which apparently was seeking a lawful method for transporting household goods of its personnel without the requirement of bids or section 22 quotations. However, and again because of the remaining privilege under section 22, conflict, confusion and destructive competition have continued to the detriment of the members of the armed services whose prized household goods and effects are being offered for transportation to the lowest bidder without any responsibility for safe carriage by the Government to the owner. I would paraphrase that by saying, without due consideration for the safety and the manner in which such goods have been and are being handled.

The amendment to section 22, among other things, will have the effect of accomplishing the purpose of Public Law 604 and will eliminate the confusion caused by the conflict between section 22 and Public Laws 600 and 604.

The amendment will not deprive the Government of using the several levels of rates lawfully on file with the Interstate Commerce Commission applying to moving services, nor will it deprive the Government of its right of appeal to the ICC as to the reasonableness of any such rate structures.

It was thought, Mr. President, that when the Interstate Commerce Commission established the rate schedules on the various and sundry classes of goods, after due notice and full hearings, then, in order to insure proper and orderly transportation methods, even under competition, we should have this type of an amendment to the act. It was the consensus of opinion of those who heard the matter in the subcommittee that this change should be made.

I would say candidly to the distinguished Senator from Tennessee that some questions were raised as to the propriety of not giving the Government the right to have reduced rates without the benefit of following the schedule of rates published by the Interstate Commerce Commission, but it was also shown fairly definitely that complaints have been increasing by the thousand with respect to damages which have been incurred by the present type of handling. The claims in 1952 developed to a point where they amounted to half a million dollars, to say nothing of the thousands and thousands of claims because of the redtape involved in going through the proper legal channels to recover.

Mr. GORE. Mr. President, will the Senator from Kansas yield?

Mr. SCHOEPPEL. I shall be glad to yield.

Mr. GORE. Are the carriers not insured? It seems that the Government could recover damages from the insurers of the carriers.

Mr. BUTLER. Mr. President, will the Senator from Kansas yield?

Mr. SCHOEPPEL. I yield.

Mr. BUTLER. I think they are insured for a very nominal amount of money. If they want additional insurance they have to furnish it. It is a nominal insurance, as it is with reference to any public carrier.

Mr. GORE. I had not understood that public carriers could get by with only nominal insurance. I thought it was more substantial than that.

Mr. BUTLER. If the Senator will look at the published rates of the Interstate Commerce Commission, I think he will understand what I have in mind. The ordinary passenger declares a value of approximately $100, or less. If he declares a higher value he pays a higher price. Sometimes, even by contract, recovery is limited to 5 percent of the value. The fact is that the Government is paying these claims, and a bureaucracy has been built up within the Pentagon solely for the purpose of handling the claims. It is a very expensive operation.

Mr. GORE. To illustrate the magnitude of this problem and to illustrate, also, to what extent the Government is moving employees about the country and transporting their household goods, one-sixth of the huge transportation involved is transportation paid for by the United States Government.

Mr. BUTLER. I am certain that the Senator does not want to advocate on the floor of the Senate that the large users should have a cut rate.

The PRESIDING OFFICER. The time of the Senator from Kansas has expired.

Mr. BUTLER. Mr. President, I have some time left of my 5 minutes.

The PRESIDING OFFICER. The Chair recognizes the Senator from Maryland.

Mr. BUTLER. The Senator from Tennessee would not advocate on the floor of the Senate that because a person is a large user he should have a cut rate.

Mr. GORE. Mr. President, I am not at the moment advocating anything. I am trying, first, to find a justification for the bill and, second, to try to determine whether it is of a sufficiently controversial character that it should not be passed on the call of the consent calendar.

Mr. BUTLER. The bill involves little expense. I do not believe the cost would be more than a million dollars a year, and we would get rid of a much greater expense in the form of payrolls in connection with claims which are piling up and becoming more numerous all the time. The bill would require the Government of the United States to pay what an ordinary individual pays when it comes to moving household goods.

Mr. GORE. What does the Senator mean by an ordinary individual? An individual may have a very small shipment, and the Government may have going from the city of Washington to the city of Philadelphia a rather large shipment of household goods.

Mr. BUTLER. A householder could not in any sense have a large shipment. Those affected by the bill are individual persons; they are householders; they are Government employees.

Mr. GORE. What I am trying to say is that there may be a shipment of household goods belonging to several householders going at one time from Washington to Philadelphia.

Mr. BUTLER. That is perfectly true.

Mr. GORE. Should we deny the Government the right to make the best bargain possible, so long as it contracts with a certified and licensed public carrier with the necessary insurance?

Mr. BUTLER. I do not think the Government should pay less than the published rate simply because it has a large number of shipments. I do not think the Government should pay a lesser rate than that which is paid by other persons using the same service. Furthermore, as it has been pointed out by the Senator from Kansas, the contract is made with persons who are irresponsible in the sense that they have to take the shipments at such a low price that the goods arrive damaged and large claims arise out of the shipments.

Mr. GORE. The Senator has said the bill would save a million dollars a year in damage claims——

Mr. BUTLER. No; I said it would cost probably a million dollars, but, on the other side, we could deduct the cost of handling the numerous claims.

Mr. GORE. The report says the Defense Department has estimated it would cost that Department alone $11,600,000.

Mr. BUTLER. I refer that question back to the Senator from Kansas. I think those figures have been shown to be entirely erroneous and that they have been picked out of the air.

Mr. SCHOEPPEL. I may say, in answer to the inquiry of the Senator from Tennessee that at one phase of the hearings officials of the armed services testified that it would cost approximately $11 million. A year previously, they had testified that the cost would be approximately $1 million. I might say very candidly to the Senator that when the hearing on the bill was conducted, and the matter was checked into, they could not substantiate in any degree the $11 million figure, which led the committee to believe that the $1 million figure was somewhere nearly in line.

The PRESIDING OFFICER. Does the Senator from Tennessee object?

Mr. JOHNSON of Colorado. Mr. President, as the author of the bill, I feel strongly that it proposes good legislation. It is similar to a bill which passed the Senate previously, in 1952, but did not reach the House in time for passage by the House and final enactment.

There are these facts with respect to the matter which appeal strongly to me: First, I do not know why the Government should have any better rate than an individual has. Congress has created the Interstate Commerce Commission to determine rates, and the Commission determines rates by holding hearings in a public way, to ascertain what the rates shall be. The rates are then established for everybody, small shippers and large shippers. Also, there are carload rates and less-than-carload rates. They are established by the Interstate Commerce Commission.

Mr. BUTLER. Mr. President, will the Senator yield for a moment on that point?

Mr. JOHNSON of Colorado. I yield.

Mr. BUTLER. The bill would also help the small trucker. Is it not true that the large trucker can take these shipments at a loss? He can simply advertise that he handles Government business, and that will cut the small trucker out completely, because he cannot compete and do business at a cut rate.

Mr. JOHNSON of Colorado. That, of course, is true, but I cannot see the fairness in having one rate for the Government and another rate for a private citizen. The rates should be the same for everyone. It is said that there should be a differential in favor of the Government because of the volume of Government shipments. The shipments of household goods are made individually. The Government does not hold shipments of household goods until there is a sufficient amount for a carload; it proceeds to ship household goods on an individual-shipment basis. So I cannot see any force to the argument that the Government should receive a lower rate because the Government does more business.

Another point which should be emphasized is the injustice which is done to the Government employee. He has nothing to say about his shipment. Someone advertises that he can do the work, and then he is cut down to the very lowest contract price which the Government can get. As a result, the carrier does not give the proper protection to the shipper, and the employee of the Government suffers because of the inferior service.

The committee has been advised that there are claims amounting to $400,000 or $500,000 as the result of bad condition of or injury to household goods, caused by damage which has been done to them in shipment. As has been stated by other Senators, there is in the Pentagon a very large group of employees who are busy handling claims of this character and making contracts.

If the truth actually were known, I think it would be found that the Government is losing money through this operation. The victim is the person who owns the household goods, because his goods are being destroyed by inferior service. These shipments do not receive the same kind of attention which the regular carriers of household goods give to shipments for which they are responsible.

Mr. BUTLER. Mr. President, will the Senator yield?

Mr. JOHNSON of Colorado. I yield.

Mr. BUTLER. It used to be said in the old days that three moves were equal to a fire. In this case, one move is equal to a fire.

Mr. JOHNSON of Colorado. That is true. Three moves were the equivalent of a fire. If an employee has the Government arrange for moving his household goods under the cheap rates which are now paid, of course, one move, as the Senator says, probably would be equal to a fire.

I think the bill is perfectly reasonable. If the rates on household goods are too high, the matter should be taken care of through the regular channels in the ICC, and the Commission should determine the rates. The Commission has determined rates in the past, and has found what reasonable rates are.

The PRESIDING OFFICER. The time of the Senator from Colorado has expired.

Mr. GORE. Mr. President, I am not prepared to object to the passage of the bill, but serious questions are involved. Senators have said that they do not understand why the Government should enjoy one rate, and the citizen another. That argument has appeal, but it can be carried too far. For instance, the Government has one rate of interest on the borrowing of money, while a citizen cannot borrow money at that rate.

In view of the fact that the general counsel of the Army, Mr. John G. Adams, has registered objection to the bill, I ask unanimous consent that the bill be passed over at this time, but to be called at the next call of the calendar. That will afford time for a study of the bill.

The PRESIDING OFFICER. The bill will be passed over until the next call of the calendar.

PRIVATE FINANCING OF NEW SHIP CONSTRUCTION—BILL PASSED OVER

The bill (S. 3219) to amend certain provisions of title XI of the Merchant Marine Act of 1936 to facilitate private financing of new ship construction was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. BUTLER. The purpose of the bill is to facilitate private financing in new ship construction. The calendar indicates that a report, Report No. 1804, accompanies the bill. As a matter of fact, the report has not yet been printed.

I ask unanimous consent that the bill be passed over, but that it be considered on the next call of the calendar, not as having been passed over, but as a new item on the calendar.

The PRESIDING OFFICER. Is it the request of the Senator from Maryland that the bill be included in the next call of the calendar?

Mr. BUTLER. That is correct.

The PRESIDING OFFICER. The bill will be passed over, and without objection will be included in the next call of the calendar.

INTERNATIONAL CONVENTION FOR THE HIGH SEAS FISHERIES OF THE NORTH PACIFIC OCEAN

The bill (S. 3713) to give effect to the International Convention for the High Seas Fisheries of the North Pacific Ocean, signed at Tokyo, May 9, 1952, and for other purposes, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. I ask for an explanation.

Mr. DUFF. The purpose of the bill is to give effect to the International Convention for the High Seas Fisheries of the North Pacific Ocean, signed at Tokyo, May 9, 1952.

The convention provides for the preservation of the fisheries of the North Pacific Ocean through the cooperation of the three great fishing nations of the area—the United States, Canada, and Japan. As with our other fishery conventions, the treaty calls for joint study by the three nations of fisheries of common concern in order to determine the conservation measures required to maintain such fisheries at their maximum sustained level of productivity. It provides further for the recommendation of such measures for adoption by the signatory governments. The North Pacific Convention goes further, however, than our other fishery conventions. Concerning itself with some of the most strictly regulated fisheries in the world, it introduces the new principle of abstention into international conservation practice. This principle is, in very brief terms, that a nation ought to abstain from newly entering a fishery if the stock of fish concerned is already fully fished and is regulated and conserved by another nation or nations. Under this principle, it was agreed that Japan should abstain from fishing salmon, halibut, and herring in certain waters off the coasts of North America, and that Canada should abstain from fishing salmon in certain waters off the Bering Sea. In return, the United States and Canada, with reference to the Japanese abstention, agreed to continue necessary conservation regimes with respect to the stocks of fish concerned.

The convention contemplated the establishment of an international commission composed of 3 national sections, each of not more than 4 persons, to be appointed by the respective governments. Each national section has one vote, and all decisions of the Commission must be unanimous. The four United States Commissioners already have been appointed as is also true of the Commissioners from Canada and Japan. It is understood that implementing legislation, also, already has been enacted by Canada, and that Japan is prepared to carry out, and is carrying out, its obligations under the terms of the convention.

The implementing legislation is similar in almost all respects to the Northwest Atlantic Fisheries Act of 1950 which implemented the International Convention for the Northwest Atlantic Fisheries, and with other legislation to implement similar fisheries conventions.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill (S. 3713) to give effect to the International Convention for the High Seas Fisheries of the North Pacific Ocean, signed at Tokyo, May 9, 1952, which has been reported from the Committee on Interstate and Foreign Commerce with amendments, on page 2, line 22, after the word "five", to strike out "or" and insert "nor"; on page 3, line 19, after the word "individual", to insert "appointed from private life"; on page 4, line 9, after the word "Commission", to strike out "to amend the Annex"; on page 9, line 12, after "haec verba", to strike out "as long as Alaska shall remain a Territory", and at the beginning of line 14 to insert "of the Northwest Atlantic Fisheries Act."

The amendments were agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. GORE. Mr. President, I send 2 amendments to the desk and ask to have them stated.

The PRESIDING OFFICER. The clerk will state the amendments of the Senator from Tennessee.

The LEGISLATIVE CLERK. On page 3, in line 20, after the word "Commissioner", it is proposed to strike out the word "appointed."

The amendment was agreed to.

The LEGISLATIVE CLERK. On page 3, in line 21, after the figure "3", it is proposed to strike out "(a)."

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That this act may be cited as the "North Pacific Fisheries Act of 1954."

SEC. 2. As used in this act, the term—

(a) "Convention" means the International Convention for the High Seas Fisheries of the North Pacific Ocean with a protocol relating thereto signed at Tokyo, May 9, 1952;

(b) "Commission" means the International North Pacific Fisheries Commission provided for by article II of the Convention;

(c) "United States section" means the United States Commissioners to the Commission;

(d) "Convention area" means all waters, other than Territorial waters, of the North Pacific Ocean which for the purposes of this act shall include the adjacent seas;

(e) "Fishing vessel" means any vessel engaged in catching fish or processing or transporting fish loaded on the high seas, or any vessel outfitted for such activities.

SEC. 3. The United States shall be represented on the Commission by not more than four Commissioners to be appointed by the President, to serve as such during his pleasure, and to receive no compensation for their services as Commissioners. Of such Commissioners—

(a) one shall be an official of the United States Government; and

(b) each of the others shall be a person residing in a State or Territory, the residents of which maintain a substantial fishery in the convention area.

SEC. 4. (a) The United States section shall appoint an advisory committee composed of not less than 5 nor more than 20 members and shall fix the terms of office thereof, such members to be selected both from the various groups participating in the fisheries covered by the convention and from the fishery agencies of the States or Territories, the residents of which maintain a substantial fishery in the convention area.

(b) Any or all members of the advisory committee may attend all sessions of the Commission except executive sessions.

(c) The advisory committee shall be invited to all nonexecutive meetings of the United States section and at such meetings shall be granted opportunity to examine and to be heard on all proposed programs of study and investigation, reports, and recommendations of the United States section.

(d) The members of the advisory committee shall receive no compensation for their services as such members. On approval by the United States section, not more than three members of the committee, designated by the committee, may be paid for transportation expenses and per diem incident to attendance at meetings of the Commission or of the United States section.

SEC. 5. Service of any individual appointed from private life as a United States Commissioner pursuant to section 3, or as a member of the advisory committee appointed pursuant to section 4 (a), shall not be considered

as service or employment bringing such individual within the provisions of sections 281, 283, 284, and 434 of title 18 of the United States Code, and section 190 of the Revised Statutes (5 U. S. C. 99), except insofar as such provisions of law may prohibit any such individual from acting or receiving compensation in respect to matters directly relating to the convention, this act, or regulations issued pursuant to this act.

SEC. 6. The President is authorized to (a) accept or reject, on behalf of the United States, recommendations made by the Commission in accordance with the provisions of article III, section 1, of the convention, and recommendations made by the Commission in pursuance of the provisions of the protocol to the convention; and (b) act for the United States in the selection of persons by the contracting parties to compose the special committee provided by the protocol to the convention.

SEC. 7. Any agency of the of the Federal Government is authorized, upon request of the Commission, to cooperate in the conduct of scientific and other programs, and to furnish, on a reimbursable basis, facilities and personnel for the purpose of assisting the Commission in carrying out its duties under the convention. Such agency may accept reimbursement from the Commission.

SEC. 8. (a) The provisions of the convention and this act relating to abstention from fishing in certain areas by the nationals and vessels of one or more of the contracting parties shall be enforced by the Coast Guard in cooperation with the Fish and Wildlife Service and the Bureau of Customs.

(b) For such purposes any Coast Guard officer, any officer of the Fish and Wildlife Service, or any other person authorized to enforce the provisions of the convention and this act referred to in subsection (a) of this section may go on board any fishing vessel of Canada or Japan found in waters in which Canada or Japan has agreed by or under the convention to abstain from exploitation of one or more stocks of fish, and, when he has reasonable cause to believe that such vessel is engaging in operations in violation of the provisions of the convention, may, without warrant or other process, inspect the equipment, books, documents, and other articles on such vessel and question the persons on board, and for these purposes may hail and stop such vessel, and use all necessary force to compel compliance.

(c) Whenever any such officer has reasonable cause to believe that any person on any fishing vessel of Canada or Japan is violating, or immediately prior to the boarding of such vessel was violating, the provisions of the convention referred to in subsection (a) of this section, such person, and any such vessel employed in such violation shall be detained and shall be delivered as promptly as practicable to an authorized official of the nation to which they belong in accordance with the provisions of the convention.

(d) Any officer of the Coast Guard, any officer of the Fish and Wildlife Service, or any other person authorized to enforce the provisions of the convention and this act referred to in subsection (a) of this section, may be directed to attend as witnesses and to produce such available records and files or duly certified copies thereof as may be necessary to the prosecution in Canada or Japan of any violation of the provisions of the convention or any Canadian or Japanese law for the enforcement thereof when requested by the appropriate authorities of Canada or Japan respectively.

SEC. 9. The Secretary of the Interior may designate officers of the States and Territories of the United States to enforce the provisions of the convention and this act insofar as they pertain to fishing vessels of the United States and the persons on board such vessels.

SEC. 10. (a) It shall be unlawful for any person or fishing vessel subject to the jurisdiction of the United States to engage in the catching of any stock of fish from which the United States may agree to abstain in the waters specified for such abstention as set forth in the annex to the convention, or to load, process, possess, or transport any such fish or fish products processed therefrom in the said waters, or to land in a port of the United States any fish so caught, loaded, possessed, or transported or any fish products processed therefrom.

(b) It shall be unlawful for any person or fishing vessel subject to the jurisdiction of the United States knowingly to load, process, possess, or transport any fish specified in subsection (a) of this section or any fish products processed therefrom in the territorial waters of the United States or in any waters of the convention area in addition to those specified in subsection (a) of this section, or to land in a port of the United States any such fish or fish products.

(c) It shall be unlawful for any person or fishing vessel subject to the jurisdiction of the United States knowingly to load, process, possess, or transport in the convention area or in the territorial waters of the United States any fish taken by a national of Canada or Japan from a stock of fish from which Canada or Japan respectively has agreed to abstain as set forth in the annex to the convention or any fish products processed therefrom, or to land such fish or fish products in a port of the United States.

(d) It shall be unlawful for any person subject to the jurisdiction of the United States to aid or abet in the taking of fish by a national or fishing vessel of Canada or of Japan from a stock of fish from which Canada or Japan has respectively agreed to abstain as set forth in the annex of the convention.

(e) It shall be unlawful for the master or owner or any person in charge of any fishing vessel of the United States to refuse to permit the duly authorized officials of the United States, Canada, or Japan to board such vessel or inspect its equipment, books, documents, or other articles or question the persons on board in accordance with the provision of the convention, or to obstruct such officials in the execution of such duties.

SEC. 11. (a) Any person violating subsection (a), (b), or (c) of section 10 of this act shall upon conviction be fined not more than $10,000, and for such offense the court may order forfeited, in whole or in part, the first concerned in the offense, or the fishing gear involved in such fishing, or both, or the monetary value thereof. Such forfeited fish or fishing gear shall be disposed of in accordance with the direction of the court.

(b) Any person violating subsection (d) of section 10 of this act shall upon conviction be fined not more than $10,000.

(c) Any person violating subsection (e) of section 10 of this act shall upon conviction be fined not more than $10,000 and be imprisoned for not more than 1 year or both, and for such offense the court may order forfeited, in whole or in part the fish and fishing gear on board the vessel, or both, or the monetary value thereof. Such fish and fishing gear shall be disposed of in accordance with the direction of the court.

(d) Section 10 of the Northwest Atlantic Fisheries Act of 1950 (64 Stat. 1067; 16 U. S. C. 989) shall not apply to violations for which penalties are provided in this section.

SEC. 12. For the effective execution of this act, sections 7 (a) and (b), 9, 10, and 11 of the Northwest Atlantic Fisheries Act of 1950 (64 Stat. 1067; 16 U. S. C. 986, 988, 989, 990) shall be deemed to be incorporated herein in haec verba as long as Alaska shall remain a Territory provided that regulations authorized by section 7 (a) of the Northwest Atlantic Fisheries Act shall be adopted by the Secretary of the Interior on consultation with the United States Section and shall apply only to stocks of fish in the convention area contiguous to the territorial water of Alaska.

SEC. 13. (a) There is hereby authorized to be appropriated from time to time such sums as may be necessary for carrying out the purposes and provisions of the convention and this act, including—

(1) necessary travel expenses of the United States Commissioners without regard to the Standardized Government Travel Regulations, as amended, the Travel Expense Act of 1949, or section 10 of the Act of March 3, 1933 (U. S. C., title 5, sec. 73b); and

(2) the United States share of the joint expenses of the Commission; provided that the Commissioners shall not, with respect to commitments concerning the United States share of the joint expenses of the Commission, be subject to the provisions of section 262 (b) of title 22 of the United States Code insofar as they limit the authority of United States representatives to international organizations with respect to such commitments.

(b) Such funds as shall be made available to the Secretary of the Interior for research and related activities shall be expended to carry out the program of the Commission in accordance with recommendations of the United States Section.

SEC. 14. If any provision of this act or the application of such provision to any circumstances or persons shall be held invalid, the validity of the remainder of the act and the applicability of such provision to other circumstances or persons shall not be affected thereby.

DEVELOPMENT OF THE HOG ISLAND TRACT BY THE CITY OF PHILADELPHIA

The bill (S. 3630) to permit the city of Philadelphia to further develop the Hog Island tract as an air, rail, and marine terminal by directing the Secretary of Commerce to release the city of Philadelphia from the fulfillment of certain conditions contained in the existing deed which restrict further development was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, I ask for an explanation.

Mr. DUFF. The purpose of the bill is to relieve the city of Philadelphia from certain obligations, including payment of an annual ground rent, contained in the deed of July 23, 1930, whereby the United States transferred to Philadelphia title to a tract of approximately 950 acres of land, known as Hog Island.

Hog Island was bought from the United States for a total price fixed at $3 million. A downpayment of $450,000 was made, and the balance secured by an annual ground rent of $76,500 for 10 years and $153,000 per year thereafter. This ground rent must be paid until the balance of $2,550,000 is extinguished. Since 1930, the United States has received a total of about $3 million, including the downpayment and annual ground rents, from the city of Philadelphia for Hog Island.

If the city had not purchased Hog Island and paid the ground rent continuously, or if the city had occupied the land pursuant to a lease or permit, it would probably have obtained this land without any payment at all as authorized by section 16 of the Federal Airport Act (60 Stat. 179, May 13, 1946). However,

in section 16 of the Federal Airport Act, Congress made no provision for transfer of interests such as the United States has retained in this instance, and the proposed legislation is necessary to authorize the release sought by the city of Philadelphia.

Mr. GORE. Mr. President, will the Senator yield?

Mr. DUFF. I yield to the Senator from Tennessee.

Mr. GORE. The General Accounting Office has entered an objection because it does not look favorably upon the surrender of property or rights of the United States without appropriate benefit accruing to the United States therefrom. Can the Senator give an explanation of what rights, and if there are rights, if they are sufficient, which will accrue to the United States Government?

Mr. DUFF. The answer to that question was given by Mr. Robert B. Murray, Jr., Under Secretary of Commerce, for Transportation, who testified before our committee and said that they disagree with the General Accounting Office, not on principle, but on the facts. The facts are that an immense benefit would accrue to the Government by virtue of further improvements of an airport which is so necessary to the national defense as is the airport in Philadelphia. Already the city of Philadelphia has expended, in the development of the present airport, in excess of $30 million, and it is desirous of making further large improvements to the airport. It is not only one of the most important airports in the eastern part of the United States, but one of the largest.

In order to raise funds for various further improvements, including lengthening the runways, it is necessary that the city of Philadelphia raise further funds. Under the laws of Pennsylvania, there exists what is known as an authority act, whereby a municipal subdivision of the State, under certain conditions, and based on the value of the property borrowed upon, can increase its indebtedness for the purpose of making improvements. With the present outstanding claim of the Federal Government, it is impossible for the city to borrow the money in that manner in order to make the improvements.

It was also testified that if the bill were passed, the city, pursuant to the method I have explained would be prepared immediately to make further improvements to the extent of $10 million, in addition to the $30 million already expended, which improvements would accrue to the benefit of the Government.

The PRESIDING OFFICER (Mr. PAYNE in the chair). Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill (S. 3630) to permit the city of Philadelphia to further develop the Hog Island tract as an air, rail, and marine terminal by directing the Secretary of Commerce to release the city of Philadelphia from the fulfillment of certain conditions contained in the existing deed which restrict further development, which has been reported from the Committee on Interstate and Foreign Commerce, with amendments, on page 1, line 5, after the word "conditions", to strike out "of" and insert "for the benefit of the United States set forth in", and on page 2, line 9, after the word "trusts", to insert "for the benefit of the United States", so as to make the bill read:

Be it enacted, etc., That the Secretary of Commerce is authorized and directed to release the city of Philadelphia from the fulfillment of any and all conditions for the benefit of the United States set forth in a deed of the United States, acting through the United States Shipping Board, dated the 23d day of July 1930, relating to a tract of land, known as Hog Island, situated partly in the township of Tinicum in the county of Delaware and State of Pennsylvania and partly in the 40th ward of the city of Philadelphia, comprising 951 acres more or less; and to execute in proper form a full and complete release and discharge of the yearly ground rent reserved to the United States under and pursuant to said deed, and relieving the city of Philadelphia from the fulfillment of any and all covenants, conditions, and trusts for the benefit of the United States set forth in said deed.

SEC. 2. The execution of the aforesaid release shall be made without consideration therefor and upon condition that the aforesaid tract shall be held, used, and developed as and for an air, rail, and marine terminal for the promotion and furtherance of the interstate and foreign commerce of the United States, and for industrial purposes related thereto: *Provided*, That the premises shall not be disposed of by the city of Philadelphia by conveyance or sale, except in furtherance of the public purposes herein set forth. The release shall contain a further provision that whenever the Congress of the United States shall declare a state of war or other national emergency the United States shall have the right to enter upon the premises and use the same or any part thereof owned by the city of Philadelphia for a period not to exceed the duration of such state of war or national emergency plus 6 months, and upon cessation of such use said premises shall revert to the city of Philadelphia: *Provided however*, That the United States shall be responsible during the period of such use for the maintenance of all of the property so used, and shall pay a fair rental for the use of any structures or other improvements which have been added thereto, said rental to include all debt service charges or other obligations arising out of the financing of all structures or improvements on the aforesaid premises.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

LOANS BY THE FARM CREDIT ADMINISTRATION

The bill (S. 3339) to authorize the Farm Credit Administration to make loans of the type formerly made by the Land Bank Commissioner was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, I request an explanation of the bill.

Mr. SCHOEPPEL. Mr. President, as the record discloses, the senior Senator from Kansas is a cosponsor of this measure, together with the distinguished junior Senator from New Mexico [Mr. ANDERSON].

The bill authorizes the Farm Credit Administration to make until June 30, 1959, loans of the type formerly made by the Land Bank Commissioner. The authority for such loans expired on July 1, 1947. In addition, the bill would make the maximum amount of the loans $15,000, instead of $7,500.

Second, the bill would liberalize the provision for deferring the principal installments.

Third, the bill would permit the interest rate on the extension of loans to be continued at the same rate applicable to the loans.

Mr. GORE. Mr. President, will the Senator from Kansas yield?

Mr. SCHOEPPEL. I am glad to yield.

Mr. GORE. As I have listened to the explanation being made by the able Senator from Kansas, I wonder why it is necessary to revive secondary mortgage availability to the farmers during this period. The program expired, as I believe the Senator from Kansas said, in 1947. Why is it necessary in 1954 to revive that program?

Mr. SCHOEPPEL. Mr. President, I may say, for the benefit of the Senator from New Mexico [Mr. ANDERSON], who has just arrived on the floor, that the Senator from Tennessee has requested a statement of the reason for the necessity of this proposed legislation, when, as a matter of fact, the authority to make loans of this type expired on July 1, 1947.

Mr. GORE. I may say that I was struck by the dates involved and by the fact that, heretofore, farmers have not been in particular need of secondary mortgages. However, now they seem to be found necessary. I was requesting an explanation.

Mr. ANDERSON. Mr. President, let me say to the Senator from Tennessee that at the time when trouble arose in connection with the livestock industry, a year or so ago, livestock prices dropped very drastically. Feed prices did not drop. As a result, many cattlemen and others were caught in difficulty.

It is anticipated that if the drought continues in southern Colorado, central Texas, all of eastern New Mexico, parts of the western section of Kansas, and the panhandle of Oklahoma, stockmen and farmers who have exhausted their present credit facilities will have a great deal of trouble arranging for loans. The authority provided by this measure will not necessarily have to be exercised; but many years ago the Land Bank Commissioner type of loan was found to be extremely useful.

At the present time there is no need for the enactment of this measure. It happens to be my opinion, however, that if the drought continues in the areas where there now has been drought for 4 years, the farmers and stockmen will be in need of additional types of financial aid and credit.

Mr. GORE. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield.

Mr. GORE. I understood we had special programs for drought relief. I shall not oppose the bill if the farmers are in such distressed condition, whether because of prices or the inadequacy of the farm program or because of the drought.

I am willing to extend a helping hand. However, I was struck by the necessity of providing now for this program.

Mr. ANDERSON. I wish to say to the Senator from Tennessee that enactment of this measure is not now required. However, I anticipate it will be required this fall. It was because of my belief that enactment of the bill will be required that I originally suggested that the Senator from Kansas [Mr. SCHOEPPEL] and I cooperate on this measure. He and I drove through five of the Western States—not viewing those areas from the air, but going by automobile directly to the places of extreme drought. There are areas of the United States where drought relief has terminated at the present time; as of July 15 the supplying of protein meal was stopped. It will be resumed in the States where the governors have decided to have a hay program.

However, this is the fifth straight season of drought. In the first year the farmers arranged for small loans from their banks. About the second year they went to the Farm Credit Administration. After a while they obtained some help from the Farm Home Administration. But after about 5 years the stockmen and farmers are in real trouble.

So my feeling is that with 10 million surplus cattle on the ranges, if the drought continues, there will be a rush to the market, and in that event there will be a collapse of prices, and at that time this provision will be needed.

Mr. GORE. Mr. President, I wish to congratulate the Senator from New Mexico on his record, not only in this case but as a great Secretary of Agriculture and an outstanding farmer before he became one of the outstanding Members of the United States Senate. I congratulate him upon foreseeing the needs of the farmers and trying to alleviate their difficulties under such circumstances.

I feel that the difficulties of the farmers may be more severe than is anticipated. Because of that, I shall withhold objection.

Mr. MORSE. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield.

Mr. MORSE. I think the bill is a sound one and is much needed. I merely wish to express doubt as to whether the Senator from New Mexico is completely correct when he says the bill is not needed now. It is my understanding that even a year ago a considerable amount of loans of this particular type, under the provision now proposed, could have been made and would have been made in the drought areas, for the reason that when the emergency program is ended stockmen may be supplied with hay and grain, and the assistance needed for immediate relief may be given, but that will not put the stockmen back on a profit-making and going-business basis, because the damage the drought does to the herds and facilities is so great that it is impossible even to begin to take care of that damage simply by supplying the stockmen with hay for starving cattle, or with grain to help fatten a few of the cattle the farmers or stockmen may wish to get on the way to market.

In this case we are dealing with the problem of supplying these particular stockmen and farmers with the loans they need in order to get back to a profitable basis of operation. In some instances they must buy new stock. The emergency relief is of no assistance to them, for example, in buying new breeding stock, if as a result of the drought they find it necessary really to get rid of stock that no longer is fit for breeding purposes.

Mr. ANDERSON. Mr. President, I could not agree more fully with the Senator from Oregon.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill (S. 339) to authorize the Farm Credit Administration to make loans of the type formerly made by the Land Bank Commissioner, which had been reported from the Committee on Agriculture and Forestry with an amendment, to strike out all after the enacting clause and insert:

That the Farm Credit Administration is authorized to exercise the authority conferred upon the Land Bank Commissioner by part 3 of the Emergency Farm Mortgage Act of 1933 (12 U. S. C. 1016–1019).

SEC. 2. Section 32 of the Emergency Farm Mortgage Act of 1933, as amended (12 U. S. C. 1016), is amended—

(a) By amending the first sentence thereof (12 U. S. C., 1946 edition, 1016 (a)), as partially repealed by section 206 (h) of the act of June 30, 1947 (61 Stat. 208), to read as follows: "Loans to any farmer as hereinafter provided shall be secured by a first or second mortgage upon the whole or any part of the farm property, real or personal, including crops, of the farmer.";

(b) By substituting "$15,000" for "$7,500" in the second sentence thereof (12 U. S. C. 1016 (b), first sentence);

(c) By amending the proviso at the end of the fourth sentence thereof (12 U. S. C. 1016 (c), first sentence), to read as follows: "*Provided*, That any borrower under this section may be permitted to defer payment of the principal portions of installments on his loan for a period not exceeding 5 years under regulations prescribed by the Farm Credit Administration"; and

(d) By amending the 11th sentence thereof (12 U. S. C. 1016 (g), first sentence), to read as follows: "The Farm Credit Administration shall make loans under this section on behalf of and in the name of the Federal Farm Mortgage Corporation, but no such loans shall be made after June 30, 1959, except for the purpose of refinancing loans previously made under this section."

SEC. 3. The second sentence of section 4 (b) of the Federal Farm Mortgage Corporation Act, as amended (12 U. S. C. 1020d, second sentence), is amended by striking out "at a rate not exceeding 5 percent per annum" and inserting in lieu thereof "at a rate not exceeding the rate of interest on the loan."

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

CONVEYANCE OF CERTAIN LANDS IN ALASKA TO THE ROTARY CLUB OF KETCHIKAN, ALASKA

The bill (H. R. 6263) to authorize the Secretary of Agriculture to convey certain lands in Alaska to the Rotary Club of Ketchikan, Alaska, was announced as next in order.

Mr. MORSE. Mr. President, may we have an explanation of the bill?

The PRESIDING OFFICER. An explanation is requested.

Mr. AIKEN. Mr. President, this is a House bill. The information given to the Senate committee is to the effect that these 4 acres of land were developed by the Ketchikan, Alaska, Rotary Club sometime during the 1930's; and during the war they were turned over to the Forest Service, inasmuch as at that time the land was included within the area of the Tongass National Forest. These 4 acres were used as a recreational ground.

Since that time the boundaries of the forest have been drawn back several miles, leaving the 4-acre recreational tract where it is rather difficult for the Forest Service to handle it. The Rotary Club says it will take it back and operate it. The bill would turn the 4 acres, with the exception of 7 feet, which is desired for a right-of-way, back to the Rotary Club to be owned by them so long as the property is operated for the public benefit. That is all I know about it.

Mr. MORSE. Mr. President, will the Senator yield for a question?

Mr. AIKEN. I yield.

Mr. MORSE. Does the Senator from Vermont think I am correct in my understanding that this land was transferred to the Federal Government in the first instance for a specific use, to be held by the Federal Government so long as it was able to use it for that purpose, but that it no longer has any use for it for that purpose, and therefore the land should go back to the people who originally made it available to the Federal Government?

Mr. AIKEN. That is my understanding.

Mr. MORSE. That is my understanding. However, for the record, in order that this case will never be cited as a precedent against me, that explanation makes it clear that the bill does not violate the Morse formula.

Mr. ANDERSON. Mr. President, I am quite sure that the purpose of the bill is such that it does not in any way violate the Morse formula.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill (H. R. 6263) was considered, ordered to a third reading, read the third time, and passed.

CONVEYANCE OF CERTAIN LAND TO THE CITY OF CLIFTON, N. J.

The bill (H. R. 4928) to authorize the Secretary of Agriculture to convey a certain parcel of land to the city of Clifton, N. J., was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, may we have an explanation? The report indicates that this is a very valuable piece of land. I have no objection to its conveyance, but the RECORD ought to show the conditions under which it is con-

veyed, and whether or not the Government is receiving proper reimbursement.

Mr. ANDERSON. Mr. President, I think it should be said that this bill is exactly in accordance with the Morse formula, which has heretofore been cited.

Mr. MORSE. It is better than the Morse formula.

Mr. HENDRICKSON. It is better than the Morse formula.

Mr. MORSE. Mr. President, I am delighted to find a bill coming before the Senate that is better than the Morse formula. I congratulate the Senator from New Jersey. This bill provides for the payment of 75 percent of the appraised fair market value.

Mr. HENDRICKSON. Mr. President, I should like to observe that many good things come from New Jersey.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill (H. R. 4928) was considered, ordered to a third reading, read the third time, and passed.

ADDITIONAL FUNDS FOR THE COMMITTEE ON APPROPRIATIONS—RESOLUTION REFERRED TO COMMITTEE ON RULES AND ADMINISTRATION

The resolution (S. Res. 279) to provide additional funds for the Committee on Appropriations was announced as next in order.

Mr. KNOWLAND. Mr. President, I believe, under our customary procedure, this resolution and the following one should be referred to the Committee on Rules and Administration.

The PRESIDING OFFICER. Without objection, the resolution will be referred to the Committee on Rules and Administration.

ADDITIONAL FUNDS FOR THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

The resolution (S. Res. 276) providing additional funds for the Committee on Interstate and Foreign Commerce was announced as next in order.

Mr. KNOWLAND. Mr. President, I ask that this resolution also be referred to the Committee on Rules and Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

AGRICULTURAL ACT OF 1954—BILL PASSED OVER

The bill (S. 3052) to encourage a stable, prosperous, and free agriculture, and for other purposes, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. HENDRICKSON. Mr. President, obviously this bill is not calendar business, and should be passed over.

The PRESIDING OFFICER. The bill will be passed over.

Mr. GORE. Mr. President, I do not wish unduly to trespass upon the time of the Senate, but it strikes me as an amusing comparison that we have just passed a bill providing for secondary mortgage loans for farmers, whereas this bill is entitled "A bill to encourage a stable, prosperous, and free agriculture, and for other purposes."

Mr. AIKEN. Mr. President, the Senator from Tennessee will note that the bill providing for emergency loans to farmers has an expiration date, about 4 years in advance. I believe that by the time of the expiration date of the emergency loan bill the other bill which has just been referred to, the bill to encourage a stable, prosperous, and free agriculture, and for other purposes, will no longer be necessary. [Laughter.]

Mr. HENDRICKSON. Mr. President, let me say to the distinguished Senator from Tennessee that, contrary to some of the arguments which I have heard from my good friends on the other side of the aisle, the United States Senate still cannot control drought.

The PRESIDING OFFICER. The bill will be passed over.

BILL PASSED OVER

The bill (S. 3744) to change the name of Gavins Point Reservoir back of Gavins Point Dam to Lewis and Clark Lake was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, at the request of the distinguished junior Senator from Iowa [Mr. GILLETTE], I object.

The PRESIDING OFFICER. The bill will be passed over.

RESOLUTIONS PASSED OVER

The resolution (S. Res. 280) to cite Albert Shadowitz for contempt of the Senate was announced as next in order.

Mr. COOPER. Mr. President, may we have an explanation of the resolution?

The PRESIDING OFFICER. An explanation is requested. The resolution was reported from the Committee on Government Operations.

Mr. COOPER. I have just been informed that there is a request that the resolution be passed over.

The PRESIDING OFFICER. The resolution will be passed over.

The resolution (S. Res. 282) to cite Abraham Unger for contempt of the Senate was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

Mr. COOPER. Mr. President, I make the same request with respect to this resolution. I ask that it be passed over.

The PRESIDING OFFICER. The resolution will be passed over.

The resolution (S. Res. 281) to cite Corliss Lamont for contempt of the Senate was announced as next in order.

Mr. COOPER. Mr. President, I make the same request with respect to this resolution. I ask that it be passed over.

The PRESIDING OFFICER. The resolution will be passed over.

BILLS PASSED OVER

The bill (H. R. 3300) to authorize the State of Illinois and the Sanitary District of Chicago under the direction of the Secretary of the Army to help control the lake level of Lake Michigan by diverting water from Lake Michigan into the Illinois waterway was announced as next in order.

Mr. HENDRICKSON. Mr. President, reserving the right to object—and I do not intend to object—this might be an important bill. I think it should be explained.

The PRESIDING OFFICER. An explanation is requested.

Mr. GORE. By request, I object.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 9678) to promote the security and foreign policy of the United States by furnishing assistance to friendly nations, and for other purposes, was announced as next in order.

Mr. HENDRICKSON. Mr. President, here again we have proposed legislation which is clearly of such a nature that it should be brought up on motion. I ask that the bill be passed over.

The PRESIDING OFFICER. The bill will be passed over.

NAVIGATION ON THE DELAWARE RIVER—BILL PASSED OVER

The bill (S. 2317) authorizing the modification of the existing project for navigation on the Delaware River, Pa., N. J., and Del., was announced as next in order.

Mr. GORE. Mr. President, I have discussed the bill with the distinguished senior Senator from Pennsylvania [Mr. MARTIN]. It seems to be an entirely meritorious bill, but it does involve an increase in cost of $18 million. We have followed, more or less, a rule of thumb, that no bill involving more than $1 million should pass on the call of the calendar. For that reason, rather than because of any objection to the principle, or the bill itself, I ask that the bill be passed over.

The PRESIDING OFFICER. The bill will be passed over.

Mr. HENDRICKSON. Mr. President, in view of the request that the bill be passed over, I hope the distinguished majority leader will bring the bill before the Senate for consideration by a motion at an early date.

LEGISLATIVE PROGRAM

Mr. KNOWLAND. Mr. President, let me say for the information of the Senator from New Jersey [Mr. HENDRICKSON] and other Senators that, in conformity with the notice heretofore given, when the pending bill shall have been disposed of there will be a number of bills of first priority, and other bills which may be of lesser importance, to be considered. They are not necessarily stated in the order in which they will be taken up on completion of consideration of the unfinished business. The pending measure will be disposed of before any other bills are taken up. The list is as follows:

Calendar No. 1808, House bill 9709, a bill to extend and improve the unemployment-compensation program.

Calendar No. 1831, House bill 9678, a bill to promote the security and foreign policy of the United States by furnishing assistance to friendly nations, and for other purposes.

Calendar No. 1825, Senate bill 3052, a bill to encourage a stable, prosperous, and free agriculture, and for other purposes.

Calendar No. 1794, Senate bill 880, a bill to amend the license law of the District of Columbia.

Calendar No. 1774, House bill 7815, a bill to provide for the construction, operation, and maintenance of the Cougar Dam and Reservoir on the South Fork McKenzie River, Oreg., with participation for power by the city of Eugene, Oreg.

Calendar No. 1315, Senate bill 2910, a bill providing for the creation of certain United States judgeships, and for other purposes.

Calendar No. 644, House bill 6287, a bill to extend and amend the Renegotiation Act of 1951.

Calendar No. 1720, Senate bill 3706, a bill to amend the Subversive Activities Control Act of 1950.

Calendar No. 1832, Senate bill 2317, a bill authorizing the modification of the existing project for navigation on the Delaware River, Pa., N. J., and Del.

There will be additional announcements to the Senate later with respect to other bills which will be called up on motion.

CONVEYANCE OF CERTAIN LANDS TO MUSKOGEE, OKLA.

The PRESIDING OFFICER. There still remains at the foot of the calendar Calendar No. 1807, House bill 8983, which will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H. R. 8983) to provide for the conveyance of certain lands by the United States to the city of Muskogee, Okla.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. GORE. Mr. President, may we have an explanation of the bill?

Mr. MONRONEY. Mr. President, the purpose of the bill is simply to reconvey to the city of Muskogee, Okla., title to 5.4 acres of land for the purpose of providing a place for the historical display of the original Indian Agency of Oklahoma Territory.

This land was a part of a tract of more than 13 acres which was donated to the Federal Government without cost to the Federal Government, for the Veterans' Administration Hospital when it was constructed. The land is being reconveyed. The additional land which was obtained for the hospital did not cost the United States Government anything. The Veterans' Administration has found that this particular parcel of land, which is of historical significance in connection with the old Indian agency, is not needed or required by the Veterans' Administration Hospital at Muskogee, and therefore it has agreed and consented to this transfer to the city of Muskogee.

Mr. MORSE. Mr. President, my understanding of the bill is that we are dealing again with a situation in which land was conveyed to the Federal Government for a specific purpose, to be used only for that purpose, and with the understanding that if it was not used for that purpose it would revert. It is a piece of land which was deeded for the use of a veterans' hospital. More land was deeded than was necessary, and the Veterans' Administration wishes to relinquish these five and a fraction acres. The bill does not violate the Morse formula, and therefore I have no objection.

The PRESIDING OFFICER. The question is on the third reading of the bill.

The bill (H. R. 8983) was ordered to a third reading, read the third time, and passed.

EXERCISE OF CERTAIN POWERS BY THE PRESIDENT RELATING TO PROPERTY CEDED TO THE UNITED STATES BY THE REPUBLIC OF HAWAII

Mr. CORDON. Mr. President, I ask that a message from the House of Representatives on House bill 2846 be laid before the Senate.

The PRESIDING OFFICER laid before the Senate a message from the House of Representatives announcing its disagreement to the amendment of the Senate to the bill (H. R. 2846) authorizing the President to exercise certain powers conferred upon him by the Hawaiian Organic Act in respect to certain property ceded to the United States by the Republic of Hawaii, notwithstanding the acts of August 5, 1939, and June 16, 1949, or other acts of Congress, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. CORDON. Mr. President, the Senate, in considering this bill, had before it correspondence from the Interior Department indicating that certain technical amendments should be made in the bill because of an error on the part of the House in considering the legal effect of applicable law. The Senate committee adopted the recommendations, and the amendments were inserted by the Senate, and the bill then went back to the House. The House objected, and asked for a conference.

Since that time the Senate committee has been advised that the first information given the Senate committee was in error, and that the House language was the correct and necessary language.

At this time, in order to meet that peculiar situation, I move that the Senate recede from its amendments, so that the bill may be enacted as it passed the House.

Mr. GORE. Mr. President, I know of no objection, but I have had no notice from the minority leader that this matter would be considered. Can the Senator give us assurance that the minority leader has been notified?

Mr. CORDON. I am happy to advise my colleague from Tennessee that the matter has been discussed both with the majority and minority leaders, and the second ranking member of the minority of the Committee on Interior and Insular Affairs, who handled the bill, the Senator from New Mexico [Mr. ANDERSON].

Mr. GORE. I have no objection.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Oregon.

The motion was agreed to.

ORDER FOR RECESS TO MONDAY AT 10 A. M.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that when the Senate completes its labors this evening it stand in recess until Monday next, at 10 a. m.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE MEETING DURING SENATE SESSION ON MONDAY

On request of Mr. LANGER, and by unanimous consent, the Committee on the Judiciary was authorized to meet on Monday afternoon next, during the session of the Senate.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. GORE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Aiken	Flanders	Knowland
Anderson	Gore	Long
Beall	Hayden	Murray
Bennett	Hendrickson	Payne
Carlson	Hickenlooper	Purtell
Case	Holland	Robertson
Cooper	Ives	Russell
Cordon	Jenner	Schoeppel
Crippa	Johnson, Colo.	Sparkman
Daniel	Johnson, Tex.	Williams
Ervin	Kerr	

The PRESIDING OFFICER (Mr. PAYNE in the chair). A quorum is not present.

Mr. KNOWLAND. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

After a little delay, Mr. BURKE, Mr. BUSH, Mr. BUTLER, Mr. CAPEHART, Mr. CHAVEZ, Mr. CLEMENTS, Mr. DIRKSEN, Mr. DOUGLAS, Mr. DUFF, Mr. DWORSHAK, Mr. FERGUSON, Mr. FULBRIGHT, Mr. GEORGE, Mr. GILLETTE, Mr. GOLDWATER, Mr. HILL, Mr. HUMPHREY, Mr. JOHNSTON of South Carolina, Mr. KILGORE, Mr. KUCHEL, Mr. LANGER, Mr. LEHMAN, Mr. LENNON, Mr. MAGNUSON, Mr. MALONE, Mr. MARTIN, Mr. MILLIKIN, Mr. MONRONEY, Mr. MORSE, Mr. MUNDT, Mr. REYNOLDS, Mr. SMATHERS, Mrs. SMITH of Maine, Mr. SMITH of

New Jersey, Mr. STENNIS, Mr. SYMINGTON, Mr. THYE, Mr. WATKINS, Mr. WELKER, and Mr. YOUNG entered the Chamber and answered to their names.

The PRESIDING OFFICER. A quorum is present.

The question is on agreeing to the amendment of the Senator from Michigan [Mr. FERGUSON].

Mr. MURRAY obtained the floor.

Mr. ANDERSON. Mr. President, will the Senator from Montana yield to me?

Mr. MURRAY. I yield.

Mr. ANDERSON. I appreciate the courtesy of the Senator from Montana in yielding.

Mr. President, I merely wish to make a brief statement for the record regarding a statement made to the Senate on yesterday by the able Senator from Connecticut [Mr. BUSH].

I have discussed this matter with the able Senator from Connecticut, and he recognizes that I am not trying to get into a controversy with him about words. I merely wanted the two of us to be speaking the same language, so to speak.

At this time I wish to read from the third column on page 10677 of the CONGRESSIONAL RECORD for yesterday, July 16. At that point in yesterday's debate, the Senator from Connecticut [Mr. BUSH] made the following statement:

Mr. President, going back to my prepared remarks, special attention is directed to items 2 and 4. The Senator from New Mexico [Mr. ANDERSON] during his debate on the afternoon of July 14, 1954, made the statement that if construction costs—

Meaning the construction costs of the Dixon-Yates plant—

exceeded the estimate of $107,250,000, the Government would put up half of the additional capital costs to a ceiling of $117 million. In other words, on an increase of $9,750,000, he indicated the Government would put $4,375,000 of capital and the sponsors would put up a like amount. I refer my colleagues to page 10506 of the CONGRESSIONAL RECORD.

That assertion by the Senator from New Mexico is not correct. I am sure he did not know it was incorrect, but it simply is not so.

In the first place, Mr. President, $9,750,000, divided into 2, does not amount to $4,375,000, but to $4,875,000.

However, the essential point is that I was trying my very best to stay within the facts.

Let me read from page 10506 of the CONGRESSIONAL RECORD for July 14, 1954, where my statement is recorded in part as follows:

If the cost goes up from our $107 million to just under $117 million, the Government of the United States will put up $4½ million of the extra $9 million, and the operators, Dixon-Yates, will put up $4½ million.

I never used the term "capital," so far as I know.

Now let me read what the Bureau of the Budget said about this matter; I read now from page 955 of the hearings:

The Middle South-Southern proposal is predicated upon a base capital requirement of $107,250,000 for the production and transmission plant with provision that the new corporation and AEC share on a 50-50 basis any decrease or increase in this figure up to $117 million.

In addition, by referring to page 948 of the hearings, we find that the General Manager said:

In other words, if there is any increase over the $107 million estimate in construction, we—

Meaning the Government—

would pay half of that increase as reflected in the capacity charge, up to 9 percent, and the company, of course, would pay the other half or lose the other half.

Mr. President, I am merely trying to point out that I think both of us meant the same thing. I did not mean "to put up capital." I realize how it is done. It is done by paying $285,000 a year—that is, up to a maximum of that amount—instead of making an actual lump-sum payment.

I wished to state this matter for the record, because I do not think the Senator from Connecticut [Mr. BUSH] and I are apart. I simply used the words "put up," whereas the Government uses the word "pay." I think they amount to the same thing.

I thank the Senator from Montana for yielding to me.

Mr. MURRAY. Mr. President, I rise to express some views on the pending bill.

Earlier today I listened with close attention to the able and distinguished Senator from New York [Mr. LEHMAN], who pointed to some of the dangerous consequences which may flow from this measure if we fail to discover the real effect of its technical provisions and fail to take proper steps in that connection, I agree completely with the views of the Senator from New York, as so eloquently expressed by him.

Mr. President, on numerous occasions during the consideration of the pending bill, it has been stated that this measure is one of the most important pieces of proposed legislation ever to come before the Senate of the United States.

The distinguished Senator from Rhode Island [Mr. PASTORE], in his able analysis of the bill on the day before yesterday, said:

Nothing during this session that will come before us will weigh heavier on what our destinies may be than the measure we are discussing today.

Continuing, the Senator said:

I daresay that we could take every piece of legislation we have discussed in the Senate since January and put it into one basket, and take this proposed legislation and put it into another basket, and by far this measure would outweigh anything we have considered or done in the Senate this year.

Of course, a small group of Senators serving on the Joint Committee on Atomic Energy have had the benefit of extensive hearings and study of the proposed amendments of the act. The majority of Senators, however, will be compelled during the period of this debate to make a complete study of the record and the report of the joint committee, in order to get a correct understanding of the effect this measure is going to have on the future of our country. During this debate we shall have the benefit of the views and recommendations of some of the Members who have served on the Joint Committee on Atomic Energy. Unfortunately, there is a conflict of opinion in the joint committee.

We are told that this measure will be of great and lasting influence on the growth and strength of our country. In fact, it will create a new era and will determine our whole future history. It must, therefore, be free from any provisions or conditions that might be construed to make it work to the detriment of the whole people. In other words, it must not be used as a vehicle to give advantage to any special interests or special groups, to the disadvantage of the country as a whole. This is the great fear which pervades the Senate in connection with this measure.

Thomas L. Stokes well expressed this fear in his article appearing in the Washington Star of July 16, 1954. In his article he reminded us of our failure in the past to guard the public interest. He said:

We start fresh now with atomic energy, with all that experience behind us. We will, indeed, be negligent—as well as fools—if again we let powerful and selfish private interests get a monopoly grip not only on atomic power but also in utilization in other fields that radiate from the atom—medical science, agriculture, processing of food, and so on.

Mr. President, I ask unanimous consent that Mr. Stokes' article be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEVELOPMENT OF ATOMIC ENERGY—FEAR EXPRESSED THAT PRIVATE INTERESTS WILL GET AN UPPER HAND IN UTILIZING NUCLEAR RESOURCES

(By Thomas L. Stokes)

It may sound somewhat melodramatic to say that Congress is on the eve of one of the great legislative decisions of its long history.

But that hardly seems an exaggeration as to what it does about the bill to revise the Atomic Energy Act that is now before the Senate.

Unless the bill as it was presented to the Senate from the Joint Committee on Atomic Energy is amended to protect the public against the monopoly that some experts believe is inherent in its patent and other provisions, then future generations may be in for a lot of headaches.

There is a background of experience to warn us. That is the way we permitted our earlier source of energy—electricity developed from waterpower and steam power—to be exploited by private combines that got bigger and bigger and more and more powerful, took higher and higher tolls from the consuming public, and finally invaded and polluted our politics until the Government, moving under the impulse of public wrath, finally stepped in to straighten it all out. That wasn't so long ago—in fact, it is still clear in the memory of many of us.

Out of that we developed regulatory laws that offer a pattern to guide us in the development of atomic power.

We start fresh now with atomic energy, with all that experience behind us. We will indeed be negligent—as well as fools—if again we let powerful and selfish private interests get a monopoly grip not only on atomic power, but also in utilization in other fields that radiate from the atom—medical science, agriculture, processing of food, and so on.

We, the taxpayers, already have invested $11 billion in atomic development, mostly

for military purposes. We have, therefore, quite a stake. It belongs to us. The terms by which we permit private interests to develop atomic power for peacetime uses become consequently the overriding consideration before Congress—and with us.

There will likely be more noise and clamor about other issues in the atomic act revision bill.

One of these issues concerns how much we shall tell our allies about military use of atomic power. Another has to do with the recent order by President Eisenhower to the Atomic Energy Commission to purchase power from a plant to be built by a private syndicate, instead of having TVA, which has been the supplier of power for AEC, build a steam plant and add to its own capacity. Supporters of TVA in Congress see this arrangement as not only bad business for the Government and costly to it and the consumer, but also as an entering wedge to hamstring TVA's usefulness as a yardstick. They are seeking to stop execution of the contract by amending the atomic-energy bill.

These two matters are extremely important in themselves, and of considerable public import and interest. But the public should be cautioned not to let these controversies hide what is done about cutting in private interests on development of atomic power.

This last involves two changes in present law. One affects patent rights which heretofore have been controlled tightly by the AEC. Under the bill before the Senate patent rights are to be opened to private interests and under terms which are criticized as not properly protective against monopoly. Because of criticism, some alterations were made. One of these extends for 5 years the AEC's power to require the holders of private patents to make them available to others if such patents are important in production or utilization of nuclear fuels or atomic energy. But some familiar with the operation of patent law in such a field still believe that the public is not adequately protected.

Aside from patents, the bill also authorizes the AEC to issue licenses to private interests for construction, ownership, and operation of facilities to produce and utilize nuclear fuel and atomic energy. Ownership of nuclear fuel still would be retained in the Government.

It is here that production of power is involved. Yet the bill does not provide for preferences to public bodies or cooperatives in distribution of power, either from private plants that are licensed or from public atomic powerplants that might be constructed by the Government. Such preferences long have been in our laws dealing with hydroelectric power. It is true that the utilities are now engaged in a campaign to break these preferences down and, in fact, are on the point of success in various areas—at Niagara Falls, at Clarke's Hill along the Savannah River in Georgia and South Carolina, and in some projects being planned for the Pacific Northwest, among others.

If the utilities could prevent preferences for public bodies and co-ops in the atomic energy law, it would be quite a victory at the very outset. They may get away with it, of course. They have their highly paid lobbyists right here, at the ear of your representatives, and you, the public, are always a long ways off.

Mr. MURRAY. J. M. Roberts, Jr., Associated Press News analyst, has recognized the vital importance of this issue. In his column on May 23, 1954, he has written:

> One of the great problems now will be to determine, as contracts are being drawn and precedents set, how the interest of the people can be protected. Industry has been insisting that, if it develops any new processes, it should be permitted normal patent rights. The great question is, where do new processes begin and the influence of original development work end? * * * Development of this type simply would not begin at this time without Government subsidization in one form or another. * * * The precedents set now will have an important effect on the whole relationship between the people, their Government, and private business management.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. HILL. The distinguished Senator from Montana was formerly chairman of the Senate Small Business Committee. In that position, as we know, he rendered great and lasting service, not only to small business, but to the entire economy and to all the people of the Nation. I wonder if he will not corroborate the statement that patents constitute one of the most important features of our economy, particularly if we are to preserve the free-enterprise system and keep the economy from getting too much under the control and domination of a few great concerns. In other words, small business must have the greatest possible concern in the subject of patents, because the question of whether or not small business is to survive may depend upon patent rights. Is not that true?

Mr. MURRAY. The Senator from Alabama is exactly correct in his observation. There is no question that the preservation of small-business enterprise is vital to the continuation of our free-enterprise system. I am sure everyone realizes that.

Mr. President, the present administration has been in control of our Government for more than a year and a half. In order to determine the trend we are following, it might be well to consider what has befallen us during the past year and a half.

Early in the first year of the present administration we were confronted with a hard-money crusade, dictated by eastern bankers who had been placed in high positions of our Government by the administration. Dangerous consequences soon began to flow from that policy. We soon began to witness a slowdown in industry, an increase in small-business bankruptcies, and rising unemployment in many sections of the country. As a result, the administration was compelled to reverse that policy after it had caused considerable damage to our economy.

Now a deliberate attempt is on foot in the Congress to deflate the farmers of America and emasculate the laws and the policies that made it possible for the farmers and workers of the country to improve their status and increase their purchasing power, and thus become an asset to the Nation instead of a liability.

During the present administration we have also witnessed an effort to change the public-power policies and programs which have brought great wealth and prosperity to the Nation. The present administration has laid down a policy that there must be no new multiple-purpose dams started by the Government unless the electric power developed in connection with such dams is turned over to private-power utilities. This change of policy has already resulted in serious consequences to the Nation.

Mr. President, I should also call attention to the national tax program, through which the administration has sought to reward the wealthy, with the resulting danger of bringing on economic stagnation and depression.

Mr. President, we should not overlook the fact that the big utility companies and other special interests are spending enormous amounts of money lobbying the Congress, seeking special legislation and special favors.

These new administration policies to which I have referred are already having a serious effect upon our economy, and will result in serious consequences if not corrected.

In order to foretell the future we must understand what has happened in the past. Over a period of 50 years or more we have evolved a Federal power policy and built it into our economy so as to fit the needs of the Nation. We have tried regulation of the private utilities. We found that it was inadequate. We found that in the absence of some sort of real competition—if not within each community in the Nation, then by the example of a competitive type of development or yardstick in a few of the areas of the Nation—regulation alone was ineffective. Under regulation, utility management would settle down to sell a scarcity of power at a high profit and ignore the need for abundant low-cost power for the Nation's economic growth and development.

We have found that water power can be developed as the paying partner in great regional development projects and thereby stimulate, not only larger supplies of electricity, but in addition, soil conservation, new industries, expansion of employment and expansion of the whole economy.

Electric energy is not a commodity that we can take or leave alone without irreparable damage. The choice is not between an electric light and a kerosene lamp, or between a steam boiler and electric motors.

The expansion of the great electrochemical and light metal industries requires ever-increasing quantities of low-cost energy; and they are essential not only to a healthy economy, but to our national defense. As the President's Materials Policy Commission pointed out 3 years ago, abundant low-cost electricity is a national necessity.

One aspect of the present administration's shift from the highly satisfactory partnership between Federal generation and local distribution which is extremely disturbing to me is what becomes of irrigation. For a good many years we have permitted the use of the interest component—interest on Federal funds invested in the power facilities of a multiple-purpose project—to pay excess irrigation costs. There was a Columbia Basin account established to permit the use of the interest component to promote irrigation development in the Northwest. But if all the proposed giveaways of power sites in the Northwest proceed—if there is to be piecemeal development of the remainder of the hydroelectric sites in the Columbia Basin by

a variety of sponsors with no responsibility for irrigation—then irrigation development in the Columbia Basin appears to be finished.

The great Hells Canyon Dam, as planned by the Federal Government, was to provide interest component funds to permit irrigation of a considerable area in the Mountain Home project. Should the Federal Power Commission license construction at that site by the Idaho Power Co., at least $300 million of prospective interest component funds will be lost—as well as the possibility of a great new low-cost power source. The possibility of going ahead with irrigation development under the present financing formula will thereby be reduced.

I am quite fully aware that the use of the interest component is a form of financial aid to irrigation. In my judgment, it is a wise arrangement. Our country properly makes a great many investments which are not, of themselves, self-liquidating, but which stimulate tremendous returns indirectly. Irrigation can be such an investment. The farmers who take up the irrigated lands in some instances cannot afford to pay the full costs of the irrigation works. But the creation of the new farming units creates new businesses. It stimulates demand upon existing industry. It creates jobs. It develops new tax sources. And, in the end, the Federal Treasury as well as the whole economy are beneficiaries.

From the beginning of the Federal reclamation program more than 50 years ago, under President Theodore Roosevelt's leadership, subsidy for irrigation has been recognized as sound public policy for regional development purposes.

The planned extension of the irrigation subsidy principle in the case of Hells Canyon Dam would be to the Payette unit of the Mountain Home irrigation project. This consists of 192,000 acres on which 750 new farm units could be located. Investment in the farms would run $50 million. With the expansion of business and population that would result, studies indicate that Federal taxes, at present rates, of approximately $7,250,000 per annum could be anticipated.

It is argued that in view of our present tremendous agricultural production and supply, there is no justification for such irrigation projects. This is a very short-term viewpoint. By 1975 we will have 25 percent more mouths to feed than in 1950. We will need the production of an additional 100 million acres of land at present yields to feed our population, even if we give no consideration to improvement of the diet of people not now well nourished. The long-term answer is that this country should continue with the orderly development of irrigable lands, as well as scientific research in the improvement of yields from lands already under cultivation. Our steady population growth requires it. We do not have 100 million acres of new land to bring into cultivation. We are going to get our increasing food requirements through a few reclamation additions to acreage and improved yields.

Irrigation subsidy can be provided by other means. We can throw out the use of interest component and substitute direct, appropriated subsidies if that is the desire of the people of this country and the Congress. But before the interest component is discarded as the means of continuing reclamation, we should have some concept of the alternative plan which is to be used. We should face the problem and not discard present development procedures without a clear understanding of what the substitute is to be. We are demolishing a useful and needed policy structure without even a blueprint of a new policy.

Over a period of more than 50 years we have developed a Federal power policy. It is contained in a dozen legislative enactments.

In 1890, the importance of our great hydroelectric resources began to become apparent to the Congress and it enacted provisions in two measures to protect the public interest in them.

One bill forbade the construction of any dam or other structure in the navigable streams of the Nation without first getting the approval of the Chief of Engineers and the Secretary of War. The Rivers and Harbors Act which was passed that year—64 years ago—indicated congressional determination to limit the time of occupancy of any power site. A special bill, which authorized the Secretary of War to grant leases for power sites on the Green and Barren Rivers, specifically provided that the leases were not to run for more than 20 years.

That was the beginning of our Nation's awakening to the value of public energy resources; the first notice that it would be the policy of Congress to control those public energy resources in the general public interest.

Positive legislation to protect the public power sites was enacted on February 15, 1901. The act of 1901 gave authority to the Secretary of the Interior to license use of the public lands for "electrical plants, poles, and lines for the generation and distribution of electrical power" leaving the lease conditions to the Cabinet officer with the provision, however, that any such licenses or rights would be subject to revocation in the discretion of the Cabinet officer.

A report of the Committee of the House on Public Lands—House Report No. 16, 64th Congress, 1st session, 1916—later commented:

> Prior to the act of February 15, 1901, there was no legislation on the subject at all; waterpower sites were patented unmolested, either as parts of homesteads or by purchase, and were given no Federal attention whatever. Under this procedure, a large number of power sites on the public domain were frittered away and have passed into private ownership beyond regulation, beyond control.
>
> As we look back on this procedure it seems like criminal neglect. Many of the valuable waterpower sites of the country passed as fast as eager private concerns and persons could grab them under the several laws then in existence. These are now forever, in part, to be enjoyed by the few who at will may practice extortion and monopoly upon the consuming public subject only to inadequate State regulation when the business is intrastate and with little or no regulation when the concern is doing an interstate business.

The next legislative action in the development of Federal power policy came in the Reclamation Act of 1906, an act which was sponsored by Republican President Theodore Roosevelt and for which he has been acclaimed, until recently, by most Republicans as a great and far-seeing President.

The Reclamation Act of 1906 recognized that water stored for irrigation could also be used to produce power, and it therefore authorized the Secretary of the Interior to lease any surplus power or power privilege. The bill provided that the Secretary should give preference to municipal purposes, thus evidencing an intention that the power benefits should be widespread, rather than monopolized by a private corporation. The act provided a 10-year limit on such leases.

Such a time limitation would undoubtedly be considered extremely drastic at the present time. Federal Power Commission licenses are for 50 years. The new administration's concept of a partnership—so far as I can determine—contemplated long licenses, if not perpetual rights, to power facilities at a dam site. It is my understanding that it is planned to let the power companies build and own the electric generating facilities in connection with a multiple-purpose dam. There has been no suggestion of a termination or recapture provision in such arrangements, although no such arrangements have yet been made so we can inspect them.

It is therefore significant to observe that other Republicans, as early as 1906, opposed the granting of perpetual rights. Acts were passed in the 1906 period granting perpetual rights to private companies for hydroelectric developments on the Tennessee, Rainey, James, White, and Coosa Rivers. But those acts were vetoed by two illustrious Republican Presidents, Presidents Theodore Roosevelt and William Howard Taft.

The President's Water Policy Commission, at page 221 of its report, issued in 1950, reviewed these vetoes and commented:

> Three veto messages by President Theodore Roosevelt and two by President Taft, dealing with bills to permit private construction of power dams on the Tennessee, Rainey, James, White, and Coosa Rivers, played an important part in the development of Federal water power policy. In general they noted, among other observations, that natural resources should not be granted and held in an undeveloped condition; that a definite time limit should be fixed in grants, permitting the public to retain control; that charges for the privilege should be imposed; and that, in approving plans, maximum development of navigation and power should be assured.

By 1910 the problem of use of the public hydroelectric sites was so pressing that Congress adopted the General Dam Act, designed to protect the people's rights in the public resources. Grants to develop power on rivers subject to Federal jurisdiction were limited to 50 years, but with the right reserved for the Government to revoke such grants at any time for public use upon payment of a reasonable value for the works, exclusive of any value for the Federal grants.

Next came the Federal Power Act of 1920—the basic legislation in our modern day power policy.

This bill has sometimes been described as a compromise between the private and the public power interests. The report of the Senate Committee on Commerce, submitting the act, said that there should be Government development, or private development, and that in order to encourage some sort of action this bill proceeds on the theory of private development with ultimate public ownership possible.

The bill then provided that the Government had first preference to any water-power sites, and that then the State and municipalities should be accorded a preference over any private applicant if their proposed projects could be made to equal the other.

There were other important aspects of that bill. It required that water-power development be undertaken as a part of comprehensive, multiple-purpose plans for development and use of waterways and watersheds. It contained a series of provisions to assure the public low rates, even under private development. It limited license periods to 50 years. It provided public recapture at the end of license periods.

The provision for recapture was an extremely significant provision and reflected the skepticism of the legislators of that early day over the adequacy of regulation alone to assure the American people abundant power at reasonable rates. The Congress, by inclusion of the recapture provision, in effect protected the right of the people through Federal, State, municipal or other nonprofit agencies, to take back the resources and provide themselves with electric power. It was a reservation against the possibility that regulated private utilities would not meet the public's requirements.

The intent of the Federal Power Act of 1920 was to stimulate development of power to supply—to give private utilities access to hydroelectric sites under regularized terms which would protect their investments but safeguard the public—to encourage them to develop a more abundant supply of power for America.

The effort to stimulate development did not work—and we should mark that fact in this period when private utilities are asking to be given the atom. By 1925, the Federal Power Commission had issued only 5 licenses for construction of dams. So Congress again took a hand and directed the Federal Power Commission and the Chief of Engineers to report to it on the cost of surveys to formulate plans for the improvement of the navigable waters of the United States. The Commission and the Chief of Engineers did report in a document known to all of us—House Document 308, 69th Congress, 1st session.

After this report was submitted, Congress, in the Rivers and Harbors Act of 1927, authorized surveys in accordance with House Document 308. Since then, we have had about 200 of the 308 reports made to this Congress, all made at considerable expense and all in accordance with a policy of undertaking Federal development of our watersheds for their multiple values and purposes.

Congress has authorized many multiple-purpose projects, invariably including a clause giving preference in the sale of electric power from a public development to public and cooperative agencies.

The Hoover Dam Act of 1928 provided that contracts for the use of energy should be let in conformity with the policy expressed in the Federal act as to conflicting applications—which meant that State, city, county, irrigation district, drainage district or other division or agency of the State should have preference.

Inasmuch as the Hoover Dam Act has been cited recently as a model law, I think it is very important to note that it contained the preference clause. That fact is being overlooked by those who are using it as an example of how power resources should be farmed out to local interests today. The act providing for the construction of Hoover Dam definitely included the preference principle.

In the sale of power from Tennessee Valley Authority projects, the Congress prescribed a preference to States, counties, municipalities, and cooperative organizations of citizens or farmers not doing business for profit but organized primarily for the purpose of supplying power to their members. That act passed May 18, 1933.

The Rural Electrification Act of May 20, 1936, provided that in making loans that agency should give preference to "States, Territories and subdivisions and agencies thereof, municipalities, peoples utility districts, and cooperatives, nonprofit, or limited dividend associations."

In 1937, the Bonneville Project Act provided a priority in sale of energy to public bodies and cooperatives. A similar provision was in the Fort Peck law passed May 18, 1938.

A preference was prescribed in the sale of power in the Water Conservation and Utilization Act of 1940.

In 1944, in the Flood Control Act of that year, Congress prescribed generally that, in the marketing of power generated at reservoir projects under control of the Secretary of the Army, preference shall be given to public bodies and cooperatives.

That act was passed December 22, 1944.

The policy of protecting public power resources for public and cooperative agencies—for the great mass of the people—has not only pervaded the laws of the last half century, but in that period the Congress has seen to it that the right of the people, who compose the Government, to the benefits of the power which the Government develops has been given real meaning; that the power is transported from the public projects to within reach of the public and cooperative, nonprofit distributors.

In the case of Hoover Dam, the large and wealthy city of Los Angeles, requiring both power and water, was able to go out nearly 300 miles and exercise its priorities there, transporting both its own power and its own water to the city. It became obvious that there are few cities, possibly none, which could finance such great transmission projects alone; and that the rural electric cooperatives could not, since they must devote their earnings to retirement of their Government loans. So the Congress for years has consistently followed the policy of authorizing, appropriating for, and having built public transmission lines which will get public power to the public and cooperative priority customers.

In the great Northwest area, Bonneville Power Administration has done it, and brought about a tremendous economic expansion in that area.

In the Tennessee Valley, the TVA has, at Congress' direction, built a great grid system reaching priority customers.

In the Southwest, in the Missouri Basin, in the Central Valley of California—wherever public power is available—it has been the policy to give meaning to the priority provision by getting the power within reach of the customer.

The Congress has provided the rural electrics with so-called G & T loan funds—generating and transmission loans—to permit them to build not only generating plants, but also necessary transmission lines. A transmission cooperative in South Dakota is entirely engaged in transmitting Bureau of Reclamation power to local REA's.

In some instances, arrangements have been made for private companies to "wheel" power over their lines for the Government to the public preference customers. I do not object to such arrangements where they are freely made by both parties—where the Government agency or the REA can go to a company and say: "We will contract with you to wheel power at a reasonable rate; but we will build our own transmission line if you are not reasonable."

But I certainly favor making it at all times possible for the public agency or REA to have the alternatives of building its own lines if the private companies are unreasonable.

I do not favor yielding to what I understand is now the private company demand that all power be sold to them at the bus bar—for them to resell to priority customers at their own rates.

Neither do I favor returning to the 19th century—ignoring all the developments of the last 50 years—and enacting atomic energy legislation which will give the private power companies exclusive, unregulated and unconditional right to use the public nuclear materials as fuel for generating plants without recapture provisions, without assent to regulation, without priority to public and cooperative power distributors—without any of the safeguards of the public interest to assure developments in abundance at the lowest possible costs which our predecessors in the national legislature—the Congress—have found necessary.

Mr. HILL. Mr. President, will the Senator from Montana yield?

Mr. MURRAY. I yield.

Mr. HILL. Is it not true that in spite of the opposition from power companies, when we passed the Flood Control Act of 1944 we wrote into it the preference clause applying to all Government-built projects, whether they were constructed for flood-control purposes, for navigation purposes, or for whatever purpose they were constructed, and this preference

for the purchase of the power was given, as the Senator has said, to municipalities, nonprofit public bodies, and REA cooperatives? If there was ever any question about the public-power policy it was made general and as broad as the encasing air, so to speak, so far as Government-constructed power projects are concerned. Is not that correct?

Mr. MURRAY. That is absolutely correct. It has become the established policy of our Nation. Everyone in the West who knows what has been accomplished there under that policy certainly approves it.

Mr. HILL. Of course, the policy had its genesis in the great fight for conservation which was made some 45 or more years ago, led by Theodore Roosevelt and Gifford Pinchot, when they were waging the battle to preserve our forests, our lands, and our water and mineral resources as the heritage of the people of the United States, the gift of God Almighty to the people of the United States. This preference provision about which the Senator has been speaking is the child of that great struggle to save for the people the benefits of these great God-given natural resources.

Mr. MURRAY. I thank the Senator for his contribution.

Mr. HILL. They should be used to benefit the people rather than for exploitation for profit by the power interests.

Mr. MURRAY. That is absolutely correct. I think it has become generally recognized in the United States, even in sections of the country far removed from where the policy has had such a beneficial effect.

Mr. HILL. There is a very excellent editorial on the subject published in this morning's Washington Post and Times Herald. I wonder if the Senator would permit me to ask unanimous consent to have it printed in the RECORD.

Mr. MURRAY. I shall be glad to have it printed in the RECORD.

Mr. HILL. Mr. President, I ask unanimous consent that an editorial entitled "Power on the Spot," published in today's Washington Post and Times Herald, be printed in the RECORD following the very able address of the distinguished Senator from Montana.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MURRAY. Mr. President, in the present state of world affairs, when for the foreseeable future we must remain strong, we must have a constantly expanding economy. We must have a constantly expanding supply of energy at low cost, if we are to be sure that we can meet any crisis, as well as to assure improvement of the standard of living of all of our people.

The President's Materials Policy Commission, in what is known commonly as the Paley report because the Commission was chaired by a businessman, William Paley, were cautioned in 1952 that we must have at least 260 percent expansion in electrical output to meet the foreseeable energy requirements of 1975. And we must keep down the cost of that development so the electrochemical and other electroprocess industries, including light metals essential to our aviation projects, will remain economically feasible. The Materials Policy Report told us:

To assist the economy to expand normally and to assure the national security, the United States by 1975 must have a supply of fuels and electricity, roughly, twice as large as it used in 1950. The requirements of other free nations can be expected to increase on about the same scale.

Four questions briefly point up the energy problem which policy must attempt to solve:

Does the United States have the natural resources, the petroleum and gas, the coal and waterpower—to provide enough energy for the future?

Will the real costs of energy be forced upward, and will any resultant rise retard economic growth?

In the event of all-out war at any time in the next 25 years, will the United States and its allies have enough fuels and other forms of energy to support full economic mobilization and fighting strength?

What opportunities are there for strengthening the long-term energy position of the United States and other free nations and what will it take to develop these opportunities?

The Commission did not at that time speculate on the possibility of atomic energy becoming available in the 1950–75 period, as is apparently developing. But the principles it enunciated about energy sources and supply, apply across the board. It said in effect that the Federal Government must assume responsibility for seeing that energy sources sufficient to meet our growing requirements are developed, that private participation and cooperation is needed, but that the Government must keep a hand on the throttle.

Two imperatives, the Commission reported, are keeping the real costs of power low, and being prepared to meet the demands of a possible war. It summarized:

If these opportunities to strengthen the United States energy position are vigorously pursued, it should be possible with the resources at its command, supplemented by imports of petroleum and perhaps some natural gas, to keep supply in step with expanding demand from now to 1975, and to keep the average costs of energy from rising significantly if at all above today's level. Many large tasks, obstacles, and problems in the path of this accomplishment present a major challenge to industry and Government alike. The task of policy is made greater by the risks of war and by the energy problems of other free nations whose future is linked closely with the prosperity and security of the United States.

In its more detailed examination of the electricity problem, the Commission said:

The central problem of electric energy is how to increase the Nation's supply 2½ times during the next 25 years without running into considerably higher costs per unit.

The supply of electricity has had to double every 10 years since 1920 and will continue to expand at a very rapid rate in order to support a doubling, by 1975, of the Nation's total output of goods and services. The Commission's studies estimate that the demand for electricity will increase by 260 percent before 1975—from 389 billion kilowatt-hours in 1950 to something like 1,400,000,000,000 in 1975.

Shortages of electricity and rising real cost could impede economic growth: They could throttle national effort in event of war.

In its conclusion, the Commission said:

The national interest in greater production at lower costs will be promoted by mutual recognition, between the Federal power agencies and private systems, of the needs of each for expansion to meet market requirements, for close integration between public and private facilities within the established Federal power policy, and for strengthening joint public and private utility planning for future expansion.

The Federal Government will have to continue work on economic hydro sites especially where multipurpose development of a river basin represents the best approach.

The Commission recommends: That the Nation's hydroelectric potential be developed as fully and as rapidly as is economically feasible.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. HILL. The Senator from Montana is absolutely correct in what he says about the way in which the demand for electricity has grown. The Senator will well recall that when the TVA and some of the other great projects, like Bonneville, were under consideration, a great hue and cry arose from representatives of the power companies that the Government would be wasting money.

Mr. MURRAY. Yes; I have a vivid recollection of that situation.

Mr. HILL. It was said that the Government would be making a tremendous investment to generate power, when there would be no demand for the power. But the result has been what? For the past 20 years, ever since the Government began to build the great projects, there has been constantly a tight power supply. There simply is not sufficient electrical energy to meet the demands of America. Is not that correct?

Mr. MURRAY. That is correct. I recall that when the Bonneville project was being planned, the experts in the field of electric power said, "Where will all this power be sold? To the jackrabbits in the plains of the West, we suppose."

Of course, when the dam was completed they were surprised at the rapidity with which the demand continued to grow, which has made it necessary to build other dams on the Columbia River.

Mr. HILL. They did not foresee at all that the Nation was then just entering the electrochemical age. As the Senator from Montana knows, there is nothing so vital to the growth and development of the electrochemical industry as is power.

With respect to all these wonderful things, whether they be in terms of new products made through the electrical process, or new machinery, or new materials—new things of all kinds—power has been absolutely essential for the marvelous development which we have witnessed. Is not that correct?

Mr. MURRAY. The Senator is correct.

Mr. HILL. In that connection, I read not long ago some testimony, given by Dr. Waterman, Director of the National Science Foundation, who, I am certain,

the Senator from Montana knows well. In his statement Dr. Waterman said that by next year the United States would be graduating 17,000 engineers, whereas Russia would be graduating 50,000 engineers. This shows how conscious Russia is, not only of the fact that the world is in the electrical age, but also of the tremendous possibilities of this age. She is conscious of it not only from the standpoint of the welfare, economic growth, and progress of the people of her nation, but also from the standpoint of the defense of her nation.

Once the United States falls behind in its onward march in the field of electrochemistry, we shall then have lost the titanic struggle in which we are engaged with the brutal, ruthless forces of Communist aggression. Is not that correct?

Mr. MURRAY. The Senator is absolutely correct. I recall the terrific battle we had in our effort to bring about the construction of the Hungry Horse Dam in Montana, which, since its completion, has been found to be of extremely great value.

Mr. HILL. But for the indefatigable, tireless, and valiant efforts of the distinguished senior Senator from Montana, that dam would not exist today.

Mr. MURRAY. If the Senator from Alabama will include the valiant efforts which he himself made to help in that struggle, I will agree with the Senator.

In view of the Nation's great power needs—needs that involve our national survival—I am disturbed by two developments.

One is the theory that no Federal developments should go ahead until some local interest agrees to take over the power phase, and the other is the dumping of atomic-electric generation over to private interests.

The hearings of the Joint Committee on Atomic Energy make it clear, and it has been made clear in other ways through other media, that Chairman Strauss and his collaborators at the Atomic Energy Commission do not want to become a power agency, they do not want to develop atomic generators. They want to dump the whole problem.

One wonders at the concept of public service of such atomic energy commissioners.

It would be nice if Members of the United States Senate could pick and choose among the policies they want to pass upon; if we could reject onerous committee responsibilities. It would be nice if we could say that we do not want to fiddle with appropriations, or with foreign policy, or with some other type of legislation. But when a legislative job has to be done, Congress has to do it.

When there are agricultural problems, the Secretary of Agriculture has to face up to them, and usually the Congress also.

The production of atomic energy needs an abundance of low-cost electric power. The Atomic Energy Commission has a fuel—a basic resource—which can supply such power. And neither the Commission nor the Federal Government totally can escape the responsibility for bringing that resource to a state of technical development, and of practical development, by simply shrugging it away to someone else.

In the case of atomic power, the Commission is proposing that we turn atomic materials over, uncontrolled, to the private utilities which, in the past, have repeatedly failed to meet America's energy needs.

They did not develop an abundance of hydroelectric power when it was made available to them under the Federal Power Act of 1920. As a matter of fact, the private power companies have repeatedly used applications to the Federal Power Commission—pre-empting hydroelectric sites—as a means of delaying development of power supply. The East Tennessee Development Co. rushed in and made application for a string of dams along the length of the Tennessee River when sentiment for public development of that river started to grow. But they did not press those applications; they did not follow up; and development by private utilities was just as remote when TVA was created as it was on the day the private utilities filed their applications to blockade development rather than to achieve it.

In the case of Hells Canyon Dam, the same tactic is in use.

The first application conflicting with the high Hells Canyon project was for a little, low dam that would throw away most of the potential at the site. One application after another has proved so ridiculous that there has been a series of modifications of applications, 1 for 5 dams, and now 1 for 3 dams, which have revealed the real game.

As I have previously indicated, it was the failure of the private utilities to take advantage of the Federal Power Act of 1920 which led to congressional determination to go ahead with river development, to get an estimate of the cost of such development, to obtain the 308 report of the Power Commission and Chief of Engineers, and to proceed with the developments which are the backbone of our present public power resources.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. HILL. The Senator well recalls the investigation which was carried on by one of his great predecessors, the late Senator Thomas J. Walsh, of Montana. That investigation showed to the country in a clear, yet reprehensible light, the abuses and excesses of the private power companies.

Mr. MURRAY. That is absolutely correct. I remember that the late Senator Walsh took a very active part in the TVA.

Mr. HILL. Not only in the TVA, but in bringing to light the abuses or excesses on the part of private power companies. He demonstrated that the private power companies had sought to place, and in some cases had been successful in placing their propaganda, even in textbooks in the American school system.

Mr. MURRAY. I thank the Senator from Alabama. The people of Montana—and, indeed, of the Nation—owe a debt of gratitude to the late Senator Walsh, of Montana, for his work on these problems.

Today it is the policy of the new administration to ignore the lessons of the past, to forget the power scarcities, to forget the failure of the private-utility industry to service rural America, to forget its consistent record of maintaining a scarcity of electricity but a superabundance of propaganda, and turn the entire initiative for the development of electric energy back to advocates of scarcity.

In the case of hydroelectric power, it is to be done by a ban on all future single-purpose electric projects by the Federal Government, and by a ban on starting any multiple-purpose projects until a local interest has been found which will take on the construction of the power phase.

These are the first items in the Federal power policy enunciated by Herbert Hoover at Case Institute on April 11, 1953, preceding his appointment by the President as head of the Hoover Commission.

In his address at Case, outlining steps to get the Federal Government "out of the business of generating and distributing power as soon as possible," Mr. Hoover's first and second points were these:

1. The Congress should cease to make appropriations for any steam plants or hydroelectric plants solely for power.

2. The Congress should follow the precedent of the Colorado project and make no more appropriations for new multiple-purpose projects unless the electric power is first leased on terms, the standards of which I shall describe in a moment.

Mr. Hoover later explained that a Commission—the very Commission that he heads today—should be established to work out the precise standards.

This policy of completely surrendering, even in these critical times, the initiative on energy supply to private interests with a scarcity record was carried into the report of the House Interior Appropriations subcommittee last year. In the report on the Interior appropriation bill, the committee said:

With respect to construction activities, essential and completely justified projects in the construction stage should be carried to completion to avoid waste of Federal funds, but wherever possible, private enterprise shall be taken into partnership to build, own, and operate that part of each project that can be handled by private ownership under conditions that protect the interests of all the people. In all future projects or new starts which include transmission lines, private enterprise shall be urged to take the initiative in constructing, owning, and operating such works before money is made available for Federal construction.

This committee recognizes that this policy cannot be fully put into operation in the fiscal year 1954, but all interested parties are urged to keep this policy in mind and to plan accordingly.

In the case of atomic power, we have been submitted a bill which includes none of the safeguards found essential, through years of experience with the private utilities, in the Federal Water Power Act of 1920. Licensing is provided only if the applicant agrees to handle nuclear materials to protect the public health and safety, and agrees to certain defense conditions. There are no recapture pro-

visions, no requirement of use as against inadequate use or nonuse, no submission to Federal regulation, or a half dozen other essential things.

Mr. HILL. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. PURTELL in the chair). Does the Senator from Montana yield to the Senator from Alabama?

Mr. MURRAY. I yield.

Mr. HILL. The requirements to which the Senator has been referring are all written into the Federal Water Power Act with reference to private development on navigable streams, are they not?

Mr. MURRAY. They are written into that act in unequivocal language and their legality has been upheld in many court decisions.

Mr. HILL. But none of those safeguards have been written into the pending bill, have they?

Mr. MURRAY. None of them appear in the provisions of the present atomic-energy bill.

Chairman Strauss and his fellow Commissioners do not want to be bothered with electric-power development. They want to be the most independent agency ever created—able to toss off all responsibility of guarding against monopoly, or to assure the Nation abundant energy to meet any emergency, or to pursue other than military development of the atom—at their pleasure.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MURRAY. I yield to the Senator from Alabama.

Mr. HILL. The Senator will no doubt recall that the bill as originally drafted gave to the Chairman of the Commission powers, authority, and jurisdiction not given to the other members of the Commission. Is that not correct?

Mr. MURRAY. That is true. That fact has been mentioned several times during the course of the debate.

Someone has said that the administration wants to substitute the golf stick for the yardstick. That puts it only partially appropriately. It is an apt expression as far as it goes. But unfortunately, more than just destroying Government power-rate yardsticks is involved.

The adequacy of power for economic growth, for national defense, and for national security is involved directly in the development of electric energy supply, and consequently even our national existence as a free and democratic Nation.

It is difficult to believe that the men who are today saying that the initiation of power projects must depend on so-called local interests entirely if the projects are wholly for power, or upon their willingness to go along with the power phase in the case of any multiple-purpose project, are familiar with the history of the power industry.

They have not taken a look at the probability that the private power industry will not provide an abundance—even the necessities—in power generation. They have not carefully studied the record.

Electroprocess aluminum production in quantity was not made possible by private electric power. The Aluminum Company of America had to go down to Tennessee and develop its own power supply to make it economically feasible. The aluminum industry is confronted with the necessity of finding power supply of its own again in these critical days as a result of the administration power policy—sometimes called the "Eisenhoover" power policy.

Rural America was not electrified by the private power industry. It was provided electricity by a Federal program after the power industry failed to meet rural need.

I have heard easterners talk about Tennessee hill-billies as a sort of backward people. The fact is the homes in the State of Tennessee today make seven times as much use of electricity as do home in New York city. The archaic people of today are not the Tennessee hill-billies but the New York City cavemen, who have never escaped the shackling scarcity of private power rates and escaped into the modern era of abundant electricity.

Since the Federal Power Act of 1920, and the development of an aggressive Federal power policy, America's use of electricity has grown 820 percent, and is still skyrocketing.

Mr. HILL. Mr. President, will the Senator yield?

Mr. MURRAY. I yield to the Senator from Alabama.

Mr. HILL. Is it not true—and we are glad it is true—that the private power companies have made large profits?

Mr. MURRAY. Certainly.

Mr. HILL. In an area where a Government project has been located, we have found the rates of the private power companies to be lower than they are in areas where there is no Government project. Yet such private power companies, even with lower rates in effect, have prospered more, and have made greater profits, on the whole, than power companies which did not have the competition, so to speak, of Government projects within the area they were serving. Is that not correct?

Mr. MURRAY. That is correct.

Mr. HILL. Does not this demonstrate what Henry Ford proved by his inauguration of mass production methods, that when there is mass consumption, there are lower rates, but so much more power is sold that in the end the profits are much greater? Is that not true?

Mr. MURRAY. That is absolutely true. Rural America was not furnished electrical power by private companies. That is now a well-recognized fact. Rural America was furnished electric power as a result of a long, hard struggle in Congress to provide Americans who lived in rural areas with a rural electrification program. That made it possible to electrify farms. Today in Montana 95 percent of the farms are electrified. That program had had a profound effect in increasing production and the prosperity of the farmers.

Mr. President, I ask unanimous consent to have printed in the RECORD at the close of my remarks a table which shows United States electrical output by years since 1920, with unofficial estimates from the Federal Power Commission of requirements in 1955 and 1960.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. MURRAY. Mr. President, back in 1920 our electrical output was 55.6 billion kilowatt-hours. In 1952, the last year for which I have been supplied figures, electrical output reached 463 billion kilowatt-hours. The 1950 estimate is for a growth to 600 billion kilowatt-hours, and in 1960 a growth to 790 billion kilowatt-hours.

This growth in power use never would have occurred had not our predecessors—Republicans and Democrats alike—seen the necessity of the Federal Government breaking the private utility bottleneck. The great growth in industry in the United States, the great growth in our productive capacity, could not have occurred if the initiative in power matters had been shirked by the Federal Government and left entirely in the hands of men more concerned with brainwashing the American people with private power slogans than in providing them with electric energy at low cost.

Part of the reluctance of private power companies to stay ahead with power development is generally regarded as good business—the practice of keeping supply somewhat behind demand. They want customers on the line before they build generating capacity. And they have always been skeptical about America's expansion and growth.

It was recounted on the floor of the Senate last year, by the junior Senator from Oregon [Mr. MORSE], that when the Tennessee Valley Authority was proposed, the private companies said that it would be a century before the power of the Tennessee River could all be used—that it was folly to be talking about speedy development of the river. One of our great research foundations made a study which backed up this contention. A tremendous point was made of it.

Now—20 years later—we know that not only was all of the power of the river needed, but that it would prove insufficient to meet the needs in that area when economic expansion got underway. The point of attack today—the effort to stifle growth—is against steam plants to supplement TVA power. Now the minions of scarcity want to prevent the TVA from developing needed power over and above all that can be generated from the river.

The Senator from Oregon also recalled, when he spoke, that out in the Bonneville area the propaganda was that there will be only jackrabbits for customers for the power from the great Bonneville and Grand Coulee Dams.

But the dams were built. Other dams have been built. And the problem today, as in the Tennessee Valley area, is getting enough power to meet future requirements. The jackrabbits are still without electricity.

The private utilities have, year in and year out, denied the need for rural-electrification funds.

In 1935 Mr. Grover C. Neff, spokesman for the private utilities on rural-power matters, wrote to REA Administrator Morris Llewellyn Cooke that—

> There are very few farms requiring electricity for major farm operations that are not now served.

The census that year showed that 10.9 percent of the farms were electrified.

Mr. Neff continued to see no need for further REA work down through the thirties and the forties, as REA gradually pushed out to 50, 60, 70, 80, and 85 percent of the farms. I have a series of Mr. Neff's statements that become very interesting today, in view of the effort to turn all initiative back to the private companies. All of them are by Grover C. Neff, president of the Wisconsin Power & Light Co., and president, 1946–47, of the Edison Electric Institute.

July 24, 1935: "There are very few farms requiring electricity for major farm operations that are not now served." (Letter to Morris L. Cooke, REA Administrator, written by committee of utility executives, including Mr. Neff.)

August 11, 1945: "There seems to be no necessity for additional allotments (to REA) at this time." (Memorandum presented to committee on electric service for farmers.)

October 17, 1945: "The job of extending lines to farms and nonfarms will be practically over in 1948." (Before a subcommittee of the House Committee on Interstate and Foreign Commerce.)

December 20, 1945: "The end of the big task of taking electric service to the great bulk of farms is now in sight." (Article, Public Utilities Fortnightly.)

June 5, 1946: "The big job of extending electric lines to the farms of this country will be about completed on December 31, 1948. REA has plenty of money to carry on the above outlined construction program for the years 1946, 1947, and 1948, even if the Senate does not grant them the $250 million included in the 1947 appropriation bill." (Inaugural address.)

April 24, 1947: "It is our opinion that REA does not need any additional loan authorizations by Congress to complete its job." (Before subcommittee of the House Committee on Appropriations.)

The percentage of the United States farms with central station electric service grew steadily as Mr. Neff talked on. The record shows the following growth:

1935	10.9
1940	30.4
1945	44.7
1946	52.9
1947	57.4

The job is not yet completed. There are more farms to be reached with lines; distribution lines must be made heavier to meet growing farm demand; and generating and transmission facilities must be built to provide power to meet that demand.

The extent of growth in the use of the new "electrical hired hand" on farms is indicated by a sample survey conducted by the Rural Electrification Administration.

In 1938 the average use per farm was 32 kilowatt-hours per month. In 1951 the average use per farm was 129 kilowatt-hours per month. In the 13-year period use had increased four times over. In the period 1945 to 1951 it doubled.

Studies by State colleges indicate that average farm use is headed toward 300 to 400 kilowatt-hours per month, on the basis of present available appliances, and that it may go even higher as other applications of the "electrical hired hand" become available.

Totally, Mr. President, the demand for electrical energy by REA borrowers has climbed from 153 million kilowatt-hours, in 1939, to 11.2 billion kilowatt-hours, in 1952. It is expected to be 19 billion kilowatt-hours in 1955.

I ask consent to have printed in the RECORD at the conclusion of my remarks a table of power requirements of REA borrowers by year, 1936 to 1963, the latter years being estimates by the National Rural Electric Cooperative Association. Other years are based on REA annual reports.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. MURRAY. Mr. President, I have gone back into the record of the attitude of the private utilities toward speeding up power developments, to illustrate the record of the past, which convinced our predecessors in 1920, 1925, and subsequent years, that the Federal Government could not look to the private groups for needed, speedy development.

The effort today to restore the initiative entirely to private interests—with possibly a few local public agencies carried along—is being undertaken without any evidence or even a contention that there has been a reform in attitude.

The reason for encouragement of the bills to permit development of 1 or 2 hydroelectric projects in the Northwest by public utility districts is quite apparent to all of us. It is a strategy to open the door to such developments for private interests. It is very doubtful if the public districts can get the amounts of money necessary to go ahead. The Senator from Oregon [Mr. MORSE] pointed out that one of the public agencies has assurances of financing from a company which fell down on financing an Iowa project, after it had made similar commitment.

The strategy is to get the door open. Let us get the policy established. The public agencies can be controlled by pressure on the purse strings in New York and the few other centers where the large sums necessary for big hydroelectric developments are available.

The little public agencies will never get beyond the anteroom; but the main door will be open for the private utilities to move in and take over.

The unregulated licensing of the use of public nuclear materials to private concerns for commercial energy use is not just a result of Chairman Strauss' antipathy to getting involved in power production, I have no doubt that he wants to avoid having the AEC become a power-producing agency. I accept his word for that. But I suspect that it puts Chairman Strauss in the position of unfairly avoiding the rendering of a public service; or appearing to want to avoid a responsibility for other than the real, basic policy reasons.

The proposed new Atomic Energy Act not only permits licensing of the limited few who have the know-how to handle atoms to produce electricity; it gives them an opportunity to patent processes by which the publicly owned nuclear material can be used as fuel in generators.

Because of secrecy, none of us can speak with authority about what processes are held by the Atomic Energy Commission. But we are told that practical use of nuclear material for commercial power is a few years off. We are told not to worry about regulations now—that can be done after the processes are developed.

Obviously, there are steps, procedures, and techniques still to be developed. There are points remaining which will be patentable. By the time regulation of the use of Uncle Sam's nuclear materials are brought before the Congress, the slate may not be a clean one, but one crisscrossed with private claims supported by patents.

This parallels what is being done in the other area of power development—the hydroelectric field.

There is a growing unanimity about integrated regional development.

I am aware that there is opposition to valley authorities. I have become aware of it after 9 years of advocacy of a Missouri Valley Authority, not futilely, by any means, but not successfully. I continue to advocate this type of administration of regional programs. In my mind, nothing which will be more effective, or assure the results of such an agency, has yet been offered as an alternative.

But our real disagreement in the case of the MVA, as in the case of the old Hoover Commission proposal of a Public Works Division at the Department of Interior, has not been over integrated regional development. It has been over method.

If we step back and take a historical view, it is clearly evident how the theory of starting at the heads of streams to control water, to stop erosion by soil conservation practices, by small dams and reforestation, has been accepted; how we have all come to look upon these problems—flood control, irrigation, domestic water supply, electrical production, economic stimulation, and a dozen other problems—as common problems in regional development programs.

The governmental agencies which once battled the overall regional approach have to a considerable degree ceased their blind insistence on single-purpose developments; the original "shotgun wedding" of the Army engineers and the Bureau of Reclamation in the Missouri Basin, which occurred under the threat of an MVA, has been repeated in other basins more or less voluntarily. The security of wedded bliss and of dwelling together with common, more comprehensive aims, appears to have appealed to the participants.

Even the Chicago Tribune has ceased to cartoon advocates of regional development as impractical young scholars with cap, gown, diploma, and huge horn-rimmed spectacles.

The integrated regional development concept is now widely accepted, like social security and the basic idea of some

sort of farm price supports. Historians will report this period—or I hope that they will report it—as a period of debate over methods, rather than over the concept.

And they will record, if I am correct, that one of the most serious threats to the regional development concept was the current proposal to pass out the great key dam sites, the hydroelectric projects, on an unintegrated, piecemeal basis, robbing many regional developments of the immediately lucrative asset which makes possible economic justification of the whole development.

I hope this will be recorded as the last futile effort to throw a road block in the way of regional developments, whether thoughtless or deliberate.

I have a great deal of sympathy for those public power agencies caught between growing demand and their desire for full regional development, who have been driven to make applications for dam sites and be a party to the dismemberment of regional development opportunities, or even, in one case, to the turning over of key sites on a stream to private development.

This is a policy matter which seriously involves the future of the Nation and the question of whether we shall have abundant power for an expanding economy or whether we shall have scarcity and hard times. I shall cast my vote on the individual bills against piecemeal development, as I shall vote against the biggest giveaway of them all: the atomic-energy giveaway.

I am confident that after the November elections this year, we are not going to be confronted with such choices; that we can then again move ahead with power development and with making up for the 2 years we are now losing while the predatory power interests—momentarily befriended by a shortsighted administration—try to liquidate the power program and power policy which dates back to William Howard Taft, Theodore Roosevelt, and even earlier.

Mr. President, the power of the atom has been harnessed through the expenditure of between $10 billion and $12 billion of American taxpayers' money. It is as much a part of the public domain as waterpower sites. It is an asset belonging to the people.

The Atomic Energy Commission has authorized today five nuclear reactors to produce heat to run electric generators. They are experimental plants, designed to develop the art of producing electricity in plants fueled with Federal nuclear material. It is hoped that out of these experimental plants will come the answer, and that with experience gained from them we can eventually produce electricity at costs which will be competitive with hydropower and fuels.

On the very eve of revealing the practical use of nuclear materials to generate electricity, on the very eve of a great peacetime benefit flowing from the taxpayers' tremendous investment, it is proposed to pass a measure which will let companies with know-how move into the energy field, take out patents, and reap a potentially enormous profit from the taxpayers' investment.

I am not opposed to the private electric companies being licensed to build nuclear-fueled electric plants. I hope that areas without hydroelectric power or a nearby coal supply, and which now have high rates, will be able to get abundant power at low rates from atomic materials through their private companies. Let those companies have it, under regulations that will assure reasonable rates.

But I am not in favor of the Government permitting the companies to patent some final step in the process of generating electric power with nuclear energy, and thereby gain control of the whole process. I am not in favor of them having a tollgate between the people's raw material and the end product, whether it be a patent or an exclusive license.

We should provide that the Government continue the development of processes for using nuclear materials to make electricity, and further provide that, when such processes are feasible, an appropriate Government agency will build generators and supply Government customers—the rural electric cooperatives, municipalities, the industries located on public lines, and others—with the power they need.

The Federal Government should produce power from this great new energy resource just as it produces power from the Columbia River, the Tennessee, the Missouri, and other great streams.

I shall support amendments to provide for regulation of the private use of nuclear materials for producing electricity in the same way we regulate the use of waterpower sites. I will support an amendment to provide for the production of electricity from nuclear materials by the Government when such production is feasible. Doubtless there will be many amendments offered, and I will support those which safeguard this resource for the people who own it—all the people of the United States.

I very strongly feel, however, that this measure should be recommitted for at least another full year of study.

The McMahon Act—the original Atomic Energy Act of 1946—provided at section 7–B that when commercial use of the atom appeared feasible, then the Atomic Energy Commission should submit to the President and Congress a report on what the social, political, and economic consequences of the development would be. That would give the President and the Congress some understanding of the problem of regulating the new development, and seeing that there were proper safeguards and controls.

No such report has ever been made. Most of the Members of Congress are in the dark about what effect atomic power is going to have on our economy and our social conditions 5 years from now; 10 years from now; or 20 or 25 years ahead. The Members of this body are supposed to have better than average information about such things—at least enough information on which to base our judgments.

If we lack adequate information, then what of the people of the Nation generally? How can they petition their Government in relation to atomic legislation if they are uninformed?

There needs to be at least another year of broad general education about this subject before we begin to legislate. And then any bill ought to have the most careful study.

The debate on the atomic energy bill now occurring is valuable. It is bringing out conflicting viewpoints. It will help to guide the joint committee as it reconsiders the measure. It will aid the Atomic Energy Commission in preparing a report on social, economic, and political effects of commercial development. It is time well spent. But when we are through, this whole measure should be set aside for further study and refinement. We want to be sure that there are no mistakes. We want to be sure that there is not "criminal neglect" of the people's interests. We want to be sure that unrestricted licensing does not place beyond recapture property which belongs to all the people. We want to be sure that this program is not used to exploit and plunder electricity users, but will contribute to a growing economy, a stronger and healthier Nation, and a more abundant life.

EXHIBIT 1

[From Washington Post and Times Herald of July 17, 1954]

POWER ON THE SPOT

Senator COOPER's significant differences with the administration position on electric power in the Tennessee Valley ought to give some pause to promoters of the private contract. Mr. COOPER has made what is probably the clearest and simplest explanation of the issues. He has pegged his opposition to the administration plan on the most fundamental discrepancy: An abuse of the authority of the Atomic Energy Commission. Actually, under the administration plan the AEC would be used to contract for private power, not directly for its own needs, but for Tennessee Valley Authority customers in the Memphis area. Furthermore, there has been no competitive bidding on the contract which the President has directed the AEC to enter into with the private Dixon-Yates group.

Both Senators COOPER and PASTORE noted that this contract would have the effect of rewriting by Executive action the basic functions of TVA as determined by Congress. Mr. COOPER's proposal for an alternative means of financing TVA's needs for additional powerplants through the sale of bonds seems to us to have much merit. But any change in the scope of TVA operations ought to be made openly by Congress. There is special reason to hold up any precipitate action, as Senator COOPER suggested, in order to give the new TVA Administrator, when he is oppointed, a chance to survey the situation.

An amendment by Senator ANDERSON would block the Dixon-Yates contract unless it were rewritten to eliminate reimbursement for Federal income taxes and to provide that power be furnished directly to the Atomic Energy Commission. The administration will be very foolish, indeed, if it permits this amendment to come to a vote. For either the administration will lose, or it will hand the Democrats a potent campaign issue, not only in the Tennessee Valley, but elsewhere in the country where public power is in question. From the standpoint of the administration's prestige it would be far better for the President to compromise by accepting Senator COOPER's suggestion that the whole matter be shelved pending study by the new head of TVA.

NEED FOR DEVELOPMENT OF UPPER COLORADO RIVER BASIN

Mr. WATKINS. Mr. President, there have been many hours of debate in this Chamber recently on the TVA-AEC power contract controversy.

While this matter has not yet been settled, I believe that the strenuous argument has adequately demonstrated that there has been extensive industrial and economic development in the great Tennessee Valley in the last 2 decades. I, for one, certainly will countenance nothing in the way of legislation which, in my opinion, would circumscribe or limit the growth and development of that river valley region. I may disagree with the methods used, but cerainly I favor a far-reaching development of that area.

However, I think it germane for me to spend a few minutes on the problems of another great river valley region which, unlike the Tennessee Valley, is today largely undeveloped. Not a single power or water storage dam has been built on the main stem of the river in this area, even though the basin extends over a geographic area the size of New York, New Jersey, and Pennsylvania combined. This area is one of the most arid sections of the country and desperately needs water for its agriculture, industry, and growing communities, and yet the river is currently carrying into the sea more than two-thirds of the water to which the four States in this area are entitled.

I am referring, of course, to the upper basin of the Colorado River, which lies within the States of Colorado, New Mexico, Utah, and Wyoming.

People who have watched the impressive development of power and reclamation facilities, under Federal-State-local sponsorship, on the Columbia, the Missouri, and other great rivers of the country undoubtedly appreciate the importance of these large, multiple-purpose projects, both to the area served and to the Nation as a whole. And I am sure that few reasonable people would deny to our semiarid area the opportunity to develop its limited water resources, in the manner which we are now proposing through a long-range, self-liquidating reclamation project outlined in the Colorado River storage project bill, now before the Congress. I should like to stress, too, that this plan for developing the water makes possible the concurrent development of strategic minerals and a large number of other resources where they are more extensive than in any other river basin in America.

In spite of these obvious advantages of the Colorado River storage project, the facts are that a vicious, concentrated campaign has been and is being carried on to defeat, in its infancy, this highly meritorious project which is so vital to the people of these States and undoubtedly to the entire West and the Nation.

We do not have the power, we do not have the fresh-water recreation areas, we do not have a controlled river, and we do not have adequate water for current municipal, agricultural, and industrial needs and future growth. We do not have these assets of the Tennessee Valley and other river basins, and yet this "have not" river-basin area is the object of a deliberate campaign of propaganda, pressure tactics, and legal obstructions to delay or stifle a project to develop the water so desperately needed for the growth and expansion of a strategically situated defense area, rich in natural resources, in the heart land of the West.

New broadsides were hurled against this incipient project this week, indicating that the opponents are getting desperate now that they see possibilities for congressional approval of the Colorado River storage project this session.

The stepup in the campaign to defeat this project is reflected in the artificially inspired flow of letters into the offices of Members of the Congress, most of it bearing the easily recognizable stamp of the propaganda line adopted by pressure groups, well-paid propagandists and writers opposing the project. That same stereotyped line was injected into a recent column of the widow of the late United States President, who signed legislation authorizing the long-range, detailed Government investigations which formed the technical basis for the proposed Colorado River project.

In California, also, according to an editorial in a Salt Lake newspaper, the Colorado River Association, with headquarters in Los Angeles, mailed letters to editors, suggesting editorials deliberately designed to stir up and scare the residents of that great State through misstatements of the objectives of the pending legislation.

At this point, I ask unanimous consent to have printed in the RECORD as part of my remarks a nationally syndicated column written by Mrs. Eleanor Roosevelt and published July 13 in the Washington Daily News and other newspapers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIERRA CLUB IS WORRIED ABOUT OUR NATIONAL PARKS

(By Mrs. Roosevelt)

HYDE PARK.—I have a letter from the president of the Sierra Club in San Francisco, Richard M. Leonard, about our national parks.

I quote from it here because our national parks and our natural resources belong to the people of this country as a whole, no matter in what part of the country they may be found.

The whole national park system and State park system, our nationally owned and State-owned forests, and all of our natural resources, mean the future of our country. If they are wasted or wrongly used, our children and grandchildren may inherit bare mountains and a land no longer able to support them. Therefore, anything that happens in any of these areas is of interest to all of us.

Part of Mr. Leonard's letter reads:

"From time to time our National Park System has been threatened with schemes for dams and other inappropriate developments within the boundaries of areas dedicated for the enjoyment of all Americans. Today the Bureau of Reclamation has plans, big plans, to drown Dinosaur National Monument with two dams that would inundate its mighty canyons for a hundred miles.

"This plan is the most serious and determined effort we have ever seen by a Government agency to appropriate unnecessarily a unit of the National Park System to make it a part of a huge irrigation, power and flood control project.

"We think that you will be interested to know of this threat to Dinosaur, for these treasured acres are yours and you will want to help preserve them for another generation to explore and admire. Under an avalanche of letters and prodding from conservationists, some Congressmen have looked into the facts more closely and not liked what they found—inadequate engineering data, incorrect arithmetic on evaporation, huge tax subsidies, and a needless sacrifice of Dinosaur National Monument.

"Does your Congressman know that these dams could be built at other locations outside the monument without sacrificing their effectiveness? You should tell him that his vote can save an outstanding unit of our national park system from destruction."

Those of you who care about preserving our national park system will look into this, I feel sure, and write your Congressmen. I have written to mine because the Sierra Club sent me two pamphlets. One put the question—"A geat national park or two wasteful dams?" I decided I would prefer the national park. The other pamphlet is headed, "Don't dam the national park system," and that is important, for it tells you the wrong ideas which have been circulated among the people of Utah, where this park exists.

I urge you to get these pamphlets from the Sierra Club, 1050 Mills Tower, San Francisco 4, Calif. On these facts you may decide to write your Congressman as I have done.

Mr. WATKINS. Mr. President, I am surprised that a person of Mrs. Roosevelt's intelligence and integrity should be taken in by propaganda arguments which have been baked up and warmed over, and discredited time after time in the past 4 years. She did this in reprinting the letter from a San Francisco club man whose writing bears all the earmarks of the propaganda machine that has been grinding out anti-Colorado River project material since the project was proposed in 1950.

It is not my intention to dignify this propaganda effort by repeating the denials that have been made, time after time, to the ridiculous charges made in the Leonard letters. That letter, I presume, was mailed from the propaganda center to every newspaper columnist in the country, few of whom, I am glad to report, have been similarly taken in by the obvious propaganda appeal, presumably containing more expensive printed brochures, obviously beyond the means of an outdoor club to produce without generous outside financial assistance.

Reporters and editors can check that biased outpouring against the objective record built up in 10 days of hearings last January before the House Irrigation Subcommittee on Irrigation and Reclamation. Included in the 909-page hearing report is a 28-page memorandum prepared by the committee counsel which clearly demonstrates that the proposed storage dam construction at Echo Park is, in no way, an invasion of, nor does it constitute a precendent for invasion of a national park or monument. This record which I am briefing in an accompanying statement, shows that this conclusion was recognized by President Roosevelt in his proclamation of July 14, 1938, enlarging the boundaries of the 80-acre Dinosaur Monument to include 203,885 acres of river canyons which, for years, have been recognized as potential power and reclamation sites.

That Roosevelt proclamation specifically provided that the enlargement reservation "shall not affect the operation of the Federal Water Power Act of June 10, 1920," which applied to long-standing powersite withdrawals in the Echo Park area. Furthermore, the proclamation exempted from monument administration a reclamation withdrawal on the Green River, within the monument boundary.

In spite of this indisputable recognition of area plans to develop the water and power resources of the river in the expanded monument area—a position supported by two Secretaries of the Interior—the opponents to a vital regional water-development program have expanded this feature into a great propaganda "crusade" that has taken in many honest conservationists.

At this time, I ask unanimous consent to reproduce in the RECORD as a part of my remarks another newspaper article that has come to my attention this week. This is an editorial which appeared in the Deseret News and Salt Lake Telegram of July 13.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WATER STEALERS—WHO, US?

A copy of a release sent out to California newspapers has just been sent to this newspaper from a former Utahan living in Los Angeles. Its contents strip away any pretense that may be left about California's motives on the upper Colorado storage project.

The release, sent out by Don J. Kinsey, general manager of the Colorado River Association with headquarters in Los Angeles, is a suggested editorial and carries the heading "Protect Our Life's Source." It starts out:

"There are bills pending in Congress for reclamation projects in Colorado, New Mexico, Utah, and Wyoming, that threaten southern California's rightful share of Colorado River water."

Mr. Kinsey's propaganda broadcast makes it clear, as have a few other recent statements, that the reclamation projects he is attacking are actually the upper Colorado storage project. But just how the project could threaten southern California's rightful share of Colorado River water is difficult to see—unless southern California is scheming to take more water than she is entitled to under the Colorado River compact of 1922.

The 1922 compact divided the water between upper and lower basin States. The upper basin States are required to let pass to the lower basin 75 million acre-feet of water each 10 years, and then may themselves use up to 7,500,000 acre-feet a year. The upper Colorado storage project is not itself a reclamation project, but a storage project to provide a means of delivering the required amount of water to the lower basin—mainly southern California.

The project, far from being a threat to southern California's rightful share of water under the 1922 compact, actually represents a guaranty of delivery to southern California.

The conclusion that southern California does plan to grab more than her legal share of water seems rather obvious. And this is interesting in light of some past protestations. For example:

"California is not reaching for any more water than provided under the 1922 Colorado River compact and will fight the attempt of any other State to do so." (Arvin B. Shaw, assistant attorney general of California, before the Colorado River Water Users Association at Las Vegas, Nev., January 1949.)

And—

"California recognizes and will conform to the Colorado River compact and the California Limitations Act * * * and seeks no water which would interfere with full use in the upper basin of water apportioned to the upper basin." (Joseph Jensen, chairman of the board of directors of the Metropolitan Water District of Southern California, in a talk before the Salt Lake Junior Chamber of Commerce, March 23, 1951.)

And especially—

"California does not seek to scuttle the Colorado River compact of 1922 nor to change its terms." (Don B. Kinsey, general manager of the Colorado River Association, in a statement prepared for the Daily Sentinel of Grand Junction, Colo., and published January 29, 1954.)

Mr. Kinsey would do well to reread his own statement of only 6 months ago. And the Nation at large should become acquainted with his more recent one.

As for Utah—we still have the same stand we have always taken:

We want no water to which we are not legally entitled. But we do want the water which is rightfully ours—and which we must have for future life and growth.

Mr. WATKINS. Mr. President, the editorial adequately answers Mr. Kinsey and his associates who have been publicly exposed in their efforts to insert propaganda of questionable veracity into the newspapers of California. I only hope that the editors of California newspapers will look into the facts before they, too, give editorial dignity to such propaganda.

I also wish to call to the attention of the Members of this body the fact that the California defendants in the case of Arizona against California, now before the Supreme Court, have moved to join as necessary and indispensable parties the States of Colorado, New Mexico, Utah, and Wyoming. This is a suit brought against California interests by Arizona, in 1952, and concerns the use of Colorado River water in the lower basin.

I wish to assure the residents of the upper basin States and the Members of this body that this Court action should have no effect whatsoever upon the authorization of the Colorado River storage project.

This was pointed out by the Honorable Jean S. Breitenstein, distinguished lawyer-judge of Colorado, in his testimony before the recent Senate hearings on this project. He stated:

All parties to that case assert and rely upon the 1922 compact, the Boulder Canyon Project Act, the Mexican Water Treaty, and the other laws and instruments which constitute the recognized and admitted law of the river. Similarly the authorization of the Colorado River storage project is predicated upon the validity and integrity of the law of the river.

While it is true that in the lower basin there has been a prolonged controversy over the application and construction of certain specific terms and provision, these controversies do not affect the upper States or the availability of water for the Colorado River storage project. Any insinuation that the authorization of the Colorado River storage project should be delayed until the *Arizona* v. *California* case is decided is an attempt to defeat upper-basin development. Litigation, both threatened and actual, has been

long utilized to delay Colorado River development. There is no legitimate reason for any delay in this project because of the lower-basin controversy.

I may say that the filing of the motion with the Supreme Court on July 15 of this year is an indication on the part of the State of California, which is the principal defendant in that case, that it will do all it can to defeat the project to put to beneficial consumptive use of the waters of the upper Colorado River. If it had been planned deliberately, it could not have come at a more timely occasion to help defeat the project authorization by the present Congress. If the State of California is not opposed to the project and is not seeking to defeat it, it could have waited at least until Congress adjourned before filing its motion with the Supreme Court to include these particular upper-basin States. I can well understand the theory on which the motion was filed, namely, for the purpose of indicating to Congress that title to the waters of the Colorado, which would be the basis of this project, are in dispute, and need to be litigated; and for that reason the project, it will be argued, should not be built now.

I am sorry that that is the objective. I do not believe that that represents the views of literally millions of people of California, who want to be fair. California already has numerous reclamation projects to develop the lower basin of the Colorado River, which have been supported by the people of Utah and by the people of all the other upper Colorado River Basin States. The filing of the motion comes rather as a blow to us, and it is somewhat unfair to attempt to defeat us by bringing us into litigation.

I agree wholeheartedly with Judge Breitenstein's statement regarding the case into which the recent motion attempts to inject the four upper-basin States. It is purely a controversy of long standing as to the rights of the lower-basin States to the use of Colorado River water. The States of Colorado, New Mexico, Utah, and Wyoming are not involved in the matter in dispute, and it is my belief that this litigation should in no way impede the authorization or construction of the Colorado River storage project which, after all, was designed with a view to guaranteeing delivery of the water allocated by compact to the lower basin.

Mr. President, I invite attention to another matter connected with the building of the Echo Park part unit of the upper Colorado storage project. The question of whether the President of the United States actually increase the area of the monument to take in Echo Park is, of course, in dispute, that is, whether or not he authorized it without making it subject to power projects and also the reclamation project in the upper part of it. The record is clear that the people of Utah were told at the time when it was proposed to enlarge this monument, which consisted of 80 acres, that the enlargement would be subject to the right of the people to build this reclamation project and to develop power sites in Echo Park Monument.

A brief has been prepared by a distinguished young lawyer who represents the House Committee on Interior and Insular Affairs, in which he covers all the various materials, documents, and what not connected with the question of whether President Roosevelt, in issuing his proclamation, actually made the enlargement subject to all these other developments.

I ask unanimous consent, Mr. President, that a summary of the brief prepared by Mr. Abbott, of the House committee, be printed in the RECORD at this point in my remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SETTING THE RECORD STRAIGHT ON THE DINOSAUR NATIONAL MONUMENT

Much has been said recently relative to the development of the upper Colorado River Basin through the construction of the Colorado River storage project and its participating projects. Everyone recognizes the need for water and power in the arid West. The development of water and power in the wild unruly Colorado River requires large dams, one of which is proposed in what is now the Dinosaur National Monument. The heat of the discussion relative to the contract of the Echo Park Dam in the Dinosaur National Monument has put in the public press much confusing, misleading and often deliberate untruths relative to this matter. An invasion of the National Monument system has been charged.

In order to bring some light out of the darkness and confusion, I submit a brief of a memorandum, submitted by George W. Abbott, Committee Counsel to the Committee on Interior and Insular Affairs of the House of Representatives, and printed as a part of the hearings on H. R. 4449, 83d Congress 2d session, on pages 719–747.

Before submitting this brief, however, I wish to point out that the father of the national park and monument system, Stephen Mather, laid down three simple criteria to guide the selection of national monuments, as follows:

1. The area must be in the nature of a shrine.

2. The area must be unique, nothing like it anywhere else.

3. The area must not contain material resources likely to be needed later in the development of the Nation's national economy and its supply of food and fiber.

The expansion of the Dinosaur National Monument from 80 to 204,000 acres violated all 3 of these criteria. The expanded area is not in the nature of a shrine; it is not unique (there are many other areas like it); and it contains tremendous water and power resources, the development of which are absolutely essential to the development of the upper Colorado River Basin.

A summary of the statutory provisions, executive actions, and correspondence relating to the establishment and expansion of Dinosaur Monument follows:

1. June 8, 1906: Congress passed an act giving the President authority to establish national monuments.

2. October 4, 1915: A proclamation was issued establishing the Dinosaur National Monument:

"SEC. 2. That the President of the United States is hereby authorized in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon lands owned or controlled by the Government of the United States to be national monuments, and may reserve as a part thereof parcels of land, the limits of which in all cases shall be confined to the smallest area compatible with the proper care and management of the objects to be protected."

NOTE.—The original area of the Dinosaur National Monument was 80 acres; it was expanded to 204,000 acres in 1938.

3. August 25, 1916: Act was passed creating the National Parks Service to regulate and promote the use of national monuments, parks, and reservations.

4. June 10, 1920: The Federal Power Act was passed, giving the FPC (sec. 4) authority to issue a license for the erection of a dam within a national monument.

5. March 3, 1921: Federal Water Power Act was amended as follows:

"That hereafter no permit, license, lease or authorization for dams, conduits, reservoirs, powerhouses, transmission lines or other works for storage or carriage of water or for the development, transmission, or utilization of power within the limits, as now constituted, of any national park or national monument shall be granted or made without the specific authority of Congress."

NOTE.—The phrase "as now constituted" was an amendment to the bill to prevent a possible tying up of the country's water and power resources by creating national parks and monuments.

6. August 9, 1945: Letter from National Park Service to Federal Power Commission re power withdrawals in the Echo Park-Blue Canyon areas.

The Utah Power & Light Co. on January 30, 1932, made application to FPC for a preliminary permit to develop power in the Echo Park-Blue Canyon areas.

It was pointed out by A. E. Demoray, Acting Director, National Park Service, that such dams would be in a proposed national monument in northwestern Colorado and if a national monument were established it would be subject to said power withdrawals, quoting:

"Such an area would be established by Presidential proclamation which would exempt all existing rights, and a power withdrawal is, of course, an existing right."

This same letter suggests that the FPC release these power withdrawals so that a monument could be established without interference.

7. December 13, 1934: Letter from Federal Power Commission to the National Park Service.

Refers to letter of August 9, 1934, relating to the proposed establishment of a national monument along the Green and Yampa Rivers in northwestern Colorado which would cover lands withdrawn for the Echo Park and Blue Mountain power developments.

Quote: "Assurance was given in the letter that the Presidential proclamation establishing such a monument would exempt all existing rights, including power withdrawals, but a statement was added that if it were possible to release the power withdrawals the monument would be placed in much better position from the standpoint of administration."

After giving careful consideration to the request for a vacation of the power withdrawals, the Federal Power Commission says further:

"It is generally recognized that the Green and Yampa Rivers present one of the most attractive fields remaining open for comprehensive and economical power development on a large scale. * * *

"The sites we are considering are important links in any general plan of development of those streams." * * *

"The Commission believes that the public interest in this major power resource is too great to permit its impairment by voluntary relinquishment of two units in the center of the scheme. The Commission will not object, however, to the creation of the monument if the proclamation contains a specific provision that power development under the provisions of the Federal Water Power Act will be permitted."

Reference is made in the letter to extensive reports, plans and profiles relating to the

potential water and power resources of the river.

8. August 26, 1935: Federal Power Act amended further. It appears that this amendment did not change the conditions set forth in the Federal Water Power Act of June 10, 1920, as amended, which is referred to in the President's proclamation of 1938 and which expressly reserves the right to develop the water and power in the expanded Dinosaur National Monument.

9. November 6, 1945: Letter from Secretary of the Interior to the Federal Power Commission.

Mr. Harold L. Ickes specifically asks the FPC to release the power withdrawals that exist in the Green and Yampa River areas so that a monument could be created.

10. January 9, 1936: Reply of Federal Power Commission to the Secretary of the Interior.

In this letter the Federal Power Commission reiterates its position set forth in its letter to the National Park Service on December 13, 1934, as follows:

"Regardless of the disposition which may be made of the Utah Power & Light Co.'s application, and giving due consideration to the project some time may elapse before this power is needed, the Commission believes that the public interest in this major power resource is too great to permit its impairment by relinquishment of two units in the center of the scheme. The Commission will not object, however, to the creation of the monument if the proclamation contains a specific provision that power development under the provisions of the Federal Water Power Act will be permitted."

11. Utah Colorado Park Service meetings: Public meetings were held in Vernal, Utah, June 11, 1936 and in Craig, Colo., June 13, 1936.

The following is an affidavit signed March 27, 1950, made by David H. Madsen, Superintendent of the Dinosaur National Monument, representative of the National Park Service at their meetings.

"Among other things discussed was the question of grazing and the question of power and of irrigation development which migh be deemed essential to the proper development of the area at some future date. I was authorized to state, and did state as a representative of the National Park Service, that grazing on the area would not be discontinued and that in the event it became necessary to construct a project or projects for power or irrigation in order to develop that part of the States of Colorado and Utah, that the establishment of the Monument would not interfere with such developments."

12. Enlargement of Dinosaur National Monument by Presidential proclamation: On July 14, 1938, Dinosaur National Monument, by a proclamation of the President, was enlarged to include an additional 203,885 acres. (The original area was 80 acres.)

The proclamation provides that the reservation of such lands "shall not affect the operation of the Federal Power Act of June 10, 1920 (41 Stat. 1063), as amended"; further, that administration of the monument would be subject to the Brown's Park Reservoir reclamation withdrawal of October 17, 1904, in connection with the Green River project.

This proclamation, including the specific reservations, is a pledge to the people of Utah and Colorado that the expansion of the monument would not interfere with the development of their water and power resources. The construction of the Echo Park Dam in the Dinosaur National Monument, therefore, cannot be an invasion of the National Monument principle.

Subsequent to the proclamation enlarging the Dinosaur National Monument, investigations were continued by the Bureau of Reclamation, directed toward the development of the water and power resources of the Green and Yampa Rivers. These investigations were made with the full knowledge and consent of the National Park Service which had jurisdiction over the area and with the full understanding of all concerned that water and power development would take place within the monument under the reservations set forth in the President's proclamation. Such knowledge and consent is clearly set forth in the following documents:

13. May 14, 1943: Ad interim report, survey of recreational resources of the Colorado River Basin.

14. December 1, 1943: Memorandum from Park Service to Bureau of Reclamation.

15. June 27, 1944: Report of position of the National Park Service on Dinosaur development.

16. May 2, 1946: Letter of Park Service Director to Dr. J. E. Broaddus, signed by Newton B. Drury, Director. Quote: "Dinosaur is one of the few areas in the system established subject to a reclamation withdrawal and this may have some bearing on the proposed Echo Park project."

17. June 1946: A survey of the recreational resources of the Colorado River Basin, report by the National Park Service.

18. December 20, 1949: Memorandum from the Bureau of Reclamation to the Department of the Interior signed by Michael Strauss.

19. December 30, 1949: Memorandum of National Park Director sent to the Secretary of the Interior.

20. February 28, 1950: Memorandum from National Park Service to the Secretary of the Interior.

21. March 3, 1950: Memorandum from the National Park Service Director to the Secretary of the Interior.

22. June 27, 1950: Memorandum from the Secretary of the Interior to the Bureau of Reclamation and the National Park Service, signed by Secretary Oscar L. Chapman.

Quote: "I am impressed with the fact that the waters of the Colorado constitute a resource of paramount importance to the region and that in view of the arid nature of the area, my approved plan for the development of the upper basin must make every practicable provision for the conservation and multiple use of these waters in the interest of the people of the West and the whole Nation.

"Weighing all the evidence in thoughtful consideration, I am impelled in the interest of the greatest public good to approve the the completion of the upper Colorado River basin report, including the dams in question because: (1) I am convinced that the plan is most economical of water in a desert river basin and therefore in the highest public interest; and (2) the order establishing the extension of the monument in the canyons in which the dams would be placed contemplated use of the monment for a water project, and my action, therefore, would not provide a precedent dangerous to other reserved areas."

23. December 10, 1953, Report of the Secretary of Interior on the Colorado River Storage Project and Participating Projects, signed by Secretary Douglas McKay.

The report again approved the project including the construction of the Echo Park Dam.

All of this evidence clearly demonstrates that after more than 40 years of investigation, numerous reports, much correspondence, and a Presidential proclamation, that the intent to develop the water and power resources of the Green and Yampa Rivers originated long before the Dinosaur National Monument was expanded and that the construction of the Echo Park Dam in the Monument will not create a precedent for nor constitute an invasion of a National Monument. On the contrary, the provision for the proposed water storage dam at Echo Park represents the fulfillment of a pledge of the President and the Federal Government to the people of Utah and Colorado, and will prove to be a recognized benefit to the Nation as a whole.

Mr. WATKINS. Mr. President, for the information of the Members of Congress, and particularly the Members of the Senate, I ask unanimous consent that the memorandum prepared at the request of the House committee be printed in the RECORD at this point.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

1. AUTHORITY OF THE PRESIDENT TO ESTABLISH NATIONAL MONUMENTS

The authority of the President to establish national monuments by proclamation is contained in the act of June 8, 1906, sometimes referred to as the "Antiquities Act." [Emphasis supplied.]

"Act of June 8, 1906, 59th Congress, 1st session (34 Stat. 225)

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any person who shall appropriate, excavate, injure, or destroy any historic or prehistoric ruin or monument, or any object of antiquity, situated on lands owned or controlled by the Government of the United States, without the permission of the Secretary of the Department of the Government having jurisdiction over the lands on which said antiquities are situated, shall upon conviction, be fined in a sum of not more than five hundred dollars or be imprisoned for a period of not more than ninety days, or shall suffer both fine and imprisonment, in the discretion of the court.

"SEC. 2. That the *President* of the United States is hereby *authorized,* in his discretion, *to declare by* public *proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned* or controlled *by the* Government of the *United States to be national monuments, and may reserve* as a part thereof *parcels of land, the limits of which in all cases shall be confined to the smallest area compatible with the proper care and management of the objects to be protected: Provided,* That when such objects are situated upon a tract covered by a bona fide unperfected claim or held in private ownership, the tract, or so much thereof as may be necessary for the proper care and management of the object, may be relinquished to the Government, and the Secretary of the Interior is hereby authorized to accept the relinquishment of such tracts in behalf of the Government of the United States.

"SEC. 3. That permits for the examination of ruins, the excavation of archaeological sites, and the gathering of objects of antiquity upon the lands under their respective jurisdictions may be granted by the Secretaries of the Interior, Agriculture, and War to institutions which they may deem properly qualified to conduct such examination, excavation, or gathering, subject to such rules and regulations as they may prescribe: *Provided,* That the examinations, excavations, and gatherings are undertaken for the benefit of reputable museums, universities, colleges, or other recognized scientific or educational institutions, with a view to increasing the knowledge of such objects, and that the gatherings shall be made for permanent preservation in public museums.

"SEC. 4. That the Secretaries of the Departments aforesaid shall make and publish from time to time uniform rules and regulations for the purpose of carrying out the provisions of this Act."

2. ESTABLISHMENT OF DINOSAUR NATIONAL MONUMENT

Dinosaur National Monument was established by Presidential proclamation, pursuant to the 1906 act, in 1915, and as originally established covered an area of 80 acres. [Emphasis supplied.]

"Proclamation of October 4, 1915 (39 Stat. 1752)

"By the President of the United States of America

"A proclamation

"Whereas, in section twenty-six, township four south, range twenty-three east of the Salt Lake meridian, Utah, *there is located an extraordinary deposit of Dinosaurian and other gigantic reptilian remains* of the Juratrias period, *which are of great scientific interest and value, and it appears that the public interest would be promoted by reserving these deposits as a National Monument, together with as much land as may be needed for the protection thereof.*

"Now, therefore, I, Woodrow Wilson, President of the United States of America, by virtue of the power in me vested by Section two of the act of Congress entitled, "An Act for the Preservation of American Antiquities", approved June 8, 1906, do hereby set aside as the Dinosaur National Monument, the unsurveyed northwest quarter of the southeast quarter and the northeast quarter of the southwest quarter of section twenty-six, township four south, range twenty-three east, Salt Lake meridian, Utah, as shown upon the diagram hereto attached and made a part of this proclamation.

"While it appears that the lands embraced within this proposed reserve have heretofore been withdrawn as coal and phosphate lands, the creation of this monument will prevent the use of the lands for the purposes for which said withdrawals were made. Warning is hereby expressly given to all unauthorized persons not to appropriate, excavate, injure or destroy any of the fossil remains contained within the deposits hereby reserved and declared to be a National Monument or to locate or settle upon any of the lands reserved and made a part of this monument by this proclamation.

"In WITNESS WHEREOF, I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington, this
"[SEAL] fourth day of October, in the year of our Lord one thousand nine hundred and fifteen and the Independence of the United States the one hundred and fortieth.

"WOODROW WILSON.

"By the President:
"ROBERT LANSING,
"Secretary of State."

3. ACT CREATING THE NATIONAL PARK SERVICE

"Act of August 25, 1916 (39 Stat. 535) 64th Congress 1st session

"Be it enacted by the Senate and House of Representatives of the United States of American in Congress assembled, That there is hereby created in the Department of the Interior a service to be called the National Park Service, * * * The service thus established shall promote and regulate the use of the Federal areas known as national parks, monuments, and reservations hereinafter specified by such means and measures as conform to the fundamental purpose of the said parks, monuments, and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. * * *

"SEC. 3. That the Secretary of the Interior shall make and publish such rules and regulations as he may deem necessary or proper for the use and management of the parks, monuments, and reservations under the jurisdiction of the National Park Service * * *."

4. THE FEDERAL WATER POWER ACT OF 1920

The act of June 10, 1920 (41 Stat. 1063), known as the Federal Water Power Act, provided for creation of the Federal Power Commission, to make possible orderly development of water power. (Emphasis supplied.)

Section 3, contained these definitions:

" *'Public lands'* means such lands and interest in lands owned by the United States as are subject to private appropriation and disposal under public-land laws. It shall *not include 'reservations'* as hereinafter defined.

" *'Reservations'* means *national monuments* * * * and other lands and interests in lands owned by the United States * * *"

Section 4 authorized the Federal Power Commission

"* * * (d) *To issue licenses* * * * *for* the purpose of constructing * * * *dams* * * * and for the development, transmission and utilization of power across, along, from or in any of the navigable waters of the United States, or *upon any part of the public lands and reservations of the United States* (including the Territories), or for the purpose of utilizing the surplus water or water power from any Government dam, except as herein provided: *Provided,* That *licenses shall be issued within any reservation only after a finding by the commission that the license will not interfere or be inconsistent with the purpose for which such reservation was created or acquired,* and shall be subject to and contain such conditions as the Secretary of the Department under whose supervision such reservation falls shall deem necessary for the adequate protection and utilization of such reservation. * * *"

Therefore, under the 1920 act, it is apparent that the FPC had authority to issue a license for the erection of a dam within a national monument.

5. 1921 AMENDMENTS TO THE 1920 FEDERAL POWER ACT

(A) Provisions of the 1921 act

The act of March 3, 1921 (41 Stat. 1353) amended the act of June 10, 1920, by providing (emphasis supplied):

"That *hereafter no* permit, license, lease, or *authorization for dams,* conduits, reservoirs, power houses, transmission lines, or other works for storage or carriage of water, or for the development, transmission, or utilization of power, *within the limits [as now constituted] of any national park or national monument shall be granted* or made *without specific authority of Congress,* and so much of the Act of Congress approved June 10, 1920 * * * as authorizes licensing such uses of *[existing]* national parks and national monuments by the Federal Power Commission is hereby repealed."

It will be noted that the words "as now constituted" and "existing" were amendments to the original bill. Two excerpts from the CONGRESSIONAL RECORD, 66th Congress, 3d session, help background these amendments.

(B) Action in the Senate

On January 25, 1921, in the Senate (60 CONGRESSIONAL RECORD, 2001 et seq.), the following comments were recorded:

"Waterpower Projects Within National Parks

"The bill (S. 4554) to amend an act entitled 'An act to create a Federal Power Commission; to provide for the improvement of navigation; the development of waterpower; the use of the public lands in relation thereto; and to repeal section 18 of the River and Harbor Appropriation Act, approved August 8, 1917, and for other purposes,' approved June 10, 1920, was announced as next in order.

"Mr. KING. Let that bill go over.

"Mr. WALSH of Montana. Mr. President, I wish to inquire if objection was made to the present consideration of Senate bill 4554?

"Mr. KING. May I inquire of the Senator from Washington [Mr. Jones] if this is the measure to which he referred?

"Mr. JONES of Washington. Yes.

"Mr. KING. Then I have no objection to the consideration of the bill, Mr. President.

"The VICE PRESIDENT. The Secretary will read the bill.

"The Assistant Secretary read the bill, as follows:

" *'Be it enacted, etc.,* That hereafter no permit, license, lease, or authorization for dams, conduits, reservoirs, powerhouses, transmission lines, or other work for storage or carriage of water, or for the development, transmission, or utilization of power, within the limits of any national park or national monument shall be granted or made without specific authority of Congress, and so much of the act of Congress approved June 10, 1920, entitled "An act to create a Federal Power Commission; to provide for the improvement of navigation; the development of water power the use of the public lands in relation thereto; and to repeal section 18 of the river and harbor appropriation act, approved August 8, 1917, and for other purposes," approved June 10, 1920, as authorized licensing such uses of national parks and national monuments by the Federal Power Commission is hereby repealed.'

"Mr. BORAH. That bill cannot be disposed of this morning.

"The VICE PRESIDENT. Then the Senator from Idaho may object to its consideration.

"Mr. BORAH. I object to its consideration.

"Mr. WALSH of Montana. Mr. President, I desire to say a few words in connection with the bill which has just been read. I was not able distinctly to hear the reading of the bill, but I understand that it was introduced by the Senator from Washington [Mr. Jones] for the purpose of eliminating national parks from the jurisdiction of the waterpower commission.

"Mr. JONES of Washington. That is correct.

"Mr. WALSH of Montana. I think, perhaps, it would be appropriate to say in this connection that the Senator from Washington, as well as myself, is under obligation to bring this matter to the consideration of the Senate with all speed, and unless there is some special reason I hope the measure will have consideration.

"When the waterpower bill was transmitted to the Senate for consideration an objection was made——

"Mr. BORAH. Mr. President, I do not desire to object to the remarks of the Senator from Montana, but I understand the bill is not under consideration. There was objection to the bill.

"Mr. WALSH of Montana. I so understand, but I will take occasion at this time to say what I desire to say, with the permission of the Senate.

"An objection was made to the bill by the Secretary of the Interior, Mr. Payne, upon the ground that it granted the waterpower commission created by that act the authority to authorize the construction of dams for power purposes within the national parks, and it seemed not unlikely that the bill would be vetoed by the President in consequence of the objection to it thus pointed out by the Secretary of the Interior. In that connection the Senator from Washington and myself, both being very deeply interested in the speedy enactment of the measure, called upon the Secretary of the Interior and stated to him that if he would withdraw his objection to the bill we would at the ensuing session of Congress charge ourselves with the duty of introducing a bill to relieve the waterpower measure of the objection and urge its passage upon the Senate. Accordingly, I feel obligated to do what I can to remove any objection that might be made against the bill. I feel that both of us stand

pledged to do everything we can to expedite the passage of the bill.

"In this connection I also desire to say, Mr. President, that in all of the long discussion of and consideration given to the waterpower bill I do not recall that anybody ever called attention to the feature of that bill to which reference is now made. It was embodied in the bill as it was originally prepared by the Secretary of War, the Secretary of the Interior, and the Secretary of Agriculture. It was not the subject of discussion upon the floor. Apparently it passed without any attention whatever being given to it. No one was particularly interested in it, so far as I can understand; yet, notwithstanding this condition of affairs, and the pledge given by the Senator from Washington as well as myself, a very active, energetic campaign is being waged, and the country is being deluged with appeals from civic associations of all kinds charging something in the nature of intrigue or indirection in getting this provision into the waterpower bill and calling on all the friends of the national parks throughout the country to assist in sweeping away all possible objection to the legislation now proposed and speedily accomplishing its enactment, reminding one of some of the adventures of Don Quixote and his celebrated mount. I do not believe that there is any serious objection to the enactment of this measure. I hope that we shall have it speedily considered. I say this in explanation of my own attitude with respect to it.

"Mr. BORAH. Mr. President, I am not going to stand in the way of the consideration of the bill if it comes up on a proper occasion when we can consider it for a reasonable length of time, but I do object to it at the present time. It is a matter of some importance, and we could not possibly dispose of it under the rules with the time which we have this morning.

"Mr. FLETCHER. Mr. President, I will simply say that this is the first time I ever heard of any objection to the bill. It has been reported unanimously by the Committee on Commerce, I believe, and I never knew heretofore there were any objections to it.

"Mr. BORAH. There are some objections to it, Mr. President, which have been presented to me. What my final attitude upon the bill will be I do not know, but it is a matter of a great deal of importance to some people. I therefore do not desire that the Senate shall undertake to dispose of it this morning.

"Mr. JONES of Washington. Mr. President, I have been seeking to get this bill up for some time. I knew that the Senator from Idaho was interested in it, and possibly might have some objection to it. I have delayed asking for its consideration in order that the Senator from Idaho might procure some information concerning the bill which he desired to obtain. As I have said before, at the very first opportunity I expect to call the bill up. As the Senator from Montana [Mr. Walsh] has stated, I feel under obligation to do whatever may be possible to secure action upon the measure by the Senate, and I expect to secure such action.

"The VICE PRESIDENT. The bill will be passed over.

"* * * * *"

The Senate passed the bill, with amendments, on February 24, 1921 (60 CONGRESSIONAL RECORD, 3789, et seq.), with the following debate:

"Amendment of Federal Power Commission Act

"Mr. JONES of Washington. Mr. President, I want to make another attempt to make good my promise to the Secretary of the Interior. The Senator from Missouri [Mr. Spencer] a moment ago told me that this was not the bill he had in mind. Therefore, I ask unanimous consent for the present consideration of Senate bill 4554, intending to offer two amendments if that consent is given. It is the bill that takes from the jurisdiction of the Water Power Commission the granting of permits in national parks and leaves it with Congress.

"The VICE PRESIDENT. Is there any objection to the present consideration of the bill?

"There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 4554) to amend an act entiled 'An act to create a Federal Power Commission; to provide for the improvement of navigation; the development of waterpower; the use of the public lands in relation thereto; and to repeal section 18 of the river and harbor appropriation act, approved August 8, 1917, and for other purposes,' approved June 10, 1920, which was read, as follows:

"'*Be it enacted, etc.*, That hereafter no permit, license, lease, or authorization for dams, conduits, reservoirs, powerhouses, transmission lines, or other works for storage or carriage of water, or for the development, transmission, or utilization of power, within the limits of any national park or national monument shall be granted or made without specific authority of Congress, and so much of the act of Congress approved June 10, 1920, entitled "An act to create a Federal Power Commission; to provide for the improvement of navigation; the development of water power; the use of the public lands in relation thereto; and to repeal section 18 of the river and harbor appropriation act, approved August 8, 1917, and for other purposes," approved June 10, 1920, as authorizes licensing such uses of national parks and national monuments by the Federal Power Commission is hereby repealed.'

"Mr. JONES of Washington. After the word 'limits,' on page 1, line 7, I move to amend by inserting the words 'as now constituted.'

"The amendment was agreed to.

"Mr. JONES of Washington. Then, on page 2, line 6, after the words 'uses of,' I move to insert the word 'existing.'

"The amendment was agreed to.

"Mr. BORAH. Mr. President, I did not feel that I was in a position to object to the consideration of this bill, as the Senator from Washington has been for a long time trying to get it before the Senate for consideration, and he was under an obligation, by reason of a promise which he made to the President and the Secretary of the Interior, to bring it up for consideration if possible. I did not desire to interfere with his bringing it before the Senate, neither have I time at this hour to discuss the bill; but I desire to record my objection to it, and I want an opportunity to vote against it. That is all I shall ever get out of it anyhow, I presume, so we might just as well consider it this afternoon.

"I have understood that the bill is very generally favored by the Senate, but it seems to me to be an unwise measure, even from the standpoint of those who are advocating it, taking into consideration the reasons for it which they assign. But I cannot undertake at this late hour, Mr. President, to discuss it. However, I ask for an opportunity to vote upon it.

"Mr. UNDERWOOD. Mr. President, I only want to say that I happen to know something about the situation. The waterpower bill, which many Members of Congress were interested in securing the passage of, was in very grave danger of a Presidential veto in the closing hours of the last Congress, and finally the Secretary of the Interior expressed as his main objection the fact that the power in that bill extended over the national parks, and he did not want any bill to develop power in the national parks and destroy their beauty. Finally, the Secretary agreed that he would recommend to the President to sign the bill and let it go through, if the Senator from Washington (Mr. Jones), who was acting chairman of the committee in charge of the bill, would bring before the Congress a bill to amend the waterpower act so as to leave out the national parks. I think in good faith we ought to pass the bill.

"Mr. BORAH. Mr. President, I do not think that good faith requires us to pass it. I think that good faith does require that an opportunity shall be given for the Senate to vote upon it. Therefore I have not opposed a veto.

"As I understand the bill, it all resolves itself into a simple proposition whether the parks would be better protected by the Congress of the United States or by the Commission which was created by the Power Act.

"I had some experience here in trying to protect the parks through the Congress of the United States, when we had up the famous Hetch-Hetchy proposition, and I observed that the Congress did all it could do, in that instance, to destroy that park. I think those who are advocating this bill will find in a very short time that they are not securing the protection which they think they are securing. I am just as much in favor of protecting the parks, I think, as those who are advocating this bill, but I wholly disagree with them as to how they can be best protected. Therefore I am opposed to the bill.

"The bill was reported to the Senate as amended, and the amendments were concurred in.

"The bill was ordered to be engrossed for a third reading, read the third time, and passed."

* * * * *

(C) Action in the House

House action on the Senate version of the bill is set out in proceedings of March 1, 1921 (60 Congressional Record, 4204, et seq.):

"Amending Federal Power Commission Act

"Mr. ESCH. Mr. Speaker, I ask to take from the Speaker's table the bill S. 4554, a bill to eliminate from the Water Power Act national parks and monuments.

"The Clerk read the bill, as follows:

"'S. 4554. An act to amend an act entitled "An act to create a Federal Power Commission; to provide for the improvement of navigation; the development of water power; the use of the public lands in relation thereto; and to repeal section 18 of the River and Harbor Appropriation Act, approved August 8, 1917, and for other purposes," approved June 10, 1920.

"'*Be it enacted, etc.*, That hereafter no permit, license, lease, or authorization for dams, conduits, reservoirs, powerhouses, transmission lines, or other works for storage or carriage of water, or for the development, transmission, or utilization of power, within the limits as now constituted of any national park or national monument shall be granted or made without specific authority of Congress, and so much of the act of Congress approved June 10, 1920, entitled "An act to create a Federal Power Commission; to provide for the improvement of navigation; the development of water power; the use of the Public Harbor Appropriation Act, approved August 8, 1917, and for other purposes," approved June 10, 1920, as authorizes licensing such uses of existing national parks and national monuments by the Federal Power Commission is hereby repealed.'

"Mr. ESCH. Mr. Speaker, the object of the bill is to modify the Federal Water Power Act so as to eliminate from its provisions national parks and monuments. When the act was originally passed we supposed we had sufficiently safeguarded national parks and monuments so that there would not be constructed therein any water power or reclamation projects. However, the President was in doubt as to whether he would sign the bill which was presented to him on the 4th day of June, the day before we adjourned. He referred the bill to the Secretaries of the Interior, War, and Agriculture. The Secretary of the Interior had great doubt as to the policy of giving to a commission control over

national parks and monuments in the matter of water-power development. Senator Jones, chairman of the Committee on Commerce, and Senator Walsh of Montana called upon the Secretary and conferred with him regarding the signing of the bill. The Secretary conferred with Senator Underwood and the majority leader [Mr. Mondell], and an understanding was reached whereby the bill was to be introduced at this session eliminating the parks and monuments from the operation of the Federal Power Act, and this bill carries out that understanding.

"Mr. BARKLEY. Will the gentleman yield?

"Mr. ESCH. Yes.

"Mr. BARKLEY. What is the difference between the bill as it passed the Senate and as it was reported from the Interstate Commerce Committee of the House?

"Mr. ESCH. They are identical.

"Mr. BARKLEY. Would you gentlemen consider an amendment to the bill as it passed, striking out the word 'existing'?

"Mr. ESCH. That is in the bill.

"Mr. BARKLEY. The word 'existing,' which limits it to national parks and monuments now in existence, is in the bill as it passed the Senate?

"Mr. ESCH. Yes; and as reported by the Select Committee on Water Power.

"Mr. BARKLEY. I would like to ask whether the gentleman would be willing to consider an amendment to the bill striking out the word 'existing'?

"Mr. ESCH. I fear, Mr. Speaker, that with such an amendment the bill would fail in this Congress.

"The SPEAKER. The question is on the third reading of the bill.

"The bill was ordered to be read a third time; was read the third time.

"Mr. BLANTON. Will the gentleman yield for a question? This does not create any commission?

"Mr. ESCH. Not at all.

"Mr. BLANTON. It is only an amendment perfecting the act, and it does not increase any salaries, or anything of that kind?

"Mr. ESCH. No.

"Mr. BARKLEY. Mr. Speaker, is it in order to offer an amendment to the bill?

"The SPEAKER. The Chair thinks it is.

"Mr. ESCH. Mr. Speaker, I did not yield the floor for that purpose.

"Mr. MANN of Illinois. Will the gentleman yield?

"Mr. ESCH. Yes.

"Mr. MANN of Illinois. I hope that the gentleman from Kentucky will not do that. I am in full sympathy with what the gentleman wants.

"Mr. BARKLEY. If the gentleman from Wisconsin will yield to me for a moment?

"Mr. ESCH. I do.

"Mr. BARKLEY. When the bill was under consideration the question arose whether a limitation should be made applying to national parks now in existence or also to future parks that might be created.

"As the bill passed the Senate and as it was reported to the House, it limited its effect to existing national parks only, so that hereafter, if more national parks shall be created, or those already in existence shall be enlarged, we must fight out on every individual bill creating a new national park or enlarging one already in existence the question whether the water power in the national park shall be used. It was my thought that we ought to make this provision apply to all parks that exist now as well as those that may be created in the future; but if the House feels that such an amendment would endanger the passage of this bill and thinks it is better to get what we can under this bill than to try to get more, I have no disposition to offer an amendment. I do desire, however, to register my objection to the provision that limits it to existing national parks instead of including all that may hereafter be created.

"Mr. ESCH. Mr. Speaker, the thought as presented to the committee by Secretary Meredith and Secretary Payne was that this would safeguard existing parks and monuments, and hereafter, if any project was presented to Congress for the creation of a new park or monument or the extension of existing parks or monuments, it would be within the power of Congress to determine whether or not the water power act should apply to them.

"The SPEAKER. The question is on the passage of the bill.

"The question was taken, and the bill was passed.

"On motion of Mr. ESCH, a motion to reconsider the vote by which the bill was passed was laid on the table.

"On motion of Mr. Esch, the bill, H. R. 14469, an identical House bill, was ordered to lie on the table.

"* * * * *."

It is here pointed out that Dinosaur National Monument as it "existed" or was then "constituted"—in 1921—was comprised of a total of 80 acres of land.

6. AUGUST 9, 1934: LETTER OF PARK SERVICE TO FEDERAL POWER COMMISSION

In August 1934 the Acting Director of the National Park Service addressed a letter to the Federal Power Commission on the subject of power withdrawals in the Echo Park-Blue Canyon areas. [Emphasis supplied.]

WASHINGTON, D. C., *August 9, 1934.*

FEDERAL POWER COMMISSION,
Washington, D. C.

GENTLEMEN: We are studying the possibility of setting aside certain lands in northwestern Colorado as a national monument. The area considered is within the watershed shown on the map marked "Exhibit H (a)," which accompanied an application of January 30, 1932, of the Utah Power & Light Co. for a preliminary permit, and which is on file in the Denver office of the Reclamation Bureau. The proposed monument would be affected by the Echo Park Dam site and the Blue Canyon Dam site, as indicated on the enclosed map of the proposed monument.

Such an area would be established by Presidential proclamation which would exempt all existing rights, and a power withdrawal is, of course, an existing right.

However, we feel that we should call this to your attention. If it is possible to release the power withdrawals that you now have in the area, our monument will be placed in a much better position from the standpoint of administration.

If you have any data or reports on this area, we would appreciate very much receiving copies.

Very truly yours,

A. E. DEMARAY,
Acting Director.

7. DECEMBER 13, 1934: REPLY OF FEDERAL POWER COMMISSION TO LETTER OF PARK SERVICE

The response of the FPC to the Park Service letter of August 9, 1934, was as follows (emphasis supplied):

FEDERAL POWER COMMISSION,
Washington, December 13, 1934.

EP–279–Utah,

Re Utah Power & Light Co.

DEAR DIRECTOR CAEMMERER: Reference is made to Acting Director Demaray's letter of August 9, 1934, in which the Commission was advised that you were studying the possibility of establishing a national monument along the Green and Yampa Rivers, in northwestern Colorado, which would embrace lands withdrawn for the proposed Echo Park and Blue Mountain power developments included in the application for preliminary permit of the Utah Power & Light Co., designated as project No. 279.

Assurance was given in the letter that the Presidential proclamation establishing such a monument would exempt all existing rights, including power withdrawals, but a statement was added that if it were possible to release the power withdrawals the "monument would be placed in a much better position from the standpoint of administration." This implied request for a vacation of the power withdrawal has called for careful consideration because of the magnitude of the power resources involved and the fact that the permit application is still in suspended status pending conclusion of the comprehensive investigation of irrigation and power possibilities on the upper Colorado River and its tributaries by the Bureau of Reclamation, and a more definite determination of water allocations between the States of the upper basin. The power resources in this area are also covered by Power Site Reserves Nos. 121 and 721 and Power Site Classifications Nos. 87 and 93 of the Interior Department.

In the application of the Utah Power & Light Co. the primary power capacity of the Echo Park site is estimated at 130,000 horsepower. This is based on the development of a head of 310 feet at the dam and a regulated flow of 5,000 cubic feet per second obtained by storage in the proposed Flaming Gorge Reservoir on Green River and Juniper Mountain Reservoir on Yampa River. At Blue Mountain the primary capacity is estimated at 19,000 horsepower based on the development of 210 feet of head and a regulated flow of 1,100 cubic feet per second.

Ralf R. Woolley in his report on Green River and its Utilization (Water Supply Paper No. 618, United States Geological Survey), proposes the development of 114,800 horsepower, primary capacity, at the Echo Park site, based on an average head of 290 feet and a streamflow of 4,950 cubic feet per second. At Johnson's Draw, which is his designation for the Blue Mountain site, Mr. Woolley proposes a primary capacity of 43,200 horsepower based on a regulated flow of 1,800 cubic feet per second and a head of 300 feet. Either of these estimates would justify installations of something like 300,000 horsepower at Echo Park and at least 50,000 horsepower at Blue Mountain.

It is generally recognized that the Green and Yampa Rivers present one of the most attractive fields remaining open for comprehensive and economical power development on a large scale. Power possibilities on Green River between the proposed Flaming Gorge Reservoir and Green River, Utah, and on the Yampa River below the proposed Juniper Mountain Reservoir are estimated at more than 700,000 primary horsepower, which would normally correspond to 1,500,000 to 2 million horsepower installed capacity. Excellent dam sites are available, and as the great part of the lands remain in the public domain, a very small outlay would be required for flowage rights. *The sites we are considering are import links in any general plan of development of these streams.*

Regardless of the disposition which may be made of the Utah Power & Light Co.'s application, and giving due consideration to the prospect that some time may elapse before this power is needed, *the Commission believes that the public interest in this major power resource is too great to permit its impairment by voluntary relinquishment of two units in the center of the scheme. The Commission will not object, however, to the creation of the monument if the proclamation contains a specific provision that power development under the provisions of the Federal Water Power Act will be permitted.*

I enclose a copy of the portion of the application of the Utah Power & Light Co. which describes the proposed development, and blue prints of exhibits H (a), H (b), and H (c) showing the location of the various units of the plan, river profiles, and cross sections of the dam sites. The Commission has no special reports on the area under consideration, but if you are not already familiar with them, it is suggested that you

obtain the following publications of the Geological Survey:

Water Supply Paper No. 618 (previously referred to).

Plan and Profile of Yampa River, Colo., from Green River to Morgan Gulch (5 sheets showing river profile and topography and 1 sheet of special dam site surveys).

Plan and Profile of Green River, Green River, Utah, to Green River, Wyo. (16 sheets, 10 plans, and 6 profiles).

Yours very cordially,

FRANK R. MCNINCH,
Chairman.

8. 1935 AMENDMENT OF THE FEDERAL WATER POWER ACT

The 74th Congress, 1st session, in the act of August 26, 1935 (49 Stat. 838), again amended the Federal Water Power Act—in two respects germane to the legislative history herein set out.

First: Section 3 of the act, which had included "national parks and monuments" in the definition of "reservations," was amended so as to exclude national parks and national monuments; offered as a committee amendment, and agreed to without discussion (79 CONGRESSIONAL RECORD 10569), the amendment—and thus, the present language of the act—reads:

"'*Reservations*' means national forests, tribal lands embraced within Indian reservations, military reservations, and other lands and interests in lands owned by the United States, and withdrawn, reserved, or withheld from private appropriation and disposal under the public land laws; also lands and interests in lands acquired and held for any public purposes; *but shall not include national monuments or national parks.*" [Emphasis supplied.]

It will be noted that the conference report, submitted on August 24, 1935 (79 CONGRESSIONAL RECORD 14621), on the disagreeing vote of the two Houses on the overall 1935 act, contains this explanation:

"The Senate bill included national monuments and national parks in the definition of 'reservations' * * * amending section 3 of the Federal Water Power Act, *but the House amendment excluded national monuments and national parks in conformity with the act of 1921* * * *." [Emphasis supplied.]

The Committee on Interstate and Foreign Commerce, in Report No. 1318 (74th Cong., 1st sess.), accompanying the bill S. 2796, at p. 22 states:

"The definition of the former term ('reservations') has been amended to exclude national parks and national monuments. *Under an amendment to the act passed in 1921, the Commission has no authority to issue licenses in national parks or national monuments.* The purpose of this change in the definition of 'reservations' is to remove from the act all suggestion of authority for the granting of such licenses." [Emphasis supplied.]

Second: Section 212 of title II of the 1935 act (49 Stat. 803, 847)—still dealing with the Federal Water Power Act—provides:

"SEC. 212. Sections 1 to 29, inclusive, of the Federal Water Power Act, as amended, shall constitute part I of that act, and sections 25 and 30 of such act, as amended, are repealed: *Provided*, That *nothing* in that act, as amended, *shall be construed to repeal or amend the provisions of the amendment to the Federal Water Power Act approved March 3, 1921 (41 Stat. 1353)*, or the provisions of any other act relating to national parks and national monuments." [Emphasis supplied.]

The record (79 CONGRESSIONAL RECORD 10575) for July 1, 1935, discloses the coming into being of the foregoing amendment:

"* * * * * *

"Mr. CROSSER of Ohio. Mr. Chairman, I ask unanimous consent to return to page 253, line 10, for the purpose of offering an amendment.

"The Clerk read as follows:

"'Amendment offered by Mr. Crosser of Ohio: Page 253, line 10, after the word "repealed" change the period to a colon and add the following: *"Provided*, That nothing in that act, as amended, shall be construed to repeal or amend the provisions of the amendment in the Federal Water Power Act approved March 3, 1921 (41 Stat. 1353), or the provisions of any other act relating to national parks and national monuments".'

"Mr. WOLFENDEN. Mr. Chairman, I object.

"Mr. CROSSER of Ohio. Will not the gentleman withhold his objections?

"Mr. WOLFENDEN. Mr. Chairman, I reserve my objection to permit the gentleman to make an explanation.

"Mr. CROSSER of Ohio. The purpose of this amendment is to clarify the language of the bill; and *this is the law now. The national parks organization wants to make sure that the bill does not infringe upon their preserve*, so to speak. We are offering this at their request. *This is not anything at all technical.* The national parks organization thinks it would be helpful to have a provision in the bill distinguishing between the national parks and the Federal Power Commissions. [Emphasis supplied.]

"Mr. WOLFENDEN. Mr. Chairman, I withdraw my objection.

"The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio.

"The amendment was agreed to.

* * * * * *"

In view of these two amendments—which appear on first examination to be somewhat inconsistent—what construction should be placed on the operation of the Federal Water Power Act of 1920, as amended in 1921 and 1935, with respect to national parks and monuments?

The conclusion indicated is that the 1935 act did not amend or repeal the act of March 3, 1921, requiring specific authorization by Congress before construction of any dam or related works within any national park or monument "constituted" or "existing" on that date. Summarized, successive legislative and executive action provided:

(*a*) Authorization for President to establish national monuments in the act of June 8, 1906 (34 Stat. 225).

(*b*) Establishment of Dinosaur National Monument, comprising 80 acres, on October 4, 1915 (proclamation, 39 Stat. 1752).

(*c*) Authorization for Federal Power Commission to issue licenses for construction of dams upon any part of the public lands and reservations (defined to include "national monuments") in the Federal Water Power Act of June 10, 1920 (41 Stat. 1063).

(*d*) Modification of authority of Federal Power Commission to require specific authority of Congress before issuance of license for construction of dams within any existing national monument, or national monument as constituted on March 3, 1921 (41 Stat. 1353).

(*e*) Redefinition, in the act of August 26, 1935 (49 Stat. 803, 838) of "reservations" to exclude national parks and monuments; but with qualification in same act that such redefinition did not amend or repeal (49 Stat. 803, 847) the provisions of the 1921 act—the latter act limiting authority of FPC in monuments as "constituted" in 1921.

No attempt will be made here to summarize or set out the conclusions reached in memorandum briefs on related questions by the Office of the Solicitor, Department of the Interior, or briefs submitted for committee consideration during the hearings on H. R. 4449, and companion bills.

The several pertinent portions of legislative history detailed above:

1921 act floor amendment inserting "existing" and "as now constituted";

Conference report on the 1935 amendment referred to as "in conformity with the act of 1921";

Committee Report No. 1318 on the 1935 act reference to "an amendment in the act passed in 1921";

Floor statements of Mr. CROSSER, i. e., "* * * and this is the law now" and "* * * This is not anything technical"; and

Section 212 of the 1935 act's clear statement that "nothing * * * shall be construed to repeal or amend (the March 3, 1921 act)"; all

suggest a conclusion that the 1935 redefinition of "reservations" can be construed only as a restatement of the 1920 Federal Water Power Act, as amended in 1921; therefore, that the 1935 act did nothing to either enlarge or reduce the inside and outside limits of authority of the Federal Power Commission spelled out in the earlier legislation.

If so interpreted, it follows that the enlarged Dinosaur National Monument (that portion not "existing" in 1921) has at no time been within the restrictions of the 1921 act, as redefined in 1935. Such a conclusion becomes significant upon examination of that portion of the 1938 proclamation (set out post, as Document 12) which declares that the enlarged reservation therein created "* * * shall not affect the operation of the Federal Water Power Act of June 10, 1920 * * * as amended."

9. NOVEMBER 6, 1935: LETTER FROM SECRETARY OF THE INTERIOR TO THE FEDERAL POWER COMMISSION

THE SECRETARY OF THE INTERIOR,
Washington, November 6, 1935.

Hon. FRANK R. MCNINCH,
Chairman, Federal Power Commission,
Washington, D. C.

MY DEAR MR. MCNINCH: For some time the National Park Service of this Department has been studying the possibility of setting aside, as a national monument, certain lands in northwestern Colorado and northeastern Utah along the Yampa and Green Rivers. Enclosed is a map of the area.

The Utah Power & Light Co. filed an application in January 1932 for a preliminary permit for a power site reservation in the Yampa and Green Rivers section. This application was on file in the Denver office of the Reclamation Bureau. Recently, however, the Utah Power & Light Co. voluntarily withdrew their application. This suggests that the power resources of the section may not be as important as originally believed.

I shall appreciate receiving your opinion as to the possibility of releasing the power withdrawals that exist in the area. By such action the proposed monument would be placed in a much better position from the standpoint of administration.

Sincerely yours,

HAROLD L. ICKES,
Secretary of the Interior.

Enclosure 686264.

10. JANUARY 9, 1936: REPLY OF FEDERAL POWER COMMISSION TO THE SECRETARY OF THE INTERIOR

FEDERAL POWER COMMISSION,
Washington, January 9, 1936.

EP-279-Colorado, Utah
Utah Power & Light Co.

Hon. HAROLD L. ICKES,
Secretary of the Interior,
Washington, D. C.

MY DEAR MR. SECRETARY: Reference is made to your letter of November 6, 1935, in which you inquire as to the possibility of releasing the power withdrawals existing in the area along Yampa and Green Rivers, in Colorado and Utah, in which the National Park Service desires to establish a national monument.

The Utah Power & Light Co. did, as you state, withdraw its application for preliminary permit covering the power sites in this area in March 1935, but this withdrawal was not based on any reduced appraisal of the

power resources. The action was taken because the Commission was unwilling to carry the application any longer in suspended status, and the growth of the company's power market did not justify the construction of any of the plants within the comparatively brief period which could have been allowed under the Power Act after the issuance of a permit. Nothing has occurred to change the status of the Power Commission withdrawal, or power site reserves Nos. 121 and 721, and power site classifications Nos. 87 and 93, which are also involved.

In reply to a similar request made by the National Park Service, a letter was sent to the Director on December 13, 1934, in which the power value of Green and Yampa Rivers was discussed in some detail and the position of the Commission was summed up as follows:

"Regardless of the disposition which may be made of the Utah Power & Light Co.'s application, and giving due consideration to the prospect that some time may elapse before this power is needed, the Commission believes that the public interest in this major power resource is too great to permit its impairment by voluntary relinquishment of two units in the center of the scheme. The Commission will not object, however, to the creation of the monument if the proclamation contains a specific provision that power development under the provisions of the Federal Water Power Act will be permitted."

Since receipt of your letter this whole subject has been given further study but no information has been developed to change the views of the Commission as expressed in the above quotation. For your further understanding of the Commission's position I enclose copies of my letter of December 13, 1934.

Yours very cordially,

FRANK R. MCNINCH,
Chairman.

11. JUNE 11–13, 1936: UTAH-COLORADO PARK SERVICE MEETINGS

On March 27, 1950, David H. Madsen, former manager of Dinosaur National Monument, signed a sworn affidavit setting out certain statements with respect to meetings held at Vernal, Utah, June 11, 1936, and Craig, Colo., June 13, 1936.

"Affidavit

"STATE OF UTAH,
"County of Utah, ss:

"David H. Madsen, being first duly sworn on oath, deposes and says: That he is over the age of 21 and a citizen of the United States, and a resident of Utah County, Utah. That at the time the area of the Dinosaur National Monument was enlarged to include the canyon unit I was employed by the National Park Service under the title of supervisor of wildlife resources for the national parks. Among my other duties I was acting superintendent of the Dinosaur National Monument and in that capacity *was ordered by the National Park Service* to arrange for hearings at Vernal, Utah, and Craig, Colo., for the purpose of securing the approval of the citizens of that area for the expansion of the Dinosaur National Monument to include the canyon unit. Meetings were accordingly held at Vernal, Utah, June 11, 1936, and Craig, Colo., June 13, 1936. A large representation of the citizens of the area were present at these meetings.

"Among other things discussed was the question of grazing and the question of power and of irrigation development which might be deemed essential to the proper development of the area at some future date. *I was authorized to state*, and *did state as a representative of the National Park Service*, that grazing on the area would not be discontinued and that in the event it became necessary to construct a project or projects for power or irrigation in order to develop that part of the States of Colorado and Utah, that the establishment of the Monument *would not interfere with such development.*

"The first part of this agreement with reference to grazing has been carried out and the residents of the area involved are entitled to the same consideration with reference to the development of power or irrigation at the Echo Park and Split Mountain Dam sites, and any other development that may not duly interfere for the purpose of the establishment of the monument and which is necessary for the development of the area.

"DAVID H. MADSEN.

"Subscribed and sworn to before me this 27th day of March A. D. 1950.

"KARL H. BENNETT.

"Residing at American Fork, Utah.

"My commission expires: December 25, 1950."

This affidavit was made part of the record of the 1950 hearings, as were supporting affidavits of J. A. Cheney, Vernal; Joseph Haslem, Jensen, Utah; Leo Calder, Vernal; H. E. Seeley, Vernal; and B. H. Stringham, Vernal.

Each deposed substantially as follows:

"That during the course of this meeting the National Park Service representative assured the residents of these areas that if the Dinosaur National Monument were enlarged, that the National Park Service would not prevent or stand in the way of the future reclamation projects or water development projects on the Green River or the Yampa River within the boundaries of the Dinosaur National Monument, for irrigation or power purposes."

12. ENLARGEMENT OF DINOSAUR NATIONAL MONUMENT BY PRESIDENTIAL PROCLAMATION

On July 14, 1938, Dinosaur National Monument, by proclamation of the President, was enlarged to include additional lands aggregating 203,885 acres. As indicated by the emphasis supplied, basis for the extension of the monument's exterior boundaries was to include lands containing "various objects of *historic* and *scientific* interest"; the proclamation provides that the reservation of such lands "* * * shall not affect the operation of the Federal Water Power Act of June 10, 1920 (41 Stat. 1063), as amended * * *"; further, that administration of the monument would be subject to the Brown's Park Reservoir reclamation withdrawal of October 17, 1904.

"Proclamation—July 14, 1938 (53 Stat. 2454)

"Enlarging the Dinosaur National Monument, Colorado and Utah

"By the President of the United States of America

"A proclamation

"Whereas certain public lands contiguous to the Dinosaur National Monument, established by proclamation of October 4, 1915, *have situated thereon various objects of historic and scientific interest;* and

"Whereas it appears that it would be in the public interest to reserve such lands as an addition to the said Dinosaur National Monument:

"Now, therefore, I, Franklin D. Roosevelt, President of the United States of America, under and by virtue of the authority vested in me by section 2 of the act of June 8, 1906, chapter 3060, 34 Stat. 225 (U. S. C., title 16, sec. 431), do proclaim that, subject to all valid existing rights, the following-described lands in Colorado and Utah are hereby reserved from all forms of appropriation under the public-land laws and added to and made a part of the Dinosaur National Monument:

* * * * *

aggregating 203,885 acres.

"Warning is hereby expressly given to any unauthorized persons not to appropriate, injure, destroy, or remove any feature of this monument and not to locate or settle upon any of the lands thereof.

"The reservation made by this proclamation supersedes as to any of the above-described lands affected thereby, the temporary withdrawal for classification and for other purposes made by Executive Order No. 5684 of August 12, 1931, and the Executive order of April 17, 1926, and the Executive order of September 8, 1933, creating Water Reserves No. 107 and No. 152.

"The Director of the National Park Service, under the direction of the Secretary of the Interior, shall have the supervision, management, and control of this monument as provided in the act of Congress entitled 'An act to establish a National Park Service, and for other purposes,' approved August 25, 1916, 39 Stat. 535 (U. S. C., title 16, secs. 1 and 2), and acts supplementary thereto or amendatory thereof, *except that this reservation shall not affect the operation of the Federal Water Power Act of June 10, 1920 (41 Stat. 1063), as amended, and the administration of the monument shall be subject to the Reclamation Withdrawal of October 17, 1904, for the Brown's Park Reservoir Site in connection with the Green River project.*

"In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington this 14th day of July, in the year of our Lord nineteen hundred and thirty-eight, and of the independence of the United States of America the one hundred and sixty-third.

[SEAL] "FRANKLIN D. ROOSEVELT.

"By the President:

"CORDELL HULL,
"The Secretary of State."

13. MAY 14, 1943: AD INTERIM REPORT, SURVEY OF RECREATIONAL RESOURCES OF THE COLORADO RIVER BASIN

The Bureau of Reclamation, in November 1940, under authority of the Boulder Canyon Project Adjustment Act of July 19, 1940 (sec. 2 (d) provides authority for financing conservation investigations and studies in connection with the work of the Bureau within the Colorado River Basin), requested the National Park Service to identify the scenic, scientific, and recreational resources of the Colorado Basin, as a part of a comprehensive plan for the utilization of the water resources of the region.

On January 27, 1941, the Secretary of the Interior approved the inclusion of a basin-wide recreational survey as a part of the studies and investigations to be continued and extended under his direction for the formulation of a comprehensive plan of utilization of the waters of the entire Colorado River system. The Secretary also appointed Frederick Law Olmsted, distinguished landscape architect, with wide experience in regional and site planning, as consultant for the survey.

By letter of transmittal of May 14, 1943, Mr. Olmsted submitted the following:

"Survey of recreation resources of Colorado River Basin

"Dinosaur National Monument Region.—Report of Progress, May 13, 1943

"(By Frederick Law Olmsted)

"To the DIRECTOR: This ad interim report is to record certain problems and certain tentative conclusions in regard to the Dinosaur National Monument area, as developed to date by unfinished investigations by Mr. George F. Ingalls and myself and others, in relation to plans now in process of development by the Bureau of Reclamation for water-control projects in and near the monument."

* * * * *

"Apart from its effect on road planning for the area, reservoir construction as contemplated by the Bureau would submerge a number of sites, geologic formations, and wildlife habitats, and would alter the character of the landscape by substitution of still water for flowing streams, and by re-

ducing the visible height of canyon walls. The latter effect would be most disastrous scenically at and near Pats Hole, where the extraordinary feature of Steamboat Rock would be submerged up to more than half its height, and in the inner canyon of the Yampa for some miles upstream well beyond Harding Hole.

"Nevertheless, the canyon unit would still have scenic and recreational values of notable importance and of nationwide interest. I venture to cite a very few examples.

"The canyon of Lodore, in general roughly V-shaped in section, is so deep that raising of the water in its bottom by 100 to 500 feet or thereabouts would hardly diminish its great impressiveness to a perceptible degree. Its rapids and low waterfalls now visibly continuing the process of erosion which cut all these canyons in the uplifting mountain mass as it rose athwart the rivers that once meandered across an ancient peneplain, would be changed to a fiordlike lake. Such an artificial change would not be justified in a national monument administered to preserve notable features of nature for enjoyment of mankind as nearly as possible in their natural condition; but it cannot be denied that if the area is deliberately made a multiple-use area, for power developments plus any recreational values compatible therewith, a great many more people can and will derive pleasure and inspiration of a high order from traversing the canyon of Lodore in boats on a fiordlike lake than would even be able to see it all in a more perfectly natural state by shooting its dangerous rapids in boats or by following the 25 miles or more of narrow trail that might with difficulty be contrived to traverse it without much scarring of natural conditions. The upstream portions of the meandering narrow inner canyon of the Yampa, incised into the "bench" in many places to a depth of about a thousand feet with almost vertical walls, would appear much as at present seen from above. One of the most impressive and geologically illuminating features of the entire area would remain, at the eastern end of the monument, wholly unaffected by the damming. It is where the high, bare, sandstone escarpment of the upfolded strata has so obviously been sawn through, on the axis of an anticline, by the river; which there quietly flows from a broad flood plain into the dark deep canyon it has cut in the slowly rising rock. The notable outlooks from many places on the rim of the upper plateau south of the rivers, especially on and near Harpers Corner—some very beautiful, all interesting geologically or otherwise—would in most cases remain substantially unchanged in appearance (unless transmission lines, as yet not definitely planned, should be so located as to impair one or more of them seriously).

"To sum up my chief considered impressions and opinions to date in regard to the scenic and recreational values of the canyon unit:

"1. It is without doubt sufficiently notable and distinctive and good of its kind, from a national standpoint, to justify in the absence of very strong special reasons to the contrary, retaining it as a national monument, administering it as such, and in due course of time expending a considerable amount of Federal taxpayers' money to make certain parts of it conveniently accessible by road and to provide simple conveniences for visitors and for its operation.

"2. It is not so unique and precious for such purposes (in the sense that Zion National Park is, for example), and the scenic, recreational, and related values which it would have if so administered would not be so largely sacrificed by the introduction of the waterpower developments contemplated by the Bureau of Reclamation as to give very strong grounds for opposing those economic developments if and when it becomes clearly evident that the installation of some or all of those waterpower developments would produce economic values of social importance largely and certainly in excess of the economic cost of producing them. Under those conditions it would be reasonable for the Park Service to approve changing the legal status of the unit from that of a national monument to that of a multiple-use area devoted to the storage and regulations of water and production of waterpower and also (to the full extent compatible with the reasonably efficient performance of that function) to conserving and utilizing the potentially great scenic, recreational, and related values of the area.

"When the several road-locations studies now in progress in the field shall have been carried far enough to determine with confidence which of them are most practicable and advantageous, the next step will be to prepare a comprehensive general plan and report for guiding the development and administration of the area—including some desirable readjustments of the present boundaries, which were fixed in the absence of accurate topographic information now available from the special USGS survey. That general plan must embody a program that can be adapted to meeting either of the two major contingencies: (a) Use of the canyon unit for hydroelectric developments and also for recreational and related values consistent therewith; or (b) indefinite postponement of final decision about building the power dams without also indefinitely postponing progressive development and use of the area in a manner appropriate to a national monument, and in such a way as to reduce to a minimum the risk of avoidable waste of natural resources or of investments in construction that may have to be made before final decision is reached about the dams."

DECEMBER 1, 1943: MEMORANDUM FROM PARK SERVICE TO BUREAU OF RECLAMATION

After the Reclamation withdrawal of June 17, 1943, the Director of the National Park Service addressed the following memorandum to the Commissioner of Reclamation:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Chicago, Ill., December 1, 1943.

Memorandum for the Commissioner, Bureau of Reclamation

On pages 13070–13071 of the July 24 issue of the Federal Register there is published the notice of the reclamation withdrawal of June 17, approved July 13, for the Colorado River storage project. This withdrawal covers most of the area of the Dinosaur National Monument in Utah and Colorado.

Since this notice in the Federal Register constituted the first information that we had received concerning the withdrawal, and since there might be some question as to the necessity for the withdrawal, as well as to the legality thereof, the lands already having been withdrawn from all forms of appropriation under the public-land laws, it occurred to us that your office might not have realized that the withdrawal covered national monument lands.

You will recall that the proclamation of July 14, 1938, enlarging the Dinosaur National Monument, including the lands now under discussion, contained a provision at the request of the Federal Power Commission, "that this reservation shall not affect the operation of the Federal Water Power Act of June 10, 1920 (41 Stat. 1063), as amended," and a further provision inserted in the proclamation at the request of your Bureau, that "the administration of the monument shall be subject to the reclamation withdrawal of October 17, 1904, for the Brown's Park Reservoir site in connection with the Green River project." While there is no question as to the validity of the provision protecting the Brown's Park reclamation withdrawal, it has been our opinion that the provision relating to the operation of the Federal Water Power Act was ineffectual, since Congress specifically excluded national parks and monuments from the purview of that act. The reclamation withdrawal of June 17, of course, does not come under either one of the above-quoted provisions in the proclamation of July 14, 1938.

As you know, our two Bureaus are collaborating in the study of the Echo Park project and other reservoir projects affecting the Dinosaur National Monument, in an attempt to work out the best possible plan of development and use of the area in the event that any one or several of the proposed water-storage projects should prove feasible and should be authorized for construction. It has been the understanding between our two Bureaus, in which the Secretary has concurred, that, in event of reservoir construction within the monument, some suitable change in the designation of the area would be sought. It is our understanding, from discussions held with representatives of your Denver office that you have not made final determinations yet as to the feasibility of the projects in Dinosaur National Monument and that, in any event, it may be many years before any of them are approved for construction.

I have cited the foregoing facts to make it clear that, insofar as I am aware, there is no misunderstanding between us as to the possible future of Dinosaur National Monument.

We are concerned, however, about the promulgation of a reclamation withdrawal within an existing national monument, which has not been done heretofore, and the possible detrimental effect of such action upon the future interpretation of the laws under which the national monuments are established and administered. Because of these considerations, it is suggested that we might profitably discuss this matter further when next I am in Washington. Perhaps it would be possible to amend the June 17 withdrawal so as to exclude from it any lands within Dinosaur National Monument.

NEWTON B. DRURY,
Director.

15. JUNE 27, 1944: REPORT OF POSITION OF THE NATIONAL PARK SERVICE ON DINOSAUR DEVELOPMENT

On June 27, 1944, the position of the National Park Service was stated in a report:

* * * * *

"4. If and when it is shown that it would certainly be in the greater national interest to develop the water resources of the canyon unit than to retain the unit for national monument purposes and it then becomes evident that authorization for such development will be given the status of the unit should be changed to that of a multiple-purpose area in which water control for the generation of power would be the principal use, and recreation the secondary but also important use."

* * * * *

16. MAY 2, 1946: LETTER OF PARK SERVICE DIRECTOR TO DR. J. E. BROADDUS

Because of its apparent bearing on intradepartmental understanding as to the effect of previous power withdrawals, the following letter is included herein (emphasis supplied):

UNITED STATES DEPARTMENT OF THE
INTERIOR, NATIONAL PARK SERVICE,
Chicago, Ill., May 2, 1946.

Dr. J. E. BROADDUS,
Salt Lake City, Utah.

DEAR DR. BROADDUS: I appreciate your courtesy in writing me as you did about your continued interest in preserving the park and monument areas in Utah, and giving me an evaluation of the scenic qualities of the canyon country within Dinosaur National Monument. Through my long association with conservation organizations, including this Service, I am well acquainted

with your work and with the contribution you have made toward bringing the outstanding scenic areas of Utah to the public attention which led to their protection and preservation.

I am intensely interested in your statement about the possible beneficial effect of the proposed Echo Park Reservoir in Dinosaur National Monument as a means of access for visitors to see the Green and Yampa Canyons.

The extensive river basin surveys now being conducted by the several agencies of Government are of concern to us, as some proposals may adversely affect areas of the National Park System. *Dinosaur is one of the few areas in the System established subject to a reclamation withdrawal and this may have some bearing on the proposed Echo Park project.* While we would regret to see this nonconforming use in the national monument, we are pleased to have your expression as to the possible beneficial effects.

As I have never had an opportunity to visit Dinosaur, I have not formulated any personal opinion of its scenic qualities. I know that it is regarded highly by Regional Director Merriam, of region 2, and others in the Service. It is hoped that there will be an opportunity for me to visit the area sometime this summer and to get in touch with you in Salt Lake City at the same time.

Sincerely yours,

NEWTON B. DRURY,
Director.

17. JUNE 1946: A SURVEY OF THE RECREATIONAL RESOURCES OF THE COLORADO RIVER BASIN

During June 1946, there was compiled the report of the National Park Service on its survey of the recreational resources of the Colorado River Basin; this report was printed in 1950.

At page 199, there is set out the following:

"Conclusions

"The policy of the National Park Service, as the administrative agency now primarily responsible for the national monument, has been, and is, to make the protection of the natural and archeological values of the area the controlling factors in administering it. The question of whether this policy is to be changed to permit water uses will require for its solution a review of all probable advantages and disadvantages arising from such use.

"Dinosaur National Monument is eminently qualified, in the absence of very strong special reasons to the contrary, to justify its retention as a unit of the National Park System. Certain parts of it should be made reasonably accessible by road and accommodations provided for visitors just as soon as funds become available. Before authorization is given to develop its water resources and to recognize water use as the principal consideration in the administration of the canyon unit, it should be clearly shown (1) that economic and social values deriving from such development and use would largely and certainly exceed the economic costs of producing them; (2) that it would be more economical to develop the water resources of the monument rather than other resources available for the same purpose within practicable reach; and (3) that it would be of greater benefit to the whole Nation to develop the area for water storage and power than to retain it in a natural state for its geological, wilderness, and associated values for public enjoyment. * * *"

18. DECEMBER 20, 1949: MEMORANDUM FROM RECLAMATION TO THE SECRETARY OF THE INTERIOR

It appears that on December 20, 1949, by memorandum addressed to the Secretary of the Interior, the Commissioner of Reclamation first urged formal concurrence by the Secretary in the Bureau's plans providing for construction of Echo Park. The memorandum follows:

DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Washington, D. C., December 20, 1949.

Memorandum.

To: Secretary of the Interior.

From: Commissioner.

Subject: Development of the Echo Park and Split Mountain Reservoirs in the upper Colorado River Basin, and their relationship to the Dinosaur National Monument.

Reference is made to memorandum of November 4 to you for approval from Director Newton B. Drury of the National Park Service on the subject, Clearance of Bureau of Reclamation Colorado River Basin Project Investigations. In concurring in Director Drury's memorandum, I informed you that the Bureau of Reclamation was studying alternative proposals to the Echo Park and Split Mountain Reservoirs, which would be located within the Dinosaur National Monument, and that we would present our findings to you as soon as current studies were completed. This memorandum summarizes the situation in the upper Colorado River Basin and the results of our studies of alternative reservoir sites.

Many years of effort in the development of coordinated plans for the best possible use of the waters of the upper Colorado River have recently culminated in the ratification and approval of the upper Colorado River Basin compact and in a recommendation by representatives of the States of the upper basin for immediate construction of certain regulating reservoirs necessary to aid in meeting requirements of the 1922 compact and for water-use projects on the streams of the upper basin.

By January 1, 1950, the regional director, Bureau of Reclamation, region 4, will complete a report entitled "Colorado River Storage Project and Participating Projects" to the point where it is ready for informal submittal to the States and interested Federal agencies for preliminary comments. Following this, it is hoped that the report soon can be submitted to this office for formal approval and adoption as your proposed report, and that formal release of the report can be made to the States and Federal agencies for review and comments in accordance with the provisions of section 1 of the Flood Control Act of 1944 and in accordance with the interagency agreements for review and coordination of reports. Members of the Senate Interior and Insular Affairs Committee were pressing the Bureau last spring for immediate submission of a report on this project.

In accordance with the 1922 compact, the States of the upper division are required not to deplete the flow at Lee Ferry below an aggregate of 75 million acre-feet for any period of 10 consecutive years. This necessitates provision of holdover storage reservoirs in the upper basin with a total capacity in excess of 48 million acre-feet. Many reservoirs have been studied by the Bureau of Reclamation in order to find the best plan for development of the necessary storage. Over a period of several years, it has become increasingly evident that any plan that would meet the upper basin's obligation in an efficient manner must include the Echo Park Dam and Reservoir on the Green River. In addition to providing efficient storage, at a location which will control the Green and Yampa Rivers with a minimum of loss or evaporation, the Echo Park project is probably the best power site in the upper Colorado River Basin and would provide a much-needed block of hydroelectric power, the returns from which are essential to the payout plan for the upper Colorado storage project. Any deferment of the Echo Park project would be only temporary, as it is a key unit in a plan requiring development of all proposed sites in the ultimate stage of the Colorado River Basin.

The Echo Park Reservoir and its afterbay, the Split Mountain Reservoir, are both in the area of the Dinosaur National Monument. Fortunately, those reservoirs will not affect the original monument area containing the Dinosaur remains, and will afford an opportunity for providing access to the undeveloped canyon areas of the Green and Yampa Rivers.

In view of the imminent release of the Colorado River storage project report, it is considered desirable that there be concurrence by the Secretary at this time in that portion of the Bureau's plan which provide for construction of the Echo Park Dam and Reservoir and the Split Mountain Dam and Reservoir on the Green and Yampa Rivers in the area previously set aside under the Secretary's jurisdiction and that of the National Park Service as the Dinosaur National Monument.

The Dinosaur National Monument as originally established by Proclamation No. 1313 of October 4, 1915, was an area not affected by the waters of the Green and Yampa Rivers and set aside as a national monument to preserve certain gigantic reptilian remains. A large additional area, known as the canyon unit, which contains very interesting geologic formations and magnificent scenery, and which was far greater in extent than the original monument, was declared as a part of the monument by Proclamation No. 2290 of July 14, 1938.

At the time of the creation of the canyon unit of the Dinosaur National Monument in July 1938, it was fully recognized within the Department and by other Federal agencies that the streams of the upper Colorado River Basin afforded vital possibilities for the development of power and consumptive water-use projects. The Federal Power Commission as early as 1935 and 1936, relative to the proposed creation of the canyon unit of the Dinosaur National Monument, had advised the Secretary of the Interior: "The Commission will not object, however, to the creation of the monument if the proclamation contains a specific provision that power development under the provision of the Federal Water Power Act will be permitted."

The position of the Bureau of Reclamation was also well known to the Secretary and the National Park Service when the proclamation was issued in July 1938, and recognition was given to the acknowledged alternate water use potentialities of the Green and Yampa Rivers in this area by the inclusion of an exception in the proclamation providing that "establishment of this monument shall not affect the operation of the Federal Power Act of June 10, 1920, as amended."

The position of the agencies of the Department in regard to the potential developments of the Green and Yampa Rivers was further expressed in the continued joint planning efforts of the National Park Service and the Bureau of Reclamation for the best possible development of the water resources lying within the Dinosaur National Monument. In a report of June 27, 1944, the position of the National Park Service was stated:

"4. If and when it is shown that it would certainly be in the greater national interest to develop the water resources of the canyon unit than to retain the unit for national monument purposes and it then becomes evident that authorization for such development will be given, the status of the unit should be changed to that of a multiple-purpose area in which water-control for the generation of power would be the principal use, and recreation the secondary but also important use."

Engineering studies now completed by the regional director, region 4, and thoroughly reviewed by the Chief Engineer of the Bureau of Reclamation, establish without a doubt the superior advantages of the pro-

posed Echo Park Dam and Reservoir with the Split Mountain afterbay dam and powerplant to any other potential developments in the upper basin. As a keystone in the plan for the upper basin, it will be required for the fullest development of this area. In view of the needs for many additional storage sites in the upper Colorado River storage project, and because of evaporation rates and reduction in storage capacities which will be caused by sedimentation over the life of the upper Colorado River storage project, there are no acceptable alternative possibilities for development which will adequately meet the needs of the basin over the life of the project. Deferring construction of the Echo Park project at this time would result in economic loss of great magnitude, and, in all probability, would serve only to delay the eventual construction of these reservoirs. The benefits to be obtained from the Echo Park projects are compared with the best alternative possibilities in the attached report by the regional director of the Bureau of Reclamation, entitled "Brief Report on the Importance of the Echo Park and Split Mountain Units, Colorado River Storage Project and Their Relation to the Existing Dinosaur National Monument, Colorado and Utah," dated December 1949. This report shows that the development of the best alternative reservoirs, namely Lodore and New Moab, would result in a loss of about 100,000 acre-feet of water annually more than from the Echo Park and Split Mountain Reservoirs, and would result in a loss of 800 million kilowatt-hours of electric energy annually under initial conditions and 431 million kilowatt-hours under ultimate conditions of stream depletion. This is equivalent to an annual loss to the Nation of about $8 million annually under present conditions, decreasing to about $5 million under ultimate conditions.

In the joint studies made by the National Park Service and the Bureau of Reclamation, it has been fully recognized that proper planning of the Echo Park development with regard to the construction of access roads and public facilities will make available to the public of the United States the beauties of the canyon unit of the Dinosaur National Monument. Access to the entire Lodore Canyon of the Green River by boat on the surface of the reservoir will open to many people the beauties of this region which can otherwise only be approached by a few on extremely difficult and hazardous trails through the existing canyon.

In view of the outstanding superiority of the Echo Park Dam and Reservoir, its required place in any event in the ultimate development of the upper Colorado River, the benefits to be gained by the public from the appropriate development of a recreational area contiguous to the Echo Park project, and the strong desire expressed by the States and local interests for prompt development of this project, inclusion of the Echo Park project and the afterbay Split Mountain Dam in the regional director's report on the Colorado River storage project should be contemplated, said report to provide for the construction of the Echo Park and Split Mountain projects and joint planning of roads and other facilities in the area now encompassed by the canyon unit of the Dinosaur National Monument. Thus, it will be possible to accommodate the fullest and most sound water resource developments, preserve the historic area of the original Dinosaur National Monument area, and enhance the recreational possibilities of the canyon area of the present monument. No formal change in the designation of any part of the Dinosaur National Monument would be required until such time as the report has been issued as a part of the Secretary's proposed report and until the States and interested agencies have commented thereon, the report submitted to Congress, and the Echo Park Dam and Reservoir authorized by the Congress and approved by the President. Before the regional director's report recommending construction of Echo Park and Split Mountain Reservoirs is released at field level, I would like to bring this matter to your attention and secure your permission at this time for the Bureau of Reclamation to recommend the construction of the Echo Park and Split Mountain Reservoirs within the boundaries of the Dinosaur National Monument.

I recommend that you approve this memorandum which will permit the Bureau of Reclamation to move forward with the Colorado River storage project report and to recommend authorization of the Echo Park and Split Mountain Reservoirs.

MICHAEL W. STRAUS.

Approved:

———— ————,

Secretary of the Interior.

19. DECEMBER 30, 1949: MEMORANDUM OF NATIONAL PARK SERVICE DIRECTOR TO THE SECRETARY OF THE INTERIOR

On December 30, 1949, the National Park Service Director expressed his views of the December 20, 1949, reclamation memorandum:

UNITED STATES DEPARTMENT
OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, December 30, 1949.

Memorandum.

To: Secretary of the Interior.

From: Director, National Park Service.

Subject: Effect of Reclamation's Echo Park and Split Mountain Reservoir proposals on Dinosaur National Monument.

Commissioner Straus' attached memorandum of December 20, which has been routed to this Service for review, requests your permission and approval for his Bureau to recommend construction of these two reservoirs in Dinosaur National Monument and to submit by January 1, or shortly thereafter, to the States concerned and otherwise the regional director's report Colorado River storage project and participating projects in accordance with established review and approval procedures.

For the following reasons, I recommend that his memorandum be not approved:

The review and clearance procedures which Reclamation now wants rushed through will comply only with the letter of the law. The spirit has already been violated through the irregular, advance submission by the Bureau to the upper Colorado River Basin States concerned of its preliminary draft report of the same title, dated March 1949. It is a little difficult to reconcile the admonition stamped in red on its cover Preliminary Draft of Proposed Report, for Review Only, Not for Public Release, with the series of public hearings, engendered by the report proposals, held in the West this autumn by the State agencies with full participation of Bureau officials. It is regrettable that the Department should now be embarrassed by the resulting local "demand" for the Echo Park and Split Mountain proposals in advance of secretarial determination of the Department's position.

During our so far unsuccessful efforts to reach with Reclamation a compromise solution of our conflicting responsibilities to be submitted for your possible approval, the National Park Service has refrained from informing the conservation organizations and others having an interest in this specific problem. I believe that you will want to have their views before reaching a conclusion on this controversial issue. However, I do not propose to seek those views without first having your approval to do so. I recommend that such approval be given.

The National Park Service has constantly been at a disadvantage in connection with dam-building projects in that almost always the knowledge of these projects is given out locally prior to any nationwide information being given to those who are interested in conservation of all natural resources.

In November representatives of this Service went to Salt Lake City in an effort to work out possible alternate reservoir proposals that might at least save the heart of Dinosaur National Monument by eliminating Echo Park Dam. Although Reclamation promised, in order to speed our analysis of the situation, to provide directly to this Service comparative data on alternates to Echo Park, the promise has not yet been kept. The first we have heard of this is the mimeographed Brief Report on the Importance of the Echo Park and Split Mountain Units, Colorado River Storage Project, and Their Relation to the Existing Dinosaur National Monument, December 1949, attached to the original and the National Park Service copies of Commissioner Straus' memorandum. This report appears to be far from an exhaustive study of alternate possibilities. Even so, certain deductions from Reclamation's conclusions based on the report are possible.

Commissioner Straus concludes that annual losses ranging from $8 million under present conditions to about $5 million under ultimate conditions would result from the substitution of Lodore and New Moab Reservoirs for Echo Park-Split Mountain. Incidentally, while he admits that the alternate proposal would provide ultimate storage capacity equal to Echo Park and Split Mountain, at smaller capital costs, he fails to point out that the saving in construction cost amounts to $33,700,000.

Moreover, as to the $5 million to $8 million annual loss that Reclamation claims would result from substituting Lodore-New Moab, we are convinced that the "loss" would not be a real one. First, it is evident that the estimates for power generation are based on the maximum potential of the reservoirs, whereas unknowable future conditions of precipitation and runoff (and, for that matter, the demand for power itself which nearby river basins appear to be able and anxious to produce) may well be such that they will not permit or justify practical operation at the projected scale; second, it is our considered judgment that the tangible economic benefits to the surrounding States from an unimpaired and fully developed Dinosaur National Monument would amount to from $10 million to $12 million a year; and this places no dollar sign whatever on the many recognized but intangible values of recreation and wilderness conservation, let alone the saving of Dinosaur National Monument itself for future generations. Furthermore, the economic values of the area as a national monument will increase in future years, whereas Reclamation's anticipated values necessarily decline with the years.

With respect to our estimate of annual economic value of Dinosaur National Monument, attention is directed to an impartial survey and analysis of the expenditures in Montana by out-of-State visitors to Glacier National Park (to which Dinosaur, when developed, may logically be compared), made by the bureau of business and economic research, Montana State University, during the current year. The Montana survey, final results of which are to be published in February 1950, disclosed an expenditure in Montana by out-of-State visitors to Glacier National Park of approximately $10 million per annum. Indications are that final tabulations by the university will result in a higher figure. In any event, it is our opinion that the potential economic value of Dinosaur National Monument compares favorably as an offset to the estimated "loss" that Commissioner Straus speaks of.

Our experience does not permit us to agree with Reclamation's view that greater economic benefits from recreation will accrue if the Echo Park and Split Mountain Dams are built. We believe that the opposite would be true.

Commissioner Straus appears to be misinformed as to the effect of the proviso in the proclamation of July 14, 1938, that "establishment of this monument shall not affect the operation of the Federal Power Act of June 10, 1920, as amended," which he cites. The Federal Power Commission is by statute expressly prohibited from granting licenses for power works in national parks and monuments (sec. 3 of the Federal Water Power Act as amended by sec. 201 of the Federal Power Act). Accordingly, it would appear that the exception in the proclamation is ineffective to accomplish Reclamation's purposes, since the authority of the Commission has been prescribed by Congress and cannot be extended by provisions in an Executive proclamation of this character. (See Solicitor's Opinion M. 30471 of December 5, 1930.)

Commissioner Straus quotes the following statement of National Park Service's position from a 1944 report we made:

"(d) If and when it is shown that it would certainly be in the greater national interest to develop the water resources of the canyon unit than to retain the unit for national monument purposes and it then becomes evident that authorization for such development will be given, the status of the unit should be changed to that of a multiple-purpose area in which water control for the generation of power would be the principal use, and recreation the secondary but also important use."

This statement was made as a part of the series of investigations and reports made by this Service in connection with the recreational resources survey of the Colorado River Basin. It was not intended to be and is not a commitment that the monument should be sacrificed to facilitate Reclamation's dam proposals. It is our contention that there has been no showing "that it would certainly be in the greater national interest to develop the water resources of the canyon unit than to retain the unit for national monument purposes." Boiled down to its essentials, that is the question that Commissioner Straus and I now find it necessary to place before you for decision.

In any case, I believe you will agree that there are considerations involved which cannot be resolved by January 1, 1950.

In summary, I recommend:

1. That Commissioner Straus' memorandum of December 20 be not approved.

2. That the Bureau of Reclamation be specifically directed, by your approval of this memorandum or otherwise, not to release the regional director's report on January 1 or until you have indicated what your position is to be.

3. That you authorize me to ascertain in your behalf the views of the conservation agencies.

NEWTON B. DRURY,
Director.

20. FEBRUARY 28, 1950: MEMORANDUM FROM NATIONAL PARK SERVICE TO THE SECRETARY OF THE INTERIOR

From the correspondence files of the Department of the Interior, it appears that a meeting was held in the Secretary's office on February 23, 1950; one of the results was this memorandum:

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D. C., February 28, 1950.

Memorandum.

To: Secretary of the Interior.

From: Director, National Park Service.

Subject: Echo Park and Split Mountain Dams.

In accordance with the request made of me at the meeting in your office on February 23, I have had prepared a statement of facts and events leading up to the opinion of the Department's Solicitor (M. 30471), dated December 5, 1939.

The proclamation which increased the Dinosaur National Monument to its present size was issued on July 14, 1938 (53 Stat. 2454). It provided that "this reservation shall not affect the operation of the Federal Water Power Act of July 10, 1920 (41 Stat. 1063), as amended," and that "the administration of the monument shall be subject to the reclamation withdrawal of October 17, 1904, for the Brown's Park Reservoir site in connection with the Green River project."

When the Federal Water Power Act (now called the Federal Power Act) was amended in 1935 (16 U. S. C., 1946 ed., sec. 796), national monuments and national parks in specific language were excluded from the term "reservations" as defined and used in the act, thus removing these areas from the authority of the Federal Power Commission with respect to the issuance of power licenses. The legislative history of this particular amendment indicates that it was the intention of Congress, by excluding national monuments and national parks from the term "reservations," to remove all suggestion of authority for the granting of such licenses in these areas and that the purpose of the amendment was to implement the policy established in a previous amendment (act of March 3, 1921, 41 Stat. 1352), which prohibited the granting of such licenses within the limits as then constituted of any national park or national monument without specific authority of Congress. (See Solicitor's opinion of Aug. 19, 1938 (53 I. D. 372).)

At the time the proclamation enlarging Dinosaur National Monument was signed (July 14, 1938), there had been no opinion of the Solicitor construing the effect of the 1935 amendment of the Federal Power Act upon the administration of the national parks and national monuments. A little more than a month later, on August 14, 1938, the Solicitor rendered the above-mentioned opinion, holding that the Federal Power Commission does not have authority to grant licenses for power works within national parks or national monuments, whether or not there are navigable waters within such reservations, and that, therefore, it is unnecessary to include in proposed legislation for establishing or extending national parks or national monuments a provision designed to limit the jurisdiction of the Federal Power Commission.

This opinion did not, however, discuss the question whether or not the authority of the Commission could be preserved by an appropriate provision in a proclamation reserving lands for national monument purposes. This question was not raised until 1939 when, on December 5 of that year, the Solicitor rendered an opinion (M. 30471) on the questions (1) whether a national monument (proposed Sawtooth National Monument) could be created subject to reclamation withdrawals and power site classifications; and (2) if so, whether the Federal Power Commission would thereafter be authorized to grant licenses affecting the classified lands. In this opinion, it was held that while, in the light of long and persistent practice, there can be no reasonable doubt as to the legal propriety of establishing a national monument subject to prior reservations for other purposes, it is clear that the Federal Power Commission is, by the 1935 amendment to the Federal Power Act, expressly prohibited from granting licenses for power works within national monuments. On the question whether this authority could be preserved in the monument proclamation, the opinion stated: "Any attempt to preserve this authority in the Commission by specific provision in the national monument proclamation would be ineffective since the authority of the Commission has been prescribed by Congress and cannot be extended by provisions in an Executive proclamation of this character."

NEWTON B. DREWRY,
Director.

21. MARCH 3, 1950: MEMORANDUM FROM NATIONAL PARK SERVICE DIRECTOR TO THE SECRETARY OF THE INTERIOR

UNITED STATES DEPARTMENT
OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D. C., March 3, 1950.

Memorandum.

To: Secretary of the Interior.

From: Director, National Park Service.

Subject: A brief on the Echo Park and Split Mountain Dams versus Dinosaur National Monument.

I have submitted, in a separate memorandum dated February 28, an answer to your specific question regarding the right of the Federal Power Commission to reserve sites in Dinosaur National Monument.

In this present memorandum I should like to summarize the main issues relating particularly to Echo Park Dam and Split Mountain Dam in order to clarify what we believe to be the position that the Department finds itself in. These issues are presented in an effort to be of assistance to you in reaching a final decision on our recommendation that Echo Park Dam and Split Mountain Dam be not built.

The problem breaks itself down into four main items, and I shall treat each item separately. They are as follows:

(1) Dinosaur National Monument and its value to the Nation;

(2) Power reservations;

(3) Past agreements and studies made for and with the Bureau of Reclamation;

(4) Secretary Warne's committee recommendations and the effect.

1. Dinosaur National Monument and its value to the Nation: Collectively, the present geologic, wilderness, and scenic qualities of the canyons of the Green and Yampa Rivers and their adjacent benches and plateaus within Dinosaur National Monument are of national significance. Their combination in natural state, together with associated geological features constitute an inspirational and recreational resource of utmost value to the people of the Nation. The topography of Dinosaur National Monument portrays a living geological story which challenges the imagination. The recent geologic history records the work of the rivers and tributary streams in abrading their channels even deeper as tremendous internal forces elevated the land. The monument formations also present in an outstanding manner the dynamic story of mountain uplift and subsidence, accompanied by faulting and folding, erosion, deposition, and stream piracy.

There have been two main charges against the Service's stand that Dinosaur National Monument should not be sacrificed for dams. One is that the proposed Echo Park and Split Mountain Dams will not touch the dinosaur remains and, second, that nobody is using the area at the present time. Both of these statements are correct. As to the dinosaur remains, the misunderstandings arise from the misnomer, Dinosaur National Monument. It probably seemed logical, at the time the original 90-acre monument was enlarged to 209,744 acres in order to include the Green and Yampa Canyons, that the original name be used. Few will now disagree that a more appropriate name should have been chosen to reflect the main purpose of the enlargement, which is to protect the scenic grandeur and the scientific values of the Green and Yampa River Canyons, originally proposed for establishment as a national park. This area fully measures up to the standards for a national monument.

Relative to the second charge, that the area is not developed and people cannot enjoy it; that is also true, but it is only a temporary condition. It is impossible to develop fully an area for public use within a few years after it has been established. Particularly has this been true in view of inadequate

appropriations for the past several years. In any event, I believe that you subscribe to our position that it is a sound policy to develop gradually and protect our natural resources for the use and enjoyment of generations to come.

2. Power reservations: While the facts pertaining to the reservation of power in the monument are covered by a separate memorandum, I do want to recall in this general résumé some of the thinking that went on at the time that the proclamation was in the process of being drawn up. On August 9, 1934, Acting Director Demaray wrote the Federal Power Commission informing them of the Department's interest in the establishment of a national monument in the Green River and Yampa Canyon area, and informed them that, while national monuments are established subject to valid existing rights, it would be preferable from an administrative standpoint if the existing power withdrawals could be released. On December 13, 1934, the Power Commission replied that they would have no objection to the extension of the monument provided that there would be no interference with any issuance of power permits within the monument boundaries. Following this correspondence, in 1935 (16 U. S. C. 1946 ed., sec. 796), the Federal Water Power Act, now called the Federal Power Act, was amended so as to preclude any power development in any park or monument then established or to be established in the future. On November 6, 1935, Secretary Ickes, who was much concerned about the preservation of this area, wrote the Federal Power Commission referring to the National Park Service letter of 1934, stating that he had heard that the Utah Power & Light Co.'s preliminary permit within the monument had been voluntarily withdrawn by them, and asking whether the Federal Power Commission would be willing to go along with the proclamation. On January 9, 1936, the Federal Power Commission replied that the permit had been relinquished, but advised that their stand was similar to that taken in their letter to the Service on December 13, 1934. The files indicate quite clearly that there was a general understanding by the affected bureaus and the Federal Power Commission of the Department's desire and effort to free the proposed monument from power withdrawls and a realization that failing this, the monument was being established subject to a desire by power interests for developments at Echo Park and Split Mountain, and subject to the plans of the Bureau of Reclamation eventually to construct a dam at the Brown's Park site (the monument proclamation was made subject only to this withdrawal) in the northernmost part of the monument as enlarged. When it was concluded that Dinosaur National Monument nevertheless should be enlarged, as it was in 1938, there was the further realization that future requirements might require that the power issue be more squarely met. That time has now come. However, the record is clear as to whether, regardless of their opinions in the matter, the Federal Power Commission has any right to issue power permits or grant applications for developments within the monument. The answer is definitely "No." The only way that such action can be accomplished is by a specific act of Congress. The Solicitor's opinion (M. 30471) of December 5, 1939, subsequent to monument enlargement, contains this sentence: "Any attempt to preserve this authority in the Commission by a specific provision in the national monument proclamation would be ineffective, since the authority of the Commission has been prescribed by Congress and cannot be extended by provision of an executive proclamation of this character."

Another occurrence, which has in no way served to clarify matters, was Reclamation's success, in 1943, in having the Department issue without our knowledge or consent, reclamation withdrawals covering the Echo Park and Split Mountain areas in the monument. This action we have always considered as of questionable propriety if indeed there is any authority for having taken the action. We have never received from Reclamation any answer to our requests for an explanation, but have made no issue of it because of possible embarrassment to the Department and with the realization that before any dam could be built it would require approval of the Secretary.

3. Past agreements and studies made for and with the Bureau of Reclamation: It is true that the National Park Service has cooperated with the Bureau of Reclamation in making a recreational study of the Colorado River. It is also true that during the process of these studies we considered what the possible effect would be upon Dinosaur National Monument if the Echo Park and Split Mountain Reservoirs were built. Personally, I feel that no reservoir studies should be undertaken in national park or monument areas. I think your decision to this effect in connection with the Kings Canyon National Park was the proper one to make; however, I realize that in the case of the Dinosaur National Monument the questions of future power and reclamation developments were definitely in mind in some quarters at the time of its establishment, and a final solution to the problem of the area's best public use was left open for future consideration. The results of subsequent studies have convinced us that the Echo Park and Split Mountain Dams should not be built unless there is an absolute national necessity as distinguished from purely local power benefits and reclamation subsidies to be derived from the sale of that power. The overall national interest in this matter appears to us to be clear.

Unavoidably, in frank discussions of Reclamation's proposals with their officials and perhaps otherwise, some of our people may have expressed thoughts, ideas, or personal opinions as to extent, caliber, worth, and kind of recreational developments that might be appropriate in the area if the dams are built. Some preliminary studies, but no final ones, have ever been made in this respect, nor do we believe that they should be unless it is concluded that the monument is to be abandoned.

The Park Service has always agreed with the Bureau of Reclamation that the entire matter should be carefully studied and analyzed, and nothing that I have ever signed or agreed to with the Bureau has had an objective other than to get all of the facts in the open so that a decision could be made by the Department as to whether congressional authorization should be sought to build power dams, or any kind of a reservoir or reservoirs, within the area that is now Dinosaur National Monument. I do not feel it fair for anyone to consider these agreements and studies except as an effort to cooperate. They should not be used against us in reaching a final decision.

Our efforts have involved many studies over the years, including a study of the entire Colorado River Basin. Our agreement and understanding with Reclamation is that they would undertake a complete study of the alternate reservoir possibilities, and certainly our understanding was that Echo Park Dam would be considered only the last resort; and only after review of the issue by the Secretary. While a token effort has been made by Reclamation in this respect, all that we have had is one copy of a mimeographed pamphlet (which we had to detach from copies of correspondence to you in order to see it at all) which lists a few alternate possibilities for project combinations in lieu of Echo Park-Split Mountain. It appears to be slanted to show why the alternates, notably New Moab-Lodore, are less desirable. In any case, the conclusion is inescapable that the search for acceptable alternates outside the monument has not been pursued with the enthusiasm, vigor, and thoroughness that have governed Reclamation's Echo Park-Split Mountain investigations within the monument.

Even if the Echo Park project is the best in the United States, we are not convinced that there are no alternates or combination of alternates capable of supplying most if not all of what is claimed for it. Certainly the national monument and its values, economic and otherwise, should count for something in totaling the score and concluding what is really in the national interest.

Surely it is not convincing to cite tentative agreements with the affected States favoring these dams within the monument. We believe that no such agreements should have been attempted before the Secretary had passed upon the desirability of building Echo Park and Split Mountain Dams.

4. Secretary Warne's committee recommendation and its effect: The recommendation of Assistant Secretary Warne's committee does not, in my opinion, disapprove or approve the Echo Park Dam. It merely authorizes the construction of certain dams already on the Bureau of Reclamation's program and approved by the State committees and the five States in the upper Colorado River Basin before any work is done on Echo Park Dam. It also provides that further studies be made as to possible alternates to the Echo Park between now and the beginning of the second phase of the upper Colorado River program, which would be January 1, 1955. In the discussions of the committee in Secretary Warne's office, at no time was it recalled by Service representatives that the Bureau of Reclamation came out and stated definitely that there was no alternate whatsoever for the Echo Park project in the upper Colorado Basin overall program.

These are the facts in the case as we know them. I know in addition that you must take into consideration other matters of national importance, such as the expediency of the situation. There is one thing that this episode brings forward emphatically. It is the need for improved technique in the Department's public relations with the people in the immediate vicinity of this type of undertaking and with the Nation as a whole. The principle here involved extends far beyond this specific case. I most sincerely hope that some arrangement can be made for future handling of projects such as this one, or any reservoir project, whether or not it affects national park lands, whereby all interested parties, Federal, State, and individual, including the many conservation societies, can be simultaneously advised and brought in for a general discussion at one time, especially before approval of any one particular interested group is obtained. I urge that the proper procedure to accomplish this be discussed with your Advisory Committee on Conservation.

Even in view of the fact that the four States have already gotten together according to the compact and approved a definite program, I still believe that this matter can be aired in a general meeting with a representative of each State and other groups interested in the Nation's welfare, and a decision reached along the line of the Warne committee program. I most sincerely hope that this can be done.

I agree most heartily with the statement made by Assistant Secretary Warne, that in whatever way you decide the issue it will require the full support of both bureaus in order to carry out your decision and to obtain the maximum benefit from the decision reached. I am sure that you can depend on both the Bureau of Reclamation and the

National Park Service to support your decision wholeheartedly, whether in their opinion they "win, lose, or draw."

NEWTON B. DRURY,
Director.

22. JUNE 27, 1950: MEMORANDUM FROM THE SECRETARY OF THE INTERIOR TO THE BUREAU OF RECLAMATION AND NATIONAL PARK SERVICE

On April 3, 1950, the Secretary of the Interior held a hearing on the proposed construction of Echo Park and Split Mountain Dams as a part of the overall development of the upper Colorado River Basin.

The conclusions reached by the Secretary in this memorandum were in turn incorporated by the Park Service in that agency's comments on the proposed report of the Secretary on the Colorado River storage project and participating projects. The memorandum follows:

THE SECRETARY OF THE INTERIOR,
Washington, June 27, 1950.

Memorandum.

To: Commissioner, Bureau of Reclamation.
Director, National Park Service.

From: The Secretary.

Subject: Construction of dams in the Dinosaur National Monument.

The preparation of a comprehensive report for the development of the upper Colorado River Basin has posed the question of whether Echo Park (immediately) and Split Mountain (eventually) Dams should be built in the canyon sections of Dinosaur National Monument. I will not have the final say, but I must determine whether, as Secretary of the Interior, I shall approve and recommend to the Congress a plan that includes these dams.

The history of the issue is well known to you and is well documented in the transcript of proceedings of the hearings I held on April 3, 1950. I shall not review it here.

I am impressed with the fact that the waters of the Colorado River constitute a resource of paramount importance to the region and that in view of the arid nature of the area, my approved plan for the development of the upper basin must make every practicable provision for the conservation and multiple use of these waters in the interest of the people of the West and of the whole Nation.

I am not unmindful of the public interest in the inviolability of our national parks, and in the status, only a little less austere, of the national monuments. By no precedent of mine would I wish to endanger these places.

Weighing all the evidence in thoughtful consideration, I am impelled in the interest of the greatest public good to approve the completion of the upper Colorado River Basin report, including the construction of the dams in question, because:

(a) I am convinced that the plan is the most economical of water in a desert river basin and therefore is in the highest public interest; and

(b) The order establishing the extension of the monument in the canyons in which the dams would be placed contemplated use of the monument for a water project, and my action, therefore, will not provide a precedent dangerous to other reserved areas.

I note that the fossils are not in the areas of the monument proposed to be flooded and that the creation of the lakes will aid the public in gaining access to scenic sections of the Green and Yampa River Canyons. Much superb wilderness within the monument will not be affected, excepting through increased accessibility.

The importance to the growth and development of the West of a sound upper Colorado River Basin program can scarcely be overemphasized. I hope that this decision on my part will promote quick solution of all other problems connected with this matter so that we may proceed with such a program.

I ask the National Park Service and the Bureau of Reclamation to cooperate fully in making plans that will insure the most appropriate recreational use of the Dinosaur National Monument, under the circumstances.

OSCAR L. CHAPMAN,
Secretary of the Interior.

ORDER OF BUSINESS

Mr. STENNIS. Mr. President, I understand that the distinguished majority leader desires to address the Senate. He does not seem to be present at this time. I think the proper thing to do is to suggest the absence of a quorum. If he enters the Chamber in the meantime, I will request that the order for the quorum call be rescinded.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Chair recognizes the Senator from California [Mr. KNOWLAND].

THE FARM PROBLEM

Mr. KNOWLAND. Mr. President, within a short time the Senate will face a decision on one of the Nation's most pressing domestic problems. This problem was laid before us early in January by the President of the United States. At that time he warned immediate action was necessary to assure the stability of our agricultural economy and to avoid the danger of a complete breakdown of our farm program brought on by large surplus stocks.

Now—more than 6 months later—the problem of these surpluses is much more serious than it was in January. It is so serious that not only is the welfare of our farmers at stake but also the welfare of our entire Nation.

At the present time the Government has about $6½ billion committed to price supports. Early this session the administration was forced to request an increase in the borrowing authority of the Commodity Credit Corporation amounting to $1¾ billion. In the past couple of weeks the administration has been forced to request another billion and a half making a staggering total of $10 billion.

Our responsibility is to meet this problem fairly and objectively. We must look at the facts and from these facts form an agricultural program that will be fair to farmers, consumers, and taxpayers. These proposals, developed by the best agricultural minds in the country, charted the course to a sound and permanent agricultural policy.

The basic feature of the proposals was a shift from an emergency wartime program of high and rigid price supports encouraging all-out production to a peacetime program of flexible supports adjusting production to our needs.

This, then, is the decision we must make.

I would be less than frank if I did not state that it is unfortunate that the decision must be made at a time of declining agricultural income, of huge price-depressing surpluses, and of reduced foreign markets. But further delay in facing the facts will not solve the problem. These conditions are all part of the penalty we pay for pursuing an emergency program after the emergency has ended. They are to a great extent the direct result of that program. They will get heavier rather than lighter the longer the day of decision is postponed. This is why we must act now.

There is a weakness on the part of some individuals that the decision should now be put off for another year. The very nature of this proposal indicates a conviction by its supporters that a continuation of the program is not sound policy. They know the program will not work. But they want just one more year of it.

Mr. President, the "one more" theory applied to something inherently wrong is very dangerous. Two, three, or four evils do not solve a problem. They only create more evil. In like manner, a farm program that helped create a serious problem will not help solve it if it is continued.

We face the task of enacting agricultural policy. We should judge each provision of the legislation on the basis of whether it is a sound and workable policy. We should not make a decision which favors one farmer over another or which favors one part of the country over another. But, most important of all, under a guise of helping our farmers, we must not do anything which our very conscience dictates will do irreparable damage to agriculture.

I do not intend to make a detailed examination of farm policy, but let us consider a few of the major points involved and see whether they constitute sound policy.

One of the most certain results of high and rigid price supports is the creation of surpluses.

Our present farm program on basic commodities was designed to assure farmers a profit and spur production under emergency conditions. We got that production and are still getting it after the need has ended.

We now have a year's supply of wheat on hand, with a new crop coming up. This fall we will have enough wheat to last us 2 years. In the face of this, is it sound policy to use taxpayers' money to encourage the production of more wheat only to be stored rather than used?

We have enough cotton to meet our domestic demands for about a year. Is it sound policy to encourage the production of cotton through incentive prices under such a condition?

We have millions of pounds of dairy products in storage—products that have been sold to the Government rather than to consumers. Government purchases are still large—but through the courageous action of Secretary of Agriculture Benson, in reducing supports last April, the dairy industry is already moving toward a healthier condition. Production is beginning to taper off. Consumption is picking up. Would it be

sound policy now to deliberately increase the support prices so that Government purchases would increase and consumption of these products again slip backward?

Mr. President, the inevitable result of excessive surpluses is waste. Our soil is needlessly depleted and we face the ever present danger of spoilage.

Artificially high prices also lead to loss of markets. Foreign countries no longer offer us the seemingly unquenchable markets of a few years ago. Competition has returned. If we are to share in world markets we must do so at competitive prices.

Domestically, many of our markets are largely a matter of price. We have seen the butter market cut in half—not because our citizens do not like butter, but because of price. We have lost some of our cotton markets because of price. We have seen our feed market for wheat dwindle away because of price. To a considerable extent these commodities have been priced right out of the world market.

Every lost market, domestic or foreign, simply aggravates the surplus problem. Our job is to develop an agricultural program which will expand markets, not reduce them.

Another inevitable result of high and rigid supports is production control. The higher the support level, the stronger must be the controls. The Nation's farmers want less, not more controls, and they do not believe that an ever-tightening system of production control is sound policy.

Rigid Government controls are resented by most Americans. The greatest thing this country has to offer the world is freedom, and we should do everything we can to see that every American enjoys a full measure of it.

The sad truth of controls is that they take away from farmers, through reduced volume, about as much as they give through higher prices. They also work a hardship on many farmers—particularly small farmers who have just enough acres to make a living.

These three great disadvantages—surpluses, loss of markets, and production controls—go hand in hand with high and rigid price supports. Every year we pursue such a program, we get further away from our goal of a free and balanced agriculture.

This, then, is the decision which will soon face the Senate of the United States. The welfare of the Nation demands that we direct our agricultural program toward a prosperous future for our farmers. We can do this with the flexible support program. We can adjust production by lowering supports in time of surpluses and raising them in time of shortage. We can build new markets through more competitive prices. We can move toward a relaxation of Government controls once we begin to restore balanced production.

Mr. President, we will undoubtedly hear attempts to justify continuation of high rigid supports on the ground that they are necessary to prevent a further decline in farm income. Let me give assurance that there is no Member of the Senate more interested in seeing farm income raised than I am. California is one of our leading agricultural States. Neither is there any one more concerned with the present decline than President Eisenhower.

Farm income has declined in 5 of the past 6 years. It is still declining. This alone should be convincing evidence that high price supports will not and cannot maintain agricultural income. This decline has taken place during a period when we have invested more money in price supports than at any other time in our history.

In this connection, I commend for the reading of my colleagues a recently issued pamphlet entitled "Farm Price Supports—Rigid or Flexible?" It was written by Dr. Karl Brandt, of Stanford University. Dr. Brandt declares:

> Rigid 90-percent price supports were not what lifted farm income during the decade from 1940 through 1949 to a level of high prosperity. Only the exceptional, almost unlimited, demand during the war and the reconstruction period, and our farmers' full utilization of this opportunity boosted the average annual net farm income from $3.9 billion in 1930–39 to $11.5 billion in 1940–49, with an all-time record of $16.8 billion in 1947. That price supports had nothing to do with it is evident in the fact that in 1940–49 farm prices stood at an average of 111 percent of parity, or high above the floors. Many of them for years pressed hard against price ceilings.
>
> The net income of farmers depends more on the volume that can be sold at a price and the costs involved in producing it than it does on the support the Government puts under prices.

In our discussion of farm income, we forget at times that price alone does not produce income. Income is price multiplied by volume. Our farmers can never be prosperous on price alone. They must have volume—large volume. When we maintain artificially high prices that shut off normal markets and invite the development of substitutes, we are damaging farm income just as surely as through a decline in price.

Let us beware of sacrificing our farmers on the altar of parity. That is a gage of price, not of income. That parity is insufficient as a sole objective of our farm program is shown by the fact that while in the past 40 years farm prices have fallen 8 percent in relation to nonfarm prices, per capita net farm income has increased 11 percent relative to per capita income of nonfarmers. Thus, since the 1910–14 period, farmers have improved their net income position relative to nonfarmers. They did this by turning out greater volume and by increasing their efficiency.

Mr. President, all the discussion which has taken place during the past year and a half cannot erase the fact that farm income is dropping under rigid supports. In addition, all the economics we know tell us that income is bound to be higher under a program that avoids a build-up of surpluses, that builds both domestic and foreign markets, that places a premium on sound management rather than one that does exactly the opposite.

There is another vitally important factor. The administration's program is designed to hold price changes to a minimum. With the setaside of large amounts of our surpluses, price supports under the new program will be considerably higher than under provisions of the present law that will become effective unless we reach agreement on an acceptable program. There is also a limitation of 5 percent a year on changes resulting from a shift from old to modernized parity.

Contrast this with what will happen if we continue the present program until it collapses under its own weight. It is this catastrophe, Mr. President, that Congress seeks to avoid; that the administration seeks to avoid.

We know there is a limit to the amount of taxpayers' money we can channel into a farm program. We do not want our entire farm program to go down the drain, as our potato program did a few years ago, because of excessive costs.

The losses on the investment we have already put into the Commodity Credit Corporation will be substantial. Just how much, no one can say. Actual losses last year, however, were more than a quarter of a billion dollars, and the Commodity Credit Corporation's reserve for losses is now near the billion-dollar mark.

Since cost figures will be a major consideration in our determination of the new program, I believe it should be pointed out that from 1932 to 1953 our price- and income-support programs on basic commodities cost more than $4½ billion. This may seem large, but it could actually be small compared with losses that will be incurred if we continue under our present program.

There are those who assert that our price supports have cost only about $1 million a year. Mr. President, that is just not the truth. We spend nearly three-quarters of that amount each day just to store our surpluses—to say nothing of the cost of acquiring them.

I firmly believe, and this administration believes, that the Government must help farmers over economic rough spots. But I believe that funds so spent should actually help our farmers—not drive them and the country deeper into an economic morass.

These basic reasons, then, demand a change in our agricultural program now—not a year from now or 2 years from now.

This is not a partisan issue. Flexible price supports were overwhelmingly supported by both parties when enacted in 1948 and 1949. I appeal to my Democratic and Republican colleagues not to make the farm program a political issue now, at the expense of a sound agricultural economic policy. The flexible program was developed on a bipartisan basis. I hope it can be voted on in the same manner.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point, as a part of my remarks, a table showing the total cost of the price- and income-support program on basic commodities from 1932 to 1953.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Total cost of price and income support program, 1932–53 on basic commodities

	Millions
(a) Price support (loans), 1933–53	$20.7
(b) International Wheat Agreement (export subsidy), 1950–53	546.5
(c) Surplus removal, 1933–53	552.0
(d) Acreage allotment payments under the ACP, 1936–43	1,666.3
(e) Acreage allotment and marketing quota programs administration, 1933–53	40.2
(f) Parity payments, 1938–43	967.1
(g) Retirement of cotton pool trust certificates, 1939–40	1.3
(h) Acreage contract payments, AAA of 1933, 1933–36	505.6
(i) Agricultural Marketing Act revaluing fund, and payments to stabilization corporation for losses incurred, 1932–34	288.3
Total	4,588.0

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. STENNIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the call of the roll be rescinded.

The PRESIDING OFFICER (Mr. COOPER in the chair). Without objection, it is so ordered.

THE NEW GIVEAWAY: ATOMIC ENERGY

Mr. MORSE. Mr. President, this will be the first of a series of speeches I contemplate giving on this subject matter, because in my judgment this bill is of such vital importance to the economic welfare of the American people for a century to come, that I propose to discuss the subject matter at this time, under the amendment now pending, and then, within my parliamentary rights, at a later time in connection with a discussion of other features of the bill.

Mr. President, since the explosion of the first atomic bomb at Hiroshima, on August 6, 1945, mankind has been aware of the existence of a great new energy source which can reshape human society. In the few years since that date, atomic technology in the United States has reached a stage where the use of atomic energy for industrial purposes can reasonably be foreseen. Of the various uses of atomic energy which in time will be made, one of the closest to practical realization is the utilization of atomic energy in the generation of electric power.

Until now the sources of economical power have been coal, oil, gas, and falling water. Power prices in our country have been lowest where these natural resources have abounded. The development of atomic energy as a new source of power means that within a period of about 10 years, high-cost power areas may have made available to them at reasonable prices power produced from fissionable materials. Within 20 years, power from atomic energy may be as economical in any area as power now produced from conventional fuels.

PEOPLE HAVE INVESTED BILLIONS IN ATOMIC PROGRAM

The people of the United States, through their Government, have to date invested about $12 billion in the development of atomic energy. Many millions more will be spent by the Government before a return from this investment in the form of peacetime benefits will be realized. Atomic energy, while not technically a natural resource, is a great national resource which must be considered to be a part of the public domain and public wealth.

Atomic-energy development in the United States has proceeded under a program which up to now has considered the production, distribution, and use of fissionable material to be too important to the national security to be left in private hands. This program has been governed by the Atomic Energy Act of 1946, known as the McMahon Act.

BILL REWRITES M'MAHON ACT

On February 17, 1954, the President submitted to the Congress a special message on atomic energy. He asked the Congress to approve "a number of amendments to the Atomic Energy Act." Accompanying his message were drafts of two separate bills prepared by the Atomic Energy Commission. One of the bills proposed to amend the McMahon Act so as to allow for widened cooperation with our allies in certain atomic-energy matters and to improve procedures for the control and dissemination of atomic-energy information. The other bill proposed to amend the act so as to encourage broader industrial participation in the development of peacetime uses of atomic energy in the United States.

On June 30, there appeared in the calendar of the Senate a bill—S. 3690—prepared by the Joint Committee on Atomic Energy, purporting to make certain amendments to the Atomic Energy Act of 1946. Actually, the bill is a complete rewrite of the McMahon Act, carrying over some provisions of the existing law intact, modifying others, and adding a number of entirely new sections. The bill is exceedingly complicated; and the inclusion of many new definitions, together with cross-referencing and interrelation of sections, make it virtually impossible for the Congress to separate matters so as to take action at this time on only the more urgent sections.

Within a few days it was announced that S. 3690 would be taken up for consideration on the floor of the Senate. At the time of the announcement, a committee report on the bill had not yet been authorized, and committee hearings had not been printed. Transcripts of the hearings, 1157 pages in length, were made available to Senators on July 9. The report of the joint committee became available on the afternoon of July 13, the same day that the bill was made the business of the Senate.

BILL NOT SUBMITTED IN CONFORMITY WITH M'MAHON ACT

The framers of the Atomic Energy Act of 1946 knew that at some future date, atomic energy would be made available for industrial use. They wisely anticipated that a future Congress deliberating on such an important change in the law would need a comprehensive report from the Atomic Energy Commission on the advisability and significance of the proposed change to guide them in their deliberations. Section 7 (b) of the McMahon Act reads, in part, as follows:

> Report to Congress: Whenever in its opinion any industrial, commercial, or other nonmilitary use of fissionable material or atomic energy has been sufficiently developed to be of practical value, the Commission shall prepare a report to the President stating all the facts with respect to such use, the Commission's estimate of the social, political, economic, and international effects of such use and the Commission's recommendations for necessary or desirable supplemental legislation. The President shall then transmit this report to the Congress, together with his recommendations.

That is what the law provides; that is what the law Congress passed in 1946 laid down as a requirement for Presidential action. That is a provision of the law, binding upon the Atomic Energy Commission as well as upon the President of the United States.

Now let us see whether it was followed.

The Atomic Energy Commission has not yet prepared and presented the report required by section 7 (b) of the McMahon Act. Mr. President, I wish to say that, in my judgment, this bill should not have been allowed to reach the floor of the Senate until the Atomic Energy Commission and the President of the United States had carried out their obligations under the 1946 act. One year ago the Commission informed the Joint Committee on Atomic Energy that such a report at that time would be premature. The President's message of February 17, submitting drafts of proposed legislation prepared by the Commission, and providing for industrial participation in the atomic energy program, made no mention of the required section 7 (b) report. The testimony of AEC Chairman Lewis Strauss before the joint committee, during its June 1954 hearings, cannot be taken as substantial compliance by the Commission with the requirement of law.

If a section 7 (b) report is premature, as the Commission indicated last year and still appears to believe, judged by its election not to present the required report, then Congress at this time should not be undertaking consideration of S. 3690.

The failure of the Commission to submit its report raises the serious question of whether its apparent support of the administration atomic energy bill is the result of its independent judgment or compliance with another Presidential directive.

The lack of a report on the social, economic, political, and international

effects of a change in the present law to allow private use of atomic energy and materials is not a matter to be taken lightly, either by the Congress or by the people of the United States. The Congress is entitled, before legislating, to have available to it the expert analysis and advice of the Commission it created and charged with administration of the atomic energy program. In failing to furnish this required information or to explain its failure to do so, the Atomic Energy Commission in my judgment has been willfully and seriously negligent in its duty, not only to the Congress, but also to the American people, or it is being bypassed.

This section of the law is being bypassed by the Atomic Energy Commission; and in my judgment the Commission is deserving of severe censure from the Congress. That is what we ought to be acting up, rather than a bill which apparently has the support of the Atomic Energy Commission without the Atomic Energy Commission ever carrying out its clear duties and obligations under the act of 1946.

In the closing days of this session—with only a few hours in which to study a 104-page bill and 1,157 pages of hearings and testimony and to listen to debate on the bill on the floor of the Senate, and without the benefit of expert advice—the Members of the Senate are being rushed into a vote on S. 3690 which might well change the course of history, and which is certain to have profound effects on the future economy of our Nation and the economic well-being of our people.

I should like to make it very clear that I have no objection to the participation of private industry in the atomic energy program. A number of industrial firms are already sharing in research and development projects with the Atomic Energy Commission, and I am sure we all look forward to the day when private industry will be able to maintain its own plants in the atomic energy field. My concern is with the apparent rush to enact this proposed legislation long before it appears to be required.

At the present time the Commission is conducting a program involving five different types of atomic reactors. The Commission has stated that the probability of producing electricity from nuclear fuel at a cost competitive with electricity from coal, oil, or gas is good. It has also stated that this does not mean that such low-cost nuclear power will be obtained from the very first plants which might be built, but that it may well come from succeeding plants which, as a result of the experience with the first, it should be possible to construct and operate more economically.

Testifying before the joint committee on June 2, 1954, Thomas E. Murray, a member of the Atomic Energy Commission, made the following statement:

> We are only now in the development stage. We have not yet reached the phase of competitive, commercial application. This is some years ahead. As I mentioned earlier, the 5-year reactor program submitted to the committee is aimed at making competitive nuclear power a reality. If the goal is accomplished, our feeling is that only a small number of full-scale privately owned and operated power reactors are likely to be on the line before 1965—in other words over 10 years from now.

Mr. President, I am confident that private capital will not be risked until the results of Government experiments with different types of reactor plants are known, and that it will be at least 5 years before an application is made by a private concern for a license to operate an atomic powerplant. No new legislative authority is required for private participation in experiment work at Government test plants. This being the case, what is the need for wholesale amendment of the McMahon Act at this time?

BILL PRIMARILY AFFECTS ELECTRIC POWER PRODUCTION

S. 3690 involves questions of Federal power policy more than atomic energy policy. When the safeguards for security, safety, and health have been taken care of, provisions for development of electric power come entirely within the field of power policy—not atomic policy. Make no mistake about it, S. 3690 is definitely and primarily a power bill, but it is a bill designed to turn over the power features of the atomic energy program to private industry rather than to guard the public interest in its $12 billion investment in atomic energy production.

Since President Theodore Roosevelt, Federal power policy has been recognized as an antimonopoly policy. It may be recalled that in his James River veto message President Theodore Roosevelt said it was his duty "to use every endeavor to prevent this growing power monopoly, the most threatening which has ever appeared, from being fastened upon the American people." Gifford Pinchot and George W. Norris have echoed these words. Our first objective in legislating on the matter of atomic energy power should be to implement this policy.

Here once again the Senate of the United States has an opportunity to learn from the lessons taught by liberals who preceded us in the Senate in decades gone by—liberals such as Norris and the La Follettes, Johnson, McNary, and Dill, liberals who have written a record for the protection of the public interest in a sound Federal power policy necessary to check the development of a private utility monopoly.

I ask the simple question, Are we to make use of the lessons taught by those great liberals who have gone before us, who in their day, too, were attacked and abused as dangerous, creeping Socialists, who were charged with an attempt to set up some kind of State economy, when all they were trying to do was to write into the law checks which would protect the public interest of the people of the United States against a private utility monopolistic combine.

They were successful; but here and now, under President Eisenhower, we are confronted once again with a reactionary administration which seeks to sell the economic freedom of the American people into a monopolistic economic bondage. Here is one liberal in the Senate who is going to call attention again to the great lessons taught by liberals before the little fighting band of liberals now in the Senate ever trod the carpets of this historic floor.

It is just as though we were to turn back the curtain and take a look at the scene when men such as La Follette, Norris, and Dill were fighting on the floor of the Senate and warning the American people as to what would happen if Congress did not adopt the kind of Federal power policy which great liberal Presidents of the United States, such as Theodore Roosevelt, urged be adopted. Theodore Roosevelt, in his great veto message on the James River bill, laid down basic principles for the protection of the public interest in a public power program which are as applicable today as they were on that day, before the ink on that veto message was dry.

Federal Power Commissioner Dale E. Doty in testimony before the joint committee on June 29, 1953, stated that legislation for grants or licenses by the AEC of the privilege of developing atomic energy should provide standards guiding the AEC's issuance of such grants or licenses to protect and promote the public interest in the development and utilization of the electric energy to be produced from atomic energy, as well as to protect those public interests in national defense and security which are particularly associated with the development of atomic weapons. The grant of the privilege should depend not solely on the negative consideration that national defense will not be harmed, but on the affirmative ground of benefit to the public interest in electric power and other products of the operation of nuclear reactors as well.

ATOMIC POWER DEVELOPMENT PARALLELS WATERPOWER LEGISLATION 50 YEARS AGO

A statement prepared by the Federal Power Commission for the Joint Committee on Atomic Energy last year stated in part:

> Current proposals to develop peacetime uses of atomic energy may involve some of the same problems faced in 1908 when Federal waterpower legislation was first proposed and resolved in 1920 when the Federal Water Power Act was enacted (now pt. I of the Federal Power Act). For by 1908 the Nation had in waterpower, as it now has in atomic energy, a great energy resource, largely undeveloped, but believed to be potentially very valuable. * * * Similarly, today, the energy resource which the United States has, as a result of its expenditures of billions of dollars in atomic weapons research, cannot be developed without congressional approval because of Federal proprietary interests. * * * Thus it becomes pertinent to test any legislative proposals with respect to non-Federal development of atomic energy to see whether the public interest in atomic energy is protected and benefited as adequately as the Congress of an earlier generation sought to do for the Nation's interest in waterpower.

FAILURE TO PROVIDE FOR FEDERAL ROLE IN ATOMIC POWER GENERATION

In the 104 pages of S. 3690 the matter of power production from atomic energy is mentioned only once, and then under the heading of "byproduct energy." The historic safeguards applied for 35 years during Republican and Democratic administrations alike, to protect the public interest in power resources, are completely bypassed and neglected in this administration's atomic energy bill.

In my judgment, that was not an oversight, either; it was by design. This administration does not say anything except what I have mentioned, namely, a very brief provision, because a part of the program of this administration is obviously to turn the power potential of this country over to a private utility monopoly, and do it under the misnomer of trying to develop private power and private enterprise.

I say again what I have said before, that the trouble with this administration is that it does not know the difference between private monopoly and private enterprise.

The Federal Power Act assumes that in some instances the public interest will best be served by Federal development of a power source. Section 7 (b) of the act provides that—

> Whenever, in the judgment of the Commission, the development of any water resource for public purposes should be undertaken by the United States itself, the Commission shall not approve any application for any project affecting such development.

But instead the Commission is directed to submit its findings to the Congress with appropriate recommendations for the development of the natural resource.

Public development of power resources and marketing of power at reasonable prices is the best way to discourage monopoly prices in the power field. Public competition keeps prices in line by furnishing a "yardstick" for the determination of what is a reasonable price. A yardstick of this kind will be sorely needed in the early days of atomic energy power development and marketing. I wish to stress this point perhaps above all others in my speech this afternoon. I believe that once again a historic issue has reappeared on the floor of the Senate. It is the issue represented by the question: Is the Senate of the United States going to protect the heritage of all the people of this country in the power potential of America by writing into this bill a public power yardstick guaranty; or are we going to walk out on these great statesmen of the past? When this issue on a previous occasion was before the Senate, in connection with the development of electric power generated by falling water, they had the foresight to write such a guaranty into the power laws of the United States. Yet we have a bill before us into which those guaranties are not written.

That is why a group of us in the Senate have submitted and will offer amendments designed to keep faith with the great leaders of the Senate in the years gone by, when they wrote such guaranties into the power acts enacted by Congress.

YARDSTICK OR GOLF STICK

There is no public power yardstick in the pending bill. In fact, sometimes I wonder what kind of stick is in this bill. I read with some interest an article in Look magazine entitled "Ike's Cronies," and I noticed some discussion of a very distinguished American, of whom I am very fond as a golfer, Bobby Jones. I am not blind to the fact, however, that he is also a director of one of the great power companies, the Southern Co., and I also know that it is a major member of the Dixon-Yates combine, with which the President has directed the Atomic Energy Commission to enter into a contract in regard to not atomic energy, but electric power.

It raises a question in my mind if what we are doing is substituting the golf stick for the public power yardstick. The golf stick does not supply the public with any protection.

In submitting the bill to us without section 7 (b) of the act of 1946 being complied with, the President of the United States opens himself up to exactly just such surmises. He opens himself up to the question: What influences are being brought to bear, and by whom, upon the President of the United States, that he would urge such a contract and that he would urge such a bill, without the provisions of section 7 (b) of the 1946 act being complied with, either by the Atomic Energy Commission or by the President himself?

PEOPLE AND PRESS BECOMING AROUSED

Mr. President, in my judgment, as a result of the debate which has taken place on the floor of the Senate on this issue, an increasing number of people all over the country, as my mail and my telephone calls give evidence, are beginning to become greatly concerned and alarmed as to what the President of the United States is up to, and are becoming very much concerned as to what the proponents of the bill are trying "to get by with." The people are beginning to recognize, Mr. President, as they did years ago when they found, with regard to the development of power by falling water, that they must look to their representatives in the Congress of the United States to protect their interests from a piece of legislation that is obviously bad. It is rather heartening and reassuring to see the response which this debate has elicited from the newspapers of America. It is rather encouraging that more and more editors and increasing numbers of columnists are raising some signal flags of warning to the American people that this bill is not one of those run-of-the-mill bills in the Senate of the United States. It is a bill which will have a terrific historical impact upon the economic welfare of the American people for generations to come.

That is why I think it should be thoroughly debated. That is why the Senator from Oregon is going to cooperate with other Members of the Senate who are bound and determined to see to it that a thorough and full record is made on the many features of this bill before the debate comes to a conclusion.

TRIBUTE TO THOMAS L. STOKES

One of the newspaper columnists to whom I wish to pay a very deserved tribute and sincere compliment at this time is Thomas L. Stokes, who, in the July 16 issue of the Washington Star, wrote a column under the heading "Development of Atomic Energy—Fear Expressed That Private Interests Will Get an Upper Hand in Utilizing Nuclear Resources."

In my opinion, Tom Stokes is one of the great journalists of America. He is one of the journalists who, in my opinion, personifies what I consider to be the primary ethical obligation of free journalists, namely, to write the truth on the basis of the facts as he finds them or honestly believes them to be. He recognizes that favorite old motto, biblical in origin, of such progressives as the senior La Follette, who, for many years, on the masthead of his Progressive magazine in the State of Wisconsin carried the motto "Ye shall know the truth and the truth shall make ye free."

Tom Stokes, Mr. President, has written time and time again, on issue after issue, and, while on a goodly number of issues I have found myself in disagreement, on the merits, nevertheless, his writings on those issues have made me recheck and think through points of view and conclusions previously formed. Tom Stokes, in my judgment, always pushes his pen in keeping with the great journalistic ethic which I have just mentioned. As a result, I think he is one of the great educators of America, and that he has done much to enlighten the American people and give them a better understanding of the facts involved in controversial political issues. In this particular column, Mr. President, he has written in keeping with that high standard of journalistic ethics. He says:

> DEVELOPMENT OF ATOMIC ENERGY—FEAR EXPRESSED THAT PRIVATE INTERESTS WILL GET AN UPPER HAND IN UTILIZING NUCLEAR RESOURCES
>
> (By Thomas L. Stokes)
>
> It may sound somewhat melodramatic to say that Congress is on the eve of one of the great legislative decisions of its long history.
>
> But that hardly seems an exaggeration as to what it does about the bill to revise the Atomic Energy Act that is now before the Senate.
>
> Unless the bill as it was presented to the Senate from the Joint Committee on Atomic Energy is amended to protect the public against the monopoly that some experts believe is inherent in its patent and other provisions, then future generations may be in for a lot of headaches.
>
> There is a background of experience to warn us. That is the way we permitted our earlier source of energy—electricity developed from water power and steam power—to be exploited by private combines that got bigger and bigger and more and more powerful, took higher and higher tolls from the consuming public, and finally invaded and polluted our politics until the Government, moving under the impulse of public wrath, finally stepped in to straighten it all out. That wasn't so long ago, in fact is still clear in the memory of many of us.
>
> Out of that we developed regulatory laws that offer a pattern to guide us in development of atomic power.
>
> We start fresh now with atomic energy, with all that experience behind us. We will indeed be negligent—as well as fools—if again we let powerful and selfish private interests get a monopoly grip not only on atomic power, but also in utilization in other fields that radiate from the atom—medical science, agriculture, processing of food, and so on.
>
> We, the taxpayers, already have invested $11 billion in atomic development, mostly for military purposes. We have, therefore, quite a stake. It belongs to us. The terms by which we permit private interests to develop atomic power for peacetime uses become consequently the overriding consideration before Congress and with us.

There will likely be more noise and clamor about other issues in the Atomic Act revision bill.

One of these issues concerns how much we shall tell our allies about military use of atomic power. Another has to do with the recent order by President Eisenhower to the Atomic Energy Commission to purchase power from a plant to be built by a private syndicate, instead of having TVA, which has been the supplier of power for AEC, build a steam plant and add to its own capacity. Supporters of TVA in Congress see this arrangement as not only bad business for the Government and costly to it and the consumer but also as an entering wedge to hamstring TVA's usefulness as a yardstick. They are seeking to stop execution of the contract by amending the atomic energy bill.

These two matters are extremely important in themselves, and of considerable public import and interest. But the public should be cautioned not to let these controversies hide what is done about cutting in private interests on development of atomic power.

This last involves two changes in present law. One affects patent rights which heretofore have been controlled tightly by the AEC. Under the bill before the Senate, patent rights are to be opened to private interests and under terms which are criticized as not properly protective against monopoly. Because of criticism, some alterations were made. One of these extends for 5 years the AEC's power to require the holders of private patents to make them available to others if such patents are important in production or utilization of nuclear fuels or atomic energy. But some familiar with the operation of patent law in such a field still believe that the public is not adequately protected.

Aside from patents, the bill also authorizes the AEC to issue licenses to private interests for construction, ownership, and operation of facilities to produce and utilize nuclear fuel and atomic energy. Ownership of nuclear fuel still would be retained in the Government.

It is here that production of power is involved. Yet the bill does not provide for preferences to public bodies or cooperatives in distribution of power, either from private plants that are licensed or from public atomic powerplants that might be constructed by the Government. Such preferences long have been in our laws dealing with hydroelectric power. It is true that the utilities are now engaged in a campaign to break these preferences down and, in fact, are on the point of success in various areas—at Niagara Falls, at Clarke's Hill along the Savannah River in Georgia and South Carolina, and in some projects being planned for the Pacific Northwest, among others.

If the utilities could prevent preferences for public bodies and co-ops in the atomic energy law, it would be quite a victory at the very outset. They may get away with it, of course. They have their highly paid lobbyists right here, at the ear of your Representatives, and you, the public, are always a long ways off.

I have read the entire Stokes article into the RECORD, because I think it is such an excellent one; and contains such sound warnings as to the dangers of the bill, that there should be in the RECORD reference to a voice other than the voices of Senators. Here we have the voice of a great mind in the journalistic profession, which, in my judgment, in a brief column, has really gone to the heart of some of the major dangers of the bill.

I wish to commend Tom Stokes for the brilliance and the insight he discloses in his analysis of the bill. I urge my colleagues in the Senate to heed his warning, because something tells me that as the American people come to understand that warning, they are going to heed it, and if Members of the Senate do not follow a course of action in amending the bill consonant with the warnings which Tom Stokes has set forth in his column they will ask a good many questions, one of them being, "Why didn't you heed it?"

THE BILL MAKES NO PROVISION FOR HISTORIC POWER SAFEGUARDS

Experts from the Atomic Energy Commission have testified before the Joint Committee that atomic reactors which 10 years from now can be expected to produce power at 7 mills per kilowatthour or less are likely to be plants of 100,000 kilowatts of electrical generating capacity or larger, costing many millions of dollars. Only the Federal Government or large corporations or investment trusts will be able to finance projects of this magnitude. For at least 20 years the people of the United States will have to depend upon giant private power combinations or the Federal Government for their supplies of power produced from atomic energy.

Section 44 of S. 3690, the administration's proposed new Atomic Energy Act, is the "power section" of the bill. It provides:

Byproduct energy: If energy which may be utilized is produced in the production of special nuclear material at production or experimental utilization facilities owned by the United States, such energy may be used by the Commission, or transferred to other Government agencies, or sold to publicly or privately owned utilities or users at reasonable and nondiscriminatory prices. If the energy produced is electric energy, the price shall be subject to regulation by the appropriate agency, State or Federal, having jurisdiction.

Section 44 is one of the sections which was carried over intact from the 1946 McMahon Act. It was written when the atomic energy program was centered primarily upon the development and production of atomic weapons. As stated in the minority report of the Joint Committee on S. 3690, this section was written when atomic power was still a remote possibility and the section pertaining to its production was embryonic. Now that we stand on the threshold of the atomic power era and consider legislation designed to usher it in, singular, indeed, is the fact that the new legislation does not enlarge upon the embryo, so far as AEC production of atomic power is concerned.

Despite the fact that the Atomic Energy Commission has assumed the role of power broker with regard to the Dixon-Yates long-term contract which it is entering into in compliance with a Presidential directive, if not stopped, the AEC has steadily maintained that it wants to stay out of the atomic power business. Chairman Strauss describes the AEC's planned power reactor program for the next few years as a minimum program by choice. This role seems to have Presidential approval. President Eisenhower said in his message of February 17:

The creation of opportunities for broadened industrial participation may permit the Government to reduce its own reactor research and development after private industrial activity is well-established.

A draft of the proposed legislation accompanying the President's message contains this interesting language:

Nothing in this act shall be construed to authorize the Commission to engage in the sale or distribution of electrical energy for commercial use except such energy as may be produced by the Commission incident to the operation of research and development facilities or facilities for the production of fissionable material.

The majority report of the joint committee on S. 3690 apparently construes this restriction to apply to section 44. It states in this regard:

This section will permit the Commission to dispose of that utilizable energy it produces in the course of its own operations, but does not permit the Commission to enter into the power-producing business without further congressional authorization to construct or operate such commercial facilities.

ADVERSE EFFECT UPON PUBLIC BODIES AND RURAL ELECTRIC CO-OPS

Rural electric power systems and other small producers and distributors of power today generate only a small percentage of the power they use. About half of their power is obtained from commercial power companies, and about 30 percent from the Federal Government. The great number of these systems represents a tremendous financial investment by American small businessmen and farmers.

In the not too distant future, power produced from nuclear sources will be lower in cost than power from conventional sources, if the atomic powerplant is large enough. If the smaller systems are unable to obtain the cheaper power from the Federal Government the utility giants will be in a position to victimize them or to put them out of business by refusing to furnish them with cheap power and underselling them on the customer market. The history of monopoly big business in America shows that the giants of industry have not hestitated to resort to such practices when the opportunity has been afforded them.

Not only have they not hesitated, but that has been their policy; not only have they not hesitated, but that is the chief device they use for squeezing the small operator out of business. Yet we have the administration coming forward with a bill having in it not a word which will protect the interests of the rural electric cooperatives of the United States, once the private utilities begin to produce power generated from atomic energy. To the contrary, we have in the report filed with the bill, and in the pronouncements of the President of the United States contained therein, clear proof and evidence that the President does not intend that the cooperatives and the small-business men shall be protected by public-preference clause from this kind of squeeze play, which has characterized the development of monopoly in the United States throughout our history.

That is why, with some emphasis, I raise this warning today. That is why I want to be certain that the RECORD is clear because, Mr. President, the record must be made on this point, so that no Member of the United States Senate can

ever go back to his constituents and say, "I did not understand that. That was not called to our attention. It was a very long bill and the report was extensive. It came up in the dying days of the 83d Congress. I never knew that that matter was involved in the bill. I am sorry, but, you know, I am so busy in Washington, I have so many things to do, and the strain, stress, and work of the job is so terrific that sometimes these details just slip by me."

Mr. President, this is one detail I do not intend to let slip by the knowledge of any Member of the United States Senate, if my warning them can call their attention to it. I am putting it into the RECORD now, and next week, on various occasions, I shall repeat it, so that the warning flag will be up.

There is no provision in the bill to protect the cooperatives and the small-business men and the electric-power consumers from being transgressed upon by the private monopolies which will come to dominate the atomic-energy field if the bill in its present form becomes law.

Those who can read know of the warning, and those who can understand the English language can see for themselves that there is no protection in this bill for the little people of America. Senators will have a chance next week to vote on some amendments that will correct this glaring deficiency in the bill, because Senator GILLETTE and other Senators of whom I am proud to be one, has introduced an amendment which will incorporate in the bill a public preference clause. This, in conjunction with section 44 and a new section 45 proposed by the Senator from Colorado [Mr. JOHNSON], would provide a public power yardstick. The Johnson amendment would make it possible for the Atomic Energy Commission and Federal power agencies to proceed to generate power in Government plants for Government use and to be marketed to co-ops, PUD's, industry, and private utilities. That does not mean the Government will not also buy power from private utilities.

Many who are discussing this subject are dealing in nonsense and hogwash. Advocates of the bill talk about protecting the public, but at the same time deny the jurisdiction, authority, and power of the Atomic Energy Commission, or some other agency of the Government, to proceed to build atomic energy plants capable of producing power on a commercial basis and making such power available as a public power yardstick.

Mr. President, I was somewhat amused earlier this afternoon when I heard a speech on the Republican side of the aisle comparing TVA to some sort of a communistic enterprise in the United States. I thought it was a very funny speech. But it is a speech the American people are going to hear about between now and November 1954, because, in my judgment, it lays down one of the cardinal principles of the economic philosophy of the Eisenhower administration in respect to TVA. I shall await with interest the repudiation of that principle from the White House any time between now and election day in November 1954.

Mr. President, when Republican Senators rise on the floor of the United States Senate and make that kind of speech and preach that kind of political dogma, I intend to be one who will hold them politically responsible for that kind of attitude. There it is now, as an historical fact, for all to read in the CONGRESSIONAL RECORD—a speech which leaves no room for doubt that there are those who think that TVA apparently has some kind of a communistic pattern connected with it; whereas the Senator from Oregon asserts here today that TVA is one of the mighty pillars—yes, it is one of the keystones—in the great temple of American private enterprise, because it is one of the fine cooperative ventures between Government and private industry that makes possible a strong private enterprise system in the Tennessee Valley.

The suggestion, Mr. President, that the people of the United States had been subjected to some kind of a communistic pattern by one of the greatest Presidents and one of the greatest liberals, in my judgment, who ever lived in the history of the United States, Franklin Roosevelt, demonstrates itself for the nonsense that it is.

The Republican Party is going to find, before it gets through with the TVA issue, Mr. President, that once the American people come to have their memories refreshed as to the sound economic and political principles upon which the TVA was founded, they will not be ready to destroy TVA.

I was highly amused when it was suggested, in the Republican speech made this afternoon to which I have referred, that the American people in other areas of the country are weary of paying tax dollars for the benefit of people of the Tennessee Valley. The fact is that in the Tennessee Valley we are dealing with great self-liquidating projects which have created, and are creating, tax dollars which are going into the Treasury amounting to many times the cost of such projects.

The tax dollars, coming from new industries, that flow into the Treasury because of the impetus produced by the TVA and the powerful shot in the arm it has given to private enterprise in the Tennessee Valley, are so many times greater than the small amount private utilities in that area would ever pay into the United States Treasury, if they were allowed to keep their stranglehold over the economic life of the Tennessee Valley, that all it takes is a pencil and a pad of paper and a knowledge of second-grade arithmetic to convince anyone that the Tennessee Valley Authority is one of the soundest economic projects in which the American people ever invested their money.

I wish to summarize that point, Mr. President, because it is vital to those of us who live in the Pacific Northwest. We hear the same phony argument in the Northwest about our multipurpose dams. We are accustomed to the argument that those of us who are advocating great multipurpose dams are creeping Socialists. Well, at least that is a kinder description than used to be sometimes applied to Norris. That is a kinder description than used to be applied to the elder La Follette, Dill, Couzens, Borah, Ladd, Johnson, and the other liberals who preceded us in the Senate, and who fought for the development of a sound power policy. But even if harsher words were used, I do not intend to let the critics get away from the economic fact that the self-liquidating—which means self-paying—multipurpose dams which have been built in the Pacific Northwest have resulted in the development in that area of private enterprise that would be almost nonexistent if the Government had not, through those dams, made cheap power available in the Pacific Northwest.

Our economic future depends upon cheap power. One reason the Senator from Oregon fights so vigorously on the floor of the Senate against the development of the so-called partnership scheme of the President of the United States is that he knows it for what it is. It is but a clever smokescreen in an attempt to hide the effort to undermine the multiple-purpose-dam program of the Pacific Northwest and to turn these great public resources over to a private-utility-monopoly combination. So I raise my voice against it when I see it showing its ugly head in connection with this atomic-energy program, because it is identical to, and represents again, at but another point, the undermining and undercutting attack by the President of the United States upon the people's heritage in the natural-resource potential of America.

Mr. President, we have to fight on this point. We have to fight on it here in the Senate, and we must fight on it on the hustings. We must take it to the political platforms of the country. We must fight on it wherever this issue is raised for consideration by free men and women, because I believe that it is no mere phrase or figure of speech or matter of language, but it is a statement, a verbal symbolism, that presents a profound truth, when I say, as I said yesterday afternoon on the floor of the Senate, and as I have said again today, and as I now repeat, that the great danger of this bill, in its present form, is that if enacted in the form in which it is now written, the Congress, including the Senate, will sell the American people for generations to come into a monopolistic economic bondage until such time—if the bill is enacted—that it is erased from the statute books.

So my plea is not to enact the bill in the first instance. My plea is that this is the time to prevent the kind of economic slavery this particular bill represents; this is the time to strike a blow for economic freedom for the private-enterprise system in the United States, because there is no connection between private monopoly and private enterprise. Private monopoly is equivalent to economic fascism and communism. Mr. President, it makes no difference whether the welfare of the people is subject to dictation by economic fascism or by economic communism. The fact is that if a segment of the economy is turned over to a monopolistic combine, that combine, not the people or their Government, rules the economic life of the people.

I know that in the haste and the stress of the many issues that today are bom-

barding the thinking of the American people, it is necessary to be on guard against intellectual fatigue on the part of the public. I think some symptoms of such fatigue are to be found today in the Nation. The people are so perplexed and confused, that they are saying "What are we to believe? We hear one thing, and then we hear another. We are simply exhausted over the conflicting points of view."

As a result of such intellectual fatigue, Mr. President, many persons are yielding to the self-satisfying and self-comforting psychological reaction of wishful thinking. They want to believe what they want to believe. They simply do not want to believe that an administration would permit the development of the kind of danger about which I am warning today, and so they have a tendency to take comfort in the old rationalization, "Why, it just cannot be so; that just cannot happen."

But, Mr. President, again I point out that it is happening. Again I warn the American people to remember that the tremendous power of the big business forces in the United States, that is represented by this administration, are taking over the people's rights in the field of natural resources, on issue after issue. We have been fighting, and we have fought, at this session of Congress. We have lost some battles; but when we have been turned back we have remained grouped in orderly fashion, awaiting another day when we will go forward.

I am pleading that we do not turn this contest into another defeat for the principles of power policy developed over 50 years. I am pleading that a majority of the Members of the Senate recognize, before it is too late, that with this bill we find a line on which to make the fight for the preservation of the public's interest and the public's rights in the development of atomic energy for the benefit of future generations of Americans, not for the selfish benefit of the profiteering dollars of the tribute takers, the private utility would-be monopolists.

WE NEED A POSITIVE PROGRAM OF FEDERAL POWER DEVELOPMENT

If the people of the United States are to realize the maximum power benefits from their $12 billion investment in the atomic energy program—if they are not to become the victims of monopoly power practices in the atomic power field—a positive program of atomic power production by the Federal Government is essential.

TRADITIONAL SAFEGUARDS FOR UTILITY CONTROL OMITTED

Section 7 (a) of the Federal Power Act provides that in issuing preliminary permits or licenses for the development of any waterpower resource, "the Commission shall give preference to applications therefor by States and municipalities" provided the plans of such public agencies are equally well adapted to meeting the requirements of the act for full use of water resources. "Municipality" is defined to mean "any city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the laws thereof to carry on the business of developing, transmitting, utilizing, or distributing power."

Public preference clauses in power laws give the people who own the natural resources the first chance at developing those resources. A local body is limited as to power sites, while a private utility company may have many opportunities to invest its capital in other locations. In the event that a public body some day is able to finance its own atomic power plant, it should have a preference over an outsider who desires to sell power in its area when it comes to getting a license for a power plant from the Atomic Energy Commission. The administration's atomic energy bill contains no such public preference clause in the licensing section.

On May 10, 1954, Walker L. Cisler, president of the Detroit Edison Co., representing a group of privately owned electric power, industrial, and engineering firms associated in the Dow Chemical-Detroit Edison & Associates atomic power development project, testified before the Joint Committee on Atomic Energy. Mr. Cisler submitted a written statement which read in part:

> The power companies engaged in this project are seeking the opportunity to utilize this new source of heat energy from atomic reaction, in common with all others at any time engaged in electric power production, without favoritism or preference for any public or private body. * * *We do not believe that private industry should have any preference as against the Federal Government or units of local government. Similarly, the Federal Government should not create a preference giving to itself or local units of government a preference against private industry.

What could be clearer? That spokesman for the private monopolies said, in the course of his testimony, they are seeking this asset without having any public preference provision written into the law.

PRIVATE UTILITIES HAVE INSIDE TRACK

Private power companies are already engaged in the atomic energy development program. As was shown in the joint committee hearings, public bodies other than the Federal Government have been unable to participate in the power development program. Present participation by the private companies assures that they will be the first to apply for and obtain licenses for atomic power production. Lack of knowledge in the field and financial limitations make it extremely unlikely that for many years the States or municipal groups will be able to enter the area of atomic power production.

Representatives of the giant utilities who demanded that the new Atomic Energy Act be written without public preference clauses obviously had two things in mind, one, they wanted a bill which contained none of the usual safeguards of the public interest contained in the Federal Power Act, and two, they were looking ahead to the time, 2 or 3 decades from now, when some of the larger public bodies might consider building their own atomic powerplants. The representatives of the people in the Senate should be equally farsighted and act now to protect the public interest.

Every law governing federally generated power in the last 50 years has contained a provision according preference to municipal, cooperative or other public bodies in the purchase of power from Government projects. It would avail these bodies little if the Federal Government were allowed to produce and market power but they were unable to buy it. Section 44 of the administration atomic energy bill, covering the marketing by the Atomic Energy Commission of byproduct electric energy, contains no such preference provision. The section should be amended in line with the established Federal power policy and program; and we intend to offer such an amendment next week.

A BLANK CHECK FOR THE PRIVATE UTILITIES

Safeguards to protect the public interest have been formulated by Congress over the years and incorporated in the licensing provisions of the Federal Power Act. Aside from section 271, providing that nothing in the act shall affect the authority or regulations of Federal, State, and local regulatory agencies, S. 3690 contains no recognition of the public interest in securing electric energy from this new source at the lowest possible rates consistent with sound business practices and the right of the atomic power licensee to obtain a reasonable profit on his investment.

The bill does not contain a provision requiring agreement by the applicant for a license, where the end is generation of electric power for sale, to claim no more than its net investment in such facilities for ratemaking purposes.

There is no provision for the right of the United States, after reasonable notices, to take over, maintain, and operate a facility at the end of the license period on payment to the licensee of its net investment.

There are no provisions in the bill setting up specific hearing and notice procedures in connection with license applications to assure full protection of the rights of interested parties.

The bill lacks provisions for Federal accounting control of licensees where such licensees are not also engaged in the transmission of electricity or sale of electricity in interstate commerce for resale.

These and other safeguards of the public interest in power production and marketing are conditions attached to all licenses for hydroelectric power developments under the Federal Power Act.

Why not have them in this bill? The reason, I think, is obvious, because through this bill the private utilities are making a concerted drive to obtain monopolistic control over the production of electric power from atomic energy, and they are receiving the complete, wholehearted cooperation of the Eisenhower administration. If they did not have it, the administration would have written into the bill some of the safeguards I have just enumerated. They are safeguards that are found in or govern every single hydroelectric power bill enacted by Congress in pursuance of what has been our Federal power program.

As indicated by the Federal Power Commission statement previously quoted, they should be applied to licensing for atomic-power production in order to assure that the public interest in this great new resource is protected. The administration's atomic-energy bill would allow the Atomic Energy Commission to turn over to favored utility companies a resource in which the people have already invested $12 billion, and which has a value many times that amount, under licenses unconditioned except for the requirements of national security and public health and safety.

The attitude of the President and his party with respect to the benefits expected by the people from the atomic-power program apparently coincides with that of the National Association of Manufacturers, which quoted in its booklet, Free the Atom, the following statement made by Mr. Alfred Iddles, president of the Babcock & Wilcox Co., one of the companies now participating in the atomic program, at a hearing of the joint committee last year:

> The argument has been made that the United States taxpayers, who have paid the bill to the extent of some $10 billion to date in the development of atomic energy, will not receive any return on their investment if the law is modified to permit private industry to utilize the accumulated knowledge, and that only a relatively few industrial companies will benefit. We believe that the taxpayers' expenditures have been primarily a military investment and, as such, we have already received the benefit in terms of national security at a critical period when equal security was unobtainable by other than atomic weapons.

Is not that interesting? I do not know how dumb he thinks we can be. But let us analyze that statement for a moment. What Mr. Iddles is trying to say, and trying to get by with, is that because in the first instance we spent the money in order to develop an atomic energy program for the production of atomic weapons, the American people have received all the benefit that should accrue from the expenditure of $12 billion of their own money, and therefore any other benefits which may accrue from this expenditure ought to go to private monopoly.

I have heard a great deal of non sequitur reasoning in my life. I have listened to a great many fallacies audaciously advanced. As a lawyer I have observed much special pleading. But I do not know that I have ever seen a clearer example of an affront to the intelligence of the American voter than that statement by the representative of monopoly. Of course we developed the atomic energy program as a defense measure for the production of atomic weapons which would help us win the war against the enemies who confronted us in World War II. But it does not follow that when the war is over we should then give any investment we made in the development of a great project that can produce tremendous quantities of power for the benefit of all the people through a private enterprise system, to a group of private monopolists. It does not follow because such projects helped win the war, that out of a feeling of charity engendered by the good fortune we had in winning the war, we ought to give all the economic benefits flowing from such projects to private monopoly.

I do not know whether Mr. Iddles knows it or not, but if he does not I will let him on a big secret. The American people would laugh at him if he should try seriously to get them to accept his argument that now, out of a sense of deep gratitude because the atomic energy program produced atomic bombs which helped to win the war, they should turn over to private monopoly the peacetime benefits of the program.

If there remains any doubt of the intention of big business to take over the people's atomic power resource and exploit it without regard for the public interest, it should be dispelled by that statement of the spokesman of the National Association of Manufacturers.

PATENT PROVISIONS INVITE MONOPOLY

The huge expense involved in atomic power plants will limit the amount of competition which will exist in the atomic-energy power field. If the administration has its way, there will be little or no competition for the giant utility companies from the Federal Government. Conditions are ripe for the giants to establish a monopoly in the atomic power business.

One of the things that can assure that there will be a monopoly operation in the field of atomic power is the possibility that the few companies now engaged in atomic research and development in the Government program may, by virtue of their experience and their position of being "on the spot" where inventions and discoveries occur, get patent equities and so preclude prospective competitors from entering the field and availing themselves of the atomic technology which has been paid for with the tax money of the people of the United States.

Mr. Iddles, the president of a company which has been in on the ground floor of the atomic-development program, who testified at a May 10, 1954, hearing of the joint committee was asked the following question:

> Do you feel that it would be reasonable if some device could be worked out so that no undue advantage in the patent field either by past experience or equipment or anything of that kind might accrue to certain so-called favored companies for a period of time?

Again Mr. Iddles revealed the attitude of big business in the atomic-energy program when he answered:

> I will remark that whereas this is not a generality applying to all manufacturers, it happens that all of my competitors are already in the business, and if I can beat them out in doing the next job in competition better, and get a patent on it, I ought to be able to do so. They have all supplied the equipment.

That is generous of him, is it not? The generosity of the big business "boys" is remarkable. However, it is a generosity that is directed only at selfish aggrandizement. They seek to be generous only in connection with a Government program that enhances their interests. That is exactly what Mr. Iddles' testimony means. What he is really saying is, "I am going to get it if I can. To heck with the public interest."

That is why in the Senate we have the watchdog job resting on our shoulders. That is why we sit here as the guardians of the public interest. That is why we must make certain that legislation does not go through the Senate which would promote the kind of selfish interest and selfish economic philosophy demonstrated by Mr. Iddles in his testimony last year before the joint committee.

The Atomic Energy Act of 1946 bans patents for inventions or discoveries which concerned the production of fissionable materials or the utilization of such material in atomic weapons. Patents could be granted in the nonmilitary field, but they were subject to a "public interest" declaration under stated conditions, in which case the Atomic Energy Commission and its licensees automatically were entitled to their use, with reasonable compensation to the owner.

S. 3690 provides in section 152 that whenever a patent has been declared affected with the public interest, the Commission automatically is licensed to use the invention or discovery covered by the patent, but another person desiring to use the patented invention or discovery must apply to the Commission for a patent license, which the Commission has the discretion to grant under certain conditions.

Under the McMahon Act the declaration of a patent to be "affected with the public interest" was mandatory, provided that (a) the invention or discovery covered by the patent utilizes or is essential to the utilization of fissionable material or atomic energy, and (b) the licensing of such invention or discovery is necessary to effectuate the policies and purposes of the act.

Under the new administration bill an applicant for a patent license must prove to the satisfaction of the Commission that the use of the invention or discovery is of primary importance to the use of fissionable material or atomic energy, and of primary importance to the effectuation of the policies and purposes of the act.

Section 105 (a) of S. 3690 applies the stringently limited test of primary importance in contrast with broader conditions under which patents are now deemed to be affected with the public interest under the McMahon Act.

The patent owner is entitled to a hearing on the matter of whether or not the discovery or invention is affected with the public interest, and it is a possibility that if he were overruled in his argument that the patent should be withheld from the public interest sphere, he could appeal the Commission's decision to the courts and delay the issuance of licenses, perhaps for years.

After the Commission has declared the invention or discovery to be affected with the public interest, the applicant could then file his license application under section 152 (b) of the bill. The Commission, under the bill, would be empowered to grant the license if it finds that the use of the invention or discovery is of primary importance to the conduct of the activity in which the applicant

proposes to engage, which in the usual case would be the production of power.

An additional condition to be met by the applicant after satisfying all of the primary importance tests is contained in section 152 (e) of the bill. The applicant would have to prove that he could not otherwise obtain a patent license from the owner of the patent on terms which the Commission deemed to be reasonable for the intended use of the patent to be made by the applicant.

It can readily be seen that it would be a difficult thing for a newcomer into the field of atomic-energy power production to obtain licenses for the use of patented discoveries or inventions which would be necessary to engage in the manufacturing of atomic-energy power. As stated in the minority report of the joint committee on S. 3690:

> The application that can survive this procedure will be an impressive one indeed. The patent attorneys may derive more satisfaction from section 152 than the would-be user of the invention.

SO-CALLED COMPULSORY LICENSING WOULD BE SHORT LIVED

The administration bill provides finally with regard to the patenting of inventions and discoveries that the provisions for the so-called compulsory licensing of patents shall expire on September 1, 1959. I have previously quoted testimony to show that the reactor-development program will take at least 5 years, and that it will be more than 10 years before more than a few companies will enter the field of atomic power production and marketing. Provisions for licensing the use of patented discoveries and inventions which are limited to 5 years will, in my judgment, accomplish little in the way of preventing the establishment of a patent monopoly by the favored companies now participating in the atomic-energy development program.

Section 151 (c) of the bill would require persons who have made or hereafter make any discoveries or inventions useful in the production or utilization of special nuclear material or atomic energy to file a report with the Commission, containing a complete description of the discovery or invention unless such description is contained in an application for a patent filed with the Commissioner of Patents.

Although drastic penalties are provided for violations of certain provisions in the bill, no penalty is provided for failing to report inventions or discoveries under section 151 (c).

At the present time Government contracts with private participants in the atomic-energy development program contain so-called type A, B, and C patent clauses, which require those who make discoveries or inventions while engaged in the program to turn them over to the Government.

In his testimony before the joint committee on May 10, 1954, Mr. Albert Iddles was asked about the possibility of companies now participating in the program using their favored position to advantage in the matter of patents. I should like to quote from pages 97 and 98 of the joint committee hearings an exchange of questions and answers between Representative CHET HOLIFIELD and Mr. Iddles:

Representative HOLIFIELD. You want to place your company in the position that because of this long experience it can step in and get patent equity advantages, and at the same time preclude others not having had that experience and not being fortunate enough to obtain some of the future limited contracts from obtaining the advantage of this technology which has been paid for by the people's money, is that not true? That is your position?

Mr. IDDLES. It happens that the Atomic Energy Commission has been extremely successful in preventing our monopoly, and our competitors have been equally well-provided with opportunities.

Representative HOLIFIELD. That is true, but that is because the McMahon Act had provisions in it and because the contracts had clauses in them. I notice as part of your testimony that you advocate that the Atomic Energy Commission—on page 2 of your testimony:

It is expected that this change will lead to a corresponding modification in the patent clauses used in research and development contracts issued by the Commission and its prime contractors. So what you are in effect asking is that if no patent provisions are put in the bill, that the Commission also refrain from using type A, B, and C patent clauses, which it now puts in its different contracts, and which has given to the Government that protection which you mentioned. Is that not true?

Mr. IDDLES. I hope that the new law does eliminate those clauses because I know of several instances in which companies have had bright ideas that they have not divulged to anybody because they would not give them out.

Representative HOLIFIELD. That is a very interesting statement on your part. We have been contracting with these companies and we have been paying them the taxpayers' money, and they have come across as a result of those contracts certain bright discoveries, and they have refrained from bringing them out in the open because they wanted to hold it for their own special interests.

Mr. IDDLES. No, sir.

Representative HOLIFIELD. Is this acting in good faith with the Government?

Mr. IDDLES. Yes, sir. Those ideas did not emanate from anything that was learned from the Atomic Energy Commission or any Government information. They are bright ideas concerning how to put something together for a particular circumstance.

Representative HOLIFIELD. We were talking about contracts for the research and development in the atomic energy projects, sir, when you made your statement.

Mr. IDDLES. Anything that comes up under a research and development program from information that is obtained from Government sources is presumably sent back to the Government, which is O. K.

Later on in the testimony there was the following exchange of questions and answers:

Representative HOLIFIELD. So during this period of time when we are developing these reactors which you say will possibly be from 5 to 10 years, there will be no protection to the Government against favored participants patenting these processes or mechanical inventions, even though the 5-year compulsory licensing provision is put into the act.

Mr. IDDLES. Would you have it otherwise?

Representative HOLIFIELD. So if we have to have protection for the Government, we would have to have it at least 10 years according to your statement.

Mr. IDDLES. Would you have it otherwise?

Representative HOLIFIELD. I am asking you the question, sir. I am seeking information on this subject.

Mr. IDDLES. The more incentive that is provided, the faster you will have inventions and development work carried on. I do not honestly think that the Government or the people of the United States are going to suffer from letting industry have those patent rights.

Representative HOLIFIELD. But you would preclude all industry from having those rights.

Mr. IDDLES. No.

Representative HOLIFIELD. You would want those rights to accrue to the favored few who participate on Government contracts.

Mr. IDDLES. No; I did not say that.

Representative HOLIFIELD. That is the natural result of your statement, sir.

Mr. IDDLES. No; because there are all kinds of competitors in all parts of this field that are being engaged in this work. Some of them might come along 10 years from now and try to get into the field and be handicapped. So it is now with the design of the steam turbine. A man that now wants to build a 100,000-kilowatt turbine is terribly handicapped because of the patents owned by General Electric, Allis-Chalmers, and the others.

Representative HOLIFIELD. They got those patents as a result of the expenditure of their own money, and not the expenditure of the tax money of the people. The tax money did not build that technology.

Mr. IDDLES. The taxpayers' money is not determining these new inventions, either.

On May 19, 1954, Mr. Iddles addressed a letter to the joint committee asking that his answers to Representative HOLIFIELD be withdrawn from his testimony. Apparently Mr. Iddles realized some time after his May 10 appearance before the committee that he had, to us a colloquialism, "let the cat out of the bag," insofar as the attitudes of the industrial giants who are in on the ground floor of the atomic energy program were concerned.

In my judgment the statements of Mr. Iddles before the joint committee demonstrate the truth of the charge that big business first-comers in the atomic energy program see the opportunity to control and monopolize the production and marketing of atomic power through ownership of basic patents.

Mr. Iddles testimony also goes to show that the 5-year so-called compulsory licensing provisions of S. 3690 would have little or no effect in warding off a patent monopoly.

TRIBUTE TO REPRESENTATIVE HOLIFIELD

Mr. President, having mentioned the name of that great Representative from California, CHET HOLIFIELD, who is a member of the Joint Committee on Atomic Energy, I wish to say this about him for the RECORD at this time. I think the statesmanship he has demonstrated as a member of the Joint Committee on Atomic Energy should commend him to the people of his district and to the people of the United States. I believe every man and woman in the United States owes a great debt of gratitude to CHET HOLIFIELD, of California, for the diligence he has exercised in calling the attention of the American people, through the hearings which have been conducted on this bill, to the shortcomings and dangers of the bill. That represents, I think, statesmanship of the highest order; and

I wish particularly to congratulate him on the magnificent job he has done in the preparation of the minority views of the Joint Committee on this bill.

In my judgment, American history will reflect great credit on the work of CHET HOLIFIELD in connection with the atomic-energy program. I think the voice of warning he has raised throughout the hearings and in the minority views, and is presently raising on the floor of the House of Representatives as this matter is under discussion, is a voice which should be heeded by the entire Congress before the bill is passed. It is a voice which should be heeded by way of writing into the bill the major amendments proposed by CHET HOLIFIELD, of California.

As the representative of the Independent Party in the Senate, Mr. President, I wish to take advantage of this opportunity to pay my high respects to CHET HOLIFIELD and to express my very deep regard for his statesmanship.

HOW MUCH FINANCIAL RISK IN ATOMIC POWER PRODUCTION?

Spokesmen for industry are loud in their claims that private industry is now investing large sums of money in the atomic-energy program and that such investment involves considerable financial risk. Listening to these claims, one might be talked into believing that corporations participating in the development program and even those entering the atomic power business, stand a chance to lose great amounts of money. There is evidence that the costs of industry's present participation in the program are paid for by the American people and that investment in the power business will be underwritten—if S. 3690 is enacted into law—by the Federal Government in the form of a substantial subsidy.

In fact, Mr. President, one of my objections to the bill is that it is, as I view it, a complete giveaway to the private utilities of the total cost of a power program which they would own and control and monopolize. If we study this bill I think we shall find in it one sleeper clause after another which would have the effect of giving away to private monopoly the people's heritage in the atomic energy program.

We see some evidence of this in the testimony, on May 10, 1954, of Mr. Walker Cisler, president of the Detroit Edison Co., who stated that money now being spent in the atomic energy research and development program by his company is absorbed in the operating costs of the company, and that it is a factor in the establishment of the company's rate structure by the Michigan Utility Commission. In other words, the people of the State of Michigan are paying for Detroit Edison's participation in the program by paying higher prices for power hearings, part I, page 85.

The testimony of Mr. Cisler makes it very clear that the policy of his company has been to figure into the costs of the operation of the company, the rate base, the expenditures which have been put into the operation of atomic energy development, and the rate payers, the consumers of the company in Michigan, have paid the bill. Of course, that is a typical device of the private utilities. That is why the consumers of electric power across the country are paying, in their electric bills, the high cost of the national advertising program of the power combines of the United States, which are propagandizing the American people with fallacious stuff to the effect that the public power yardstick is some form of creeping socialism. This advertising, by way of political propaganda, is being paid for by the rate payers of the private utilities throughout the country.

I have been heard to say before that what Congress needs to do is to pass a law which will deny to the private utilities any right to incorporate in their accounting systems the cost of that kind of political advertising.

There is no reason in the world why the electricity users of Michigan, Illinois, Ohio, California, Oregon, or any other State in the Union, should have to pay, in their electric power bills, the cost of the political advertising propaganda of the private utilities.

Here we get in the record of the case further testimony, which contains the admission, in this instance, of Mr. Cisler, that what the private power companies are doing, so far as their atomic energy development costs are concerned, is including it in their determination of the rates to be paid by their electric users. They are the ones who pay the bill.

We can be quite certain, Mr. President, that when the deal is consummated the people will pay for this giveaway to the private monopolies.

EARLIER AEC-WHITE HOUSE PROPOSED BILLS REQUESTED FOR THE RECORD

Mr. President, I have asked the distinguished senior Senator from Iowa [Mr. HICKENLOOPER] to be on the floor while I present my next argument. In keeping with the courtesy he always extends to the junior Senator from Oregon, the Senator from Iowa is present, and I desire to present the argument now, because it is really based upon a desire on the part of the Senator from Oregon for information, if the assumption I make is correct.

Mr. President, on the basis of what I have been led to believe, the bill should not be voted upon for several days, so that Members of the Senate may have an opportunity to study and compare it with the bills which President Eisenhower is reported to have recommended to the committee.

I do not know what he asked. I have been advised that early in 1954, before the hearings, that the Atomic Energy Commission sent over to the joint committee, with Budget Bureau approval, two separate bills.

One was an amendment to the bill providing for the exchange of information on uses of atomic materials with certain foreign countries.

The second dealt with encouraging the peacetime use of atomic power.

I have examined the committee hearings carefully, but I find no trace of the proposals which were cleared by the White House. Apparently they were not even dignified by publication and public consideration.

Instead, a Cole-Hickenlooper draft was the subject of hearings; then there was a clean draft of the Cole-Hickenlooper bill, and finally the bill now being considered was developed by the committee. And even after it was introduced by the cochairmen, the committee developed further amendments.

I would like to inquire of the Senator from Iowa if copies of the two-package proposals of the AEC, cleared by the White House, are available so I can introduce them into the RECORD, thus making them available to all Members at least by the first thing on Monday morning.

Certainly the Congress should clearly understand any differences between what the President wanted and the present bill.

I am disturbed that the two bills were not made public, so that the witnesses who appeared before the joint committee could comment on them, and could give Congress the benefit of the public view.

It may be suggested that members of the Atomic Energy Commission testified in favor of the Cole-Hickenlooper bill. Their testimony did not have Budget Bureau clearance. I have not had the time to determine—as I should like to determine before I vote on this measure—what changes they proposed in the draft, and whether the changes were made.

This is particularly important because some of my colleagues on the Democratic side of the aisle may want to use the President's bills in drafting amendments to the bill, so as to make it conform to his views, and then help put down the Republican opposition to the things he wants.

It would be amazing if President Eisenhower asked for the international provisions contained in the Cole-Hickenlooper bill now before the Senate. If that is what he wanted, then he has backed away from the bold approach to the matter which he made before the United Nations.

Mr. President, I ask unanimous consent that the two administration drafts may be printed in the RECORD, if my assumption is correct, and if the members of the Joint Committee, or the committee staff, can supply me with them if, in fact, they ever existed.

Mr. HICKENLOOPER. Mr. President, I shall have the two drafts in perhaps 5 minutes. I am happy to place them in the RECORD verbatim.

There has been no concealment or attempt to conceal. The drafts were sent to the committee as tentative recommendations for approaches to these two phases of the problem by the Atomic Energy Commission.

One draft, in the nature of a separate bill, had to do with the international exchange of information. The other draft had to do with the development of power and the opening of the present law to experimentation, research, and development by industry, private and public.

Some substantial revisions of the Atomic Energy Act have been indicated for some time. The Joint Committee considered that it was the part of wisdom to approach a comprehensive review and

correction of the Atomic Energy Act, and approached its work from that standpoint.

The general provisions and the general policy and theory contained in the two drafts sent to the Joint Committee by the Atomic Energy Commission have effectively been placed into the bill which we are considering now. As I have said, I shall, for the benefit of the Senator, as quickly as the one I sent there can get back from the office of the Joint Committee on Atomic Energy, make available a copy of each draft, which can be placed in the RECORD at this point, following the Senator's remarks, or at any other point desired.

I may inform the Senator from Oregon that I now have a copy of each of the recommended acts as they came from the Atomic Energy Commission. So far as one of the mimeographed copies of the proposed acts is concerned, it is a clean copy. That is the one contemplating the opportunity for peacetime research of power by private industry. The other draft, which has to do with the general subject matter of exchange of information internationally, is the shorter of the two proposed acts. It has been used by the committee staff, and there are some marks through it, but I shall ask the staff to work with the clerk so that the bill may be printed in the RECORD as it was originally drawn, and without making any deletions of any kind, because that is the actual bill. Therefore, I make available those two copies to the Senator from Oregon.

Mr. MORSE. I thank the Senator very much for his cooperation. I ask unanimous consent that the two drafts be printed in the RECORD at this point in my remarks.

The PRESIDING OFFICER (Mr. GOLDWATER in the chair). Without objection, the two documents will be printed in the RECORD at this point.

The documents are as follows:

An act to encourage the development of peacetime uses of atomic energy

Be it enacted, etc.—

PREAMBLE

Research and experimentation have progressed to the stage that the large-scale utilization of atomic energy for peacetime purposes appears possible within the foreseeable future. The development of a new source of economic electric power and of other industrial applications will contribute significantly to the material well-being of mankind. Widespread participation and investment will speed the Nation's progress toward this objective. However, the continuing significance of atomic weapons for military purposes and the unique safety problems associated with the utilization of fissionable material require public regulation of such participation.

In enacting the Atomic Energy Act of 1946 the Congress foresaw the necessity of future revision of the act. Such revision is now necessary to encourage the development of the peacetime uses of atomic energy. However, until peacetime applications of atomic energy have been further developed, and until experience has been gained in the licensing and regulation of peacetime uses of atomic energy, the act will necessarily remain subject to further revision from time to time.

SEC. 2. Section 4 of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"PRODUCTION AND UTILIZATION OF FISSIONABLE MATERIALS

"SEC. 4. (a) Definitions: As used in this act, the term "process," when used in relation to fissionable material, means to process, fabricate, or refine fissionable material or to separate fissionable material by means other than isotopic separation from other substances in which such material may be contained; and the term "produce," when used in relation to fissionable material, means to process fissionable material, to separ te fissionable material by isotopic separation from other substances in which such material may be contained, and to produce new fissionable material.

"(b) Prohibition: It shall be unlawful for any person: (1) to produce fissionable material, except as provided in subsections (c) or (f), or (2) to utilize fissionable material, except as provided in subsections (c) or (f), or in sections 5 (a) (4) (A) or (B) or 6 (a), except under and in accordance with a license issued by the Commission pursuant to section 7.

"(c) Operation of the Commission's production facilities: The Commission is authorized and directed to produce or to provide for the production of fissionable material in its own facilities. To the extent deemed necessary, the Commission is authorized to make, or to continue in effect, contracts with persons obligating them to produce fissionable material in facilities owned by the Commission. The Commission is also authorized to enter into research and development contracts authorizing the contractor to produce or utilize fissionable material in facilities owned by the Commission to the extent that the production or utilization of such fissionable material may be incident to the conduct of research and development activities under such contracts. Any contract entered into under this section shall contain provisions (1) prohibiting the contractor with the Commission from subcontracting any part of the work he is obligated to perform under the contract, except as authorized by the Commission, and (2) obligating the contractor to make such reports to the Commission as it may deem appropriate with respect to his activities under the contract, to submit to frequent inspection by employees of the Commission of all such activities, and to comply with all safety and security regulations which may be prescribed by the Commission. Any contract made under the provisions of this paragraph may be made without regard to the provisions of section 3709 of the Revised Statutes (U. S. C., title 41, sec. 5) upon certification by the Commission that such action is necessary in the interest of the common defense and security, or upon a showing that advertising is not reasonably practicable and partial and advance payments may be made under such contracts. The President shall determine at least once each year the quantities of fissionable material to be produced under this subsection.

"(d) Irradiation of materials: The Commission and persons lawfully producing or utilizing fissionable material are authorized, subject to the provisions of section 7 with respect to activities licensed thereunder, to expose materials of any kind to the radiation incident to the processes of producing or utilizing fissionable material.

"(e) Manufacture of facilities: Unless authorized by a license issued by the Commission, no person may manufacture, produce, export, transfer, or acquire any facilities for the production or utilization of fissionable material. Licenses shall be issued on a nonexclusive basis for such periods of time, not to exceed the period which in the opinion of the Commission is necessary to accomplish the purposes of the license, as the Commission may specify and in accordance with such procedures and upon such conditions as the Commission may by regulation establish to effectuate the policies and purposes of this act. Such licenses shall specify the activities in which the licensee is authorized to engage and shall be nontransferable. The Commission shall, prior to the issuance of any license, notify the Attorney General and the Federal Trade Commission of the proposed license and the proposed terms and conditions thereof, except such classes or types of licenses as the Commission with the approval of the Attorney General may in advance determine would not significantly affect the consistency of the licensee's activities with the antitrust laws. Thereupon the Attorney General after consultation with the Federal Trade Commission shall, within 90 days after receiving such notification, advise the Commission whether, insofar as he can determine, the proposesd license would tend to create or maintain a situation inconsistent with the antitrust laws. Upon the request of the Attorney General the Commission shall furnish or cause to be furnished such information as it may possess which the Attorney General determines to be appropriate or necessary to enable him to give the advice called for by this section. The Commission shall advise the Attorney General whenever in its opinion any activities licensed pursuant to this subsection involve or threaten to involve a violation of the antitrust laws. Nothing in this act shall impair, amend, or modify the antitrust laws or limit and prevent their application to persons licensed pursuant to this section. Licenses issued under this section shall contain a condition requiring the licensee to reimburse the Government for the cost of personnel security clearances required pursuant to section 10 (b) (5) (B) (i). The Commission may revoke any license issued pursuant to this subsection from any licensee who willfully violates any condition of such license or any applicable provision of this act or of any applicable regulation or order issued pursuant to this act, or from any licensee who fails, upon notice from the Commission of any such violation, to take within a reasonable time such action as the Commission may require to correct or prevent the recurrence of such violation. Any such revocation shall be determined on the record after opportunity for a hearing in accordance with the requirements of the Administrative Procedure Act, subject to such regulations as the Commission may find necessary to safeguard restricted data: *Provided*, That the Commission shall have the authority to suspend any such license prior to a hearing whenever it deems such action to be necessary in the interest of the common defense and security.

"(f) Exemption for research and medical therapy and processing contracts: Nothing in this section shall be deemed to prohibit or to require a license for (1) the manufacture, production, acquisition, or transfer within the United States of facilities which are useful for medical therapy or in the conduct of research and development activities specified in section 3 and which do not, in the opinion of the Commission, have a potential production rate adequate to enable the operation of such facilities to produce within a reasonable period of time a sufficient quantity of fissionable material to produce an atomic bomb or any other atomic weapon; (2) the production or utilization of fissionable material incident to the use of such facilities for medical therapy or to the conduct of research and development activities in any such facilities; or (3) the processing of fissionable material under contract with and for the account of the Commission.

"(g) Exemption for agencies of Department of Defense: Nothing in this section

shall be deemed to prohibit, or to require a license for, (1) the manufacture, production, acquisition or operation by any agency or contractor of the Department of Defense of facilities utilizing fissionable material for research and development activities or for the application of atomic energy to military uses, or (2) the production of fissionable material incident to such utilization.

"(h) Security regulations: The Commission is authorized to issue or prescribe such regulations or orders as it may deem necessary to control the dissemination of restricted data by any person licensed pursuant to section 4 (e) or exempted pursuant to section 4 (f) in such a manner as to assure the common defense and security and to prevent access to such data by unauthorized persons.

"(i) Byproduct power: To the extent that energy which may be utilized is produced by the Commission incident to the operation of research and development facilities or facilities for the production of fissionable material, such energy may be used by the Commission, transferred to other Government agencies, or sold under contract to public or private utilities or persons. Such contracts shall be for such periods of time as the Commission may deem necessary and shall provide for payment of not less than the fair market value of the energy sold. The Commission shall obtain the advice of the Federal Power Commission concerning the proposed terms of sale prior to entering into any contract for the sale of energy under this subsection. Nothing in this act shall be construed to authorize the Commission to engage in the sale or distribution of electric energy for commercial use except such energy as may be produced by the Commission incident to the operation of research and development facilities or facilities for the production of fissionable material."

SEC. 3. Section 5 (a) (2) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"(2) Ownership of fissionable material: All right, title, and interest within or under the jurisdiction of the United States, in or to any fissionable material, now or hereafter produced, except fissionable material acquired by any person pursuant to paragraph (4) below or which is lawfully produced by any person in accordance with sections 4 (f) or 7, shall be the property of the Commission, and shall be deemed to be vested in the Commission by virtue of this act. Any person owning any interest in any fissionable material at the time of the enactment of this act, or owning any interest in any material at the time when such material is hereafter determined to be a fissionable material, shall be paid just compensation for any material ownership of which is vested in the Commission by virtue of this act."

SEC. 4. Section 5 (a) (4) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"(4) Distribution of fissionable material: The Commission may sell, lease, loan, or otherwise make available fissionable material owned by it, and may authorize the sale or transfer of fissionable material by persons owning such material, to applicants requesting such material (A) for the conduct of research or development activities either independently or under contract or other arrangement with the Commission, (B) for use in medical therapy, or (C) for use pursuant to a license issued under the authority of section 7. The Commission is directed to distribute sufficient fissionable material to permit the conduct of widespread independent research and development activity, to the maximum extent practicable. In determining the quantities of fissionable material to be distributed, the Commission shall make provision for national military requirements as determined by the President and such provisions for its own needs and the conservation of fissionable material as it may determine to be necessary in the national interest. The Commission shall not distribute or authorize the transfer of any fissionable material to any applicant who is not equipped to observe such security standards to guard against loss or diversion of such material and such safety standards to protect health and to minimize danger from explosion or other hazard to life or property as may be established by the Commission."

SEC. 5. Section 5 (a) of the Atomic Energy Act of 1946, as amended, is amended by adding the following subsections 5 (a) (6) and 5 (a) (7):

"(6) Recall and confiscation of fissionable material: The Commission may recall or confiscate any fissionable material, including material acquired pursuant to section 5 (a) (4) or produced in connection with an activity licensed pursuant to section 7 or exempted pursuant to section 4 (f), from any person who is not authorized to possess such material or who wilfully uses such material in violation of any applicable provision of this act or of any applicable regulation or order issued pursuant to this act or in a manner other than authorized under or pursuant to this act, or who fails, upon notice from the Commission of such violation, to take within a reasonable time such action as the Commission may require to correct or prevent the recurrence of such violation. Any such recall or confiscation shall be determined on the record after opportunity for a hearing in accordance with the requirements of the Administrative Procedure Act, subject to such regulations as the Commission may find necessary to safeguard restricted data; provided, that the Commission shall have the authority to take immediate possession of such material prior to a hearing and pending final determination whenever it deems such action to be necessary to the public health or safety or in the interest of the common defense and security.

"(7) Safeguarding of fissionable material: The Commission is authorized to issue or prescribe such regulations or orders as it may deem necessary to guard against the loss or diversion of any fissionable material acquired by any person pursuant to section 5 (a) (4), or produced by any person in connection with any activity licensed pursuant to subsection 7 or exempted pursuant to section 4 (f), and to prevent any use or disposition thereof which the Commission may determine to be inimical to the common defense and security."

SEC. 6. Section 7 of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"LICENSES

"SEC. 7. (a) Authority: In order to encourage the development and to insure the exploitation of atomic energy for peacetime purposes, the Commission may issue licenses authorizing persons to utilize, process or produce fissionable material within or under the jurisdiction of the United States for the production of energy, scientific research and development, medical therapy, the production of byproduct materials or other similarly constructive purposes in accordance with the provisions of this section.

"(b) Issuance of licenses: The Commission is authorized to issue and renew licenses, on a nonexclusive basis, to applicants (1) whose proposed activities will advance or strengthen the utilization of atomic energy for peacetime purposes and will serve a clearly constructive purpose proportionate to the quantities of source or fissionable material to be utilized or consumed and (2) who are equipped to observe such security standards to guard against the loss or diversion of such material and such safety standards to protect health and to minimize danger from explosion or other hazard to life or property as the Commission may establish. The Commission shall issue such licenses for such periods of time, not to exceed the period which in the opinion of the Commission is necessary to accomplish the purposes of the license, as it may specify and in accordance with such procedures and subject to such conditions as it may by regulation establish to effectuate the policies and purposes of this act. Such licenses shall specify the activities in which the licensee is authorized to engage and shall be nontransferable. Prior to the issuance of any license or the denial of any application therefor, the Commission shall publish in the Federal Register, to the extent consistent with the safeguarding of restricted data, notice of the principal terms and conditions of the proposed license or of the reasons for which the Commission proposes to deny the application, including a description of any arrangement or contract proposed to be made with the applicant pursuant to section 7 (d) or (e). The Commission shall afford a reasonable opportunity for any person who would be materially affected by the issuance or denial of a license or by any such proposed arrangement or contract to submit to the Commission any relevant facts or arguments in support of or in opposition to the proposed license or the proposed denial of the application. Licenses issued under this section shall contain a condition requiring the licensee to reimburse the Government for the cost of personnel security clearances required pursuant to section 10 (b) (5) (B) (1). The Commission shall, prior to the issuance of any license, notify the Attorney General and the Federal Trade Commission of the proposed license and the proposed terms and conditions thereof, except such classes or types of licenses as the Commission with the approval of the Attorney General may in advance determine would not significantly affect the consistency of the licensee's activities with the antitrust laws. Thereupon the Attorney General after consultation with the Federal Trade Commission shall, within 90 days after receiving such notification, advise the Commission whether, insofar as he can determine, the proposed license would tend to create or maintain a situation inconsistent with the antitrust laws. Upon the request of the Attorney General the Commission shall furnish or cause to be furnished such information as it may possess which the Attorney General determines to be appropriate or necessary to enable him to give the advice called for by this section. The Commission shall advise the Attorney General whenever in its opinion any activities licensed pursuant to this section involve or threaten to involve a violation of the antitrust laws. Nothing in this act shall impair, amend, or modify the antitrust laws or limit and prevent their application to persons licensed pursuant to this section. No license may be given to any person if, in the opinion of the Commission, the issuance of a license to such person would be inimical to the common defense and security.

"(c) Regulation of licensed activities: The Commission is authorized and directed to issue or prescribe such regulations or orders as it may deem necessary:

"(1) to control the dissemination of restricted data by any person licensed pursuant to this section in such a manner as to assure the common defense and security and to prevent access to such data by unauthorized persons;

"(2) to prohibit or control the production, possession, use, transfer or export of any byproduct material produced or capable of being produced incident to any activity licensed pursuant to this section, to the extent the Commission deems the control of such material to be necessary in the interest of the common defense and security; and

"(3) to establish such standards and instructions governing activities licensed pursuant to this section, including standards and instructions governing the design, location and operation of facilities used by the

licensee in the conduct of such activities, as the Commission may deem necessary to protect health and to minimize danger from explosion or other hazard to life or property.

"(d) Arrangements with licensees: The Commission is authorized to enter into contracts and arrangements with persons licensed under this section for such periods of time as the Commission may deem necessary or desirable:

"(1) after making provision for national military requirements, for the Commission's own use and for the conservation of such materials, as provided in section 5 (a) (4), to sell, lease, or otherwise make available to such licensees such quantities of source, fissionable or other special materials as may be necessary for the conduct of activities licensed pursuant to this section; and

"(2) to provide for the processing in facilities owned by the Commission of source, fissionable, byproduct or other special materials owned by or made available to such licensees which is utilized or produced in the conduct of activities licensed pursuant to this section.

The Commission shall establish prices to be paid by licensees for material or services furnished by the Commission pursuant to this subsection. The Commission shall, insofar as practicable, establish prices on a nondiscriminatory basis, which in the opinion of the Commission will provide reasonable compensation to the Government for such materials and services and which will not discourage the development of sources of supply independent of the Commission. In the event that requests by licensees to the Commission for materials or services exceed the materials or services available, preference shall be given by the Commission to those licensees whose activities are most likely, in the opinion of the Commission, to contribute to the development of peacetime uses of atomic energy and to the economic and military strength of the Nation. Any contract or arrangement made pursuant to this subsection may be made without regard to the provisions of section 3709 of the Revised Statutes (U. S. C. title 41, sec. 5). Nothing in this subsection shall be deemed to limit the Commission's authority to loan fissionable material with or without charge to licensees or other persons for the conduct of research and development activities.

"(e) Purchase by the Commission of Fissionable or byproduct materials:

"(1) The Commission is authorized to purchase or otherwise acquire such quantities of fissionable or byproduct materials owned or produced by any person licensed under this section as the President may determine to be required in the interests of the common defense and security. Prices paid by the Commission shall not exceed either (a) the estimated cost to the Government of producing similar material in facilities owned by the Commission, or (b) such amount as will, in the judgment of the Commission, provide reasonable compensation to the licensee taking into account the estimated costs to be incurred and the estimated revenues to be derived by the licensee in the conduct of his licensed activities. Any contract or agreement made pursuant to this subsection may be made without regard to the provisions of section 3709 of the Revised Statutes (U. S. C., title 41, sec. 5). The Commission may requisition any fissionable material or any interest in such material upon a determination by the President that such action is necessary in the interest of the common defense and security. Just compensation shall be made for any such material requisitioned under this subsection.

"(2) Any license issued pursuant to this section shall contain a provision requiring the licensee, upon the request of the Commission, to produce, for delivery to the Commission, such fissionable or byproduct material in such quantities and of such types as the licensee's facilities may be capable of producing and as the Commission, with the approval of the President, may determine to be required in the interests of the common defense and security. The licensee shall be entitled to just compensation for any material produced and delivered to the Commission pursuant to this subsection.

"(3) In the event of failure by the licensee to comply with the provisions of his license in accordance with paragraph (2), the Commission may take immediate possession of and operate the licensee's facilities for the production of such fissionable or byproduct materials as the Commission may require. Just compensation shall be paid as rental for the use of such facilities.

"(f) Revocation of licenses: The Commission may revoke any license issued pursuant to this section from any licensee who willfully violates any condition of such license or any applicable provision of this act or of any applicable regulation or order issued pursuant to this act, or from any licensee who fails, upon notice from the Commission of any such violation, to take within a reasonable time such action as the Commission may require to correct or prevent the recurrence of such violation. Any such revocation shall be determined on the record after opportunity for a hearing in accordance with the requirements of the Administrative Procedure Act, subject to such regulations as the Commission may find necessary to safeguard restricted data; provided, that the Commission shall have the authority to suspend any such license prior to a hearing whenever it deems such action to be necessary to the public health or safety or in the interest of the common defense and security.

"(g) Regulation of utilities: Nothing in this act shall be construed to affect the authority or regulations of any Federal, State, or local agency with respect to the generation, sale, or transmission of electric power.

"(h) Reporting of technical information:

"(1) Any person licensed pursuant to sections 4 (e) or 7 of this act shall make available to the Commission such technical information and data concerning his activities pursuant to such license as the Commission shall request. The Commission is authorized to utilize such information or data in the performance of its activities under this act.

"(2) The Commission is further authorized and directed to make such information and data available to other licensees or potential licensee whenever it determines (A) that the use of such information or data is essential in the production or utilization of fissionable material and (B) that the disclosure of such information or data to such other licensees or potential licensees, in each instance, is necessary to carry out the purposes and policies of this act. The provisions of this paragraph shall not apply, however, to any information or data developed after [insert date approximately 5 years after expected date of enactment of this amendment].

"(3) Nothing in this subsection shall be construed to limit the right of any licensee to an award or to the payment of just compensation pursuant to section 11 in respect to the use of any invention or discovery based upon or incorporating any such information or data.

"(i) Report to Congress: Whenever in its opinion the utilization of fissionable material for any industrial, commercial, or other nonmilitary purpose has been sufficiently developed to be of practical value, the Commission shall prepare a report to the President stating all the facts with respect to such use, the Commission's estimate of the social, political, economic, and international effects of such use and the Commission's recommendations for necessary or desirable supplemental legislation. The President shall then transmit this report to the Congress together with his recommendation."

SEC. 7. Section 8 of the Atomic Energy Act of 1946, as amended, is amended by adding the following subsection:

"(d) Requisition by President: The President may requisition any fissionable material or facilities for the production of fissionable material authorized or licensed to be owned by any person pursuant to this act when such action is necessary to effectuate the provisions of any such international arrangement. Just compensation shall be made for any material or facilities so requisitioned."

SEC. 8. Sections 11 (a) (1), 11 (a) (2), and 11 (e) (2) (C) of the Atomic Energy Act of 1946, as amended, are amended by deleting therefrom the words "in the production of fissionable material or."

SEC. 9. Section 11 (c) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"(c) Nonmilitary utilization:

"(1) It shall be the duty of the Commission to declare any patent to be affected with the public interest if (A) the invention or discovery covered by the patent utilizes or is essential in the production or utilization of fissionable material or atomic energy; and (B) the licensing of such invention or discovery under this subsection is necessary to effectuate the policies and purposes of this act.

"(2) Whenever any patent has been declared, pursuant to paragraph (1), to be affected with the public interest—

"(A) the Commission is hereby licensed to use the invention or discovery covered by such patent in performing any of its powers under this act; and

"(B) Any person may apply to the Commission for a license to use the invention or discovery covered by such patent, and the Commission shall grant such license to the extent that it finds that the use of the invention or discovery is necessary to the conduct of an activity authorized under this act.

"The owner of the patent shall be entitled to a reasonable royalty fee for any use of an invention or discovery licensed by this subsection. Such royalty fee may be agreed upon by such owner and the licensee, or in the absence of such agreement shall be determined by the Commission. The provisions of this subsection shall not apply to any invention or discovery made or conceived after [insert date approximately 5 years from expected date of enactment of this amendment]."

SEC. 10. Section 13 (a) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"SEC. 13. (a) The United States shall make just compensation for any property or interests therein taken or requisitioned pursuant to sections 5 and 11, or for any material requisitioned by or required to be produced and delivered to the Commission or for facilities of which the Commission may take possession pursuant to section 7 (e). The Commission shall determine such compensation. If the compensation so determined is unsatisfactory to the person entitled thereto, such person shall be paid 50 percent of the amount so determined, and shall be entitled to sue the United States in the Court of Claims or in any district court of the United States in the manner provided by sections 24 (20) and 145 of the Judicial Code to recover such further sum as added to said 50 percent will make up such amount as will be just compensation."

SEC. 11. Section 16(b) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"(b) Whoever wilfully violates, attempts to violate, or conspires to violate, any provision of this act other than those specified in subsection (a) and other than section 10 (b), or of any regulation or order prescribed or issued under sections 4 (h), 5 (a) (7), 5 (b) (4), 7 (c), 10 (c), or 12 (a) (2)

shall, upon conviction thereof, be punished by a fine of not more than $5,000 or by imprisonment for not more than 2 years, or both, except that whoever commits such an offense with intent to injure the United States or with intent to secure an advantage to any foreign nation shall, upon conviction thereof, be punished by a fine of not more than $20,000 or by imprisonment for not more than 20 years, or both."

SEC. 12. Section 18 of the Atomic Energy Act of 1946, as amended, is amended by deleting paragraph (g) and substituting therefor the following paragraphs (g) and (h):

"(g) The term 'facilities for the production of fissionable material' shall be construed to mean any equipment or device capable of such production and any important component part especially designed for such equipment or devices, as determined by the Commission, but includes equipment or devices capable of processing fissionable material only to the extent that such equipment or devices are in the opinion of the Commission peculiarly adapted for such purposes.

"(h) The term 'facilities for the utilization of fissionable material' shall be construed to mean any equipment or device capable of utilizing fissionable material and any important component part especially designed for such equipment or devices, as determined by the Commission, but includes equipment or devices capable of utilizing energy released in the course of nuclear chain reaction of such material only to the extent that such equipment or devices are, in the opinion of the Commission, peculiarly adapted for such use."

An act to amend the Atomic Energy Act of 1946, as amended

Be it enacted, etc., That section 5 (a) (3) (C) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"(3) Prohibition: It shall be unlawful for any person to * * *

* * * * *

"(C) directly or indirectly engage in the production of any fissionable material outside of the United States, except that the President may authorize the Commission, in accordance with such conditions as he may prescribe for the protection of the common defense and security of the United States to grant exceptions to this clause (C)."

SEC. 2. Section 5 (d) (1) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"(d) General provisions: The Commission shall not—

"(1) distribute any fissionable material to

"(A) any person for a use which is not under or within the jurisdiction of the United States;

"(B) any foreign government, except that notwithstanding any limitation of any provision of this section the President may authorize the Commission, in accordance with such conditions as he may prescribe for the protection of the common defense and security of the United States, to enter into direct arrangements with the governments of other nations involving the distribution of fissionable material to such governments for research or industrial use: *Provided,* That no fissionable material shall be distributed to any foreign government except upon receipt of assurances from the recipient government that such material will be used only for research or industrial purposes and will not be used for weapons or other military purposes; or

"(C) any person within the United States if, in the opinion of the Commission, the distribution of such fissionable material to such person would be inimical to the common defense and security."

SEC. 3. Section 10 (a) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"(a) Policy: It shall be the policy of the Commission to control the dissemination of restricted data in such a manner as to assure the common defense and security. Consistent with such policy, the Commission shall be guided by the following principles:

"(1) That until Congress declares by joint resolution that effective and enforceable international safeguards against the use of atomic energy for destructive purposes have been established, there shall be no exchange of restricted data with other nations, except that the President may authorize the Commission, in accordance with such conditions as he may prescribe for the protection of the common defense and security of the United States, to enter into arrangements involving the communication to other nations of:

"(A) restricted data necessary to assist other nations in the development of industrial applications of atomic energy for peaceful purposes;

"(B) restricted data necessary to assist nations which are participating with the United States in the defense of the free world, including regional defense organizations such as the North Atlantic Treaty Organization, in the development of defense plans, the training of personnel in the employment of and defense against atomic weapons, and the evaluation of the capabilities of potential enemies in the employment of atomic weapons; and

"(C) restricted data on refining, purification, and subsequent treatment of source materials; reactor development; production of fissionable materials; health and safety; and research and development relating to the foregoing.

"(2) That the dissemination of scientific and technical information relating to atomic energy should be permitted and encouraged so as to provide that free interchange of ideas and criticisms which is essential to scientific progress."

SEC. 4. Section 10 (b) (1) of the Atomic Energy Act of 1946, as amended, is amended to read as follows:

"(1) The term 'restricted data' as used in this section means all data concerning the theory, design, and manufacture of atomic weapons, the production of fissionable material, or the use of fissionable material in the production of power, but shall not include any data which the Commission from time to time determines may be published without adversely affecting the common defense and security: *Provided,* That in the case of data which the Commission and the Department of Defense jointly determine to relate primarily to the military utilization of atomic weapons the determination that the data may be published without adversely affecting the common defense and security shall be made by the Commission and the Department of Defense jointly: *Provided further,* That the Commission shall remove from the restricted data category such data as the Commission and the Department of Defense jointly determine to relate primarily to the military utilization of atomic weapons and which the Commission and the Department of Defense jointly determine can be adequately safeguarded, as classified defense information, under other applicable statutes. Action by the Commission pursuant to the preceding proviso shall not be regarded as excluding the applicability of any other laws, including sections 793 and 794 of title 18 of the United States Code."

SEC. 5. Section 10 (b) (5) (B) of the Atomic Energy Act of 1946, as amended, is amended by adding the following subsection:

"(viii) The Commission shall determine the scope and extent of personnel security investigations to be made for the Commission by the Federal Bureau of Investigation or the Civil Service Commission on the basis of the nature and significance of the access to restricted data which will be permitted: *Provided,* That nothing in this act shall be construed as limiting the authority of the Commission to authorize any contractor, prospective contractor, licensee or prospective licensee of the Commission to permit any employee of an agency of the Department of Defense or of its contractors or any member of the Armed Forces to have access to restricted data required in the performance of his duties where the head of the appropriate agency of the Department of Defense or his designee has determined, in accordance with the established personnel security procedures and standards of such agency, that permitting the member or employee to have access to such restricted data will not endanger the common defense and security."

Mr. MORSE. The Senator from Iowa has demonstrated again the same spirit of cooperation which he has extended to the Senator from Oregon in the 9 years I have been a Member of the Senate. I should like to say that, so far as I am concerned, I know the spirit has been mutual, because I have sought to cooperate on the same basis with the Senator from Iowa.

I do not know anything about the two drafts. I simply wanted to have them in the RECORD, if they existed, so that they could speak for themselves, and we could draw our own inferences and conclusions in regard to them. I thank the Senator from Iowa very much for his cooperation.

BUILT-IN SUBSIDY FOR BIG BUSINESS

Discovering the subsidy offered private industry in S. 3690 involves only a basic understanding of the atomic energy utilization process and a study of the provisions of the bill with regard to the use of special nuclear material by private commercial operators.

Generation of electric power from nuclear material follows the basic process used in manufacturing atomic weapons, and both operations utilize the same nuclear fuel. In the manufacture of weapons, piles of nuclear material are burned in an atomic reactor to get plutonium ash. Great heat is generated in the reaction process. Electric power is to be generated by using that heat in steam plants. In the military use of atomic energy, the end product is plutonium ash, and by the byproduct is electric energy created by utilization of heat. Commercial use of atomic energy looks to power as the end product and plutonium ash as the byproduct. Both operations create the precious plutonium ash which is so valuable for use in our national defense program.

Section 2 (h) of the atomic energy bill makes the finding that "it is essential to the common defense and security of the United States that title to all special nuclear material be in the United States while such material is in the United States."

The bill proposes that the Federal Government shall relinquish its exclusive ownership rights in facilities for production or use of special nuclear material, but retain ownership of the material itself.

It necessarily follows that the Federal Government, which owns any nuclear material produced in privately owned plants, cannot refuse to take and pay for what is produced. I now quote from the

minority report of the joint committee on S. 3690:

As a consequence, the incidents of private and public ownership are intermingled in such a way that not only may vexatious problems of administration and accounting control arise, but the private companies licensed for a maximum period of 40 years to own and operate production facilities (atomic reactors) legally can depend on the Government to compensate them adequately for whatever they produce during the lifetime of the license. This constitutes a built-in subsidy for licensed atomic enterprise until about the year A. D. 2000.

NO LOSS OF MATERIAL IN POWER PROCESS

Admiral Lewis Strauss, AEC Chairman, has stated that fissionable material is not perishable. An AEC report to the joint committee on June 2, 1954, describes an atomic reactor now being operated by the Commission which "will also breed new fissionable material, that is, produce as much as it consumes or more."

The administration atomic energy bill provides that the Government shall purchase at a fair price any special nuclear material that is produced, and that it shall make a reasonable charge for any special material which it distributes to licensees—Sections 52 and 53.

In determining a fair price to be paid by the Government, the Commission is directed, in section 56 of the bill, to "take into consideration the value of the special material for its intended use by the United States." The section also provides that the Commission "may give such weight to the actual cost of producing that material as the Commission finds to be equitable."

Section 53 of the bill lists the factors to be taken into consideration by the Commission in determining a reasonable charge to be collected by the Government for nuclear material. With respect to commercial licensees, the Commission is directed to make uniform, nondiscriminatory charges for the use of the material.

FEDERAL POWER COMMISSION CRITICIZES BILL

A Federal Power Commission analysis of the proposed legislation at the request of the joint committee pointed out the lack of legislative standards in the bill and the bill's subsidy implications. Commenting upon the fair price provision, the analysis stated:

There is not and probably never will be a free market to provide a standard of what a fair price would be * * * there is little, if anything, in the legally established concepts of utility regulation that can be deemed to provide meaning for the term "fair price." (Hearings, pt. II, p. 1131.)

As a lawyer, I would say that a fair price, in my judgment, would be much less, if there were no restrictions contained in the bill to prevent the Government as such from developing a Government atomic-energy power plant program; in other words, if there were not given to the private utilities a monopoly which, in my judgment, the bill gives to them. Then, of course, the uranium product, or fissionable product, which would go to the private utilities under some lease arrangement, would not bring, in my judgment, nearly as much in value as it would if there were provided a public competitive yardstick under a program in which the Government would also develop electric power from this process.

When we consider what the Government would pay in return for the plutonium ash, we realize we are dealing with a piece of property which is bound to be of tremendous value because of its importance to the defense program. And again, if there is given to the private utilities the monopoly of the manufacturing of that process, we would have a hard time, in my judgment, even if the decision were left to the court, on the basis of judicial standards of determining value. It is worse in this case because it is being left to the Atomic Energy Commission. We cannot disregard the fact that we would pay an extremely high price for the plutonium ash in comparison with the lease price which would be charged the utilities for the leasing of the uranium, in the first instance, out of which, in the long run, would be developed the plutonium ash.

I think that is a sleeper in the bill, a catch we must watch out for, and we must attack from two angles: first, from the angle of seeing to it that the bill is amended in such a way that the Government will be able to do its own power generating, particularly for Government use and the use of public bodies; and, second, in my judgment we must write into the bill what the Federal Power Commission says are some very much needed standards of valuation, rather than the very general terms in the bill which are not even identical when they come to deal with fixing the value of the uranium, as compared with fixing the value of the plutonium ash.

Mr. HICKENLOOPER. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. HICKENLOOPER. Lest a misconception arise, I wish to call the attention of the Senator from Oregon to the fact that the bill does not give a monopoly to private industry. Any public or quasi-public body, utility district, municipality, REA, the TVA, and of such organizations, will have just as much right to participate in this program and to apply for, and receive, licenses as will any private utility. The bill so provides.

Mr. MORSE. Let me say that my good friend, the Senator from Iowa, was not here earlier this afternoon when I discussed this phase of the bill. I shall stand on the record I have made. I think the language of the bill to which the Senator from Iowa refers is very empty, because of certain physical facts which will confront us for the next 10 years. No REA's or cooperatives or municipalities will, in the present stage of the development of atomic power, build a reactor.

What we must take pains to remember, Mr. President, is that in the building of the reactors, only so many of them can be built in the country, and the number is relatively small, because if they are built large enough, and if they are not large enough to begin with, they will not be economically feasible, either for the benefit of the Government or for a private utility, and if only a certain number of them are built across the country, there will automatically be a monopoly. Furthermore, the electric cooperatives and municipalities do not now have the funds that will be needed to build reactors; and if licenses are given to a private utility combine spotted throughout the country by building reactors in certain critical areas, we might just as well forget about the cooperatives or the municipalities ever building a reactor 15 or 20 years from now.

Mr. HICKENLOOPER. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. HICKENLOOPER. I do not follow the Senator's line of reasoning, because certainly the public or semi-public groups and cooperatives are as capable of going into this field in the same way private capital is willing to go into it and invest in it. The opportunity is provided in the bill.

Mr. MORSE. There are scores of reasons why they will not do it now, at the present stage of development of atomic energy. Let us not forget that a select group of private utilities have been working on the development of atomic energy from the beginning. They have been engaged in the development and acquiring the know-how, and they are aware what the hidden potentialities of atomic energy are; and in view of the hidden subsidies provided by this bill, they will be in a fine position to grab off, right now, the desirable locations for the construction of reactors, and in that way they will obtain the subsidies. They will have the advantages of a virtual monopoly of patents.

Furthermore, the bill does not contain provision for having any Federal Government units develop power on a commercial basis. In the bill Government units are limited to the development of power as a byproduct; and when we come to the byproduct-power section, we see some very interesting restrictions on what they shall be able to do with the byproduct power.

A part of the objection I am presenting this afternoon to the bill is that the bill, as drafted, does not give effective preference to public bodies. That is why I believe it so essential to write into the bill a provision giving the Atomic Energy Commission and Federal power agencies the authority and the right to build some plants, so as to generate some power for the people, and so as to sell some power under preference provisions in line with general power policy. That should be done in order to have cheap power generated for the benefit of the people.

It is important to have included in the bill a provision setting forth clearly a public-power yardstick which will have some meaning to it, by way of a public-power program, through the construction of atomic-energy reactors owned by the people, as represented by their Federal Government.

Mr. HICKENLOOPER. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. HICKENLOOPER. No doubt the Senator from Oregon is aware of what I am about to say, but I should like to call it to his attention again, at this

point, namely, that so far as public and semipublic bodies and cooperative bodies are concerned, in respect to the power field, the TVA has an extensive study and experimental program in connection with this matter; and the REA's are studying the matter, and have a program in regard to the possibilities of atomic-power development, through their connection with Fairbanks-Morse. So the cooperative groups and the REA's are interested in it and are exploring it, just as the privately owned utilities are; and the TVA has its segment investigating and looking into and canvassing the possibilities of atomic-power development.

So I believe it is not exclusively—even at the present time—in the hands of the private utilities, insofar as examination and exploration of this field are concerned.

Again I assure the Senate that I have no fear that the bill will exclude the other bodies and groups in the field of atomic energy, from proper exploitation of it.

Mr. MORSE. Mr. President, I offer a very simple test to settle the disagreement between the Senator from Iowa and myself. The very simple language we shall vote upon, possibly next week, contained in the Johnson and Gillette amendments to the bill, will, if incorporated in the bill, remove any doubt as to whether the power will be developed, in part, for the benefit of all the people, through guaranteeing a public-power yardstick. Let us write into the bill provisions which will authorize the Atomic Energy Commission and Federal power agencies to develop some Government-owned plants for the generation of power, as such, to be made available to the people, as such. That will constitute a check on monopoly, and will make it possible for the Atomic Energy Commission and other Federal agencies, through that kind of a Government plant, really to breathe life and meaning into any public preference.

If we really wish to check private monopoly and if we really wish to have a public-power yardstick of control against them, then, first, the Senate should adopt our amendments, providing that the Atomic Energy Commission and Federal power agencies shall have authority and jurisdiction to build some of these plants, too, and market their power under the preference clause.

Mr. President, at this time I wish to say a few words about the Federal Power Commission's criticisms of the bill. A Federal Power Commission analysis of the proposed legislation at the request of the Joint Committee pointed out the lack of legislative standards in the bill and the bill's subsidy implications. Commenting upon the "fair price" provision, the analysis stated:

> There is not and probably never will be a free market to provide a standard of what a "fair price" would be * * * there is little, if anything, in the legally established concepts of utility regulation that can be deemed to provide meaning for the term "fair price." (Hearings, pt. II, p. 1131.)

The FPC also asked this question:

> If persons are to be permitted to use the energy resource resulting from the Government's expenditure of billions of dollars on atomic research and production, are they to pay anything for that privilege?

Although licensees for development of hydroelectric resources under the Federal Power Act are required to pay an annual license fee, S. 3690 makes no provision requiring that private persons making use of the atomic energy resource pay for such use.

The FPC concluded:

> For all the bill now provides, the AEC may pay more for the ashes than it charges for the fuel. If the Government is thus to subsidize the electric utilities and other persons developing atomic energy by paying operating costs in addition to giving them the license privilege without charge, it would seem that Congress should fix that policy—not attempt to pass the responsibility to the AEC, the Review Board, the courts, or anyone else.

I completely agree with that point of view of the Federal Power Commission. If there are those who say, "It is not a sound position for the Federal Power Commission to take. It is misinterpreting the act and misjudging its implication," I say it raises at least a doubt. It raises at least a charge of ambiguity in the bill, and it calls for clarification.

TOO MUCH DISCRETION IN AEC

In my judgment the Atomic Energy Commission is allowed an amazing amount of discretion in the administration bill with regard to receipts and disbursements of the taxpayers' money. The provisions of the bill leave wide open the possibility that the Government may buy back nuclear material for a higher price than it charges when it distributes it, especially in view of the provision which allows the private producer's operating costs to be considered in making up the fair price to be paid. The Commission may very well set a low price to the licensees for unprocessed material and pay a high price for plutonium ash. This would be a windfall for the utility companies operating the plants who would already be making huge profits from the sale of power. Even if the fair price and the reasonable charge were the same, the private operator would be making his profits on the nuclear material if he had a breeder reactor which produced more material than it burned.

The built-in subsidy feature in S. 3690 would give to the private operator who had already been given the right to exploit a $12-billion investment of the people without even the payment of a license fee, the assurance that his operation would be without expense and that he could probably make a profit from the operation even if he never sold a kilowatt of power. It is no wonder that the giants of industry are eager to get in on the atomic energy program.

The social implications of adoption of this kind of legislative proposal were discussed by Edward R. Murrow in his broadcast of June 7, 1954. I quote from the text of the Murrow broadcast:

> But more interesting—and surely more significant—is another issue raised by the Commission in its report to Congress. This has to do with the development of atomic energy for peaceful purposes. The Commission recommends that private industry take this over from the Government. This is what the report says: "Obtaining full participation of the Nation's electrical energy producers and equipment manufacturers in the development and production of nuclear power is, in our judgment, the best way of securing the maximum return on the public investment in this phase of our atomic energy program."
>
> Previously in the report the Commission had said, in effect, that we are a society of private enterprise and should remain so. Nuclear power, it said "should be produced and distributed by the private and public power systems and not by the Commission." And that, it argued, would let nuclear power "confirm and strengthen, rather than change, our way of life." But what the Commission proposes may itself be a change in our way of life. It is not easy to find a name for the kind of society it would produce. Obviously it would not be socialism, for though the people put up the money for atomic development and now own the process and the plant, the profits under socialism, (if there are profits) would go directly or indirectly to the people. But just because something isn't socialism it isn't automatically free or private enterprise. In free enterprise the capital is put up by private persons—at a risk—and that is what entitles them to the profits they make. Obviously it wouldn't be free or private enterprise to collect the equivalent of $75 from every person in the United States for nuclear development, which is what the Government has done. This is public money and the discovery and the industry now belong to the public. Of course, if private industry "buys its way in," and the public is reimbursed for its capital outlay, that could end up as private enterprise. But the AEC doesn't suggest this should happen. And nothing is being said about it so far in Congress. It just isn't explained how the public property is to become private property. I should mention that giving public property to private persons, or selling it at nominal cost, is not necessarily reprehensible. It was worthily done by Abraham Lincoln in the Homestead Act, for example. But it is not the same to give away a whole range of new knowledge and a vast equipment that have cost the public an outlay of $12 billion. This is not said to object to atomic energy for peaceful purposes becoming a function of private enterprise. Most Americans will agree that this is a valid objective. But one is entitled to know just how this public property is to become private property. And we may need a new name for the kind of society we might become.

Murrow went on to say, in this excellent broadcast:

> As I said, it isn't socialism, but it also isn't pure private enterprise. If one assumes that neither the administration nor Congress wants to arrange simply a gigantic handout of the public property, what do they have in mind? It is not a mixed economy, even though the proposal is that the Government stop making nuclear energy for peaceful purposes and go on making it for defense. For it is not characteristic of a mixed economy to turn over publicly financed and operated functions to private persons. Another name for the proposal may be subsidy. Letting private industry benefit from the nearly four billions it cost simply to develop nuclear energy and use part of the public's plant and equipment, would be one of the most sensational subsidies of all time. Must we learn to call our form of society in the atomic era "subsidized free enterprise?" One should hope not. It sounds like doubletalk. To quote again from the AEC report, the aim is "securing the maximum return on the public investment." But the maximum return to whom? Is it to the public which put up the capital? Or is it to private corporations? These questions are worth thinking about.

Earlier this afternoon in this speech I expressed my high regard for Tom Stokes and the great job he is doing in helping to awaken the American public to the serious dangers in this bill. I now wish to pay my compliments to Ed Murrow. We have heard about that broadcast from a great many sources. The broadcast had about as terrific an impact on the American people, I think, as Murrow's telecast on Senator McCARTHY. The American people have great confidence in the keen intellect of Ed Murrow, and I wish to commend him for the job of public education he did in this broadcast. When he closed it with the sentence, "These questions are worth thinking about," in my judgment, he described the issue which is now before us in the Senate. The questions he raised are questions about which the Senate had better do some thinking before we come to vote on the pending bill.

I think Murrow is quite right. We cannot call this private enterprise. We cannot call this free enterprise. I would suggest, instead of Murrow's phrase "subsidized free enterprise," that what it is is "subsidized private monopoly." This bill is a subsidy bill for private monopoly. This bill is a bill which will result in the American people giving free to the private utilities a monopolistic stranglehold over the development of an atomic energy program for the purpose of generating power and selling it back to the American people at the rates that private monopolies usually charge, which are invariably higher than the rates charged when they have to compete against the public power yardstick. The bill contains no public power yardstick provisions for the development of electric power through an atomic energy program.

THE EISENHOWER PROGRAM OF GIVING AWAY THE PEOPLE'S NATURAL RESOURCES

In 1953 the Eisenhower administration gave away to the oil companies of the Nation the valuable resources of the people of the United States in the offshore oil lands, resources worth hundreds of billions of dollars. That giveaway was heralded with great publicity and delivered with pious pronouncements.

In 1954 the same Eisenhower administration proposes to give away to the utility giants of the Nation a new resource in which the people of the United States have invested $12 billion and which has a potential value greater than that of all the oil, gas, coal, and water resources of the country combined.

This giveaway is being attempted in the form of a number of amendments to the McMahon Act, by a bill which is being rushed through the Congress in the closing days of the session without adequate consideration, unless a few of us insist on standing on the floor of the Senate for the next few days and forcing a full public discussion of what we consider to be the very serious defects of this bill.

NO NEED FOR CHANGE IN THE PRESENT LAW

There is no need for legislation at this time to enable private industry to participate in the development of the atomic-energy program. Industry is already involved and taking a full part in the atomic-energy research and development program. Legislation to allow the possession and use by private operators of nuclear material and atomic energy production facilities will not be needed until the program has reached the phase of practical application of processes developed under the present program.

In fact, I may say that private industry has not lost a dollar, but has prospered in the atomic energy development.

I attended a little luncheon yesterday with a group of Senators, where there was some discussion of this bill. In the course of the discussion one of the Senators said that during the war private industry got behind the Government and helped to develop the atomic energy program.

That struck me as a rather amusing statement, because what happened was that the Government got behind private industry and Government and industry, working together cooperatively, as they should, in the interest of national security, developed the atomic energy program. However, industry did not lose anything by it.

To listen to some, one would think that industry's economic neck was not in the wringer during World War II, as well as the economic neck of all the rest of us. One would think that the very survival of industry, as well as the very survival of all the people, was not at stake in World War II, to hear some of those argue about what industry did during World War II. Industry did no more than its patriotic duty, no more than the boys who fought in uniform, and no more than the civilians on the home front did on the industrial line of America, no more than the farmers making possible the development of the materials and food which were needed in order to back up the boys in uniform.

Therefore, Mr. President, I am never very much impressed by the argument that we owe industry some giveaway in regard to the atomic energy program because during World War II industry cooperated with the Government in developing the atomic energy program. It was industry's patriotic duty to do so, and it did not lose a dollar by doing it.

In fact, the Government backed up industry in the development of that program to the profit, in dollars and cents, of industry and it was still a profit long after industry got through paying any excess profit taxes.

Therefore, I do not bleed for industry because of any argument what industry did during the war now places upon us some obligation to give away the people's heritage in the atomic energy program. I do not weep for industry with crocodile tears or any other kind of tears. In my judgment, under the amendments some of us are urging industry would still prosper. Under the amendments offered by the Senator from Colorado [Mr. JOHNSON], the Senator from Iowa [Mr. GILLETTE], the Senator from Tennessee, by the Senator from New Mexico [Mr. ANDERSON], by the Senator from Alabama [Mr. HILL], by the Senator from Oregon, and by other Senators, industry would prosper under the Atomic energy program; but the people would be protected in the several respects I have argued for this afternoon.

PROPOSED JOHNSON AND GILLETTE AMENDMENTS

First, we would be provided the right of the Federal Government, through its appropriate agencies, to develop its own power plants, if it should decide that in the public interest such a program should be followed in some sections of the country, just as we have done in the development of electric power through falling water in the TVA project.

Second, there would be established a public power yardstick by the marketing of that and byproduct power under the public body preference clause.

They are amendments which will be in keeping with the spirit and intent of a strong private enterprise system, in contrast with the dangers of a private monopoly system. It is the latter system, I respectfully submit, which this bill develops, not the private enterprise system, and the lease and purchase provisions should be revised to remove the subsidy element now imbedded in the bill.

I should now like to quote from the report of the Atomic Energy Commission, made by the Member Murray to the Joint Committee on Atomic Energy on June 2, 1954: He said:

> We are only now in the development stage. We have not yet reached the phase of competitive, commercial application. This is some years ahead. As I mentioned earlier, the 5-year reactor program submitted to the committee is aimed at making competitive nuclear power a reality. If the goal is accomplished, our feeling is that only a small number of full-scale privately owned and operated power reactors are likely to be on the line before 1965—in other words over 10 years from now.

I respectfully say to my friend, the Senator from Iowa [Mr. HICKENLOOPER] that is the answer of a member of the Atomic Energy Commission. That is why, Mr. President, the cooperatives and the municipalities are not going to rush in at this time and ask for licenses to develop reactors which will cost hundreds of millions of dollars. The figures vary as one reads the record on the bill, as I have, but it appears that there will not be any commercially feasible reactor that will cost less than $200 million.

In my judgment, Mr. President, it is stretching the imagination pretty far and violating the rules of credulity to argue on the floor of the Senate, as my good friend from Iowa has done, that there is nothing to stop some little cooperative or a municipality from getting in on the ground floor. From a financial standpoint, it happens to be impossible for them to do so. Where is there a little rural electric cooperative with $200 million to spare to build one of these reactors? Where is the municipality that can do it? The catch is what I cited a few minutes ago. The language is empty; it does not mean anything, because the private utility combines see the chance for an economic "killing." They can get a license now to spot check this country with a few reactors needed to supply all the power that could possibly be sold by way of atomic-energy generation. If they have the license now, they have the monopoly now.

I shall not be fooled by these sleeper clauses in the bill. I shall not be fooled by meaningless language in the bill. If the proponents of the bill really mean it when they say the bill will provide for better development and better generation, all they have to do is to support the amendment of the Senator from Colorado [Mr. JOHNSON] which would give to the Federal Government the jurisdiction, the authority, and the right to build some of these reactors and to market the power under the public preference clause to co-ops, PUD's, municipalities, industry and private utilities.

I have quoted the utility witnesses. That is not what Iddles wants. That is not what Cisler wants. That is not what those who are now on the ground floor of development want. They have a bill here which would put the Government out of it. We shall try to put language in the bill that will put the Government into it, because the Government must be put into the development of electric power from atomic energy if we are going to protect the public interest from the kind of monopolistic control that will flow from this bill if we do not put the proper language into it.

It is just that simple, Mr. President, but we must say it over and over again. We have got to pound away on it. We have got to get the American people, by the old process of repetition of the truth, to recognize it. By repeating the truth we may finally get them to discard the point of view which has been developed by repetition of a lot of falsehoods. By repetition of the truth we may be able to get the American people to see through the false propaganda of private utilities which has been flooding the country for sometime past, and by a repetition of the truth that this bill has not a single effective safeguard of the public interest in it from the standpoint of a public power yardstick, we may in the days ahead—and I think we will—cause the American people sufficiently to understand the situation so that they will demand that the Senate adopt the simple amendment to which I have been referring, namely, an amendment which will clearly give to the Federal Government the authority, jurisdiction, and right to build some of these reactors for the benefit of the people.

President Eisenhower himself stated to the Congress in his message on February 17, 1954, "the act in the main is still adequate to the Nation's needs." When he urged some revisions in the Atomic Energy Act at that time he indicated that they were needed only to allow cooperation with our military allies in the atomic-energy field. I am satisfied from what I have been told by members of the Joint Committee on Atomic Energy that this can be accomplished without changes in the present law, at least without the changes proposed by the majority of the committee in the present bill.

WE MUST BE SURE OF WHAT WE ARE DOING

America and the world are entering into a new era. Utilization of nuclear energy for industrial and power purposes can greatly improve the living conditions of millions of people whose chances for a better life have been restricted by their inability to get power at reasonable prices. Before we consider the adoption of legislation which proposes to provide what is done with this great new power resource we should be very sure that we know what we are doing.

Fifty years of development of another great power resource—the falling water of our Nation's rivers and streams—have established guides for the development of atomic-energy power. In my judgment, the Congress of the United States would be acting in a completely irresponsible manner if, in legislating on atomic power, it did not make use of knowledge gained in the hydroelectric power program. This experience has been incorporated into law during Republican and Democratic administrations; yet the proposed legislation in S. 3690 makes no reference to the established power policy of our country and sets up no positive standards in its place.

We must not enact a proposal which would allow America's greatest potential source of power to be turned over to the private utility monopoly without safeguards to protect the interest of the American public in its $12 billion investment in atomic energy.

We must not pass a bill, Mr. President, such as this bill in its present form, which would help to sell the American people into a monopolistic economic bondage for decades to come.

OWNERSHIP BY TEXAS OF SUBMERGED LANDS EXTENDING THREE LEAGUES INTO THE GULF OF MEXICO

Mr. DANIEL. Mr. President, on yesterday the Senator from Illinois [Mr. DOUGLAS] inserted in the RECORD editorials from newspapers concerning the boundary of Texas in the Gulf of Mexico, and the Senator from Minnesota [Mr. HUMPHREY] referred to a visit which the junior Senator from Texas had at the White House with reference to the same subject.

I ask unanimous consent that a statement which I released yesterday concerning the meeting and the general subject of the three-league boundary of Texas with reference to submerged lands be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR PRICE DANIEL, JULY 15, 1954, ON TEXAS THREE-LEAGUE BOUNDARY IN THE GULF OF MEXICO

In a visit with President Eisenhower at the White House today, he assured me that there was no change whatever in his position that Texas owns the submerged lands extending 3 leagues, rather than 3 miles, into the Gulf of Mexico.

There is no question but that the Submerged Lands Act passed by the Congress and signed by the President in 1953 restored to Texas all submerged lands within its historic 3-league (10.5-mile) boundary in the Gulf of Mexico. However, I had heard a report from the recent State bar meeting in San Antonio that Attorney General Shepperd was under the impression that the Eisenhower administration might not recognize the 3-league boundary, and that Attorney General Brownell might try to push us back to 3 miles. That is why I brought up the question with President Eisenhower today.

I planned to do this immediately after hearing of the report last week, and my inquiry certainly has no reference to subsequent involvement of the question in the Governor's race. I am sure the people of Texas know that my long interest in the tidelands fight and my conference with the President today have no connection with any present political campaign.

I reviewed with the President his letter written to Senator ANDERSON, of New Mexico, last year, which was placed in the CONGRESSIONAL RECORD on April 25, 1953, in which he referred to this Houston, Tex., speech of October 14, 1952, as follows:

"The next day, October 14, I made specific reference to the State of Texas:

"'Just a 107 years ago the United States Senate decided that the public lands of Texas were not worth $10 million. * * * So the United States said Texas, "Keep your debts—and keep your lands. We don't want either." And so the State of Texas paid off the $10-million debt of the Republic. It kept its 400 million acres of lands, including the submerged area extending 3 marine leagues seaward into the Gulf of Mexico.'

"My position is the same today. It was further amplified by the administration representatives in the hearings before the Senate and your committees considering the legislation.

"DWIGHT D. EISENHOWER."

President Eisenhower authorizes me to say there is "no change in his position whatever." He seemed surprised that the question has been raised again, and I feel sure that our full 3-league (10-mile) boundary will not be challenged by this administration.

Even if challenged by some future administration, it would have no chance of success, because the Submerged Lands Act covers all lands out to the boundaries which existed at the time any State entered the Union. That phrase was written into the law especially for Texas, and the entire legislative history shows this to be true. In fact, both in the House and in the Senate, amendments were offered to limit all States to 3 miles, but these amendments were overwhelmingly defeated after the Texas boundary situation was explained.

Attorney General Brownell recognized the Texas 3-league boundary in his testimony before the Senate Interior and Insular Affairs Committee in 1953. He said:

"In order that there may be no misunderstanding, generally speaking what we have in mind is the 3-mile line, except for the coasts of Texas and the west coast of Florida, where 3 leagues would generally prevail."

Secretary of Interior McKay testified to the same effect with regard to Texas in his appearance before the Senate Interior and Insular Affairs Committee as follows:

"Senator DANIEL. May he complete that statement. I thought maybe he would say something about his understanding of the Texas 3-league boundary.

"Secretary MCKAY. That is what I wanted to say. I am with Texas on that, 3 leagues to sea."

Mr. DANIEL. Mr. President, I ask unanimous consent that a newspaper article concerning the same subject be inserted in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO DISPUTE ON TEXAS BOUNDARY

WASHINGTON.—Senator DANIEL said today he has no knowledge of any differences between President Eisenhower and Attorney

General Brownell over interpretation of the extent of Texas' title to offshore lands in the Gulf of Mexico.

He told a reporter he sent word to Brownell yesterday that he would like to discuss the question with him, but in replying through an intermediary Brownell said it looked to him as though the President had sufficiently covered the matter during DANIEL'S visit to the White House Thursday.

After that visit DANIEL told reporters Eisenhower had authorized him to say that he had not changed the position he has always held—that Texas is entitled to offshore lands and their oil resources reaching 3 leagues, rather than 3 miles, into the gulf.

Confirming this yesterday, White House Press Secretary James C. Hagerty said Eisenhower always believed and still believes that the historical boundaries of Texas extend 3 leagues—about 10½ miles—off its coast.

After DANIEL'S statement Thursday John Ben Shepperd, the Texas attorney general, said that J. Lee Rankin, the United States Assistant Attorney General, has challenged Texas' claim to the lands beyond the 3-mile limit. Neither Rankin nor Brownell would comment yesterday.

Asked today about this reported conflict between the White House and Justice Department, DANIEL said he knew of no disagreement between the two. He said he hadn't talked to Brownell about the matter because it seemed to him the President's position as outlined to him personally left no doubt that "this whole matter has been completely decided in favor of Texas."

Mr. DANIEL. Mr. President, I simply wish to add that so far as any dispute having arisen concerning the boundaries at this late date, at least a hundred times during the argument on the submerged lands bill last year it was stated by both proponents and opponents of the measure that the gulfward boundary of Texas is 3 leagues instead of 3 miles.

I should like to invite attention to the fact that the report on the bill by the Senate Interior and Insular Affairs Committee, in stating the boundaries and the acreage covered by the bill clearly shows in appendix F, on page 76 of the report, that the Texas boundary is figured as 3 leagues rather than as 3 miles, and the acreage is specifically stated so that there can be no doubt as to what boundaries were involved insofar as the State of Texas is concerned.

I do not believe there is any real conflict in the administration over this matter, and I wish to point out that so far as Congress is concerned, the issue was settled, because an attempt was made on the floor of the House and of the Senate to add an amendment which would specifically limit all States to 3 miles.

As the Presiding Officer will remember, that attempt was made twice in the Senate. The amendment was overwhelmingly defeated after the senior Senator from Texas [Mr. JOHNSON] and I had explained the Texas 3-league boundary. The proposal likewise was defeated in the House. The Senator from Florida [Mr. HOLLAND] showed that Florida had the same situation on its gulfward boundary.

After the defeat of the amendments which attempted to limit us to 3 miles instead of 3 leagues, the Senate will remember that an amendment was added which specifically provided that the effect of the act, in the Atlantic Ocean and the Pacific Ocean would be limited to 3 miles, and in the Gulf of Mexico to 3 leagues, rather than 3 miles.

Mr. President, on April 29, 1953—CONGRESSIONAL RECORD, volume 99, part 3, pages 4171 to 4176—during consideration of the Submerged Lands Act, I gave the history of Texas 3-league boundary and cited the many times it had been recognized by the Congress. The Senate defeated the pending amendment which would have limited Texas to 3 miles instead of 3 leagues, just as the House had done previously.

AWARDS FOR DISTINGUISHED SERVICE TO CONSERVATION

Mr. MURRAY. Mr. President, on Thursday, July 15, 1954, at a dinner held in the Statler Hotel, and sponsored by a group of organizations interested in the conservation of natural resources, a national award was presented to Representative LEE METCALF, of Montana, for distinguished service to conservation. The same action was taken with reference to Representative LEON H. GAVIN, of Pennsylvania.

The organizations which sponsored the dinner and which presented the awards are the Izaak Walton League of America, the National Parks Association, the National Wildlife Federation, the Wilderness Society, and the Wildlife Management Institute.

The chairman of the meeting was Bernard DeVoto, who delivered an address reviewing the work of those interested in conservation.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the statements made by these organizations in connection with the presentation of the awards to Representative METCALF and Representative GAVIN.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

NINETEEN HUNDRED AND FIFTY-FOUR NATIONAL AWARD TO LEE METCALF FOR DISTINGUISHED SERVICE TO CONSERVATION

LEE METCALF'S alert and continuing work in the Nation's Capital has won him widespread respect and admiration. By virtue of his profound interest and comprehensive understanding of conservation and its objectives and problems, the recipient has, during his first term of office as a Member of the House of Representatives of the United States, emerged as a defender of the principles of better management and wise use of natural resources for the benefit of all the people. Among his many achievements in attaining an enviable record in the 83d Congress, he was a foremost leader in successful actions that turned aside attempts by those who chose to overlook the fundamental privileges of all Americans in the national forest lands in order to obtain special concessions for minority groups; he sponsored legislation that would make possible improved management of public domain lands; and he directed the attention of Congress to the diversion of duck stamp funds while appealing for adequate appropriations with which to fulfill the duties and responsibilities of the United States Fish and Wildlife Service. It is in gratitude for this outstanding public service and in appreciation of his accomplishments that this national award and bronze plaque are presented to Representative LEE METCALF, of Montana, by the undersigned national conservation organizations.

WILDERNESS SOCIETY.
WILDLIFE MANAGEMENT INSTITUTE.

NINETEEN HUNDRED AND FIFTY-FOUR NATIONAL AWARD TO LEON H. GAVIN FOR DISTINGUISHED SERVICE TO CONSERVATION

Since the 78th Congress, LEON H. GAVIN'S continuing interest has been the promoting of better management of the vast treasures of natural resources held in public trust by the Federal Government and in assuring equal privileges for all who would benefit from these resources. During his long and active career in the House of Representatives of the United States, he has become known as a fearless champion of the national forest system. His trade-marks are his firm convictions that, consistent with sound management policies, the privileges of all users of the national forests be recognized, and his unyielding stand in opposition to those who would obtain special privileges at the expense of others. He has been a forceful advocate of the appropriation by Congress of adequate funds with which to carry out the study and management of fish and game resources on these public lands. In recognition of his outstanding service and untiring efforts to secure the best management and wise use of the country's natural resources in the public interest, the undersigned national conservation organizations are privileged to present this national award and a bronze plaque to Representative LEON H. GAVIN, of Pennsylvania.

RECESS TO 10 A. M. ON MONDAY

Mr. KNOWLAND. Mr. President, pursuant to the order previously entered, I move that the Senate now stand in recess until Monday next at 10 o'clock a. m.

The motion was agreed to; and (at 6 o'clock and 47 minutes p. m.) the Senate took a recess, the recess being under the order previously entered, until Monday, July 19, 1954, at 10 o'clock a. m.

NOMINATIONS

Executive nominations received by the Senate July 17 (legislative day of July 2), 1954:

IN THE ARMY

The following-named officers for temporary appointment in the Army of the United States to the grades indicated under the provisions of subsection 515 (c) of the Officer Personnel Act of 1947:

To be major general

Brig. Gen. Charles Ernest Loucks, O6949, United States Army.

To be brigadier generals

Col. Mack Macon Green, O16539, Medical Corps, United States Army.

Col. Arthur Letcher Irons, O16526, Dental Corps, United States Army.

Col. James Glore, O28758, United States Army.

Col. John Robert Burns, O16509, United States Army.

Col. Robert Vernon Lee, O28882, United States Army.

Col. Marshall Stubbs, O17706, United States Army.

IN THE REGULAR ARMY

The following-named officers for promotion in the Regular Army of the United States, under the provisions of sections 502 and 509 of the Officer Personnel Act of 1947. All officers are subject to physical examination required by law:

To be captains

Abbott, Donald I., O60517.
Abelson, Albert N., O57434.
Aboe, Kenneth R., O69577.
Abt, Alan B. O60323.
Achee, Sidney W., O60583.
Acker, Ivan B., O60474.
Acuff, Earl C., O60178.
Adams, Alfred M., O65721.
Adams, Billy J., O59933.
Adams, Dexter W., O62247.
Adams, Howard E., O57244.
Adams, Marvin L., O60612.
Adams, Thomas E., Jr., O59949.
Adcock, Robert L., O60565.
Adkins, Aaron C., O60512.
Adkins, Alvin E., O65940.
Adoue, Eugene L., O58805.
Affleck, David W., O58806.
Ahearn, John R., O59918.
Ahearn, Neal J., O65591.
Akin, Karl E., O59900.
Albertson, James J., O62197.
Aldridge, Thomas C., O58807.
Alexander, David B., O59956.
Alfonso, Albert F., O57240.
Allard, Henry G., O58808.
Allbee, Howard G., O68069.
Allbright, Marion C., O63678.
Allen, Herbert B., O60349.
Allen, Philip J., Jr., O60585.
Allen, Warren P., O62825.
Allen, William E., O60661.
Allis, John D., O60616.
Allison, Charles C., O65729.
Allison, William A., O60176.
Allred, William M., O58809.
Allyn, John O., O65941.
Ambrose, Don C., O62179.
Amity, Richard F., O60407.
Anderson, Allen R., O62116.
Anderson, Kenneth S., Jr., O62252.
Anderson, Melvin C., O60805.
Anderson, Reuben L., Jr., O57129.
Anderson, Richard C., O58810.
Anderson, Richard L., O60567.
Anderton, Edward C., O61094.
Andreasen, Eugene K., O57431.
Andres, Charles, 3d, O58811.
Andrews, James L., O58812.
Andrews, William J., O58162.
Anthony, Thomas J., O58813.
Antrim, Ralph C., Jr., O65170.
Applegate, William H., O65007.
Applin, Paul L., Jr., O57968.
Apt, Robert, O58814.
Arendt, Morton, Jr., O65942.
Armstrong, George E., O65598.
Armstrong, John R., O65159.
Armstrong, Nemesio A., O59898.
Arnett, Vern R., O60369.
Arnold, Emmett R., O60396.
Arnold, Richard D., O58815.
Arnold, Richard J., O58816.
Aron, Joel D., O57076.
Ashley, Lewis J., O62231.
Astarita, Edward F., O60821.
Atchison, Frank E., O58817.
Athanason, Frank A., O58818.
Atkinson, Donald E., O65071.

EXTENSIONS OF REMARKS

Anti-Semitic Activity in the United States

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, July 17, 1954

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD, a statement I have prepared containing certain extracts from a report and appraisal entitled "Anti-Semitic Activity in the United States."

The report was prepared and issued recently by the American Jewish Committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER

These unfortunately are troubled times in which certain subversive and dissident influences unhappily are able to continue their work of spreading discord and weakening the fabric of our constitutionally prescribed form of government. The American Jewish Committee's report is most timely in this respect. It provides the tools that are needed for the constant vigilance that is required by our people if they are to protect their liberties.

As the president of the American Jewish Committee, Irving M. Engel, Esq., of New York, states in the foreword to the report:

"Organized bigotry, like all other social ills, is best counteracted when its nature and symptoms are known to the public. To gather and disseminate such knowledge, the American Jewish Committee has engaged in continuing research and analysis of anti-Semitic activity and has rendered reports of its findings from time to time.

"Today, as the American people cope with the worldwide threat of communism and bend their energies to resolve many other crucial problems, it is more than ever necessary to guard against malicious movements striving to foment racial and religious discord. Many of these movements have now abandoned their former overt appeals to bigotry in favor of more subtle tactics to which the public must be alerted. It is this circumstance that has occasioned the present report.

"Founded nearly half a century ago, the American Jewish Committee is dedicated to the great common task of all loyal Americans—the strengthening of unity among our citizens of all races and creeds to the end that this Nation and its free institutions may remain secure."

The report is keynoted by an extract from the annual report of the House Committee on Un-American Activities, dated February 6, 1954, where, on page 5, the following statement appears:

"There are presently at work within the United States various and sundry hate groups, the leaders of which, while masking their activities under the guise of patriotism and devotion to the republican form of government, are in fact spreading dissension, discord, bigotry, and intolerance. In many instances, these organizations select ultrapatriotic names and devices to conceal their true and dangerous purposes. The subjects of the hate attacks are individuals or groups of religious and racial minorities among American citizens. The committee is by no means unaware of these activities, and investigation and documentation will proceed to the end that the individuals concerned may be disclosed for what they are. In the opinion of the committee, there are no degrees to subversion. It is not sufficient to be simply anti-Communist if one is anti-American at the same time."

It is true indeed that there are no degrees to subversion. Power mad zealots have too long been able to single out individuals or groups of religious and racial minorities among American citizens and subject them to hate attacks or casually snide implications that they should not enjoy the full exercise of the rights of citizenship which the Constitution provides for them. I regret to say that there have been such evidences even in my own State, but it always has and will be my privilege and my duty to the people of my State and the Nation to take a stand in opposition to them and expose them to the light of day.

The American Jewish Committee is a pioneer organization in the fight against bigotry and intolerance. It has chapters throughout our country and its members are leaders in their own communities. Its report is a sober and factual statement. The following extracts emphasize its principal points:

"In this time of worldwide tensions, it is more than ever important that we correctly appraise the force and scope of organized anti-Semitism—as distinguished from individual expressions of social and economic discrimination—in the United States.

"Until about 20 years ago, our country was comparatively free of this evil which had plagued the Old World for centuries. But with Hitler's rise in Germany, the anti-Semitic movement was forged into an exportable weapon which found its way into the hands of democracy's foes throughout the world.

"In the United States, this weapon has been wielded with varying effect over the years. Organized anti-Semitism has waxed and waned, but never has it vanished completely from the American scene; never has it ceased to be a threat, actual or potential, to our national unity and our free institutions.

* * * * *

"To achieve a proper perspective, it is necessary to understand that many anti-Semites have abandoned their former brash and obvious tactics. The more skillful hatemongers and cunning publicists have now developed a sense of public relations. They exploit current legitimate issues, toning down, if not eliminating, open anti-Semitism. They aim to win the support of respectable elements, rather than the lunatic fringe following which they so highly prized in Christian Front days.

"Thus, in the Presidential elections of 1952, when several thousand citizens in the States of California, Texas, Missouri, Arkansas, North Dakota, and Washington voted for Gen. Douglas MacArthur on the Christian Nationalist Party ticket, these voters were expressing their confidence in an American hero. They were unaware that the general had not accepted the nomination, and that the party was actually a front for one of the most vicious and implacable anti-Semites in the country.

"Similarly, when many people in Los Angeles protested against the schools teaching about UNESCO (United Nations Educational, Scientific, and Cultural Organization), they had at heart what they sincerely, albeit mistakenly, believed to be the best interest of our country. They did not know that many of the alarming rumors they had heard about UNESCO came from the propaganda of a man who makes his living stirring up hatred, and who once headed an organization which the Attorney General of the United States listed as Fascist.

"Such are the maneuvers whereby anti-Semites currently seek to influence public opinion. Thus far, their success has not been impressive; but the support and alliances they have gained by their deceptive tactics nevertheless constitute a potential danger.

"HOW THE CHANGE CAME ABOUT

"Overt anti-Semitism reached its high-water mark in the United States in 1939, when several hundred anti-Jewish groups, launched with Nazi money, tried to convince Americans that Hitler was right. Mainly composed of crackpots and presided over by petty fuehrers, these organizations held storm-troop meetings; they picketed; they published reams of abusive literature, but such blatant demagogery was offensive to the overwhelming majority of Americans; mostly the so-called lunatic fringe rallied to their banners.

"On Pearl Harbor Day most of the rabble-rousers scurried for cover, remaining there for the duration of the war. By 1947, organized anti-Semitism had reached its lowest ebb.

"The advent of the cold war brought many of these agitators back into the open. Some resumed their rabid fulminations against the Jews. Others, having learned from experience that racist appeals violated a basic American ethic, now courted public approval by exploiting the controversial issues of the day. The glibness of their arguments and the vigor of their attacks appeal especially to ultranationalist groups.

"Ultranationalist groups have been a factor in American life since the First World War. They have opposed all progressive moves to meet the needs of Government and society in these complex, industrialized, modern times. After almost a generation of collective bargaining, social-security measures, and Government welfare programs, ultranationalists still seek a return to the 19th century. Their view of States' rights would even preclude SEC regulation of security markers.

"Although three wars have proven their thesis fallacious, the ultranationalists are still vehemently isolationists. They oppose foreign aid, bitterly resent United States participation in the United Nations, and favor amending the Constitution to curtail the treatymaking power of the Federal Government. Suspicious of foreigners, they have consistently resisted immigration into this country except by persons of certain approved racial and national origins, and have fought all efforts to improve our immigration laws.

* * * * *

"Though often led and financed by reputable individuals, and spending millions of dollars to advertise their views via press, platform, radio, and other media, ultranationalists made little headway with the average American until the cold war brought about the present tense atmosphere of our national life.

"While some of the ultranationalist groups espouse retrogressive economic reforms, and others have political aims, all favor extremist techniques in combating communism—free-swinging, wild-accusation tactics which indiscriminately charge liberals with being communistic. Ultranationalists are now appealing to the American people on this basis, equating everything they oppose with communism, subversion, and a newly invented phenomenon—creeping socialism.

"During the past decade, ultranationalist organizations have increased measurably, and they now offer tempting opportunities for infiltration by anti-Semitic elements. In setting out to cultivate these groups, the professional bigot plays his hand adroitly, exploiting the particular political issues which are currently the focus of concern in ultranationalist circles.

* * * * *

"SOCIO-ECONOMIC MEASURES

"It is expected that ultranationalist groups will soon launch their strongest attack upon such long-accepted features of our national way of life as unionism, social security, Government welfare assistance, and similar social reforms of the past generation. Tied in will be appeals to 'save America from creeping socialism' and return to 'constitutionalism,' 'economic freedom,' and 'freedom of choice.' Anti-Semites add the 'Jewish angle' to these lines, alleging prominent Americans of Jewish background to be Machiavellian agents of a super-government.

"THIRD PARTY ISSUE

"The third party is not a new feature in American politics. Theodore Roosevelt's Bull Moose Party, La Follette's Progressives, and the more recent political venture of Henry Wallace, bearing the same title, come readily to mind. Adapting this idea to their own objectives, ultranationalists contend that the present Republican administration is little more than a carbon copy of the Democratic administrations which preceded it. Many anti-Semites have seduiously taken up the third party cry; in so doing, their propaganda generally charges that both major political parties are controlled by Jews.

"A notorious instance of this dovetailing occurred during the 1952 Republican primary fights when both the ultranationalists and the anti-Semites opposed the nomination of General Eisenhower. The former proclaimed what they considered his failings, and the latter blamed these shortcomings on Jewish influence. In some localities, leaflets penned by as many as 10 agitators in different parts of the country were assembled into kits and distributed on main thoroughfares. A typical piece showed a Streicher-like caricature of the Jew pointing to Eisenhower and saying, 'Ike vill keep us boys in power.' This broadside was produced by Independent Republicans for MacArthur, a front organization established by Gerald L. K. Smith—without MacArthur's approval.

* * * * *

"PARTISANSHIP OF THE M'CARRAN-WALTER IMMIGRATION ACT

"The McCarran-Walter Act has been severely criticized by Christian organizations—Protestants and Catholic—as well as by Jewish and many other reputable groups. Much

ultranationalist and anti-Semitic propaganda, aimed at stirring anti-alien sentiment, has attacked critics of the act, while minimizing or ignoring the opposition of Christian church groups. Played up instead is a portrayal of the Jews as seeking the law's repeal because they wish to get millions of their coreligionists into this country. Hints of Jewish power are frequently woven into this argument.

"EXPLOITING LOCAL ISSUES

"The onslaught of ultranationalists against modern education has gravely harassed the school systems of many towns during the past several years. In some instances, so-called education groups, dominated or influenced by anti-Semites, have smeared modern educational methods as communistic and atheistic. Such features as intercultural education, especially, have come under vicious attack; leading educators have been vilified as Communists and their textbooks investigated. UNESCO teaching materials and the display of the U. N. flag have been frequently used as starting points for these attacks. The momentum produced by the earlier organizational and propaganda efforts of ultranationalists promises to keep the issue of modern educational methods alive for some time to come.

"In the grotesque effort to exploit the fears and phobias of the public, the anti-Semites have seized upon proposals in some sections of the country to fluoridate drinking water as a community health measure. Demagogic interpretations range from outright scares of mass poisoning and mass suicide to innuendoes that fluorine saps the individual's willpower—an end, it is charged, desired by the Government. Also suggested, if not openly asserted, is that a supersecret world government backs the project. Fantastic? Yet huge quantities of such propaganda were distributed in Cincinnati. They may well have influenced the negative vote which this proposition received in November 1953.

* * * * *

"CONCLUSION

"Organized anti-Semitic activity today bears little resemblance to the noisy, unruly assemblages of pre-Pearl Harbor days with their spewing of unvarnished racial hatred easily recognizable as Nazi inspired. Using as a point of reference the year 1947, when the anti-Semitic movement reached its lowest ebb, several changing trends in dynamics and tactics are discernible:

"First, more emphasis is laid on disseminating literature, rather than staging meetings, picket lines, rallies, and other demonstrations.

"Second, more subtle approaches are made to public opinion by exploiting such issues as communism, United Nations, and national economic policies.

"Third, there is a pronounced tendency among prominent ultranationalist organizations and leaders to accept—or at least tolerate—hatemongers and their propaganda products. In many cases this amenability is the result of unwariness; many would be more discerning, were it not for their own extremist viewpoints.

"And finally, professional fomenters of discord are in positions where they can cause much trouble, for they have learned how to salt public debate with hate propaganda, and have discovered the usefulness of general mailing lists, instead of relying on the private rosters of crackpot following in years gone by.

"The threat of bigotry polluting the American atmosphere can best be averted by an alert American public. Hatemongers and their machinations must be exposed. Vitally important is the responsibility of ultranationalists and ultraconservatives to recognize, and rid themselves of, the racists who seek to exploit and dominate them. Equally vital is the obligation of respectable leaders and supporters of these movements to dissociate themselves from groups which cannot dislodge the anti-Semites, and to persuade other men of goodwill to do likewise.

"There is much room in the market-place of ideas for opposing viewpoints on a multitude of issues—national and international, political, social, and economic. That is the glory of American democracy. But the public must be shown how to recognize and reject the ideological counterfeiters who would pass on as legal tender their hollow coins of bigotry."

SENATE

MONDAY, JULY 19, 1954

(Legislative day of Friday, July 2, 1954)

The Senate met at 10 o'clock a. m., on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

Our Father God, who hath taught us that in quietness and confidence shall be our strength, standing at the threshold of another week of test and toil, by the might of Thy spirit lift us, we pray Thee, to Thy presence that we may be still and know that Thou art God.

We thank Thee for friendships that enrich our lives, for duties that challenge our powers, for rainbows of radiant hope which are our skies. In paths beyond our human ken to discover, lead us to that concord which is the fruit of righteousness. Grant us reason and insight to apply our hearts unto wisdom and to bring every thought and effort into captivity to the high endeavor of peace on earth to men of good will. We ask it in the Redeemer's name. Amen.

THE JOURNAL

On request of Mr. SCHOEPPEL, and by unanimous consent, the reading of the Journal of the proceedings of Saturday, July 17, 1954, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILL

Messages in writing from the President of the United States were communicated to the Senate by Mr. Tribbe, one of his secretaries, and he announced that on July 16, 1954, the President had approved and signed the act (S. 3539) to further amend title II of the Career Compensation Act of 1949, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services.

MESSAGE FROM THE HOUSE—ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

S. 2987. An act to provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to the Federal land-administering agencies;

H. R. 2617. An act for the relief of Guillermo Morales Chacon;

H. R. 2846. An act authorizing the President to exercise certain powers conferred upon him by the Hawaiian Organic Act in respect of certain property ceded to the United States by the Republic of Hawaii, notwithstanding the acts of August 5, 1939, and June 16, 1940, or other acts of Congress;

H. R. 4928. An act to authorize the Secretary of Agriculture to convey a certain parcel of land to the city of Clifton, N. J.;

H. R. 6263. An act to authorize the Secretary of Agriculture to convey certain lands in Alaska to the Rotary Club of Ketchikan, Alaska;

H. R. 6642. An act for the relief of Mrs. Augusta Selmer-Andersen;

H. R. 6882. An act to amend the act of September 27, 1950, relating to construction of the Vermejo reclamation project;

H. R. 6975. An act authorizing the Secretary of the Interior to convey certain lands to the Siskiyou Joint Union High School District, Siskiyou County, Calif.;

H. R. 7012. An act for the relief of Nicole Goldman;

H. R. 8549. An act granting the consent of Congress to The Breaks Interstate Park Compact;

H. R. 8713. An act to amend section 1 (d) of the Helium Act (50 U. S. C. sec. 161 (d)), and to repeal section 3 (13) of the act entitled "An act to amend or repeal certain Government property laws, and for other purposes," approved October 31, 1951 (65 Stat. 701);

H. R. 9006. An act to authorize the Secretary of the Army to donate 28 paintings to the Australian War Memorial; and

H. R. 9242. An act to authorize certain construction at military and naval installations and for the Alaska Communications System, and for other purposes.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent that immediately following the quorum call there may be the customary morning hour for the transaction of routine business, under the usual 2-minute limitation on speeches.

The VICE PRESIDENT. Without objection, it is so ordered.

CALL OF THE ROLL

Mr. SCHOEPPEL. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Barrett	Ferguson	Murray
Bennett	Gillette	Saltonstall
Bowring	Gore	Schoeppel
Bridges	Hayden	Smith, Maine
Burke	Hickenlooper	Smith, N. J.
Butler	Hill	Thye
Chavez	Holland	Williams
Crippa	Johnson, Tex.	Young
Dirksen	Knowland	
Ervin	Lehman	

Mr. CLEMENTS. I announce that the Senator from Mississippi [Mr. EASTLAND], the Senator from Louisiana [Mr.

ELLENDER], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from South Carolina [Mr. MAYBANK], the Senator from Arkansas [Mr. MCCLELLAN], and the Senator from Rhode Island [Mr. PASTORE] are absent on official business.

The Senator from Missouri [Mr. HENNINGS] is necessarily absent.

The VICE PRESIDENT. A quorum is not present.

Mr. KNOWLAND. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The VICE PRESIDENT. The question is on agreeing to the motion of the Senator from California.

The motion was agreed to.

The VICE PRESIDENT. The Sergeant at Arms will execute the order of the Senate.

After a little delay, Mr. AIKEN, Mr. ANDERSON, Mr. BEALL, Mr. BRICKER, Mr. BUSH, Mr. BYRD, Mr. CAPEHART, Mr. CARLSON, Mr. CASE, Mr. CLEMENTS, Mr. COOPER, Mr. CORDON, Mr. DANIEL, Mr. DOUGLAS, Mr. DUFF, Mr. DWORSHAK, Mr. FLANDERS, Mr. FREAR, Mr. FULBRIGHT, Mr. GEORGE, Mr. GOLDWATER, Mr. GREEN, Mr. HENDRICKSON, Mr. HUMPHREY, Mr. IVES, Mr. JACKSON, Mr. JENNER, Mr. JOHNSON of Colorado, Mr. JOHNSTON of South Carolina, Mr. KERR, Mr. KILGORE, Mr. KUCHEL, Mr. LANGER, Mr. LENNON, Mr. LONG, Mr. MAGNUSON, Mr. MALONE, Mr. MANSFIELD, Mr. MARTIN, Mr. MCCARRAN, Mr. MCCARTHY, Mr. MILLIKIN, Mr. MONRONEY, Mr. MORSE, Mr. MUNDT, Mr. NEELY, Mr. PAYNE, Mr. POTTER, Mr. PURTELL, Mr. REYNOLDS, Mr. ROBERTSON, Mr. RUSSELL, Mr. SMATHERS, Mr. SPARKMAN, Mr. STENNIS, Mr. SYMINGTON, Mr. UPTON, Mr. WATKINS, Mr. WELKER, and Mr. WILEY entered the Chamber and answered to their names.

The VICE PRESIDENT. A quorum is present. Routine business is now in order.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following communications and letters, which were referred as indicated:

PROPOSED SUPPLEMENTAL APPROPRIATIONS, DISTRICT OF COLUMBIA (S. DOC. NO. 145)

A communication from the President of the United States, transmitting proposed supplemental appropriations in the amount of $73,721.48 for the District of Columbia for the fiscal year 1955 and prior fiscal years (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

PROPOSED SUPPLEMENTAL APPROPRIATION FOR PAYMENT OF CLAIMS, ETC. (S. DOC. NO. 144)

A communication from the President of the United States, transmitting a proposed supplemental appropriation to pay claims for damages, audited claims, and judgments rendered against the United States, as provided by various laws, in the amount of $2,097,539, together with such amounts as may be necessary to pay indefinite interest and costs and to cover increases in rates of exchange as may be necessary to pay claims in foreign currency (with accompanying papers); to the Committee on Appropriations and ordered to be printed.

PAYMENT OF MONEY ORDERS

A letter from the Postmaster General, transmitting a draft of proposed legislation relating to the payment of money orders (with an accompanying paper); to the Committee on Post Office and Civil Service.

PROPOSED AWARD OF CONCESSION PERMIT, OLYMPIC NATIONAL PARK, WASH.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed award of a concession permit, Olympic National Park, Wash., for the period June 15 to September 15, 1954 (with an accompanying paper); to the Committee on Interior and Insular Affairs.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

Three letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law as to each alien, and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

GRANTING OF APPLICATIONS FOR PERMANENT RESIDENCE FILED BY CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders granting the applications for permanent residence filed by certain aliens, together with a statement of the facts and pertinent provisions of law as to each alien, and the reasons for granting such applications (with accompanying papers); to the Committee on the Judiciary.

GRANTING ADMISSION INTO THE UNITED STATES OF A CERTAIN ALIEN

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copy of an order granting admission into the United States of Fintan Patrick Walsh (with an accompanying paper); to the Committee on the Judiciary.

TEMPORARY ADMISSION INTO THE UNITED STATES OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered granting temporary admission into the United States of certain aliens (with accompanying papers); to the Committee on the Judiciary.

D. A. SULLIVAN AND SONS, INC., AND THOMAS F. HARNEY, JR., DOING BUSINESS AS HARNEY ENGINEERING CO. *v.* THE UNITED STATES

A letter from the Clerk, United States Court of Claims, transmitting, pursuant to Senate resolutions 152 and 165 of the 81st Congress, 1st session, and sections 1492 and 2509, of title 28, United States Code, copies of the Court's opinion and findings of fact, together with conclusions therein, entered in the case of D. A. Sullivan and Sons, Inc., and Thomas F. Harney, Jr., doing business as Harney Engineering Co., v. The United States (with an accompanying document); to the Committee on the Judiciary.

DISPOSITION OF EXECUTIVE PAPERS

A letter from the Archivist of the United States, transmitting, pursuant to law, a list of papers and documents on the files of several departments and agencies of the Government which are not needed in the conduct of business and have no permanent value or historical interest, and requesting action looking to their disposition (with accompanying papers); to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The VICE PRESIDENT appointed Mr. CARLSON and Mr. JOHNSTON of South Carolina members of the committee on the part of the Senate.

PETITION

The VICE PRESIDENT laid before the Senate a resolution adopted by the National Federation of Business and Professional Women's Clubs, Inc., at St. Louis, Mo., favoring the enactment of legislation granting Statehood for Alaska and Hawaii, which was ordered to lie on the table.

RECOGNITION OF SOVIET RUSSIA AND HER SATELLITE NATIONS—RESOLUTION OF AMERICAN LEGION, DEPARTMENT OF WISCONSIN

Mr. JENNER. Mr. President, I present for appropriate reference, and ask unanimous consent to have printed in the RECORD, a resolution adopted by the Wisconsin Department of the American Legion, at Madison, Wis., favoring the adoption of Senate Resolution 247, to withdraw recognition of Russia and her satellite nations.

There being no objection, the resolution was referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

RECOGNITION OF SOVIET RUSSIA AND ITS SATELLITE NATIONS BE WITHDRAWN AS PROVIDED IN SENATE RESOLUTION 247

Whereas there has been introduced into the United States Senate a resolution, Senate Resolution 247, by Senators MCCARRAN and JENNER to the end that recognition be withdrawn from the Union of Soviet Socialist Republics together with the satellite nations of the Soviet Union; and

Whereas recognition was granted to this nation over the protests of the American Legion in the year 1933; and

Whereas the Soviet Union has violated many of the provisions of the pact wherein that nation was granted recognition by our beloved Republic; and

Whereas the Soviet Union has been responsible for a continued network of espionage within the United States of America; Now, therefore, be it

Resolved by the American Legion, Department of Wisconsin, in convention assembled, this 17th day of July 1954, at Madison, Wis., as follows: That the Members of the Congress from the State of Wisconsin be petitioned to collectively work to the end of the adoption and enforcement of the provisions of Senate Resolution 247, as offered by the Honorable PAT MCCARRAN and the Honorable WILLIAM E. JENNER.

PERMANENT MERCHANT MARINE ACADEMY—TELEGRAM

Mr. WILEY. Mr. President, earlier this year in this session of Congress, I introduced S. 3610, to amend section 216 (b) of the Merchant Marine Act, 1936, as amended, to provide for the maintenance of the Merchant Marine Academy, as a companion measure to H. R. 9434, which had been introduced by my associate, Representative WILLIAM VAN PELT, to accord permanent status to the Kings Point Merchant Marine Academy. This proposed legislation has the widest backing among friends of the United States merchant marine.

It has been distressing, however, to note that this proposed legislation, so

vital to our civilian economy, so indispensable to our military needs in the event of war emergency, has become stalled. A combination of adverse factors is apparently at work, both within and outside the executive branch of Government. It includes the adverse position of certain few folks in the legislative branch as well.

I earnestly hope that the executive branch will reconsider and will give a definitive green light to the Senate and House to pass this proposed legislation. And I hope that those of my associates in the Congress who oppose it will take a second look, and will revise their opinion.

I present a telegram which I received this morning from an officer of the Association of Parents and Friends of the Kings Point Academy. I ask unanimous consent that it be printed at this point in the RECORD and be thereafter appropriately referred.

There being no objection, the telegram was referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

GREAT NECK, N. Y., *July 16, 1954.*

ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.:

Association of Parents and Friends of Kings Point and its hundreds of members from coast to coast join your many constituents in expressing disappointments over House inactivity today on Kings Point bill. Our surveys show majorities in both Houses favor bill passage. Time runs short. Can you request White House clarification of discrepancies between attitudes of Commerce and Navy Departments toward? Such clarification offered by you for committee meetings next may prove turning point. Your tireless and effective efforts today merits full gratitude of America but only further personal and drastic action by you exerted now can assure success this session.

JOHN W. SCHERGER,
First Vice President, Association of Parents and Friends, Kings Point, N. Y.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. LANGER, from the Committee on the Judiciary, without amendment:

S. 979. A bill for the relief of Dr. James C. S. Lee (Rept. No. 1820);

S. 1123. A bill for the relief of Kosmas Vasilios Fournarakis (Rept. No. 1821);

S. 1201. A bill for the relief of Martin P. Pavlov (Rept. No. 1822);

S. 1259. A bill for the relief of Anastasia Knodylis (Rept. No. 1823);

S. 1325. A bill for the relief of Szjena Peison and David Peison (Rept. No. 1824);

S. 1558. A bill for the relief of Sultana Coka Pavlovitch (Rept. No. 1825);

S. 1888. A bill for the relief of Rica, Lucy, and Salomon Breger (Rept. No. 1826);

S. 1909. A bill for the relief of Jacob Grynberg (Rept. No. 1827);

S. 2105. A bill for the relief of Donald Hector Taylor (Rept. No. 1828);

S. 2259. A bill for the relief of Rev. Charles V. Rossini (Rept. No. 1829);

S. 2337. A bill for the relief of Jose Alvarez (Rept. No. 1830);

S. 2345. A bill for the relief of Yun Tai Miao and his wife, Chao Pei Tsang Miao (Rept. No. 1831);

S. 2433. A bill for the relief of Dr. Sylvia Siu Fan Cheng Chu and Dr. Johnson Chinsheng Chu (Rept. No. 1832);

S. 2520. A bill for the relief of Julius Maar (Rept. No. 1833);

S. 2580. A bill for the relief of Anni Marjatta Makela (nee Kirvesmaki) and her son, Markku Paivio Makela (Rept. No. 1834);

S. 2586. A bill for the relief of Leon J. de Szethofer and Blanche Hrdinova de Szethofer (Rept. No. 1835);

S. 2639. A bill for the relief of Etsuko Tamaki (Shimizu) (Rept. No. 1836);

S. 2644. A bill for the relief of Maria Louise Andreis (Rept. No. 1837);

S. 2666. A bill for the relief of Anastasia Alexiadou (Rept. No. 1838);

S. 2710. A bill for the relief of Chokichi Iraha (Rept. No. 1839);

S. 2771. A bill for the relief of Guiseppe Minardi (Rept. No. 1840);

S. 2842. A bill for the relief of Dr. Felix de Pinies (Rept. No. 1841);

S. 2893. A bill for the relief of Seraphina Papgeorgiou (Rept. No. 1842);

S. 2894. A bill for the relief of Mrs. Azniv Y. Hasserdjian (Rept. No. 1843);

S. 2967. A bill for the relief of James Ji-Tsung Woo, Margie Wanching Woo, Daniel Du-Ning Woo, and Robert Du-An Woo (Rept. No. 1844);

S. 3319. A bill for the relief of Suzanne L'Heureux (Rept. No. 1845);

H. R. 686. A bill for the relief of Mrs. Erna Gronowski (Rept. No. 1846);

H. R. 692. A bill for the relief of Nina Makeef, also known as Nina Berberova (Rept. No. 1847);

H. R. 795. A bill for the relief of Jean Hollis Vock (Rept. No. 1848);

H. R. 1337. A bill for the relief of Mrs. Franca Gatti Ohta (Rept. No. 1849);

H. R. 1462. A bill for the relief of Fotini X. Parisis (Rept. No. 1850);

H. R. 1768. A bill for the relief of Claire Louise Carey and Vincent F. Carey (Rept. No. 1851);

H. R. 1788. A bill for the relief of Wanda Luceri, also known as Sister Cecilia; Maria De Padova, also known as Sister Rosanna; Anna Santoro, also known as Sister Natalina; Valentina Ruffoni, also known as Sister Severina; Cosima Russo, also known as Sister Carmelina (Rept. No. 1852);

H. R. 2028. A bill for the relief of Mrs. Antonietta Palmieri (Rept. No. 1853);

H. R. 2188. A bill for the relief of Karoline Diekmeyer (Rept. No. 1854);

H. R. 2371. A bill for the relief of Mrs. Maria M. Broix (Rept. No. 1855);

H. R. 2403. A bill for the relief of Laszlo Varga and Nike Varga (Rept. No. 1856);

H. R. 2440. A bill for the relief of Lidija Cimze (Rept. No. 1857);

H. R. 2499. A bill for the relief of Adolfo L. Kalb, and his wife, Mrs. Eugenia G. Kalb (Rept. No. 1858);

H. R. 2619. A bill for the relief of Sister Aurelia Yanguas Teres and Sister Matilde Cuevas San Martin (Rept. No. 1859);

H. R. 2627. A bill for the relief of Cecilia Lucy Boyack (Rept. No. 1860);

H. R. 2650. A bill for the relief of Sister Anna Etti (Rept. No. 1861);

H. R. 3017. A bill for the relief of Felix Petrover (Rept. No. 1862);

H. R. 3675. A bill for the relief of Herre van der Veen, Mrs. Marie van der Veen, Helen Winifred van der Veen, and Jan Herre van der Veen (Rept. No. 1863);

H. R. 3743. A bill for the relief of Chaim Szemaja Segal and Icek Hersz Segal (Rept. No. 1864);

H. R. 4248. A bill for the relief of Albertas Bauras (Rept. No. 1865);

H. R. 4330. A bill for the relief of Dr. Orlando Artuso and family (Rept. No. 1866);

H. R. 4813. A bill for the relief of Radu Florescu and Nicole Elizabeth Michel Florescu (Rept. No. 1867);

H. R. 5340. A bill for the relief of Tibor, Szuzsa (Suzanne), and Judith Sauer (Rept. No. 1868);

H. R. 5354. A bill for the relief of Liborio Guido Rutilio (Rept. No. 1869);

H. R. 5816. A bill for the relief of Mrs. Caridad Rosa Avila Leyva de Ernest (Rept. No. 1870);

H. R. 6026. A bill for the relief of Gertrud O. Heinz (Rept. No. 1871);

H. R. 6553. A bill for the relief of Esterina Pella Bellucci (Rept. No. 1872);

H. R. 6855. A bill for the relief of Mrs. Elisabeth Metzing Rink (Rept. No. 1873);

H. R. 6982. A bill for the relief of Maria Elizabeth Sanchez Y Moreno (Rept. No. 1874);

H. R. 7041. A bill for the relief of Waltruade Elsa Solleder (Rept. No. 1875);

H. R. 7145. A bill for the relief of Anneliese Catalino (Rept. No. 1876);

H. R. 7150. A bill for the relief of Thora June Grumbles (Rept. No. 1877);

H. R. 7152. A bill for the relief of Jozef Van den broeck (Rept. No. 1878);

H. R. 7221. A bill for the relief of Anders Taranger (Rept. No. 1879);

H. R. 7761. A bill for the relief of John Lewis Pyles, Jr. (Rept. No. 1880); and

H. R. 8239. A bill for the relief of Fung Ping Wah (also known as Reginald Ping Wah Fung) and his wife, Fung Wai-Yin Li (also known as Doris Fung) (Rept. No. 1881).

By Mr. LANGER, from the Committee on the Judiciary, with an amendment:

S. 377. A bill for the relief of the State of Oklahoma (Rept. No. 1882);

S. 547. A bill for the relief of Hava Shpak, A. A. Shpak, and Sympeha Shpak (Rept. No. 1883);

S. 1601. A bill for the relief of Jeremy Allen Clore (Rept. No. 1884);

S. 1978. A bill for the relief of Dr. Chang Ho Cho (Rept. No. 1885);

S. 2064. A bill for the relief of Aniceto Sparagna (Rept. No. 1886);

S. 2536. A bill for the relief of Ellen Henriette Buch (Rept. No. 1887);

S. 2649. A bill for the relief of Chaya Frangies (Rept. No. 1888);

S. 2709. A bill for the relief of Peter Haberl (Rept. No. 1889);

S. 2789. A bill for the relief of Gianni Bernardis (Rept. No. 1890);

S. 2791. A bill for the relief of Ernesto DeLeon (Rept. No. 1891);

S. 2885. A bill for the relief of Sandra Lea MacMullin (Rept. No. 1892);

S. 3065. A bill for the relief of Ernest Ludwig Bamford and Mrs. Nadine Bamford (Rept. No. 1893);

S. 3160. A bill for the relief of Irene Julienne Givens (Rept. No. 1894);

S. 3221. A bill for the relief of Ingeborg Otto (Rept. No. 1895);

S. 3322. A bill for the relief of Ali Hassan Waffa (Rept. No. 1896);

S. 3343. A bill for the relief of Babette Bayer Trisler (Rept. No. 1897);

S. 3424. A bill for the relief of Anneliese Hofmann (Rept. No. 1898); and

H. R. 1514. A bill for the relief of Clint Lewis (Rept. No. 1899).

By Mr. LANGER, from the Committee on the Judiciary, with amendments:

S. 1852. A bill for the relief of Juan Antonio Gorrono Lajarzabulo and Jesus Maria Ojenola Guernica (Rept. No. 1900);

S. 1873. A bill for the relief of Ursula Wilke (Rept. No. 1901);

S. 2841. A bill for the relief of Vittoria Alberghetti, Daniele Alberghetti, and Anna Maria Alberghetti (Rept. No. 1902);

S. 2925. A bill for the relief of Evantiyi Yorgiadis (Rept. No. 1903);

H. R. 5461. A bill for the relief of Wah Chang Corp. (Rept. No. 1904); and

H. R. 7886. A bill for the relief of Mrs. Cecil Norton Broy (Rept. No. 1905).

By Mr. JENNER, from the Committee on the Judiciary, without amendment:

S. 3428. A bill to authorize the Federal Government to guard strategic defense facilities against individuals believed to be disposed to commit acts of sabotage, espionage, or other subversion (Rept. No. 1818).

By Mr. JENNER, from the Committee on the Judiciary, with amendments:

H. R. 9580. A bill to revise and extend the laws relating to espionage and sabotage, and for other purposes (Rept. No. 1819).

By Mr. MILLIKIN, from the Committee on Finance, without amendment:

H. R. 8155. A bill to continue until the close of June 30, 1955, the suspension of duties and import taxes on metal scrap, and for other purposes (Rept. No. 1907); and

H. R. 8628. A bill to amend the Tariff Act of 1930 to insure that crude silicon carbide imported into the United States will continue to be exempt from duty (Rept. No. 1908).

By Mr. MILLIKIN, from the Committee on Finance, with an amendment:

H. R. 9248. A bill to amend section 308 (5) of the Tariff Act of 1930, as amended (Rept. No. 1909).

By Mr. MILLIKIN, from the Committee on Finance, with amendments:

H. R. 8041. A bill to provide benefits under the laws administered by the Veterans' Administration based upon service in the Women's Army Auxiliary Corps under certain conditions (Rept. No. 1910).

By Mr. CAPEHART, from the Committee on Banking and Currency, with an amendment:

H. R. 8152. A bill to extend to June 30, 1955, the direct home and farmhouse loan authority of the Administrator of Veterans' Affairs under title III of the Servicemen's Readjustment Act of 1944, as amended, to make additional funds available therefor, and for other purposes (Rept. No. 1911).

By Mr. GOLDWATER, from the Committee on Labor and Public Welfare, without amendment:

S. 1871. A bill for the relief of Antonio Fopp (Rept. No. 1912).

GEO. D. EMERY CO.—REFERENCE OF BILL TO COURT OF CLAIMS—REPORT OF A COMMITTEE

Mr. LANGER. Mr. President, from the Committee on the Judiciary, I report an original resolution, to refer the bill (S. 3730) for the relief of the Geo. D. Emery Co., a private bill, to the Court of Claims for a report, and I submit a report (No. 1906) thereon.

The VICE PRESIDENT. The report will be received, and the resolution will be placed on the calendar.

The resolution (S. Res. 285), was placed on the calendar, as follows:

Resolved, That the bill (S. 3730) entitled "A bill for the relief of the Geo. D. Emery Co.," now pending in the Senate, together with all accompanying papers, is hereby referred to the United States Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code; and said court shall proceed expeditiously with the same, in accordance with the provisions of said sections, and report to the Senate, at the earliest practicable date, giving such findings of fact and conclusions thereon as shall be sufficient to inform the Congress of the nature and character of the demand, as a claim legal or equitable, against the United States, and the amount, if any, legally or equitably due from the United States to the claimant.

HEALTH SERVICE PREPAYMENT PLAN REINSURANCE ACT—SEPARATE VIEWS (PT. 2 OF S. REPT. NO. 1798)

Mr. MURRAY. Mr. President, in accordance with the unanimous consent agreement entered into on Tuesday, July 13, 1954, I submit separate views on the bill (S. 3114) to improve the public health by encouraging more extensive use of the voluntary prepayment method in the provision of personal health services, and request that they be printed.

The VICE PRESIDENT. The separate views of the Senator from Montana will be received, and, without objection, will be printed.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, July 19, 1954, he presented to the President of the United States the enrolled bill (S. 2987) to provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to Federal land-administering agencies.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and by unanimous consent, the second time, and referred as follows:

By Mr. COOPER:

S. 3767. A bill to authorize the issuance of a special series of stamps commemorative of the 100th anniversary of the founding of Berea College, Berea, Ky.; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. COOPER when he introduced the above bill, which appear under a separate heading.)

By Mr. YOUNG:

S. 3768. A bill authorizing the construction of flood control works on the lower Heart River in the vicinity of Mandan, N. Dak.; to the Committee on Public Works.

By Mr. McCARRAN:

S. 3769. A bill to amend section 709 of title 18, United States Code, so as to protect the name of the Federal Bureau of Investigation from commercial exploitation; to the Committee on the Judiciary.

By Mr. MARTIN:

S. 3770. A bill for the relief of Gertrud Mattigkeit; to the Committee on the Judiciary.

By Mr. JOHNSON of Texas (for himself and Mr. DANIEL):

S. 3771. A bill to convey by quitclaim deed certain land to the Brownsville Navigation District of Cameron County, Tex.; to the Committee on Armed Services.

(See the remarks of Mr. JOHNSON of Texas when he introduced the above bill, which appear under a separate heading.)

By Mr. McCARTHY (by request):

S. 3772. A bill to amend the Federal Property and Administrative Services Act of 1949, as amended, to provide for the payment of appraisers', auctioneers' and brokers' fees from the proceeds of disposal of Government surplus real property, and for other purposes; and

S. 3773. A bill to authorize reciprocal fire protection agreements between departments and agencies of the United States and public or private organizations engaged in fire-fighting activities, and for other purposes; to the Committee on Government Operations.

By Mr. AIKEN:

S. 3774. A bill to extend the benefits of the Watershed and Flood Prevention Act to Alaska, Hawaii, and Puerto Rico; to the Committee on Agriculture and Forestry.

By Mr. KENNEDY:

S. 3775. A bill to amend the Federal Regulation of Lobbying Act; to the Committee on the Judiciary.

(See the remarks of Mr. KENNEDY when he introduced the above bill, which appear under a separate heading.)

By Mr. YOUNG (for himself and Mr. MUNDT):

S. J. Res. 179. Joint resolution to authorize the Secretary of Agriculture to postpone the referendum on marketing quotas for the 1955 crop of wheat; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. YOUNG when he introduced the above joint resolution, which appear under a separate heading.)

ISSUANCE OF COMMEMORATIVE STAMP IN HONOR OF CENTENARY OF BEREA COLLEGE, BEREA, KY.

Mr. COOPER. Mr. President, I introduce for appropriate reference a bill to authorize the issuance of a commemorative stamp in honor of the centenary of Berea College, Berea, Ky.

Berea is an unusual and outstanding educational institution. It was first founded to provide the opportunity for an education to young men and women living in the mountains of Kentucky and adjacent States. In this endeavor it has succeeded admirably.

The present enrollment of Berea is approximately 1,500 students. Its students today number many from other States and foreign countries. The college charges no tuition. The only fee is that for food, lodging, and incidental expenses, running $337 per year.

A program of work is provided for students to help them finance their education. To accomplish this, Berea manages a number of flourishing business enterprises which give opportunities for employment, including a hotel, a farm, and a print shop. Each student is guaranteed a minimum of 10 hours of work per week.

Berea was conceived in the reform movements prior to the Civil War. The founder was John G. Fee, a preacher who opposed the evils of slavery. His own father denounced him for his convictions. He went to Madison County, Ky., where, in 1853, he was able to establish a church. Two years later a school was founded.

School and Society for April 21, 1951, describes Berea as "a unique example of a school which has been achieving the fundamental aims of education in our democratic society. From its very beginning, Berea was linked to the cause of freedom and to people who were of great faith and courage."

Mr. President, I would like to pay special tribute to the men of great faith and courage who have headed Berea College. During its existence, Berea has had 6 great presidents, as follows: John A Rogers, principal, 1858–69; Edward H. Fairchild, 1869–89; William B. Stewart, 1890–92; William G. Frost, 1892–1920; William J. Hutchins, 1920–39; Francis S. Hutchins, 1939 to the present.

These men, a long roster of dedicated and able teachers, and the support of devoted friends in Kentucky and throughout the Nation have made Berea College one of the great educational institutions of our country.

I ask unanimous consent to have published in the RECORD a brief chronology of Berea College, which will give to the Members of the Senate the significant events in the history of this great institution.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the chronology will be printed in the RECORD.

The bill (S. 3767) to authorize the issuance of a special series of stamps commemorative of the 100th anniversary of the founding of Berea College, Berea, Ky., introduced by Mr. COOPER was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

The chronology presented by Mr. COOPER is as follows:

LANDMARKS IN THE HISTORY OF BEREA COLLEGE

1855: Berea College founded by Rev. John G. Fee, a Kentucky abolitionist, aided by Rev. J. A. R. Rogers, John Hanson, Hon. Cassius M. Clay, and other antislavery men.

1858: Constitution written for the new school. Land for campus secured on faith.

1859: Antislavery families of Berea ordered to leave the State, owing to panicky fear arising from John Brown's raid in Virginia.

1859–65: The young college closed because of exile of its leaders.

1866: Berea College reopened with both young men and young women in attendance, both colored and white.

1873: First college class graduated, three receiving bachelor of arts degrees, one a B. B. degree.

1898: Berea College General Hospital founded. First hospital on a college campus in America.

1904: Day law passed by the Kentucky Legislature forbidding the coeducation of Negroes and whites in the same private institution. Contested by Berea College. Law upheld by the United States Supreme Court in 1908.

1906–9: Berea College raised adjustment fund of $400,000 to establish Lincoln Institute for education of Negroes.

1906: Seven hours a week of work (later 10 hours) required of each student to maintain a democratic social tone among those who did not need to earn their way through college.

1914: First dean of labor appointed to cope with the work problem created by increased enrollments.

1915: First out-of-territory rule passed: That no nonmountain student be admitted to Berea if his presence would crowd out a worthy mountain student.

1919: Second dean of labor appointed with responsibility of developing new incentives and new industries to meet increased pressure for student labor, a successful policy which resulted in worldwide recognition of the trade name Berea College Student Industries as quality product.

1950: Controversial Day law was revised by the Kentucky Legislature permitting private institutions to regulate themselves regarding coeducation of Negroes and whites.

1954: In January the first Negro student was graduated from Berea College since the Day law became effective in 1904—50 years later.

1955: Berea College celebrates its 100th anniversary.

That Berea College has kept pace with educational advances is shown by the recognitions received and the accredited status granted by such agencies as are qualified to pass judgment.

1920: Three-year diploma course in nursing approved by the State board of nurse examiners.

1924: Berea Academy accredited by the Southern Association of Colleges and Secondary Schools.

1926: Berea College accredited by the Southern Association of Colleges and Secondary Schools.

1927: Berea College accepted into membership in the Association of American Colleges.

1928: Berea College placed on the approved list of the Association of American Universities.

1930: Accepted into full membership in the American Association of University Women.

1952: The School of Nursing was temporarily accredited by the National League of Nursing Education.

CONVEYANCE OF CERTAIN LAND TO BROWNSVILLE NAVIGATION DISTRICT OF CAMERON COUNTY, TEX.

Mr. JOHNSON of Texas. Mr. President, on behalf of myself and my colleague, the junior Senator from Texas [Mr. DANIEL], I introduce for appropriate reference a bill authorizing the Secretary of the Army to reconvey, by quitclaim deed, to the Brownsville Navigation District of Cameron County, Tex., certain lands in that county.

In October, 1932, the Brownsville Navigation District conveyed to the United States Government the south tip of Padre Island and the north tip of Brazos Island. No monetary consideration was involved. Subsequently, the United States leased to Cameron County the south tip of Padre Island. This was a 5-year lease, which has been once renewed. The renewed lease expires in August of this year.

Cameron County has declared this tract of land a park area, and voted $850,000 in bonds for its development. Recreational facilities have been erected in the area. The county also has built a causeway from the mainland to the tip of Padre Island, at a cost of $2,750,000. Plans have been made to establish a number of parks on the island.

Officials of Cameron County and of Brownsville Navigation District recently were informed by the Army Engineers that the United States Government no longer needs the land deeded to it in 1932, and that the land should be declared surplus.

This bill would simply authorize the Army to deed back to the Navigation District the land which it received without cost, instead of having the land declared surplus and placed on the market.

The bill provides that if the property is not used for public park and recreational purposes in any two successive years, title to it shall revert to the United States.

The proposed action is fair and equitable. It protects the interests of all concerned. I hope that early and favorable action will be taken upon this bill.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 3771) to convey by quitclaim deed certain land to the Brownsville Navigation District of Cameron County, Tex., introduced by Mr. JOHNSON of Texas (for himself and Mr. DANIEL), was received, read twice by its title and referred to the Committee on Armed Services.

EXTENSION OF COVERAGE UNDER OLD-AGE AND SURVIVORS INSURANCE PROGRAM—AMENDMENT

Mr. MARTIN (for himself and Mr. LONG) submitted an amendment intended to be proposed by them, jointly, to the bill (H. R. 9366) to amend the Social Security Act and the Internal Revenue Code so as to extend coverage under the old-age and survivors insurance program, increase the benefits payable thereunder, preserve the insurance rights of disabled individuals, and increase the amount of earnings permitted without loss of benefits, and for other purposes, which was referred to the Committee on Finance, and ordered to be printed.

AGRICULTURAL ACT OF 1954—AMENDMENTS

Mr. AIKEN (for himself, Mr. HICKENLOOPER, Mr. WILLIAMS, Mr. SCHOEPPEL, Mr. WELKER, Mr. HOLLAND, and Mr. ANDERSON) submitted amendments intended to be proposed by them, jointly, to the bill (S. 3052) to encourage a stable, prosperous, and free agriculture, and for other purposes, which were ordered to lie on the table and to be printed.

EXECUTIVE MESSAGES REFERRED

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting several nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. WELKER, from the Committee on the Judiciary:

Fred M. Taylor, of Idaho, to be United States district judge for the district of Idaho.

By Mr. LANGER, from the Committee on the Judiciary:

Herbert S. Boreman, of West Virginia, to be United States district judge for the northern district of West Virginia, vice William Ell Baker, retired;

Emett C. Choate, of Florida, to be United States district judge for the southern district of Florida; and

Joseph E. Hines, of South Carolina, to be United States attorney for the western district of South Carolina, vice John C. Williams, resigned.

NOTICE OF HEARING ON NOMINATION OF LAWRENCE QUINCY MUMFORD, TO BE LIBRARIAN OF CONGRESS

Mr. JENNER. Mr. President, on behalf of the Committee on Rules and Administration, I desire to give notice that a public hearing has been scheduled for Monday, July 26, 1954, at 2 p. m., in room

457, of the Senate Office Building, upon the nomination of Lawrence Quincy Mumford, of Ohio, to be Librarian of Congress.

All persons interested in the nomination are invited to be present at the hearing.

WATER IN THE ARID WEST

Mr. BENNETT. Mr. President, even in the Senate, it pays to pause sometimes and talk of simple things.

What could be more simple—or more vital than water? As the Ancient Mariner said, "Water, water everywhere." It is always with us in the Senate. It fails to rain in one or many States, and we have a withering drought. It rains too hard in one locality in Texas, and we have a lethal flood. It rains too much over too wide an area in the northern plain States, and in Louisiana, they start "workin' on the levee."

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. BENNETT. I yield to the Senator from Iowa.

Mr. HICKENLOOPER. I do not mean to be facetious about a very disastrous catastrophe, and while I admit that perhaps Texas has everything larger than any other State, and that it has had some terrible floods, I wish to call attention to the fact that Iowa also has had some disastrous floods which have destroyed a great deal of property.

Mr. BENNETT. I will include Iowa and every other State in which flood damage has been lethal.

I believe all of us can agree that nature can use water to create a crisis.

But our arid West suffers an unending thirst.

The challenge of this truth is always with us. It must be met and mastered, or we cannot grow, either in numbers or in productivity. "More people" means more food, more jobs, and bigger cities—and all these mean "more water."

At first, when we were few, the little mountain streams supplied our need. But by the century's turn, we had stretched to their full limit both these local water sources and our limited financial power to develop them. Then came the Federal reclamation law, and under it we have brought the waters of larger streams from greater distances, and thus sustained a second 50 years of growth.

Now we need to raise our eyes again—this time to our last resource—the highest and remotest reaches of the Rockies. The streams that drain those melting snows become the mighty Colorado, most of whose irreplaceable potential is wasted in the ocean because to harness it for use is understandably difficult and costly. But we have exhausted all the easier resources, and we have no other choice.

Fortunately, we are prepared for it. Already we have an interstate agreement and a plan with which it can be implemented. Because this plan, embodied in S. 1555, will soon be before the Senate for approval, I shall present each day another chapter of this vital story of water in the arid West.

OPPOSITION TO DIVERSION OF WATER FROM LAKE MICHIGAN

Mr. FERGUSON. Mr. President, the senior Senator from Wisconsin [Mr. WILEY] has been compelled to leave the Chamber. He had in mind offering a telegram for the RECORD, and I now ask unanimous consent that a statement by him in connection with the telegram of Vernon W. Thompson, attorney general of Wisconsin, in opposition to diversion of water from Lake Michigan, be printed in the body of the RECORD, together with the telegram referred to.

There being no objection, the statement and telegram were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

OPPOSITION TO GREAT LAKES WATER STEAL

For three decades the State of Wisconsin has been in the vanguard of the fight against what is generally known as "Chicago water steal legislation."

This legislation, which is now coming up again as H. R. 3300 from the Senate Public Works Committee, would be a blow to the Great Lakes States; a blow to good relations between the United States and Canada.

I have received a great many messages from within and outside my State expressing vigorous opposition to H. R. 3300. One such representative message is from the attorney general of Wisconsin, and I append it to this statement. It is as follows:

MADISON, WIS., *July 16, 1954.*

Hon. ALEXANDER WILEY,
Senate Office Building:

Respectfully request that you exert all possible effort to defeat H. R. 3300 which would authorize a diversion of water from Lake Michigan by the Chicago Sanitary District. For 30 years Wisconsin has led the fight to halt such unlawful diversion and has obtained a United States Supreme Court decree which protects the rights of the citizens of Wisconsin. While the diversion proposed by the pending bill is minor, it is only the camel's nose which could lead to a major and unwarranted interference with the navigable capacity of the Great Lakes. A lowering of the water level 1 inch will remove 2 million tons of shipping annually from the carrying capacity of the lake and will increase the expenditure for dredging in all lake harbors. The waters which belong to all the Great Lakes States are improperly taken when used to flush Chicago sewage down the drainage canal and to generate electric power at Lockport for the profit of the Chicago Sanitary District.

VERNON W. THOMPSON,
Attorney General of Wisconsin.

THE DROUGHT IN MISSOURI

Mr. SYMINGTON. Mr. President, reports received today from Missouri emphasize that it is time for action. Thousands of the small farmers of my State now face financial ruin as the result of the searing heat of the last month and rainfall far below normal.

Temperatures in Missouri yesterday exceeded 110, and again today are at or near 110 in many sections of the State. Pastures are burned up, and water supply for many farmers is near the vanishing point. The intensity of the heat in the last 10 days has burned the tassels and silk right out of the corn, so that there will be little or no grain.

A report from Missouri this morning, by a man who knows, sets the 1954 corn crop at 25 percent or less, pastures worse than last year, and the grasshopper plague the worst it has ever been.

Record shipments of drought-distressed cattle are being received by the stockyards in my State.

Fifteen thousand head of cattle were received at Kansas City this morning, of which 25 percent or more are cows. Some of this stock brings as little as 4 cents a pound.

With burnt out pastures and dried up water supply, the little farmer has no choice but to sell his 10 or 15 brood cows. When those cows bring as little as 4 to 6 cents a pound, or at best an average of $60 per head, this little farmer will not even have the money to pay the loan on his herd.

Mr. President, now is the time that the small farmers need help, and need it badly.

A resumption of the Government's beef-buying program for school lunches, by raising the prices on canners and cutters to 9 or 10 cents, would stabilize the entire cattle market. Such buying now would aid both the farmers who cannot hold their stock any longer, and those who will be able to wait for the fall rains.

This morning, Gov. Phil M. Donnelly held an emergency meeting of the Missouri State Drought Committee. The report from that meeting will be forwarded to President Eisenhower.

In this connection, let me point out that in the drought program in the last year, the State of Missouri invested in excess of $9 million in getting hay to the farmers of our State—a degree of State participation unequalled by any other State.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD telegrams I have received from Missouri and two which I have sent to the Secretary of Agriculture.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *July 17, 1954.*

Hon. EZRA TAFT BENSON,
Secretary of Agriculture,
Department of Agriculture,
Washington, D. C.:

Severity of drought in Missouri justifies immediate action.

In most of Missouri drought is now as serious as at any time last year. In some sections it is much worse.

As previously reported to you, cows are selling for as low as $4 per hundredweight on Kansas City market and generally are bringing $2 less than at same time last year. Prices are as low as early September last year when market hit bottom.

Water supply dangerously low as result of searing heat of past 2 weeks. Pastures badly burned. Corn crop in some parts of State completely lost; in other areas will make only one-third. Grasshopper plague aggravating situation.

Immediate reactivation of beef buying and feed distribution programs in distressed areas vitally important if brood herds are to be saved. In beef-buying program every care should be exercised so that benefit goes to farmer in distress. Hope defects in 1953 programs on feed distribution can be corrected.

If additional authority necessary, respectfully urge request be submitted now in time for congressional action.

STUART SYMINGTON.

KANSAS CITY, MO., *July 15, 1954.*

STUART SYMINGTON,
United States Senator:

Copy of wire sending Secretary of Agriculture today: "Near 30 percent present cattle run consists cows which is high percentage, canner and cutter cows at $6 to $8.50 with shelled down to $4, and utility grades $8 to $10 represent some 90 percent of all cow sales here. Few commercial cows $10.50 to $12. All cow prices $1.0059; $2 lower than 1 year ago and as low as the lowest period last year which was early September. Many low-grade canner and cutter steers and heifers selling same range of price as cows. Desertlike temperatures up to 117° with most recent days 100° to 112° have parched pastures and causing water shortages. Rainfall here past 30 days one-seventh inch. Return from cows and other low grades of cattle about 50 percent of normal values. Area affected by severe conditions, growing rapidly, and could easily result larger run lower price. Lower-grade cows are now at lower level of prices than when Government initiated emergency cattle-buying program last year. This condition affecting entire market structure. We recommend emergency measures be taken at once."

M. J. FLYNN,
President, Kansas City Livestock Exchange.

MEXICO, MO., *July 14, 1954.*

Hon. STUART SYMINGTON,
Senate Office Building:

At an emergency meeting of the board of directors of the Mexico Chamber of Commerce held this morning, I was instructed to inform you as follows:

Within the past week soil and crop conditions have become such that drastic and prompt relief measures must be initiated to prevent an indicated economic disaster to our people.

Investigation shows that as of this date in Audrain County, there is more crop damage than at any time during the 1953 drought.

Pastures are burnt brown. There is no grass for livestock. Their water supply is being depleted. Most corn appears to be damaged beyond the state of grain production, soybeans are stunted and "fired." Local agricultural officials and experts call the condition critical.

A personal survey of the movement of cattle to the major stockyards shows that great numbers of animals are being sent to slaughter in gaunt flesh. Especially is this true of cows and their calves. Consequently, prices are being depressed to such an extent as to be ruinous to our farmers.

It is recommended that action be initiated to immediately provide at reasonable costs to local farmers such surplus feeds in Federal control as will enable the maintenance on the farms of our production of livestock and the orderly marketing of cattle in sufficient flesh for slaughter. We believe this to be in the national interest.

It is our considered opinion that unless rain in abundant quantities is immediately forthcoming, this county at least will suffer damage as greatly as in the agricultural disaster of 1934. The Weather Bureau offers no encouragement for relief.

It is hoped that action will be prompt.

Hungry livestock will not be tolerant of delay.

Sincerely,

MEXICO CHAMBER OF COMMERCE,
JACK BAKER, *President.*

JULY 9, 1954.

Hon. EZRA T. BENSON,
Secretary of Agriculture, Department of Agriculture, Washington, D. C.:

Am advised water shortage and high temperatures are resulting in unusual forced movement of livestock into Kansas City market, particularly cows, calves, and light cattle. Situation approaching serious proportions of last year. Would appreciate your consideration of emergency action.

STUART SYMINGTON,
United States Senator.

KANSAS CITY, MO., *July 8, 1954.*

STUART SYMINGTON,
United States Senator:

Recent high temperatures and low rainfall resulting large numbers cows, calves, and light cattle coming to market. Water shortage contributing to forced movement of livestock. Some fifty-five hundred cows received our market this week, about as large number as any week in June or July 1953; values on cows and other young cattle in canner and cutter flesh approaching the lows of last year. This situation can rapidly develop demoralized prices on these classes of cattle. It would seem some plans for emergency action should be under consideration.

M. J. FLYNN,
President, Kansas City Livestock Exchange.

PICKETING IN FRONT OF THE WHITE HOUSE

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the body of the RECORD at this point an article entitled "Picketing Is O. K.," written by Fred Othman, and published in the Washington Daily News of July 14, 1954.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PICKETING IS O. K.

(By Fred Othman)

If you want to walk in front of the White House with a sign demanding that President Eisenhower pass out free ice cream on hot days, it's all right. Picketing the President is still legal.

Just keep moving, is all, and get in no arguments with the cops.

Maybe this isn't important. And maybe it reaches to the very fundamentals of being an American. In any event there was Representative BRADY GENTRY, Democrat, of Texas, arriving in town about 18 months ago and running smack dab into the Rosenberg pickets at 1600 Pennsylvania Avenue.

All those signs demanding that the President pardon the atom spies and all those people pounding the pavements 24 hours a day struck him as a disgrace. Disgusting and also revolting, he said.

So the gentleman from Texas wrote a bill to prohibit pickets from performing on any streets adjacent to the Executive Mansion. This the House passed unanimously June 14.

Eventually the bill reached the Senate District Subcommittee, with Nebraska's new Senator, SAM REYNOLDS, in the chair, and Senator WAYNE MORSE, the Oregon Independent, sitting beside him. Representative GENTRY, a large party in horn-rimmed eyeglasses, read an eloquent statement saying pickets should not be allowed to sully the majestic symbol of a great democracy.

Came then a municipal attorney to point out that Statesman GENTRY had got the names of one of the streets wrong. Came also Chief of Police Robert V. Murray to say he was neutral. He said he could handle pickets and never had any trouble with 'em. Well, hardly ever.

Once, he said, there was this President Trujillo, of the Dominican Republic, in town and his enemies began to picket the Mayflower Hotel. Then came his friends to picket them. It kept the Chief busy for a while keeping the pros separated from the cons.

Chairman REYNOLDS said, well, sir, he once saw a mob in action in Omaha and it was a frightening experience. End of the hearings, but not of story:

Senator MORSE, the one-time law professor, delivered a little lecture. "The right of picketing is an essential part of the freedom of speech and the right of petition," he said. "There's always a risk of living in a democracy; there's always a risk in being free. And I cannot imagine a President who would deny the right of Americans to walk in an orderly fashion in front of the White House.

"The man who sits in the White House is the servant of the people. He is not our master. We have the right to petition him."

Representative GENTRY had pointed out that Congress long ago outlawed pickets at its own front door.

"We did a very cowardly thing," Senator MORSE said. "We ought to be ashamed of ourselves. That law should be repealed."

Senator REYNOLDS said he still didn't believe mobs should be allowed to form in front of the White House. Without police, he said, they might get into the grounds, upon the front porch, and into the mansion itself. "This is akin to anarchy," he said. "It is just a step from rebellion."

The professor turned Senator then recalled for the chairman's benefit a little history about people gathering with signs in colonial days, petitioning against adopting the Constitution itself. The right to picket, he said, is even older than the United States.

Senator REYNOLDS said let's have a vote. Senator MORSE said (and this was important) that he had in his pocket the proxy of Senator MATTHEW M. NEELY, Democrat, of West Virginia. The bill to end picketing of the White House lost 2 to 1—or at least was postponed indefinitely—and somehow I figure ours will be a better Nation because of it.

AMITY SPEAKS

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article published in the Amity (Oreg.) Standard of Thursday, June 10, 1954. The article is entitled "Amity Speaks," and was written by Mr. R. L. Walker.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMITY SPEAKS

(By R. L. Walker)

As late as the end of the year 1929, economically, we the people of the United States, were getting along pretty good; of course for about 15 years prior to that time, we had either been fighting World War I, or feeding a devastated Europe. However, by the end of 1929, we had caught up with our agricultural production to the extent that we all had enough to eat and some surplus.

Now what happened? The trade found themselves with a lot of commodities on hand, and a lot more than the consuming public would consume and another crop ready to harvest. So what happened? Everybody was stuck. No one could buy any commodity, for there was no place to sell it. There was no established price. The bottom fell out of everything. By that time very few people had a job, and those that did were in the same boat because their pay had been cut until there was no buying power by January 1932. Notwithstanding the fact that agriculture had cut production, what production they had was produced by the farm owners themselves without hiring any help. So what happened? They burned the corn for fuel and fed some to the hogs, which they sold when fat, as low as $1 per 100 pounds. So what about all this?

Now good folks for your information, all of that condition was brought about by that

old natural law of supply and demand, that some of you people think is all we need. Oh, yes, that was private enterprise, too. You know there is one other thing I might mention. When the farmer goes down everyone else goes down with him. As an example, I think every logging camp and lumber mill in the State was closed up, except one, and it was not doing much.

The fact that I wish to call to your attention at this time is the fact that we have a larger surplus of every kind of commodity now than we have ever had before. Therefore the only thing that is keeping us out of even a worse predicament than we were in during 1930 and 1931, is our agricultural program and support prices. But the present administration through our Department of Agriculture, and under the leadership of Secretary of Agriculture, Mr. Benson, is trying to tear down what little soundness there is left in our price-support system.

As I see this matter, unless the legislative branches of our Government do something to stabilize the agriculture of this country, we can find ourselves in bad shape. Another way to put it is like this: If the laboring or salary man is going to keep his job, buying power and well-being, likewise the business and professional man, they are not only going to be willing to pay agriculture a just price for his labor and production, but will have to find a way to do it.

I do not think it makes a lot of difference how this is done, just so it is done; and done before it is too late. I do think that agriculture should cut production on the things that we now have too much surplus of, and I do think it should be by quota, and I think that the farmer should be paid as well as the farmer pays everyone else. It takes just this to constitute a sound economy.

This is all my own opinion, and I do not think that I am wrong.

INROADS ON CIVIL LIBERTIES—LETTER TO THE EDITOR

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a very fine article which appeared in the Toledo Blade of Sunday, June 13, 1954. It is in the form of a letter to the editor of the Blade by Mr. Dan H. McCullough, and was published in the Sunday forum column of the Blade.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

SUNDAY FORUM—LAWYER TRACES INROADS ON CIVIL LIBERTIES; SEES SOME BASIC FREEDOMS LOST, IMPAIRED

To the EDITOR OF THE BLADE:

Under the impact of two world wars, the prohibition amendment, the cold war, politically ambitious prosecutors, some cowardly judges and a few demagogs who have taken advantage of the cold war to scare hell out of everybody, the liberties of which we boast have been or are being taken away from us. Scholarly Asiatics and Europeans, as well as a substantial segment of our own population, know that the facts belie our proud boast of being a free people.

We are not concerned unless it is our ox that is gored, and so one group is unconcerned when another loses the right of free speech, or a free press. So we sanction the denial of bail to persons of whom we disapprove, or illegal search and seizure when it does not affect us.

"Send not to know for whom the bell tolls; it tolls for thee."

The verity of these words is not understood nor their applicability to the denial of civil rights. In a healthy society the protection of the civil rights of all groups is the concern of all groups, but particularly of the educated and well informed. In our country, those with the greatest stakes in the preservation of our system view with approval the denial of civil rights to those at the lower levels of our economic life. The degree of freedom of the rich and the well placed is decided each day in police courts across the land. The tap on the door at night can climb the social ladder in our country as it has in others.

Years ago Finley Peter Dunne had his Mister Dooley say "The Supreme Court follows the election returns." I didn't believe that statement until I learned what happened to the first amendment during World War I. The first amendment to the Federal Constitution spells out that—

"Congress shall make no law * * * abridging freedom of speech, or the press * * *" And section II of article I of the Ohio bill of rights says the same thing.

That was the law in 1914, but in 1919 the United States Supreme Court placed its interpretation upon the words of the first amendment when it decided the Schenk, Frohwerk, and Debs cases. Then the war scare and the Communist scare died out and by 1927 we had free speech again under the doctrine in the Whitney case. Then freedom of speech vanished again when the Federal Supreme Court upheld the conviction in the Dennis case in 1951. Maybe we will have free speech again some day, but I doubt it.

Right now the Attorney General is trying to get a wiretapping bill through the Congress, and some politicians are trying to stir people up against the fifth amendment. Without the fifth amendment you would soon have a police state, but that doesn't bother the average guy who has never had the opportunity to think things out. All he knows is that some politicians have been claiming that a few guys may escape punishment for something that they are supposed to have done. Some transparent fraud of a politician gets him stirred up and the guy wants the Constitution and the Bill of Rights repealed.

This is what the fourth amendment to the Federal Constitution says:

"The rights of the people to be secure in their persons' houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the person or things to be seized."

Section 14 of article I of the Ohio bill of rights says just about the same thing. To a layman it must be quite clear that when the police officers raid a card game in a private home on the word of some informer and without a search warrant, they violate the homeowner's constitutional rights.

That was the law of Ohio a long time ago, if you are arrested by a Federal officer for a Federal offense it is still the law. In Federal court your lawyer would file a motion to suppress the evidence and it would be granted and you would go free. That is today known as the Federal rule. In only 16 of the States is that rule followed. The other States, including Ohio, follow what is known as the State rule on search and seizure.

Back in 1922 the Ohio Supreme Court decided the bootlegging cases of *Houck* v. *State* and *Rosanski* v. *State*, and these decisions led inevitably to the decision in the famous *State* v. *Lindway* case in 1946.

Lindway was suspected of complicity in some bombings which took place in Cleveland and his home was searched without a search warrant.

Lindway was a bad boy and the trial judge was anxious to convict him. He denied Lindway's motion to suppress the evidence and the Supreme Court of Ohio said:

"The immunities from compulsory self-incrimination and unreasonable searches and seizures given by Ohio constitution, article I, sections 10, 14, are not violated by the denial of application to suppress or exclude evidence obtained by unlawful search and the admission of such evidence."

Then the court went on and piously called the officer a trespasser and suggested that Lindway sue the officer when he got out of jail. The hard fact was that the evidence obtained in an illegal search was used against Lindway with the approval of the Ohio Supreme Court, and the United States Supreme Court refused to review the case.

On and after the decision in the Lindway case a home was no longer a man's castle in Ohio.

Apparently the Ohio judges did not subscribe to the words of Mr. Justice Frankfurter in his dissent in *United States* v. *Rabinowitz* in which the judge said:

"It is a fair summary of history to say that the safeguards of liberty have frequently been forged in controversies involving not very nice people. And so, while we are concerned here with a shabby defrauder, we must deal with his case in the context of what are really the great themes expressed by the fourth amendment."

This is, of course, what people will never learn. First, that the degree of freedom that an innocent man has is exactly the degree of freedom that a guilty man has; and, second, that the law of civil liberties is hammered out in cases involving such not nice people.

People also tend to forget what Tom Paine wrote:

"He that would make his own liberty secure must guard even his enemy from oppression, for if he violates this duty he establishes a precedent that will reach to himself."

Since the decision in the Lindway case in 1936 the question of search and seizure has been before our Supreme Court and the various district courts of appeals on many occasions. The ruling has always been the same: The illegal search and seizure has been approved.

The State of Colorado has the same rule as Ohio, and in *Wolf* v. *Colorado*, in 1949, the United States Supreme Court refused to reverse Wolf's conviction, although the search and seizure was illegal.

In 1952 the United States Supreme Court had this question before it in *Casey* v. *United States*. This was a Federal case and so the court ruled in favor of Casey on the question of the illegal search and seizure. The evidence having been obtained illegally, it was thrown out and Casey went free.

In *Casey* v. *United States*, which was a Federal case, the United States Supreme Court followed the Federal rule. In the Wolf case, which was a State case, the United States Supreme Court followed the State rule.

Not only can the police prosecute you in the city courts for the violation of an ordinance, but you can be prosecuted again in the common pleas court for the felony. I know that is double jeopardy, but here again the Constitution says one thing and the law another.

The fifth amendment to the United States Constitution says:

"Nor shall any person be subject for the same offense to be twice put in jeopardy of life of limb."

Section 10 of article I of the Ohio bill of rights reads in this wise:

"No person shall be twice put in jeopardy for the same offense."

This may seem pretty plain to you, and that was the law until the Supreme Court of Ohio went haywire back in 1914 in *State* v. *Rose*. The court said:

"The words 'same offense' mean same offense, not same transaction, not the same

acts, not the same circumstances or same situation."

The famous case of *Duval* v. *State* went up from Lucas County in 1924 and the supreme court affirmed the conviction of Duvall on a robbery charge, although he had previously been acquitted of a murder charge growing out of the same transaction.

The last time this question was before the Ohio Supreme Court was in 1951 in the case of *State* v. *Martin*, and the court spelled out the law:

"One act may constitute several offenses, for example under a municipal ordinance, State statute or Federal statute."

Is it fair to say that freedom of speech is no more? The moment you qualify or limit this right, it ceases to exist. It is also fair to say that not only have the express terms of the first amendment been evaded by judicial legerdemain, but that presently the prohibitions against search and seizure and double jeopardy as contained in the fourth and fifth amendments to the United States Bill of Rights as well as in sections 14 and 10 of article 1 of the Ohio bill of rights are but words and of no effect at the trial level.

DAN H. MCCULLOUGH.

PRINTING OF ADDITIONAL COPIES OF SENATE DOCUMENT 87, REVIEW OF THE UNITED NATIONS CHARTER—A COLLECTION OF DOCUMENTS

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the concurrent resolution (S. Con. Res. 80) to print additional copies of Senate Document 87, Review of the United Nations Charter—a Collection of Documents, which were in lines 2 and 3 strike out "for the use of the Committee on Foreign Relations one" and insert "three", and in line 6, after "Documents" insert "; one thousand copies for the use of the Committee on Foreign Relations and 2,000 copies for the Members of the House of Representatives."

Mr. JENNER. I move that the Senate concur in the amendments of the House.

The motion was agreed to.

CONVEYANCE OF CERTAIN LANDS TO CITY OF MUSKOGEE, OKLA.—RECONSIDERATION AND PASSAGE OF BILL

Mr. BUSH. Mr. President, on July 2, 1954, the Senate passed the bill (H. R. 8983) to provide for the conveyance of certain lands by the United States to the city of Muskogee, Okla. There was a mistake in the bill on page 2, line 19, where the word "bill" was used instead of the word "act." I ask unanimous consent that the vote by which the bill was ordered to a third reading, read the third time, and passed, be reconsidered. This matter has been cleared with the minority leader.

The VICE PRESIDENT. Is there objection to the request of the Senator from Connecticut?

There being no objection, the Senate proceeded to reconsider the bill.

Mr. BUSH. I now offer an amendment, on page 2, line 19, to strike out the word "bill" and insert "act."

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Connecticut.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

REFERENDUM ON MARKETING QUOTAS FOR 1955 WHEAT CROP

Mr. YOUNG. Mr. President, on behalf of myself, and the Senator from South Dakota [Mr. MUNDT], I introduce for appropriate reference a joint resolution to authorize the Secretary of Agriculture to postpone the referendum on marketing quotas for the 1955 crop of wheat.

The PRESIDING OFFICER (Mrs. BOWRING in the chair). The joint resolution will be received and appropriately referred.

The joint resolution (S. J. Res. 179) to authorize the Secretary of Agriculture to postpone the referendum on marketing quotas for the 1955 crop of wheat, introduced by Mr. YOUNG (for himself and Mr. MUNDT), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

Mr. YOUNG. Mr. President, the joint resolution would permit the Secretary of Agriculture to postpone for 1 month the wheat referendum scheduled for Friday of this week, July 23. I shall state the reason for the postponement. The wheat farmers are now required to vote on one choice, namely, whether they shall have quotas, which would mean a reduction in acreage of 34 percent and the effective price-support program, or no quotas and 50 percent of price supports. It is very uncertain at the present time what the price-support level for wheat will be next year. If no legislation is passed—and I believe in view of the delay in Congress, there is a possibility that no such legislation will be passed—in that event the Anderson act will go into effect, providing for price supports of from 75 percent to 90 percent of parity; whereas if the House version of price supports on pending legislation were adopted, wheat farmers would have 82½ percent of parity. We do not know yet what the Senate action will be.

However, since there is a delay in the Senate, and the farmers do not know what the position of the Senate will be, or what the position of the Secretary of Agriculture will be on price-support levels for wheat if no legislation is passed, I believe it is appropriate that the referendum be postponed. If there were an adverse vote, and wheat supports went to 50 percent of parity, I could think of no greater tragedy that could happen to our farm economy.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. YOUNG. I shall be happy to yield in a moment. If no legislation were passed, the Secretary of Agriculture would have discretion to set the level of supports at from 75 to 95 percent of parity.

President Eisenhower has indicated, I believe, that he does not favor having wheat supports go all the way down to 75 percent, if the Anderson Act should go into effect. I have telegraphed the Secretary of Agriculture, Mr. Benson, asking him for his opinion on the joint resolution we are introducing, and urging him to state to the farmers, if no action should be taken in Congress on farm legislation, what price-support level they could expect under the Anderson Act, whether the price-support level would be 75 percent, 80 percent, 85 percent, or 90 percent. I think it would be very proper for the Secretary of Agriculture at this time to state what his position will be if nothing is done by Congress, and if the Anderson Act goes into effect.

I now yield to my good friend from South Dakota.

Mr. MUNDT. Mr. President, I congratulate my colleague from North Dakota on introducing the joint resolution with which I have associated myself. It seems to me that it is not right to ask the farmer to vote on something that is more or less in the category of a cat in the bag, when the farmer can not tell on what basis he should vote in the referendum. The restrictions by way of acreage allotments are becoming rather severe, and before a wheat farmer can vote intelligently in his own interest or in the national interest he must know something about the support level. He must have that information, so that he can do the necessary arithmetic in order to determine whether it is in his interest or not to vote for allotments. It is rather difficult for the farmer to cast his ballot when the situation is vague as it is, and something should be done.

I do not think that a delay of 10 days or even 2 or 3 weeks in taking the referendum will in any way work an injury on the program. By that time I believe Congress will have been able to express its desires in connection with an agricultural bill, and the farmer will then be able to vote on a definite and precise set of circumstances.

Mr. YOUNG. I thank the Senator from South Dakota whose judgment I greatly value, and especially on agricultural matters. I think the wheat farmers are perfectly willing to vote for wheat quotas, even though they are severe, but they ought to know what the alternative will be and what he will receive by way of price support if he votes approval.

I believe few people realize how severe the impact will be on the wheat farmers. If he votes approval—and I think he should—he will have to cut his acreage 34 percent. He will not be able to produce anything else on the acres which will have been withdrawn. Thus he will lose one-third of his income because of acreage reduction. On top of that, if the Secretary fixes price supports at 75 percent, which he will be privileged to do if the Anderson act goes into effect, the farmer will lose another 15 percent in income. If the modernized formula were to go into effect, which would start in 1957, he would lose another 15 percent or more of income. That is a very severe blow. No business establishment that I know of could stand such a jolt and remain solvent.

VOCATIONAL REHABILITATION AMENDMENTS OF 1954—CONFERENCE REPORT

Mr. PURTELL. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 2759) to amend the Vocational Rehabilitation Act so as to promote and assist in the extension and improvement of vocational rehabilitation services, provide for a more effective use of available Federal funds, and otherwise improve the provisions of that act, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see pp. 10386–10390 of House proceedings for today.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. PURTELL. Mr. President, despite the numerous differences which existed between the Senate and House versions of the bill, the conferees succeeded in reconciling their differences so that, in my opinion, the resultant legislation should very admirably accomplish the objective of improving the Federal-State services for the physically handicapped.

I shall explain the principal provisions resulting from the action of the conferees. First, Mr. President, as the Senate well knows, there was considerable debate in the Chamber concerning the so-called pivot point or average Federal share. The bill, as it passed the Senate, provided a pivot point of 55 percent with a range of 45 percent to 65 percent for the Federal share. The bill, as amended by the House, included a pivot point of 62 percent with a range of 52 percent to 72 percent. The House conferees were very insistent on their amendment, but I am happy to state that our differences were reconciled by agreement on a 60 percent pivot point with a range of 50 percent to 70 percent for the Federal share. There is no doubt in my mind, Mr. President, that this provision will result in an improvement over the old haphazard method of allotting Federal funds, and that the provision will make it possible for the States not only to hold their base levels of support, but also to step up their programs in order to achieve the overall objectives set forth by the President.

The Senate and House versions of the bill also differed to some extent in the transition provisions for getting the program under operation of the formula provided in the bill. As the Senate will recall, that formula was patterned after the formula used in the Hospital Survey and Construction Act—the so-called Hill-Burton formula. The conferees accepted the House version in this respect. Accordingly, the bill provides that the first $23 million, which is the amount appropriated in the fiscal year 1954 for grants under the present law, of each year's appropriations for grants, shall be available exclusively for basic grants. It further provides that in case the allotment of any State for any year, as computed under the Hill-Burton formula, is less than the State's base allotment—which is an amount slightly in excess of the amount it received in Federal grants for its 1954 expenditures—the State's allotment shall be increased to the amount of its base allotment. The Senate version contained a similar provision. The Senate version also contained certain transition provisions for allocation of new money over the base allotment, namely, 100 percent Federal funds for fiscal year 1955, 80 percent for fiscal year 1956, 65 percent for 1957, 55 percent or the Hill-Burton ratio for 1958, and Hill-Burton matching for 1959 and thereafter. In the House version, upon which the conferees agreed, the new money goes out under the Hill-Burton allotment provisions. The amounts required to increase the allotments of some States to the amount of their base allotments are derived by placing a ceiling on the allotments of other States which, under the Hill-Burton allotment formula, would receive a disproportionate increase in Federal grants as compared with the percentage increase in basic grant appropriations for the allotment year over the $23 million appropriated in 1954. The maximum increase permitted is one and one-half times the percentage increase in appropriations for the year involved. In any year in which the basic grant appropriation is higher than $23 million, application of this one and one-half ceiling will always result in enough funds to bring all low-allotment States up to their base allotments and, in addition, provide funds to increase by a uniform percentage their allotments, as well as the allotments of all other States not affected by the ceiling.

This, Mr. President, is an improvement over the Senate version, since it will assure all States receiving new money over and above the base allotments that they had been receiving in the past. Under the Senate revision, particularly in the first 2 or 3 years of the transition period, some States would not have received new money over and above the base allotment. The provisions upon which the conferees agreed contain a permanent guaranty of the amount of the base allotment so long as Congress appropriates the money.

Both versions of the bill provided for extension and improvement grants. The Senate version would have made available such grants with 75 percent Federal funds the first 2 years, 50 percent the second 2 years, and 25 percent for a third 2-year period. The House version provided only for 75 percent Federal grants for 2 years on any project. The House conferees insisted on their version but finally agreed to extend such grants for a 3-year period with 75 percent Federal funds.

Both the Senate and House versions contained provisions for special project grants. It is under these grants, Mr. President, that the Secretary would be authorized to support special projects for training and for providing scholarships for individuals to be trained in the skills necessary for carrying on the rehabilitation process. As the Senate well knows, this is one of the most important provisions in the bill. We all know that there is a great shortage of trained personnel necessary for rehabilitation work. The Senate version had no restrictions within which the Secretary would have to operate in this important regard. The House, however, restricted projects for training and traineeships to the fiscal years 1955 and 1956 only, and to 12 months in the case of any individual trainee. This provision would have so seriously handicapped the Secretary that it is questionable whether anything substantial could have been accomplished in the way of training the personnel so greatly needed, if we are to achieve the President's goal of rehabilitating at least 200,000 individuals annually. I am happy to say that the House receded on its restriction of this authority to the fiscal years 1955 and 1956. The House conferees also agreed to extend the time limit to 2 years in the case of any individual pursuing any one course of study. The conferees were advised that this provision would, in no way, handicap the Secretary in carrying out the intent of these training provisions. Also, in regard to the special project grant authority, the House conferees agreed to the Senate amendment which authorized the Secretary to cooperate in assisting with the financing of a pilot demonstration rehabilitation center in the Washington metropolitan area.

Another important provision agreed to by the conferees, Mr. President, is the adoption of amendments to the Randolph-Sheppard Vending Stand Act. As the Senate will recall, an amendment was adopted on the floor to make certain that this subject would be before the conference. I am happy to say that the conferees agreed to the provision regarding the Randolph-Sheppard Act essentially as passed by the House. The present act authorizes the operation of vending stands by the blind in Federal buildings. The measure adopted by the conferees extends this authority to include Federal property, thereby opening up additional sites to this program.

Also, one of the important provisions in the Randolph-Sheppard Act amendment is one which is designed to insure that a preference is given to blind persons in the granting of permission to operate vending stands on Federal property. It provides that, first, so far as feasible, preference will be given to blind operators licensed under this program; and, second, the head of each Federal department or agency concerned shall consult with the Secretary of Health, Education, and Welfare and prescribe regulations to insure special preference. Such regulations will be subject to approval by the President. The conferees were thoroughly convinced that the property of the Federal Government should be more fully and freely utilized in expanding the vending-stand program for the blind, and that no department or agency should be permitted to refuse suitable stand locations to this blind program except where such stand would clearly conflict with the proper functioning of the department or agency.

Another important amendment to the Randolph-Sheppard Act, Mr. President, is one providing that where the State wishes to do so, it may permit the operators of the vending stands to own their equipment. Various spokesmen for the blind have been very much interested in this provision and I am happy to say that the conferees agreed to it. This privilege is, of course, provided with appropriate safeguards which will insure that if the blind operator ceases to operate his stand, the use of the location and the equipment will not be lost to the use of the blind.

I am also pleased to advise the Senate that the conferees adopted the Senate provision which establishes a special advisory council to make recommendations to the Secretary concerning special project grants. This is an important provision, Mr. President, since it will assure the Secretary of the assistant of a continuing advisory group of experts and other outstanding persons in the field of rehabilitation.

Finally, Mr. President, the conferees also agreed to a House provision which would amend the Wagner-Peyser Act to require States to provide employment counseling and placement services for handicapped persons, and provide that each State or Federal employment service office must designate at least one person to promote employment opportunities for the handicapped and provide them with counseling and placement service.

The conferees also adopted a House provision increasing the annual appropriation authorization for the President's Committee on Employment of the Physically Handicapped from $75,000 to $225,000.

These provisions which I have discussed were the major points in the agreement reached by the conferees. It is the opinion of the conferees, Mr. President, that we now have a highly workable piece of legislation and one in which both the House and the Senate may take pride in their accomplishment.

I ask for the adoption of the conference report.

Mr. HILL. Mr. President, I was a member of the committee of conference, but because I was engaged on the floor, I was unable to attend many meetings of the conference committee, although I signed the report.

The distinguished junior Senator from New York [Mr. LEHMAN] also was a member of the committee of conference, and, as I understand, signed the report.

Mr. PURTELL. That is correct.

Mr. HILL. Did the Senator from Connecticut indicate to the Senator from New York that it was his intention to have the report considered at this time? I do not know whether the Senator from Connecticut has talked to the Senator from New York about the report.

Mr. PURTELL. I did not talk with the Senator from New York, although I understand he was quite satisfied with the outcome of the conference.

As I understand, the distinguished Senator from New Jersey [Mr. SMITH] was in conversation with the Senator from New York. I believe he would state that the Senator from New York was quite satisfied with the result of the committee of conference. Perhaps he would wish to inform the Senate of his own knowledge.

Mr. SMITH of New Jersey. I urged all Senate members of the committee of conference to be present. The Senator from New York [Mr. LEHMAN] apologized for his inability to be present. I advised him in a general way of what the committee had done, and I think he was entirely in accord with the action taken.

As I think the Senator from Connecticut [Mr. PURTELL] will remember, the Senator from New York was present at the end of the conference and signed the report.

Mr. PURTELL. He was present for the final session, and he agreed to the compromise which was made at the very end. I feel confident that the Senator from New York would have no objection to the report.

Mr. HILL. As I understand, the Senator from New York was present at the final conference.

Mr. PURTELL. He was present at the final conference, and he agreed with the conclusions reached by the conferees of the Senate and the House. That is my recollection.

Mr. HILL. As I understand, the Senator from New York signed the conference report.

Mr. PURTELL. That is correct.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. PURTELL. I am happy to yield.

Mr. SPARKMAN. May I ask if the statement on the part of the managers of the House has been printed in the RECORD?

Mr. PURTELL. It has not. It will be printed today.

Mr. SPARKMAN. May I ask the Senator from Connecticut what action was taken with reference to two amendments which I offered, and which the Senator agreed to take to conference?

Mr. PURTELL. I shall be happy to report on the amendments suggested by the Senator from Alabama.

An important provision agreed to by the conferees, Mr. President, is the adoption of amendments to the Randolph-Sheppard Vending Stand Act, in which the Senator from Alabama was particularly interested.

As the Senate will recall, an amendment was adopted on the floor of the Senate to make certain that this subject would be before the conference. I am happy to say that the conferees agreed to the provision regarding the Randolph-Sheppard Act essentially as it was passed by the House. The present act authorizes the operation of vending stands by the blind in Federal buildings. The measure adopted by the conferees extends this authority to include Federal property, thereby opening additional sites to the program.

Also, one of the important provisions in the Randolph-Sheppard Act amendment is one which is designed to insure that a preference shall be given to blind persons in the granting of permits to operate vending stands on Federal property.

I believe that is the amendment in which the Senator from Alabama was interested.

Mr. SPARKMAN. I was interested in that amendment, although I did not offer it; another Senator offered it while the bill was before the Senate.

One of my amendments related to the membership of the Advisory Council and another related to increasing the authorization for the President's Committee on Employment of the Physically Handicapped.

Mr. PURTELL. I am happy to report to the Senate, and especially to the distinguished Senator from Alabama, that the conferees adopted a House provision increasing the annual appropriation authorization for the President's Committee on Employment of the Physically Handicapped from $75,000 to $225,000.

Mr. SPARKMAN. I appreciate that action very much.

Mr. SMITH of New Jersey. With regard to the composition of the Advisory Council, the Senator from Connecticut will recall that the actual provision which had been suggested by the Senator from Alabama, with regard to having the three blind persons, if practicable, made members of the Advisory Council, was agreed to.

Mr. PURTELL. The Senator from New Jersey is correct. That provision was agreed to by the conference.

Mr. SPARKMAN. I thank the Senator.

Mr. GORE. Mr. President, will the Senator from Connecticut yield?

Mr. PURTELL. I yield to the Senator from Tennessee.

Mr. GORE. Will the distinguished Senator from Connecticut inform the Senate as to the provisions agreed to with respect to the vending stand program for the blind?

Mr. PURTELL. I tried to cover that subject before. I will attempt to elaborate on it now.

Another important provision agreed to by the conferees was the amendment relating to the Randolph-Sheppard Vending Stand Act. As the Senator may recall, an amendment was adopted on the floor of the Senate to make certain that the subject would be before the conference. I am happy to say that the conferees agreed to the provision regarding the Randolph-Sheppard Act essentially as passed by the House.

The present act authorizes the operation of vending stands by the blind in Federal buildings. The measure adopted by the conferees extends this authority to include Federal property, thereby opening up additional sites to this program. Also, one of the important provisions in the Randolph-Sheppard Act amendment is one which is designed to insure that a preference is given to blind persons in the granting of permission to operate vending stands on Federal property.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PURTELL. I yield to the Senator from Tennessee.

Mr. GORE. I congratulate, commend, and express my appreciation to the able

Senator for this accomplishment. I should like to make a further inquiry. Does the Senator think the provisions contained in the conference report are sufficient to give a preference to the blind operators of vending stands in a Federal building or a particular piece of Federal property over the objection of such stands by Federal employees within such building or Federal property?

Mr. PURTELL. It is the understanding of the Senator from Connecticut that it does give such preference regardless of the feelings of employees in those facilities.

Mr. GORE. I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

WATERSHED PROTECTION ACT—CONFERENCE REPORT

Mr. AIKEN. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H. R. 6788) to authorize the Secretary of Agriculture to cooperate with States and local agencies in the planning and carrying out of works of improvement for soil conservation, and for other purposes. I ask unanimous consent for its present consideration.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The report was read by the legislative clerk, as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H. R. 6788) to authorize the Secretary of Agriculture to cooperate with States and local agencies in the planning and carrying out of works of improvement for soil conservation, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: "That erosion, floodwater, and sediment damages in the watersheds of the rivers and streams of the United States, causing loss of life and damage to property, constitute a menace to the national welfare; and that it is the sense of Congress that the Federal Government should cooperate with States and their political subdivisions, soil or water conservation districts, flood prevention or control districts, and other local public agencies for the purpose of preventing such damages and of furthering the conservation, development, utilization, and disposal of water and thereby of preserving and protecting the Nation's land and water resources.

"SEC. 2. For the purposes of this Act, the following terms shall mean:

"The 'Secretary'—the Secretary of Agriculture of the United States.

"'Works of improvement'—any undertaking for—

"(1) flood prevention (including structural and land-treatment measures) or

"(2) agricultural phases of the conservation, development, utilization, and disposal of water

in watershed or subwatershed areas not exceeding two hundred and fifty thousand acres and not including any single structure which provides more than five thousand acre-feet of total capacity. No appropriation shall be made for any plan for works of improvement which includes any structure which provides more than twenty-five hundred acre-feet of total capacity unless such plan has been approved by resolutions adopted by the Committee on Agriculture and Forestry of the Senate and the Committee on Agriculture of the House of Representatives, respectively. A number of such subwatersheds when they are component parts of a larger watershed may be planned together when the local sponsoring organizations so desire.

"'Local organization'—any State, political subdivision thereof, soil or water conservation district, flood prevention or control district, or combinations thereof, or any other agency having authority under State law to carry out, maintain and operate the works of improvement.

"SEC. 3. In order to assist local organizations in preparing and carrying out plans for works of improvement, the Secretary is authorized, upon application of local organizations if such application has been submitted to, and not disapproved within 45 days by, the State agency having supervisory responsibility over programs provided for in this Act, or by the Governor if there is no State agency having such responsibility—

"(1) to conduct such investigations and surveys as may be necessary to prepare plans for works of improvement;

"(2) to make such studies as may be necessary for determining the physical and economic soundness of plans for works of improvement, including a determination as to whether benefits exceed costs;

"(3) to cooperate and enter into agreements with and to furnish financial and other assistance to local organizations: *Provided*, That, for the land-treatment measures, the Federal assistance shall not exceed the rate of assistance for similar practices under existing national programs;

"(4) to obtain the cooperation and assistance of other Federal agencies in carrying out the purposes of this section.

"SEC. 4. The Secretary shall require as a condition to providing Federal assistance for the installation of works of improvement that local organizations shall—

"(1) acquire without cost to the Federal Government such land, easements, or rights-of-way as will be needed in connection with works of improvement installed with Federal assistance;

"(2) assume such proportionate share of the cost of installing any works of improvement involving Federal assistance as may be determined by the Secretary to be equitable in consideration of anticipated benefits from such improvements: *Provided*, That no part of the construction cost for providing any capacity in structures for purposes other than flood prevention and features related thereto shall be borne by the Federal Government under the provisions of this Act;

"(3) make arrangements satisfactory to the Secretary for defraying costs of operating and maintaining such works of improvement, in accordance with regulations presented by the Secretary of Agriculture;

"(4) acquire, or provide assurance that landowners have acquired, such water rights, pursuant to State law, as may be needed in the installation and operation of the work of improvement; and

"(5) obtain agreements to carry out recommended soil conservation measures and proper farm plans from owners of not less than 50 per centum of the lands situated in the drainage area above each retention reservoir to be installed with Federal assistance.

"SEC. 5. At such time as the Secretary and the interested local organization have agreed on a plan for works of improvement, and the Secretary has determined that the benefits exceed the costs, and the local organization has met the requirements for participation in carrying out the works of improvement as set forth in section 4, the Secretary is authorized to assist such local organizations in developing specifications, in preparing contracts for construction, and to participate in the installation of such works of improvement in accordance with the plan: *Provided*, That, except as to the installation of works of improvement on Federal lands, the Secretary shall not construct or enter into any contract for the construction of any structure unless there is no local organization authorized by State law to undertake such construction or to enter into such contract, and in no event after July 1, 1956: *Provided further*, That in participating in the installation of such works of improvement the Secretary, as far as practicable and consistent with his responsibilities for administering the overall national agricultural program, shall utilize the authority conferred upon him by the provisions of this Act: *Provided further*, That, at least forty-five days (counting only days occurring during any regular or special sessions of the Congress) before such installation involving Federal assistance is commenced, the Secretary shall transmit a copy of the plan and the justification therefor to the Congress through the President: *Provided further*, That any such plan (a) which includes reclamation or irrigation works or which affects public or other lands under the jurisdiction of the Secretary of the Interior, or (b) which includes Federal assistance for floodwater detention structures, shall be submitted to the Secretary of the Interior or the Secretary of the Army, respectively, for his views and recommendations at least sixty days prior to transmission of the plan to the Congress through the President. The views and recommendations of the Secretary of the Interior, and the Secretary of the Army, if received by the Secretary of Agriculture prior to the expiration of the above sixty-day period, shall accompany the plan transmitted by the Secretary of Agriculture to the Congress through the President: *Provided further*, That, prior to any Federal participation in the works of improvement under this Act, the President shall issue such rules and regulations as he deems necessary or desirable to carry out the purposes of this Act, and to assure the coordination of the work authorized under this Act and related work of other agencies including the Department of the Interior and the Department of the Army.

"SEC. 6. The Secretary is authorized in cooperation with other Federal and with States and local agencies to make investigations and surveys of the watersheds of rivers and other waterways as a basis for the development of coordinated programs. In areas where the programs of the Secretary of Agriculture may affect public or other lands under the jurisdiction of the Secretary of the Interior, the Secretary of the Interior is authorized to cooperate with the Secretary of Agriculture in the planning and development of works or programs for such lands.

"SEC. 7. The provisions of the Act of June 22, 1936 (49 Stat. 1570), as amended and supplemented, conferring authority upon the Department of Agriculture under the direction of the Secretary of Agriculture to make preliminary examinations and surveys and to prosecute works of improvement for runoff and waterflow retardation and soil erosion prevention on the watersheds of rivers and other waterways are hereby repealed: *Provided*, That (a) the authority of the Department of Agriculture, under the direction of the Secretary, to prosecute the works of improvement for runoff and waterflow retardation and soil erosion prevention authorized to be carried out by that Department by the Act of December 22, 1944 (58 Stat. 887), as amended, and (b) the authority of the Secretary of Agriculture to undertake emergency measures for runoff retardation and

soil erosion prevention authorized to be carried out by section 7 of the Act of June 28, 1938 (52 Stat. 1215), as amended by section 216 of the Act of May 17, 1950 (64 Stat. 163), shall not be affected by the provisions of this section.

"SEC. 8. There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act, such sums to remain available until expended.

"SEC. 9. This Act may be cited as the 'Watershed Protection and Flood Prevention Act'."

And the Senate agree to the same.

GEORGE D. AIKEN,
MILTON R. YOUNG,
EDWARD J. THYE,
B. B. HICKENLOOPER,
ALLEN J. ELLENDER,
OLIN D. JOHNSTON,
SPESSARD L. HOLLAND,
Managers on the Part of the Senate.

CLIFFORD R. HOPE,
AUG. H. ANDRESEN,
WM. S. HILL,
HAROLD D. COOLEY,
Managers on the Part of the House.

The PRESIDING OFFICER. Is there objection to the request for the immediate consideration of the report?

Mr. GORE. Mr. President, reserving the right to object, let me say that a member of the minority——

The PRESIDING OFFICER. The question of the consideration of a conference report is not debatable. The report itself would be debatable.

The question now is whether there is objection to the request of the Senator from Vermont for the present consideration of the conference report.

Mr. GORE. I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. KUCHEL in the chair). The clerk will call the roll.

Mr. AIKEN. Mr. President, let me say to the Senator from Tennessee that this question has been discussed with both the majority leader and the minority leader, as well as with other interested Members on his side of the aisle.

The PRESIDING OFFICER. The absence of a quorum has been suggested. The clerk will call the roll.

Mr. HOLLAND. Mr. President, if the Senator will withhold his suggestion of the absence of a quorum for a moment, I should like to make a brief statement.

Mr. GORE. I withhold it.

Mr. HOLLAND. Mr. President——

The PRESIDING OFFICER. The Chair is informed by the Parliamentarian, that under the rules the question of immediate consideration of the conference report is not debatable. Is there objection to the immediate consideration of the conference report?

Mr. HOLLAND. Mr. President, I wish to say for the information of Senators on this side of the aisle that the distinguished minority leader, the Senator from Texas [Mr. JOHNSON] questioned me about the report and asked me if it would be agreeable to bring it up at the first opportunity. He stated that he wished to have it brought up at the earliest opportunity. I suppose, therefore, that there is no reason why it should not be immediately considered.

The PRESIDING OFFICER. Is there objection to the present consideration of the conference report?

There being no objection, the Senate proceeded to consider the report.

Mr. AIKEN. Mr. President, I shall explain briefly the various points which were discussed in conference.

Mr. GORE. Mr. President, will the Senator yield?

Mr. AIKEN. I yield.

Mr. GORE. My purpose in suggesting the absence of a quorum, which suggestion I later withdrew at the request of the Senator from Florida [Mr. HOLLAND], was to give Senators interested in the report an opportunity to reach the floor of the Senate. It was not for the purpose of registering any objection to the conference report. I think before the Senator's explanation is finished, Senators who are interested will have an opportunity to reach the floor.

Mr. THYE. Mr. President, I understand that a certain Senator would like to be present during the consideration of the conference report. I have a 2-minute statement to make. If the Senator from Vermont will yield to me for 2 minutes, that will permit the Senator in question to reach the floor.

The PRESIDING OFFICER. The Chair will state that, no objection having been interposed to the immediate consideration of the conference report, it is now the pending question before the Senate, and it is debatable. The Chair has recognized the Senator from Vermont. He now understands that the Senator from Minnesota desires to have the Senator from Vermont yield to him.

Mr. AIKEN. I have no objection to yielding to the Senator from Minnesota for a couple of minutes. I have no objection to the Senator from Tennessee suggesting the absence of a quorum, if he so desires, although I think many Senators who are interested in this particular conference report have already examined it.

I yield to the Senator from Minnesota with the understanding that I shall not lose the floor.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. AIKEN. Mr. President——

Mr. GORE. Mr. President, if the Senator from Vermont is willing, I feel that I should suggest the absence of a quorum, in order to give Senators an opportunity to be present during the consideration of the report.

Mr. AIKEN. I have no objection to more Members of the Senate being present. I will yield to the Senator from Tennessee for the purpose of suggesting the absence of a quorum.

Mr. GORE. I thank the Senator.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ANDERSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. AIKEN. Mr. President, I shall explain as briefly as I can the points which were in conference on House bill 6788, the so-called watershed bill.

First. The conference agreed to the change made in form and punctuation by the Senate in the definition of "works of improvement," as well as to the use of "and" instead of "or" to make it clear that the definition includes drainage projects.

Second. The House bill provided that the Secretary of Agriculture must come into agreement with the Committee on Agriculture and Forestry of the Senate and the Committee on Agriculture of the House of Representatives on all watershed projects. The Senate amendment struck out this provision and provided that any dam providing a capacity of from 2,000 to 5,000 acre-feet must be approved by the Congress. The conference agreement substitutes for these provisions a requirement that before appropriations can be made for any project containing any structure providing a capacity of from 2,500 to 5,000 acre-feet, the project must be approved by resolutions adopted by the Senate and House Agriculture Committees.

Third. The House defined "local organization", as including any agency having authority under State law to "carry out flood prevention and related activities." The Senate approved a definition, which was agreed upon by the conference, changing the quoted phrase to "carry out, maintain and operate the works of improvement."

Fourth. The Senate amendment added a provision to the House bill requiring approval of the application of the local organization by the appropriate State agency, or if there were no such State agency, by the Governor. The conference agreed to a substitute provision authorizing the Secretary of Agriculture to proceed on such application unless it had been disapproved by the State agency or the Governor in the absence of any authorized agency, within 45 days after submission of the application.

Fifth. Two technical amendments of the Senate were adopted making it clear that local organizations, first, would not be required to meet all of the requirements of section 4 before assistance in planning could be given; and, second, would not necessarily be required to defray "all" operating and maintenance costs.

Sixth. The House provided that, among other conditions, local organizations would have to "furnish" without cost to the Federal Government such land, easements, or rights-of-way as would be needed in connection with installation of works of improvement before the Secretary could assist with such works of improvement. The Senate amended this provision by changing "furnish" to "acquire", and the conference agreed to the Senate amendment.

Seventh. The conference agreed to provisions of the Senate amendment requiring that, first, State water-rights laws be complied with; and, second, agreements to carry out recommended soil-conservation measures and proper farm plans be obtained from owners of not less than 50 percent of the lands in the drainage area above each retention reservoir.

Eighth. The House authorized the Secretary to construct or contract for the

construction of structures included in works of improvement and the Senate deleted such authority. The conference agreed to permit the Secretary to perform such construction or enter such contracts only in those States where local organizations do not have authority to perform such construction or enter into such contracts, and then only until July 1, 1956. The conference further authorized the Secretary to contract for installation of that part of any work which it is necessary to perform on Federal lands.

Ninth. The conference adopted a Senate provision requiring the submission of the plan to Congress to be made at least 45 session days before installation is commenced.

Tenth. The Senate provision that the President shall issue regulations to assure coordination of the work authorized by the act with the related work of other agencies was adopted.

Eleventh. The conference agreed to the 60-day period provided by the House bill—rather than the 90-day period provided by the Senate amendment—for submission of views of the Secretary of the Interior or the Secretary of the Army.

Twelfth. The Senate provision authorizing cooperation by the Secretary of the Interior in the development of works on lands under his jurisdiction was adopted.

Thirteenth. The Senate provision preserving the authority of the Secretary of Agriculture to undertake emergency measures for runoff retardation and soil-erosion prevention under the Flood Control Act of 1938 was retained.

Fourteenth. The conference changed the short title added by the Senate amendment to "Watershed Protection and Flood Prevention Act."

The PRESIDING OFFICER. The question is on agreeing to the conference report.

Mr. HOLLAND. Mr. President, I listened with interest and approval to the able statement made by the distinguished chairman of the Committee on Agriculture and Forestry, the Senator from Vermont [Mr. AIKEN], in reporting the conference agreement on H. R. 6788, the watershed bill. It is probably unnecessary to make further comment, but there are four features of the conference report that I wish to mention briefly.

The Senate will remember that the Senate bill differentiated between two sizes of projects which would be constructed under this program. The Senate passed its committee bill in a form providing that projects for 2,000 acre-feet or less might be initiated by the local districts and the Secretary of Agriculture without further reference to Congress, but that projects between 2,000 acre-feet and 5,000 acre-feet, because of their possible implications upon flood control, navigation, or reclamation projects which were downstream, must come before the Congress for authorization.

In the conference, the figures were changed slightly. In the first instance, instead of having 2,000 acre-feet as the upper limit of the structures which could be constructed without further reference to Congress, that upper limit was restated to be 2,500 acre-feet. In other words, projects up to 2,500 acre-feet do not have to be approved further or considered further by the Congress.

As to projects between 2,500 acre-feet and 5,000 acre-feet, the conference report differs from the provisions of both the Senate and House bills in that we have adopted the same machinery which the Congress adopted in the so-called lease-purchase bill. In an effort to relieve the full Congress of further details in this matter, it was decided, instead, to provide machinery under which the Senate and House committees alone would be given the power to authorize, which power would have to be affirmatively exercised before any appropriations could be made for projects coming within those sizes.

Senators will remember that in the lease-purchase bill we were so advised by the parliamentarians of the House and the Senate that it is clear that under such a provision a point of order can be made if an appropriation is proposed for a project between the 2,500 acre-feet size and the 5,000 acre-feet size, without its having first been submitted to and authorized by the appropriate committees.

Mr. MUNDT. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I yield.

Mr. MUNDT. On another phase of the report I should like to interrogate the able Senator from Florida. He will recall that at the instance of the senior Senator from South Dakota there was written into the bill in various forms and at various stages an amendment which had the objective of making certain for the record that the conservation board of each State would have something to say about the construction of watershed projects, either in a negative way or in an affirmative way, to make sure that the Federal Government did not come into the matter without the interests of the States being protected. Will the Senator dilate, for the benefit of our colleagues, on what has been done to give assurance that the State interests will be protected?

Mr. HOLLAND. I appreciate the question, and I am glad to assure the Senator that the conference report does completely safeguard the point the Senator has made. He will remember that as passed by the Senate there was a requirment in the bill that either the appropriate State agency, if one existed, or the governor, would have to take affirmative action on a project as requested by, let us say, a local soil conservation district, before Federal aid could be given. The conference committee changed this provision so that it now provides for submission to the appropriate State agency, if one exists, and if one does not exist, for submission to the governor. Forty-five days time is given to the appropriate State agency or to the governor to act. If they act negatively, the project must not be further proceeded with, but if they act affirmatively, or do not act at all, the project can proceed and Federal aid be given. So that, as written into the conference report, the provision is that in the absence of timely negative action by the appropriate State agency, if one exists having jurisdiction over such conservation matters, or by the governor, if no such agency exists, the program may move ahead.

Mr. MUNDT. And the appropriate agency will receive official notice. It will have 45 days within which to go forward.

Mr. HOLLAND. If they desire to have 45 days they may have that long a time. It is compulsory that the program be submitted to the appropriate State agency, if one exists, and if none exists, to the governor, before the program can move ahead.

Mr. MUNDT. I believe that will meet the situation, because by the very nature of things, since this provision is in the law, every State will be watching these applications and following carefully the development of the plans and programs and areas. So it appears that 45 days should be ample time for a State to disapprove such a project if for reasons best known to itself it should so decide.

Mr. HOLLAND. I completely agree with the Senator's conclusion in that regard.

Mr. MONRONEY. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I yield.

Mr. MONRONEY. Mr. President, as one of the coauthors of the bill, and having been interested in the matter for a number of years, I should like to congratulate the chairman of the committee and all the conferees upon arriving at what I consider to be the best possible compromise between the two Houses. Obviously, we are only on the threshold of this great opportunity to prevent floods in the upstream reaches of streams which cause 50 percent of the damage. There will be changes, undoubtedly, as we proceed with the program, but I think that by the fair way the conferees have approached the differences between the two Houses they have given us an initial blueprint which should be effective. I am particularly gratified that the State regulatory bodies will have a 45-day notice which will enable them to take action rather than to face the possibility that such projects will be killed by inaction, which might have been possible had this wise provision not been placed in the bill.

I am also glad that provision is made to take care of water retention dams and for their approval by the two committees having charge of the matter, because there will undoubtedly be topographic areas where larger retention dams above and beyond the established points will be required, and a survey of the parent committees of the Congress is certainly needed.

May I at this time express my deep appreciation for the promptness and the efforts which have gone into this bill to make it operative ahead of the time it would have been if the committee had not acted so promptly.

Mr. HOLLAND. Mr. President, I appreciate the remarks of the Senator from Oklahoma, who has been such an ardent advocate of this measure, and I am glad to say that, in my opinion, the conference report provides a good tool with which to work toward the solution of the problem.

Another recognition of State rights in this program is the fact that the conferees approved the two Senate amendments, one requiring that State water right laws be complied with, and the second requiring that for any program, as to not less than 50 percent of the land in the area affected, the property owners of the local area would have to be sold on the project and cooperating with it contractually before the project could move ahead. In both instances the Senate amendments were accepted by the House conferees, and they appear in the conference bill.

The fourth point I should like to make is that the philosophies of the two Houses, which differed as to the proper function of the Federal Government, were in some degree compromised for the immediate future. The Senate will recall that in the House bill the construction work was to be done by the Department of Agriculture, or might all have been done by the Department of Agriculture, whereas, in the Senate bill the program was purely an assistance program and the construction work had to be done by or contracted by the local agency, meaning either the district or some State agency which was clothed with the necessary power.

Having in mind the fact that in some States no appropriate State agency and no appropriate districts now exist which have adequate authority in this field, the conference report allows until June 1, 1956, to States which do not have such a setup, to create such a setup.

As soon as the law becomes operative, the philosophy of the Senate will be applicable in those States where State agency or local districts now have the authority to enter into contracts for the construction of dams. But in a case where no such authority exists, the State in question is given as long as it may need to come within the requirements of the bill, up to July 1, 1956. It may not have longer than that time.

It is hoped that States will proceed speedily to allow their districts or their State agencies to operate as quickly as possible under the spirit of the conference report, which requires the control and the initiative and the contractual power to remain in local hands, in all cases after July 1, 1956, and at once in all cases where that result is now possible.

Mr. AIKEN. Mr. President, this is one of the most important bills which will be acted on at this session of Congress. As the Senator from Oklahoma has stated, the work which it authorizes is still in the pioneer stage, but it is work which is very vital to the generations to come. It may mean the difference between being able to produce enough to sustain ourselves, and not being able to do so.

The bill does not go quite so far as some would have had it go at this time; nevertheless, it will permit the work to go forward. I do not believe there are any handicaps at all now which cannot be very easily overcome.

I move the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

REVISION OF THE ATOMIC ENERGY ACT OF 1945

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1945, as amended, and for other purposes.

Mr. GORE. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GORE. Mr. President, I ask unanimous consent that the order for the call of the roll be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

The question is on agreeing to the amendment offered by the Senator from Michigan [Mr. FERGUSON].

Mr. FERGUSON. Mr. President, my amendment is as follows:

On page 80, after the period in line 9, insert the following: "The authority of the Commission under this section to enter into new contracts or modify or confirm existing contracts to provide for electric utility services includes, in case such electric utility services are to be furnished to the Commission by the Tennessee Valley Authority, authority to contract with any person to furnish electric utility services to the Tennessee Valley Authority in replacement thereof."

Mr. President, in order to make this amendment clear, I think it would be well that I read the entire section to which the amendment applies. It is section 164 of the pending bill on page 79, which reads as follows:

SEC. 164. The Commission is authorized in connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission, without regard to section 3679 of the Revised Statutes, as amended, to enter into new contracts or modify or confirm existing contracts to provide for electric utility services for periods not exceeding 25 years, and such contracts shall be subject to termination by the Commission upon payment of cancellation costs as provided in such contracts, and any appropriation presently or hereafter made available to the Commission shall be available for the payment of such cancellation costs. Any such cancellation payments shall be taken into consideration in determination of the rate to be charged in the event the Commission or any other agency of the Federal Government shall purchase electric utility services from the contractor subsequent to the cancellation and during the life of the original contract.

Mr. President, it has been stated by some Senators on the floor that this section does not clearly and specifically authorize the Atomic Energy Commission to make a contract with private concerns, or capitalistic concerns, as they may be called by some, for furnishing power not directly used by the Atomic Energy Commission.

In other words, the contract which has been discussed, the contract which is the concern of the amendment about which the distinguished Senator from New Mexico has spoken, is a contract by the Atomic Energy Commission with a private enterprise concern to furnish power, not directly to the Commission for use, but to be used in the TVA network of power. So some have said on the floor that this section did not authorize the making of a contract by the Atomic Energy Commission with a concern which would furnish power into the lines of the TVA.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. FERGUSON. I yield.

Mr. ANDERSON. Does not the Senator think it would be useful to clear up the question as to which contract we are going to discuss? The Senator is not, as I understand, discussing the contracts with EEI, OVEC, or TVA, which were entered into under section 12 (d).

Mr. FERGUSON. No, not at the present moment.

Mr. ANDERSON. Is the Senator discussing the language of section 164, in the proposed bill, rather than the language of 12 (d) of the existing act?

Mr. FERGUSON. That is correct. I am discussing one section.

Mr. ANDERSON. The Senator from Michigan recognizes, I am certain, that the contract now being suggested with Dixon-Yates for which a tentative proposal has been made, is supposedly under section 12 (d), because there is no other language in the law which could cover it except 12 (d).

Mr. FERGUSON. Yes, but I propose to include in the bill language which would authorize the Dixon-Yates contract.

Mr. ANDERSON. Is the Senator proposing an amendment to section 164 which would clearly authorize the Dixon-Yates controversy?

Mr. FERGUSON. That is correct.

Mr. ANDERSON. I am certain the Senator recognizes, as many others among us do, that there is some question as to whether that can be done under the language of section 12 (d), or under the language of section 164.

Mr. FERGUSON. Yes, the question has been raised on the floor as to whether that can be done under either of these sections.

Mr. ANDERSON. The question was raised in the Atomic Energy Commission?

Mr. FERGUSON. That is correct.

Mr. ANDERSON. But the members of the Commission and of the Bureau of the Budget stated that, in their opinion, such action could not be taken without a Presidential directive.

Mr. FERGUSON. All I desired to do was to submit a clear provision, to be included in section 164, authorizing the Dixon-Yates contract.

Mr. ANDERSON. Would the Senator from Michigan feel that that would be preferable to amending the law now on the statute books? After all, it is still a question whether or not the atomic energy bill will pass both Houses of Congress. Does not the Senator think that if the contract is to be authorized, that might be done by a specific resolution to amend section 12 (d), which is now the law of the land?

Mr. FERGUSON. No; I think it should be included in this particular section.

Mr. ANDERSON. Then, if the bill should not pass, the Senator would recognize that the Dixon-Yates contract would be dead, because it would not be authorized by 12 (d).

Mr. FERGUSON. No; I do not say that. I merely say that, in my opinion, to allay the fear of any Member of the Senate that there is doubt about the right to enter into the contract, it should be made crystal clear, in words that can be understood by everyone, and interpreted in only one way, that the Dixon-Yates contract is authorized.

We do not always agree that there is a doubt when we desire to make something clear. We simply want to eliminate the possibility of a doubt in the mind of anyone. That is all I seek to do by my amendment. I am not saying now that I believe there is a doubt; in fact, I do not believe there is at the present moment. But I want to take the side of those who think there is a doubt.

Mr. ANDERSON. Then, I do not understand why we need to take all this time, if there is no doubt.

Mr. FERGUSON. I read the speech by the Senator from Kentucky [Mr. COOPER]——

Mr. ANDERSON. The Senator from Kentucky made one of the finest contributions which could have been made, because he has a doubt. The interesting point is that not only does the able Senator from Kentucky have a doubt, and I am happy to know that he has—in fact, both Senators from Kentucky have doubts, though at the moment I am referring to the speech by the junior Senator from Kentucky—but the members of the Commission themselves have a doubt.

Mr. FERGUSON. I want to resolve that doubt, so that there will be no question in their minds.

Mr. ANDERSON. Why not remove the doubt by amending the law under which it is contemplated the contract will be made, and not try to amend the pending bill? If the bill does not pass, there will still exist a doubt.

Mr. FERGUSON. The Senator from New Mexico realizes that to do that it would be necessary to throw the whole matter back into committee. We are debating a bill now before the Senate to which this amendment is relevant. Therefore, we should act on the matter which is before the Senate.

Mr. ANDERSON. But the Senator will recognize that in the committee an attempt was made to clarify the question. Language was offered in the committee which attempted to straighten out the matter one way or the other and resolve the doubt. The proposed language was rejected by a vote of 5 to 4, so far as the 9 Senate members of the joint committee were concerned, and by a similar vote on the part of the House members of the joint committee.

But there would be no objection, I feel certain, on the part of the Joint Committee on Atomic Energy to report a measure which would try to make valid that which, in the opinion of many of us, is invalid. The Congress could vote that up or down. When people appear before a legislative committee and say, "If the bill becomes law, we will use it in this fashion, and no other," and then, after the bill becomes law, they decide to use it in a quite different way, probably their actions are going to land in court.

Mr. FERGUSON. When a proposal is before a committee and the committee does not include it in the bill which it reports to the Senate, it is not an unusual procedure that a Senator should try to clarify the bill by a perfecting amendment so as to grant the authority which was challenged in the committee.

Mr. ANDERSON. I wish to assure the Senator from Michigan that I am not trying to say this is an unusual procedure. I think it is a perfectly proper procedure. I think the Senator from Michigan is right in saying there should be language in the law which provides that the contract either can or cannot be made.

Mr. FERGUSON. That is correct.

Mr. ANDERSON. My amendment would provide that the contract could not be entered into.

Mr. FERGUSON. Mine would provide that it could be entered into.

Mr. ANDERSON. I merely wanted to establish the fact clearly that what is sought to be done is to include a provision one way or the other so that there could be no misunderstanding as to whether the Dixon-Yates contract could or could not be made.

Mr. FERGUSON. I think the Senator from New Mexico has stated the issue on the amendment. My amendment would authorize the contract; the amendment offered by the Senator from New Mexico would forbid it.

I think there is no need for further debate on the amendment. Either the contract is to be authorized, or it is not to be authorized.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. ANDERSON. Mr. President, will the Senator from Michigan yield to me, so that the Senator from Vermont may propound a question?

Mr. FERGUSON. I yield the floor.

Mr. AIKEN. I wish to ask a question of the distinguished Senator from New Mexico. I realize that the bill has been debated for several days; and from what I have heard, there is promise that it might even be debated until well into the fall. It is difficult to follow a debate of such length, so would the Senator from New Mexico save the time of the Senator from Vermont by pointing out exactly which section of the bill is responsible for creating the long, drawn-out discussion of the subject? Perhaps the Senator could do it in a few well-chosen words.

Mr. ANDERSON. There are many sections about which there is concern, but I think most of the time in recent days has been spent upon section 44, page 23 of the bill, entitled "byproduct energy."

I feel that Congress should definitely authorize the Commission to build a plant so that it may generate electric energy as electric energy, and not only as a byproduct of other operations. I feel that there is a necessity to have someone build a reactor of the size which needs to be built, and that it is too great a risk for private enterprise to undertake.

Mr. AIKEN. What is the proposal? I notice that the section provides that surplus energy may be transferred to other Government agencies, or sold to publicly or privately owned utilities or users at reasonable and nondiscriminatory prices.

Is it proposed that the so-called preference clause be inserted at this point? What is the proposal?

Mr. ANDERSON. There is a proposal to do that; but personally I have not suggested at any time the addition of a preference clause. I have grave doubt whether that is proper in this type of proposed legislation. I do not foreclose that possibility, but what I have said is that I should like to see the Government construct a plant and a larger reactor which would develop electric energy for the sake of electric energy, and not solely as a byproduct. I do not understand that this section, which we discussed in the committee, dealing with byproducts only, was a complete bar to the Government's building the type of plant I have in mind. It was only after the bill came to the floor that it became apparent to me that this was a complete bar to the Government's building its own plant.

A 200,000-kilowatt plant probably would cost a quarter of a billion dollars. It should be a type which would permit very economic results. We cannot expect to go to private electric energy group even though there are many of them and say to them, "pool your efforts, build this type of reactor, and risk your $250 million, and if it fails, you will have lost your money."

Mr. AIKEN. If the surplus power which is developed is transferred to other Government agencies, are there any other Government agencies to which authority is given to resell that power?

Mr. FERGUSON. TVA would have such authority.

Mr. AIKEN. Suppose the Government developed the power and, as suggested by the Senator from New Mexico, it had a right to sell it, would not some agency of Government have to have the specific authorization to sell the power? There could not merely be a general authority that the Government could sell it.

Mr. ANDERSON. Yes; I think the Senator from Colorado [Mr. JOHNSON] suggested the Department of the Interior should handle it. Personally, I do not subscribe to that. I believe it ought to be sold directly by the group which generated it, namely, the Atomic Energy Commission.

Mr. AIKEN. The Senator means that the Atomic Energy Commission would sell it directly to private or public bodies?

Mr. ANDERSON. In my contemplation it would be purely a test plant which

would have to be built to a sufficiently large size, and once the validity of the theory was proven by the construction of the pilot plant, then the Atomic Energy Commission should proceed to grant a license to use it. It should not operate it in my opinion, but it would have taken the risk and found out how to construct and operate it in proper fashion.

Mr. AIKEN. The Senator would not preclude the Federal Government from building a plant larger than one which would naturally be classed as an experimental plant?

Mr. ANDERSON. I am simply saying to the Senator from Vermont that there are only about two contracts that embody any possibility of developing a 60,000 kilowatt reactor, or perhaps there is only one, the contract with the Duquesne Power & Light Co. Most of those with whom I have talked say that there is no possibility that the reactor will be of any real use in determining whether the plant can be built for the development of current. It is of a size which will not permit of current being low in cost.

The Senator from Rhode Island [Mr. PASTORE], who is not present on the floor of the Senate at this time, was very anxious that in the New England States, where power even at 8 or 9 mills would be quite a blessing, there might be a chance of getting the type of reactor which would do that, rather one which would produce power at a cost of 15 or 20 mills, and then have the persons concerned say, "We are sorry, but nuclear energy is no possible commercial source of electric energy." We do not think that is true; at least, I do not. I think that if a plant with a capacity of 250,000 kilowatts or more were constructed in one of the projects organized for developing low-cost energy, the Atomic Energy Commission should perhaps take that risk, which means, of course, that the Government would be taking the risk. If it should then develop that electric current at 5, 6, 7, or 8 mills could be produced from that plant, it could proceed to license the construction of such plants in New England, or in any other part of the country where the cost of electric power is high, but not at first in those areas where hydroelectric power is available at low cost.

Mr. AIKEN. Can the Senator tell me where the Tennessee Valley Authority would come into that picture?

Mr. ANDERSON. It would not come into the picture at all. I have not been one of those who have been interested in this matter because of devotion to protecting the rights of TVA, whatever they may be. I have not been contending it is wrong to make a contract with a private company. I believe it is extremely desirable. I approved the granting of contracts to EEI and OVEC in order to be sure that we were not trying to push the Government into the electric-energy business.

Mr. AIKEN. Then does the opposition of the Senator from New Mexico to the section under discussion arise from the fact that he does not believe the Federal Government should be permanently precluded from developing atomic-energy power on a large scale?

Mr. ANDERSON. That is exactly my position.

Mr. HICKENLOOPER rose.

Mr. ANDERSON. I would appreciate any remarks the Senator from Iowa may make. I was about to say what I thought the Senator from Iowa indicated by his remarks last week, but I shall not do so, because he is well able to speak for himself. But my interest is not merely in the sale of byproduct energy. I think the time may come, and probably will come, and the possibility should not be barred by law, when the Federal Government, perhaps through the Atomic Energy Commission, may wane to see if it cannot go into the atomic-energy field for the purpose of developing electric energy, and not as a byproduct, and can do it at a cost sufficiently low so that it will be available for marketing all over the country.

Mr. AIKEN. I thank the Senator from New Mexico for setting forth his position so clearly. I should like to hear the other side of the picture from the Senator from Iowa. I freely admit that frequently the Senator from Vermont finds it possible to learn more in 20 minutes from a discussion of this kind than in a different kind of study which may last 2 weeks.

Mr. ANDERSON. I do hope the Senator from Iowa will take part in the discussion. I do not think the Senator from Iowa and I are too far apart. The bill does bar the development of electric energy as electric energy. I think the Senator from Iowa will agree with me that that is true.

Mr. AIKEN. Does the Senator from New Mexico believe it would be possible so to word the bill as to accomplish the purpose he seeks without doing violence to the probable purpose of the authors of the amendment?

Mr. ANDERSON. I think it would be possible, yes.

Mr. AIKEN. I will hope so, anyway.

Mr. HICKENLOOPER. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I think the Senator from Vermont had the floor.

Mr. AIKEN. Mr. President, by unanimous consent, I should like to yield to the Senator from Iowa to explain the reasons why the proposal of the Senator from New Mexico is not acceptable to other Members of the Senate.

Mr. HICKENLOOPER. Let me say to the Senator from Vermont first that the discussion now revolves around section 44 of the proposed legislation before the Senate. As I said the other day, section 44 is not in any way involved in the commercial competitive production of power by the AEC. At that time I said, as is also stated in the report, that section 44 refers only to whatever possible incidental power might be developed in connection with the major operation of the Commission in its research and development program. I made the positive statement, and it is also made in the report, that section 44 in and of itself does not permit or authorize the Commission to engage in the commercial production of power. It was not intended for that purpose. It was only a matter of prudence, minor as it may be, which led us to provide that if in the operation of the research and development operation in the field, any such incidental power might be produced if there was any commercial value in it, the Commission could sell such power rather than let it go into the atmosphere or be destroyed. It is similar to an agency selling scrap iron when a building is being torn down. They ought to be able to sell it rather than throw it in the river. Scrap iron is an incidental result of their operations and experimentation.

There is no provision in the proposed act which affirmatively bars the Commission from building a reactor for the sole and only purpose of producing power. Section 44 does not permit it, it does not authorize it, but it is silent. What I meant to say the other day, and what I think I did say, and what I want to say at this time, is that section 44 should not be interpreted as an affirmative authorization to the Commission to build reactors for the production of power. The section refers only to the incidental byproduct which may result from its other operations.

I wish to call to the attention of the Senator from Vermont and my other colleagues to the program which the Commission is now proposing to put into effect during the next 5 years or so, which is a very substantial program looking to experimentation in the field of power.

I have here a report of the Subcommittee on Research and Development, of the Joint Committee on Atomic Energy, published in March 1954. I cannot give the exact date of publication, for it is identified only as March 1954. But the exact date could easily be ascertained.

On the first page of the report a so-called 5-year plan is shown. It indicates that $8,500,000 a year is expected to be expended on research and development on this matter, and that over a period of 5 years, 5 different types of experimental reactors are proposed to be constructed in one way or another.

One is the pressurized water reactor, which should be completed sometime in 1957, at a total cost of $85 million. Some of that money is to be supplied by the Atomic Energy Commission; and I believe it is the Duquesne Power & Light Co. that has taken on a contract to put up a substantial number of millions of dollars, in cooperation. That reactor will produce power; I think 60,000 kilowatts will be the capacity.

Manifestly, that is still in the nature of an experimental reactor, because, theoretically, atomic reactors, in order to produce, let us say, competitive power at the lowest possible cost, must have substantially above a 60,000-kilowatt capacity.

A second type of reactor, which will involve an expenditure of approximately $17 million.

Mr. ANDERSON. Madam President, will the Senator from Iowa yield at this point?

The PRESIDING OFFICER (Mrs. BOWRING in the chair). Does the Sena-

tor from Iowa yield to the Senator from New Mexico?

Mr. HICKENLOOPER. I yield.

Mr. ANDERSON. With everything the Senator from Iowa has said thus far, I find myself in agreement.

I have been saying that that Duquesne Power & Light reactor of 60,000 kilowatts was not sufficiently large to make a firm test, but would be a very satisfactory experimental plant.

What I want to ascertain is what language of the bill would, if that test is satisfactory, permit the Commission to build a reactor with a capacity of from 500,000 to 600,000 kilowatts, at a cost of from $200 million to $500 million in order to ascertain whether it is commercially feasible to do this sort of thing.

Mr. HICKENLOOPER. I am not certain there is in the bill affirmative language to permit the Commission to experiment with the production of power for sale.

Mr. BUSH. Madam President, will the Senator from Iowa yield for a question?

Mr. HICKENLOOPER. I yield.

Mr. BUSH. If such a large undertaking as the one the Senator from New Mexico suggests were in prospect, would not it be necessary to have that matter handled by way of special legislation and a special appropriation for that purpose? Such a plant would be a gigantic one. The Senator from New Mexico suggested that several hundred million dollars should be spent. It does not seem to me that blanket approval for an undertaking of that nature could very well be included in the bill, and I do not think the Senator so intended.

Mr. HICKENLOOPER. Let me call attention to section 31 of the pending bill, in chapter 4, the research chapter. Section 31 is entitled "Research Assistance," and in it the Senator will find that—

a. The Commission is directed to exercise its powers in such manner as to insure the continued conduct of research and development activities in the fields specified below, by private or public institutions or persons, and to assist in the acquisition of an ever-expanding fund of theoretical and practical knowledge in such fields. To this end the Commission is authorized and directed to make arrangements (including contracts, agreements, and loans) for the conduct of research and development activities relating to—

(1) nuclear processes;

(2) the theory and production of atomic energy, including processes, materials, and devices related to such production;

(3) utilization of special nuclear material and radioactive material for medical, biological, agricultural, health, or military purposes;

(4)—

And this is the important item—

utilization of special nuclear material and radioactive material and processes entailed in the production of such material for all other purposes, including industrial uses.

Mr. ANDERSON. That is, again, with reference to the byproduct use.

Mr. HICKENLOOPER. I do not so interpret it.

Mr. ANDERSON. The language of paragraph (4) is, in part, "entailed in the production of such material"—that is, nuclear-energy material—"for all other purposes."

Mr. HICKENLOOPER. Yes; "for all other purposes, including industrial uses."

Mr. ANDERSON. But it has to be tied to the production of this material. It has to be a byproduct use, or at least the language might be so read.

Mr. HICKENLOOPER. I would refer the Senator from New Mexico to the word "utilization," the first word of paragraph (4) of section 31. The reference is to the utilization of these materials, including industrial uses—that is to say, as I view the matter, the Commission is authorized to join in and cooperate for industrial uses.

Mr. AIKEN. Does the Senator interpret the provision for "the production of such materials for all other purposes, including industrial uses" to mean that it might be necessary to produce on a large scale? Otherwise, it would hardly be possible to ascertain the real value of atomic energy for industrial uses."

Mr. HICKENLOOPER. Will the Senator from Vermont repeat the question, please?

Mr. AIKEN. Would the Senator from Iowa interpret paragraph (4), which relates to the "utilization of special nuclear material and radioactive material and processes entailed in the production of such material for all other purposes, including industrial uses" to mean that it might be necessary to produce on a large scale, in order to determine the possibilities for industrial uses?

Mr. HICKENLOOPER. It might well be interpreted that way.

Mr. AIKEN. With the explanation given by the Senator from Iowa, who is in charge of the bill on the floor, I should think that we might be building up a record which would, partly at least, meet the objections which have been raised by the Senator from Mexico.

Mr. HICKENLOOPER. I wish to call attention to section 32, which I believe we should discuss in connection with this matter, because it is a part of it.

Mr. ANDERSON. First, Madam President, let me interrupt for a second, if I may, to say to the Senator from Vermont that is the reason why I have not submitted an amendment to section 44. I had hoped the discussion which the able Senator from Iowa and I had the first time I spoke on the bill would be a starting point, and that we might subsequently develop it sufficiently far to constitute a legislative history and to make it possible for the Commission to do what I think it should do.

Again I say to the Senator from Iowa that the suggestion of the Senator from Connecticut [Mr. BUSH] is along the line of my thinking. I would not wish to see the Commission rush blindly into spending $300 million or $400 million on a large plant without coming to Congress again. But I should like to have it looking in that direction.

Mr. HICKENLOOPER. I think the discussion is helpful and will bring out some desirable ideas. The Senator from New Mexico is as familiar with this phase of the subject as I am. But it is the general theory—expressed in section 31, as well as in section 32 and other experimental and development sections of the bill—which lays the basis for the 5-year reactor development program. At this point in the RECORD I should like to read the five different types of activity which are encompassed in the 5-year program.

The first was the pressurized water reactor which I mentioned a moment ago, and which eventually will cost approximately $85 million, and is estimated to be completed in 1957. That is the one into which the Duquesne Light and Power Co. is putting about $35 million of its own money.

The Government will be putting up about $50 million eventually. Manifestly, that will produce very high-cost power. We know that it will not necessarily be in the competitive field.

I assume that a part of the justification for it is that it will produce a comparatively small amount—about 60,000 kilowatts, and that for experimental purposes it can be fed into a larger system, and that the high cost of that small amount of power can be leveled out or diluted in a much lower cost system.

The second type of reactor is the boiling-water reactor. That is estimated to cost somewhere around $17 million. It is an experimental reactor, not designed to produce power to be fed into powerlines, necessarily, but to show what can be done with this type of reactor. It is estimated that this will be completed in 1956.

Then there is the sodium-graphite reactor, upon which approximately $10 million is to be spent.

Mr. ANDERSON. Madam President, will the Senator yield?

Mr. HICKENLOOPER. I yield.

Mr. ANDERSON. The Commission has a contract with North American Aviation for the sodium-graphite type of reactor, and that program is underway.

Mr. HICKENLOOPER. Yes.

Mr. ANDERSON. Again, the production of power will be extremely small. We know in advance that the cost of that electricity will be so high that it will have no practical value whatever, except to prove or disprove the theory behind it.

Mr. HICKENLOOPER. The Senator is correct. These reactors, with the exception of the pressurized water reactor, on which the Duquesne Power Co. is cooperating, are really in the nature of experimental tools in the reactor field, using various types and kinds of moderators. The sodium-graphite reactor, it is estimated, will be finished in 1955.

Then there is the homogeneous reactor, which, it is estimated, will be finished sometime between 1956 and 1958, at a cost of approximately $47 million. There is also the fast-breeder reactor, which, it is estimated, will cost approximately $40 million, and will be finished in 1958.

That is the general 5-year program, but these are in the nature of experimental reactors. I take the position—and I think the Congress contemplates—that if the Atomic Energy Commission elects eventually to construct a large-scale producing reactor which would cost $250 million, the Commission ought to lay the program before the joint committee and ought to be authorized by the

Congress to enter upon such a very substantial program of commercial production. If the Congress authorizes that kind of policy, that is all right.

However, the main job of the Atomic Energy Commission is still to look after the security of the United States and the production of weapons. That is no more important, perhaps, than humanitarian or industrial activities, but still the national security is very important, and at this moment the mission of the Atomic Energy Commission is to take care of the national security. But almost of equal importance, so far as the urgency of the situation is concerned, is the industrial and humanitarian aspect. Nevertheless, I do not think there is any more reason for the Atomic Energy Commission to go into the commercial production of power at this time than there is for the Department of Agriculture to go into the commercial production of fertilizer.

Mr. ANDERSON. Madam President, will the Senator yield?

Mr. HICKENLOOPER. I yield.

Mr. ANDERSON. I wish to say here, in order that it may be in the RECORD, that in my judgment perhaps the best way to promote the security of the United States may be by the rapid development of peacetime uses of atomic energy, so that we can offer something to the people of the world other than the ability to blow them to pieces. The British seem to be pushing ahead of us in this field. Very likely the Russians are ahead of us in this field. Does our country want to go into southeast Asia, where we are now having trouble, and say, "We Americans would like to bring you a bomb that will shatter you tomorrow, whereas some other Nation may bring you a new source of power, the peaceful utilization of atomic energy, which will bring you peace and happiness." I believe we can accomplish more good by bringing them an instrument of peace and happiness rather than an instrument of destruction.

Mr. AIKEN. Madam President, will the Senator yield?

Mr. HICKENLOOPER. I yield.

Mr. AIKEN. I assume from the remarks of the Senator from Iowa that the wording of this bill would not permit the Atomic Energy Commission to construct a plant at a cost, we will say, of a quarter of a billion dollars in order to determine what the benefit to our heavy industries might be from the wholesale generation of electric energy from atomic energy, even though the Commission might justify the proposal before the Appropriations Committee, which it certainly would have to do. If such a proposal were brought up, it might involve weeks of debate in both Houses of Congress. The other day we passed the so-called lease-purchase bill, which contains a provision that no appropriation may be made for the particular purpose involved in that bill without authorization from the Public Works Committee, I believe. Then the proposal for a particular project could go to the Appropriations Committee for an appropriation.

If the Senator from Iowa feels that the Joint Committee on Atomic Energy should still keep its fingers tightly on this program—and I presume it should—could we not write into the pending bill a provision which would permit the appropriation to be made after clearance had been received from the Joint Committee on Atomic Energy, so as to avoid becoming involved in 2 or 3 months' debate upon the subject, if it were decided that such a program were desirable?

Mr. HICKENLOOPER. There is no question in my mind that the bill would permit the Atomic Energy Commission to build a half-billion-dollar plant if it could get the money from the Appropriations Committee. The authorization is in section 261.

Mr. AIKEN. That is the subject on which I wish the Senator's opinion.

Mr. HICKENLOOPER. I read section 261:

SEC. 261. There are hereby authorized to be appropriated such sums as may be necessary and appropriate to carry out the provisions and purposes of this act except such as may be necessary for acquisition or condemnation of real property or for plant construction or expansion. The acts appropriating such sums may appropriate specified portions thereof to be accounted for upon the certification of the Commission only. Funds appropriated to the Commission shall, if obligated by contract during the fiscal year for which appropriated, remain available for expenditure for 4 years following the expiration of the fiscal year for which appropriated.

Mr. ANDERSON. Madam President, will the Senator yield?

Mr. HICKENLOOPER. I yield.

Mr. ANDERSON. I think the Senator from Iowa has served the purpose which the Senator from Vermont had in mind, and he certainly has served the purpose I had in mind when he stated that he believed it would be possible, under the language of the bill, to do what was suggested. I have been afraid that a point of order could be raised in connection with an appropriation item of that kind, on the ground that it was not authorized by law, and that Congress had never authorized the Atomic Energy Commission to go into the business of generating power.

Mr. HICKENLOOPER. I should like to clarify my statement.

Mr. ANDERSON. That is what I want.

Mr. HICKENLOOPER. If the Atomic Energy Commission were to say, "We are going into the commercial production of power for sale for profit," that would be quite a different thing from saying, "It is necessary, in the expansion of this program, for us to determine certain things. Theoretically a plant producing 200,000 kilowatts would be very efficient, and would fit into our industrial system. Therefore, we believe it is the duty of the Atomic Energy Commission to construct a 200,000-kilowatt plant for experimental purposes and for the determination of certain questions by a process which private capital and private groups simply cannot finance under our system."

I believe the bill would authorize such an activity, and that the Commission could proceed with such a program if it could obtain an appropriation.

Perhaps I am trying to draw a fine line. I do not believe it is the connotation of the bill as a whole that the Atomic Energy Commission shall go into the commercial competitive power field. It could go into the experimental field, the development field, as a public service, if it could obtain the money from the Congress by an appropriation. I do not know what the limit would be. I suppose there is no practical limit, except the good sense and judgment of the Appropriations Committees, plus that of the Joint Committee on Atomic Energy.

Mr. ANDERSON. I do not disagree with the Senator in his last interpretation. I do not desire to have the Atomic Energy Commission authorized to engage in the production of commercial power in order that it may sell it in the competitive field for a profit. That is not in my heart or mind at all, because I think that might be bad. However, I do want the Commission to have enough money to build whatever plants may be necessary to demonstrate practicability and cost.

Mr. HICKENLOOPER. That would be up to the Appropriations Committees.

Mr. ANDERSON. Yes. Let me say that throughout the entire atomic energy program we have been playing by ear. We have been improvising as we have been going along. The recent tests illustrated that as fully as anything could. The fact is that we authorized $2 billion for atomic research before we even knew whether the atom bomb would explode. The Congress that did it was extremely wise. Of course, if the bomb had failed to explode, every Member who had been concerned with it would have been criticized for throwing money away on a foolish venture.

We are building a plant in Ohio which will cost considerably more than a billion dollars, probably more than a billion and a half dollars. I am not so sure that we will need everything which will be in the plant when we get through building it, because it may well be that by the time it is completed a new process will have been developed, which will make it more or less unimportant. However, it was wise to start to build it, even if it should develop that a subsequent process may prove it to have been unneeded. We were in such a situation that we had to have it.

We are building a plant on the Savannah River, which was intended for one purpose, although perhaps it will be used for another purpose eventually because of changing techniques. In other words, its purpose may change after we shall have spent the money for it.

We threw away millions by rushing the work. However, the public would not have been satisfied if the work had not been rushed. Therefore I believe the Commission went ahead with it very properly.

All I want to be able to be sure of is that the Commission, if it decides to do so, can take a little bigger chance than the chances it is now taking.

The Duquesne Power & Light contract has helped so far as it goes. However, the very able Senator from Iowa, who is very familiar with the subject, has stated that it will be a high-priced oper-

ation, because of its limited size. He and I know that the answer we will get will not be the final answer. The question will be tentatively answered for us if through the experimental processes there will be subsequently developed power at a lower price. As was brought out in the recent hearings, the Atomic Energy Commission had to reactivate an old plant which it had to throw into operation, although its production cost was 20 mills, whereas another plant was producing current at 2 mills.

When we get to the point where we are pressed for power, even if the AEC has to build a reactor which will produce power at a cost of 20 mills, it would not be a great violation to put it into operation, if the erection of a substantially larger plant will make possible very cheap current all over the country.

Mr. HICKENLOOPER. I think it is essential that I read into the RECORD section 32 of the bill, which I started to read a short time ago. It clarifies the matter. It should be borne in mind that section 31 under paragraph (4) refers to industrial uses. I did not read section 31 into the RECORD. Section 32, the subsequent section, says:

> The Commission is authorized to conduct, through its own facilities, activities and studies of the types specified in section 31.

Section 31 refers to the industrial uses and activities.

Mr. ANDERSON. Section 31 authorizes the Commission to deal with private institutions and foundations, but section 32, dealing with research, says that if the Commission does not make that kind of deal, it can do the work itself. I am afraid that paragraph (4) may be a little limited in permitting the Commission to go ahead in building the type of plant I am talking about. What I am trying to say is that if the bill does carry language to let the Commission do it, why not, as the Senator from Michigan [Mr. FERGUSON] suggested, write into it language which clearly provides that the Atomic Energy Commission can build a plant to develop electric energy for that purpose and for no other purpose.

Mr. CASE. Madam President, will the Senator yield?

Mr. HICKENLOOPER. The Senator from Vermont has the floor.

Mr. AIKEN. I shall be glad to yield if I can still hold the floor. I want to say to the Senator from Iowa that I do not want the United States Government to go into the wholesale production of power from atomic energy, to be sold in the competitive field. I believe that we ought to give the Atomic Energy Commission authority to construct a plant on such a scale that the benefit of power derived from atomic energy to heavy industry can be definitely determined.

Mr. ANDERSON. That is all I want.

Mr. AIKEN. As I understand, the Senator from Iowa believes that after the Atomic Energy Commission has made justification before the Appropriations Committees, it could get the funds for that purpose. I believe the colloquy between the Senator from Iowa and the Senator from New Mexico has gone very far in clarifying the situation in one mind at least, and that is my mind, and of course, that is quite important to me.

Mr. HICKENLOOPER. I wish to make further clarification, because I think it is probably very important that the legislative history of the matter should be as complete as possible.

Section 261 of the bill reads as follows:

> There are hereby authorized to be appropriated such funds as may be necessary and appropriate to carry out the provisions and purposes of this act, except such as may be necessary for acquisition and condemnation of real property or for plant construction or expansion.

That is not necessarily directed at anything except the general attitude of the Appropriations Committees and the other committees, that the agencies of Government should not be given authority to go and condemn property and buy real estate without coming to Congress with their programs.

The language is not directed necessarily at the Atomic Energy Commission. It indicates the general policy Congress has adopted and which is applicable to all Government agencies—I should not say "all," because there may be some exceptions—that departments and agencies cannot condemn land and undertake massive major construction without submitting the matter to Congress.

Mr. AIKEN. Section 261 would not prohibit the Atomic Energy Commission from acquiring or condemning real property to an extent adequate for the construction of one experimental plant of sufficient size to determine the value of atomic-energy power to industry, would it?

Mr. HICKENLOOPER. The proposal for the acquision of additional real estate probably would have to come before the joint committee for authorization. This section was not inserted for any special reason of singling out the Atomic Energy Commission. It is an attempt to follow the general purposes expressed repeatedly by Congress so far as agencies of the Government are concerned; namely, that such matters as the substantial condemnation of land or a building program should, from time to time, be considered by Congress.

Mr. AIKEN. If the Atomic Energy Commission could not acquire or condemn any real property, how could it do anything on its own except through contract with industry?

Mr. HICKENLOOPER. As a matter of fact, at the present time the Atomic Energy Commission, I believe, owns ample property so that it could build one of those plants on its own property without any difficulty. If they want to go into some other area of the United States and construct property of this kind there——

Mr. ANDERSON. Madam President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I yield.

Mr. ANDERSON. The Senator from Iowa said he thought the Atomic Energy Commission had plenty of property. I think I would agree with him that probably the first plant ought to be built in connection with some other plant, so that the energy might be utilized by the other plant, and then, thereafter the Commission might acquire other property, because, obviously, they might desire to operate at some other place.

Mr. HICKENLOOPER. I think the Senator will agree with me that we are very much interested in the 5-year program. I do not think the Commission will program a $250-million plant until it can get some answers from the program under which they are proceeding and until the Appropriations Committee gives them the necessary money. Of course, the answers will be those resulting from the experimental development.

Mr. CASE. Madam President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I yield.

CONSTRUCTIVE USES OF ATOMIC ENERGY

Mr. CASE. I had not wanted to interrupt the continuity of the debate, which I consider to be very important in connection with the legislative history of the bill. But I am a little disturbed by the implications which I think might follow this discussion as the record now stands. I do not want this bill to forbid actual production of atomic power or to limit its production to pure research. I want it to embrace and authorize a practical demonstration production. I recall there was considerable debate on that point in connection with the authority given the Tennessee Valley Authority to engage in the production of phosphate fertilizers.

So, I wish to second what the Senator from New Mexico [Mr. ANDERSON] has said about the importance of our doing something clearly, definitely, and purposefully in developing atomic power for constructive purposes rather than for destructive purposes.

Mr. HICKENLOOPER. We are doing a vast amount of that, more than is all the rest of the world.

Mr. CASE. The Senator has proved by his eagerness to interrupt, the point I wished to make. I dare say that the Senator from Iowa does not make a speech in the State of Iowa on the subject of atomic energy without stressing that point and without saying that what the development of radioactive isotopes means for medicine or for human happiness surpasses in importance what the development of atomic energy has meant in a destructive way. The President himself, recently, in making some comment upon our atomic program, stressed the beneficial results. It is extremely important that before the bar of world public opinion it be clearly shown that what we seek is a constructive application in this field. It is a rather paradoxical thing that we want to prove the very antithesis of what we seem to have been doing. We are at a disadvantage in the cold war in the Far East today as a result of some of the unfortunate experiences in experiments with the H-bomb. We must correct that and make clear our constructive and beneficial aims.

Mr. HICKENLOOPER. The Senator is speaking now about what is probably the most overwhelming purpose of the bill. The great burden of this bill is to open atomic energy for peacetime and humanitarian purposes. That is probably the major segment of the bill. That

is the purpose for which the revision is written.

Mr. CASE. That is fine, but I do not want that purpose negatived or nullified by any provisions in the bill.

Mr. HICKENLOOPER. I do not think it is, at any place in the bill.

Mr. CASE. So, Mr. President, I raise the specific question as to whether by the language of section 261, section 32, and section 44, we have limited the development of atomic energy for constructive purposes or not.

Section 261, to which the Senator has referred, authorizes such appropriations as may be necessary appropriately to carry out the provisions and purposes of the act.

Then when we go back to section 44 we find that what is permitted by the act is the sale of by-product energy, not its production as an original or primary purpose.

Mr. HICKENLOOPER. That section refers only to energy which is produced, possibly, as an incident to certain research and development activities of the Commission. It is not intended to go to the question of mass production of energy at all. It simply provides that if in the course of the Commission's activities some energy is produced which could be used, there is no use in wasting it. In the construction of a building frequently material is left which may be sold for whatever amount of money can be obtained.

DEMONSTRATION AS WELL AS RESEARCH

Mr. CASE. That strengthens my fear that in the development of electric energy, the Commission is limited to research. Section 32 says that the Commission is authorized to conduct, through its own facilities, activities of the type provided by section 31. Section 31 in paragraph (4), provides for research and development. The question is what is covered or included by those words.

During the hearings of the joint committee on phosphate resources, held in the summer of 1938, I recall that at Knoxville, Tenn., the committee found itself in the midst of a considerable debate as to whether the phosphate fertilizer sold by the TVA was that which was produced in the course of research or whether its production was a commercial operation. There was some contention that the TVA was getting into commercial business. It was the contention of Senator Norris and the TVA authorities at the time, however that the TVA Act authorized the production of fertilizer for demonstration purposes. As a part of that demonstration program, fertilizer was distributed to a number of counties in Tennessee and other States where it could be appropriately distributed, with reasonable freight rates, to show that it could be produced and delivered at a price which farmers could afford to pay. What I fear here—and I hope I am wrong—is that the language which the Senator has been citing limits the Atomic Energy Commission to a research program or a development program in the nature of a laboratory proposition, with not even a pilot plant, much less commercial development.

Mr. HICKENLOOPER. I should like to read the language of section 11, subparagraph (2). The Senator will find it on page 8 of the act, beginning with line 18:

q. The term "research and development" means (1) theoretical analysis, exploration, or experimentation; or (2) the extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes, including the experimental production and testing of models, devices, equipment, materials, and processes.

That is the technical definition of "research and development."

Mr. CASE. Would the Senator from Iowa interpret that definition to mean that the Atomic Energy Commission could build a plant of sufficient size to determine whether or not the electrical energy could be developed through the application of atomic energy or fissionable materials, in such a way as to be commercially practicable?

Mr. HICKENLOOPER. A moment ago I answered the same question, when propounded by the Senator from New Mexico [Mr. ANDERSON] and the Senator from Vermont [Mr. AIKEN]. The answer is: Yes, if the Atomic Energy Commission could obtain the money.

Mr. ANDERSON. Will the Senator from Iowa permit me to ask if the part of the report at the top of page 15 bothers him in any way. It refers to section 44, and reads:

This section will permit the Commission to dispose of that utilizable energy it produces in the course of its own operations, but does not permit the Commission to enter the power-producing business without further congressional authorization to construct or operate such commercial facilities.

I wonder if that language means that the energy must be sold to someone else, or does it prevent the Commission from constructing a powerplant, as such, for the development of power?

Mr. HICKENLOOPER. I think certainly there was no intent, so far as I know, to have section 44 apply to any commercial activities at all. It does not refer to that subject. The report merely points out that section 44 is not intended to authorize or permit such action. The construction of large scale plants for experimentation and determination purposes, even though they might cost hundreds of millions of dollars, is authorized in other sections of the bill.

The Commission must obtain the money for such construction; it must prove its case in order to get the money. It cannot go out, willy-nilly, and build the plants.

Mr. President, I wish to say to the Senator from South Dakota that the term "research and development" does not go to the question of the size of the plant; it goes to the question of the purpose. Size is immaterial. Other things being equal, a billion kilowatt plant could be built if the Commission could get the money and if the plant were for the establishment of a certain purpose within the authority of the Atomic Energy Commission. The question of size is not involved; the question involved is that of purpose.

Mr. CASE. I thank the distinguished Senator from Iowa. Referring again to the definitions contained on page 8 of the bill, I note that clause (2) of subparagraph q. reads:

The term "research and development" means (1) theoretical analysis, exploration, or experimentation—

That would not cover the point in which I am interested; but clause (2) might. The definition of "research and development" continues:

or (2) the extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes—

I have emphasized "and demonstration purposes"—

including the experimental production and testing of models, devices, equipment, materials, and processes.

I pose this question: Does the Senator from Iowa, who is in charge of the bill, feel that the use of the words "and demonstration purposes," taken in connection with what he has previously said, means that, whatever be the size required to provide the practical application for demonstration purposes, the Commission can engage in whatever experiments are necessary in order to demonstrate the practical application?

Mr. HICKENLOOPER. I think the answer is "Yes," if the Commission could get the money from Congress with which to do it.

POSSIBLE UTILIZATION OF PICKSTOWN

Mr. CASE. Then, I should like to ask a more specific question. In my State there is a great deal of interest in the possible development of atomic energy and in the development of standby electricity from fissionable materials to firm up the so-called secondary or dump power which will be generated on the Missouri River. I call the Senator's attention to the fact that a large part of the hydroelectric power available in that area represents so-called secondary power. The Oahe Dam, which is the largest of the dams and manifestly the largest of the reservoirs, has been estimated by the Hoover Commission to produce 52 percent of its energy in the form of secondary rather than firm power.

There has been considerable interest in the State as to how that secondary power might be firmed up. The suggestion has been repeatedly made that the firming up might well be provided by an atomic energy plant. Does the bill authorize the Commission to consider that as a possibility and to provide a plant which would firm up the secondary power of this hydroelectric project?

Mr. HICKENLOOPER. I would say no, that there is no authority to build a plant for the sole purpose of firming up power. I do not think that is a purpose of the act. If the Congress authorized the Commission to acquire property in that area, that would be a different question. As I pointed out before, the Commission can not condemn property without authorization of Congress.

Mr. CASE. Could the Commission receive property transferred by another agency of the Government?

Mr. HICKENLOOPER. Probably it could, if the Commission did not have to pay anything for it. I would not want to be too positive or dogmatic about that statement.

I am informed by the Senator from Vermont [Mr. AIKEN], who is very well versed in such questions, that it would take an act of Congress to enable one agency to acquire the property of another.

Mr. CASE. Under the provisions of the general act for the disposal of surplus property, I suggest that another agency might acquire such property. I think that before the General Services Administration sells property which is considered to be in excess of the needs of a particular agency, it can dispose of it to another agency.

Mr. HICKENLOOPER. Perhaps such property could be disposed of in that manner; I am not sure. The point I wish to make is that if the production of atomic energy is demonstrated to be within reasonable economic soundness on the basis of cost—and that is what is being attempted to be demonstrated by the 5-year program—and if the Congress is convinced that the building of a substantial atomic energy plant in a certain area to firm up the power is desirable, and if Congress authorizes the Commission to go ahead with such a project, the Commission could do so. However, the Atomic Energy Commission is not primarily an operating agency; it is a research and development agency. It is not a commercially operating agency any more than is the Department of Agriculture.

Mr. CASE. The final question which the junior Senator from South Dakota is seeking to determine is whether or not the Atomic Energy Commission would have the authority, under the provisions of the proposed act, to receive from the Corps of Army Engineers and to utilize a certain installation known as Pickstown, a body of real estate on which there are buildings ranging all the way from houses to hospitals and administrative office facilities, which were built by the Army engineers to house the engineers and the workers engaged in the construction of the Randall Dam. It happens that their work is practically completed. I have been told by the Chief of Army Engineers, General Sturgis, that he has discussed with representatives of the Atomic Energy Commission the matter of transferring such buildings and facilities to the Atomic Energy Commission when such property is declared excess to the needs of the Army engineers. It has been my thought that if those facilities were transferred, without cost, to the Atomic Energy Commission, under the general law for the disposition of surplus real estate or real property, the Atomic Energy Commission might receive them and then, possessing them, could there establish a practical demonstration project, utilizing the abundant water and hydroeelctric energy which the Government itself owns.

The Government has built the Randall Dam. That has created a reservoir which is now storing water and which is now producing hydroelectric power. The Government is in the process of building a large backbone transmission system which will link together the hydroelectric power produced by the dams at Gavin's Point, Randall Dam and Oahe Dam in South Dakota, and at Garrison Dam, in North Dakota. On that line there will be in excess of 1 billion kilowatts of generative capacity, but a large part of the production will be secondary power.

The question I seek to have answered is, Can the Atomic Energy Commission, under the provisions of this measure, receive that property at Pickstown, land and buildings, when it is excess to the needs of the Army engineers, and use it as a basis of operations for a practical demonstration plant?

Mr. HICKENLOOPER. In answer to the Senator's question I may say that I do not know. So far as this measure is concerned, I know nothing in it that will either prohibit or permit it. I do not know—because I have not looked into the question—what the rights of the interrelated agencies, including the Atomic Energy Commission, may be. I shall undertake to have that matter looked into immediately, so that I can get the answer for the Senator from South Dakota, if possible. But I would hesitate to answer his question now.

Mr. CASE. Would it be fair to assume—on the basis of the Senator's answer to the earlier question—that if other law permits a transfer to the Atomic Energy Commission of the real property I have mentioned when it is excess to the needs of the Army engineers, once it is in the possession of the Atomic Energy Commission, it would be possible for the Commission to engage in a demonstration project there, under the conditions heretofore recited?

Mr. HICKENLOOPER. The Senator from South Dakota has asked a hypothetical question, based upon certain premises. I do not have the answer to the question; but if the Atomic Energy Commission is authorized to accept that land or other convenient land in that area and if the Commission determines that it is essential or proper, in the research and development field of the Commission, to erect such a plant, and if the Atomic Energy Commission determines that that is a proper place at which to conduct research and development, and that a plant of X kilowatts—several hundred thousand kilowatts, or any figure the Senator from South Dakota might wish to use—would be required for that purpose, then I would say that if the Commission could obtain the funds from the Appropriations Committees, the Commission could build the plant.

Mr. CASE. Mr. President, I wish to express appreciation to the Senator from Iowa for the answer he has given and for his offer to obtain a further answer to the hypothetical part of the question.

I wish to say for the RECORD that here is a situation in which the Government has a tremendous amount of electrical energy which it owns and a tremendous volume of water which it owns, both of which, as I understand, are essential elements in the development of a practical plant.

Mr. HICKENLOOPER. The Senator from South Dakota understands, does he not, that the Atomic Energy Commission does practically nothing on its own, except supervision and the conducting of certain research and development activities of a minor nature?

Mr. CASE. Yes, I understand that.

Mr. HICKENLOOPER. The Commission does almost all its activity through contractors.

Mr. CASE. Yes; by contract.

Mr. HICKENLOOPER. Yes; the Commission does most of its work through contractors, and most of the operation is through contractors.

Again, I wish to say that I do not believe either the original act or this bill contemplates that the Atomic Energy Commission will go into the commercial production of atomic energy, as such. It will go into the production of large amounts of electricity only if it is essential, in the demonstration in connection with research and development, to prove certain points or to demonstrate the practicality of certain things.

Mr. CASE. In review, may I make clear that in addition to the water and the power, the Government owns about a $7 million plant there, in the form of a town, with all kinds of administrative facilities—housing, shops, schools, chapel, and hospital. The Government owns both the land and the buildings.

Mr. HICKENLOOPER. I understand that.

Mr. CASE. I wanted to add that for emphasis as I suspect that this colloquy will be studied in connection with answering that question.

Mr. THYE. Mr. President, if the Senator from Vermont will yield to me, I should like to comment on the colloquy which has taken place between the Senator from South Dakota and the Senator from Iowa.

I would say that, in the first instance, property referred to by the Senator from South Dakota would go to General Services Administration. I think the Senator from South Dakota has raised a question which needs to be explored, because here is physical property which possibly could lend itself to research in the atomic energy field. Therefore, inasmuch as I represent in part an adjoining State which would be one of the beneficiaries if such a pilot plant or research plant were developed in connection with atomic energy, to firm up the hydroelectric energy that is going into that area, I would say that a bill should be introduced in order to begin the necessary study and discussion of the matter. By means of the introduction of such a bill, we would have the necessary discussion and study of the question, so that the properties would not either be disposed of as surplus property to be sold to the highest bidder, or razed, for the purpose of clearing the land and returning it to the State in which it was located when it was acquired, before the buildings were installed.

So I am going to instruct the staff of the Small Business Committee—which already is making a study of a

possible research activity on the part of the Atomic Energy Commission in that field—to look into that matter. I would be very happy to join the Senator from South Dakota in the introduction of such a bill, in order to get the question before the appropriate congressional committees.

Mr. CASE. I certainly appreciate the statement the Senator from Minnesota [Mr. THYE] has made. As usual, he has a constructive suggestion to make in connection with the discussion.

I may say I think possibly I should obtain the answer the Senator from Iowa suggested he would get, because it is my understanding that if property is declared to be excess to the needs of any Federal agency it goes to the General Services Administration and then it can be transferred to other Federal agencies; and that the ones with a national-defense interest have first priority in claiming excess property.

So it might be that the real property in this case—meaning both the land and the building—could be so transferred. If so transferred, I seek to determine whether this bill permits the Atomic Energy Commission to go ahead with a plant there.

The PRESIDING OFFICER. The question is on agreement to the amendment offered by the Senator from Michigan [Mr. FERGUSON].

Mr. GORE. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Aiken	Green	Mundt
Anderson	Hayden	Reynolds
Barrett	Hickenlooper	Schoeppel
Bricker	Hill	Smith, Maine
Butler	Holland	Smith, N. J.
Case	Jenner	Sparkman
Cooper	Johnson, Tex.	Stennis
Daniel	Knowland	Thye
Dworshak	Kuchel	Upton
Ervin	Mansfield	Welker
Fulbright	Martin	Wiley
Gore	Monroney	

The PRESIDING OFFICER. A quorum is not present.

Mr. BARRETT. Mr. President, I move that the Sergeant at Arms be instructed to request the attendance of the absent Senators.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Wyoming.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

After a little delay, Mr. BEALL, Mr. BENNETT, Mrs. BOWRING, Mr. BRIDGES, Mr. BURKE, Mr. BUSH, Mr. BYRD, Mr. CAPEHART, Mr. CARLSON, Mr. CHAVEZ, Mr. CLEMENTS, Mr. CORDON, Mr. CRIPPA, Mr. DIRKSEN, Mr. DOUGLAS, Mr. DUFF, Mr. FERGUSON, Mr. FLANDERS, Mr. FREAR, Mr. GEORGE, Mr. GILLETTE, Mr. GOLDWATER, Mr. HENDRICKSON, Mr. HUMPHREY, Mr. IVES, Mr. JACKSON, Mr. JOHNSON of Colorado, Mr. JOHNSTON of South Carolina, Mr. KERR, Mr. KILGORE, Mr. LANGER, Mr. LEHMAN, Mr. LENNON, Mr. LONG, Mr. MAGNUSON, Mr. MALONE, Mr. MCCARRAN, Mr. MCCARTHY, Mr. MILLIKIN, Mr. MORSE, Mr. MURRAY, Mr. NEELY, Mr. PAYNE, Mr. POTTER, Mr. PURTELL, Mr. ROBERTSON, Mr. RUSSELL, Mr. SALTONSTALL, Mr. SMATHERS, Mr. SYMINGTON, Mr. WATKINS, Mr. WILLIAMS, and Mr. YOUNG entered the Chamber and answered to their names.

The PRESIDING OFFICER (Mr. PAYNE in the chair). A quorum is present.

Mr. GORE obtained the floor.

WHITE HOUSE CONFERENCE ON EDUCATION—CONFERENCE REPORT

Mr. COOPER. Mr. President, will the Senator from Tennessee yield, to permit me to submit a conference report?

Mr. GORE. Mr. President, I ask unanimous consent that I may yield for that purpose, without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COOPER. Mr. President, I submit a report of the commmittee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 7601) to provide for a White House Conference on Education; and I request the immediate consideration of the report.

Mr. GORE. Mr. President, will the Senator from Kentucky yield?

Mr. COOPER. I yield.

Mr. GORE. Has the presentation of the report been cleared with the minority leader, as well as with the minority members of the committee of conference?

Mr. COOPER. It has not, although the report is a unanimous one. If the Senator from Tennessee prefers, I shall postpone my request for consideration of the report until there has been an opportunity to confer with the minority leader.

Mr. GORE. I believe that would be best. I hesitate to take the responsibility of agreeing to the request for consideration of the report at this time, in view of the fact that I have not heard from the minority leader about it.

Mr. COOPER. If the Senator from Tennessee prefers, I shall wait.

Mr. President, at this time I withdraw the report.

The PRESIDING OFFICER. The report is withdrawn.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Maurer, its reading clerk, announced that the House had passed, without amendment, the following bills and joint resolution of the Senate:

S. 1381. An act to amend the Agricultural Act of 1949;

S. 2367. An act to amend the act of June 29, 1935 (the Bankhead-Jones Act), as amended, to strengthen the conduct of research of the Department of Agriculture;

S. 2583. An act to indemnify against loss all persons whose swine were destroyed in July 1952 as a result of having been infected with or exposed to the contagious disease vesicular exanthema;

S. 2766. An act to amend section 7 (d) of the Internal Security Act of 1950, as amended;

S. 2786. An act granting the consent and approval of Congress to the Southeastern Interstate Forest Fire Protection Compact;

S. 3561. An act authorizing the Administrator of Veterans' Affairs to convey certain property to the Armory Board, State of Utah;

S. 3630. An act to permit the city of Philadelphia to further develop the Hog Island tract as an air, rail, and marine terminal by directing the Secretary of Commerce to release the city of Philadelphia from the fulfillment of certain conditions contained in the existing deed which restrict further development; and

S. J. Res. 96. Joint resolution to strengthen the foreign relations of the United States by establishing a Commission on Governmental Use of International Telecommunications.

The message also announced that the House had insisted upon its amendments to the bill (S. 3458) to authorize the long-term time charter of tankers by the Secretary of the Navy, and for other purposes, disagreed to by the Senate; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. ARENDS, Mr. COLE of New York, Mr. SHAFER, Mr. CUNNINGHAM, Mr. VINSON, Mr. KILDAY, and Mr. RIVERS were appointed managers on the part of the House at the conference.

The message further announced that the House had severally agreed to the amendment of the Senate to the following bills of the House:

H. R. 6786. An act authorizing the Secretary of the Interior to purchase improvements or pay damages for removal of improvements located on public lands of the United States in the Palisades project area, Palisades reclamation project, Idaho;

H. R. 8983. An act to provide for the conveyance of certain lands by the United States to the city of Muskogee, Okla.; and

H. R. 9005. An act to continue the effectiveness of the act of July 17, 1953 (67 Stat. 177).

The message also announced that the House had agreed to the amendments of the Senate to the bill (H. R. 130) to amend section 1 of the act approved June 27, 1947 (61 Stat. 189).

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. GORE. Mr. President, I rise in opposition to the amendment submitted by the senior Senator from Michigan [Mr. FERGUSON].

The amendment proposes to legitimatize or legalize a proposed contract which many of us in this body hold to be without legal authority. In my opinion, the submission of the amendment is a concession of the doubtful legality of the proposed Dixon-Yates contract.

However, Mr. President, this question has come to have far broader implications. The attempted perversion of functions of the Atomic Energy Commission in this instance has triggered an explosion of suspicion, mistrust, and doubt which now cast their shadows over the entire atomic energy bill and the atomic energy program.

If, for the purpose of serving this particular private interest group, a provision in the Atomic Energy Law enacted for a specific purpose is stretched beyond its intent, and beyond any reasonable interpretation of its meaning, what confidence can the Senate have to justify the further vesting in the administration of such very great authority and discretionary power as is contained in the pending far-reaching bill?

I should like to make a preliminary statement regarding the amendment, and then give a detailed analysis. Throughout the debate the controversy has raged over this proposal of the administration, acting through the Atomic Energy Commission, to execute a contract with the Dixon-Yates group for the construction and operation of a steam electric generating plant for purposes unrelated to the atomic energy program. Much of the debate has consisted of charges and countercharges involving the operation of the TVA. The RECORD will show that on the first day of debate an effort was made to make the TVA an issue. On that first day the Tennessee Valley Authority, was tried, and I think, judging from the record, acquitted.

Since then the debate has been more relevant, more upon the advisability of the contract, the legality of the proposal, and the improvident characteristics of the proposal.

I believe another significant circumstance has been engendered by this attempted perversion of functions of the Atomic Energy Commission and of the law. Because of this attempt doubts have been expressed on the floor of the Senate about the licensing provision, the patent provision, and other provisions of the bill.

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. No doubt the Senator from Tennessee will address himself to this question, but does he not believe that one of the most important aspects is the failure to permit the Atomic Energy Commission itself to go forward with the construction of some of the powerplants which are needed?

Mr. GORE. I thank the Senator for his question and his contribution. I find it paradoxical that the Ferguson amendment would authorize the Atomic Energy Commission to go into the power business not only to the extent of the Dixon-Yates contract, but to the extent of 3 million kilowatts of electricity. Were the Ferguson amendment to become law the Atomic Energy Commission could make a contract with private utilities to furnish electricity to the Atomic Energy Commission to the extent of the full amount of TVA electricity now going to the Atomic Energy Commission.

I point out to the able Senator from Alabama that by 1957 the schedule calls for the TVA to furnish to the Atomic Energy Commission more electrical energy than was used in the year 1952 by any 1 of the 48 States with the exception of the State of New York. The TVA is scheduled to furnish more electric power than was used in the year 1952 by all the industry of Illinois, all the industry of Pennsylvania, or the vast industrial development of California. The Ferguson amendment would authorize the Atomic Energy Commission to go into the power business to that extent. Why? It specifically prohibits the Atomic Energy Commission from engaging in the generation of power in commercial quantities from atomic energy. In other words, let me say to my brilliant and distinguished friend from Alabama, the amendment would state that it is all right for the Atomic Energy Commission to go into the power business so long as it is invading the TVA's territory, but if it proposes to use nuclear fission to develop commercial power, that must be prohibited. I point out that the Senator from Michigan is chairman of the Republican policy committee, and I suppose can be properly regarded as a spokesman not only for the majority party here, but for the administration.

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. The 3 million kilowatts to which the Senator has referred represents five times the amount of power contemplated in the Dixon-Yates proposal.

Mr. GORE. The Ferguson amendment is five times as bad as the Dixon-Yates proposal.

Mr. HILL. The Senator is absolutely correct.

Mr. GORE. It has been insisted by the proponents of the Dixon-Yates contract that the TVA is seeking to expand its service area, and even that TVA has unconscionably overcharged the Atomic Energy Commission for electricity supplied for the operation of the Atomic Energy Commission's vital production facilities. A welter of confusing statistics, involving ratemaking procedures, has been introduced, and the RECORD is replete with information and misinformation about the operation of TVA. I refer to this only in a summary way. I believe, as I have said, that TVA has been completely exonerated of those charges by the RECORD of this debate. I do not wish to spend any further time at this moment in defense of TVA. Frankly, I do not think it particularly needs defense.

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. Is it not true that the RECORD shows that the charges against TVA are absolutely unfounded and untrue?

Mr. GORE. I believe that the RECORD is clear on that point now.

I wish to say to the Senator from Alabama that I believe the genesis of the Dixon-Yates proposal was a desire on the part of the private Power Trust to attack TVA and to invade TVA's territory. I believe it is the first step toward the dismemberment of the TVA service area.

I inquire of my distinguished friend from Alabama whether he knows who made the request for this contract. The RECORD does not show that the Atomic Energy Commission made any such proposal. The RECORD does not show that the people of Memphis made such a proposal, or that the citizens of Arkansas made such a proposal. It does not show who sought the contract. Does the Senator know the genesis of it?

Mr. HILL. Not only do I not know the genesis of it, but, in the light of the fact that 3 of the 5 members of the Commission are opposed to the proposal, it seems to me entirely reasonable to conclude that the Atomic Energy Commission did not make it.

Mr. GORE. That is a reasonable presumption. Furthermore, the fact is that the Atomic Energy Commission does not want any more power at its Paducah facility. It has a contract for ample power there.

Mr. HILL. Is it not true that one of the strongest statements against the proposal is the letter which Commissioners Smyth and Zuckert wrote to the Bureau of the Budget against the proposal?

Mr. GORE. I think that is true.

Mr. HILL. I am not sure whether that letter has been read into the RECORD, but it is printed at page 958 of the printed hearings. It might be well to incorporate the letter in the RECORD at this point, if the Senator from Tennessee deems it wise to do so.

Mr. GORE. I think it might be well to read the letter. I have before me the letter which Commissioners Smyth and Zuckert wrote to the Director of the Budget. It reads:

> DEAR MR. HUGHES: On April 15, 1954, the chairman of the Atomic Energy Commission, Mr. Strauss, sent you a letter outlining an analysis of the negotiations for certain power to be furnished by Middle South Utilities, Inc., and the Southern Co.
>
> Under this proposal the Atomic Energy Commission contracting power would be used as a vehicle—

Does the Senator catch the significance of that statement?—

> The Atomic Energy Commission contracting power would be used as a vehicle—

The able Senator from Alabama was a Member of the Senate and I was a Member of the House of Representatives at the time the original act was passed and at the time the amendment was adopted on which the administration seeks to pin authority to engage in this disgraceful and scandalous contract. Did the Senator realize or suspect that the original legislation or the amendment would permit the Atomic Energy Commission to be used as a vehicle for something unrelated to the atomic energy program?

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. I am confident there was never such a thought, and that it was never contemplated, indeed, not even dreamed of that the Atomic Energy Commission would be used as a vehicle for such a proposal as that of the Dixon-Yates group, a proposal which is made much worse by the Ferguson amendment.

Mr. GORE. I agree fully with the Senator from Alabama. There was never the slightest intimation to that effect.

Returning to the letter:

Under this proposal the Atomic Energy Commission contracting power would be used as a vehicle for the supply—

Vehicle, that is—

for the supply of 600,000 kilowatts of power in the Memphis area.

With the knowledge of the other members of the Commission, we are taking this opportunity to bring to your attention our personal view——

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. As the Senator from Tennessee has brought out, is it not true that what the Ferguson amendment would do would be to enlarge and extend this vehicle fivefold?

Mr. GORE. The Ferguson amendment would make the Atomic Energy Commission a vehicle to go into the power business to the extent of 3 million kilowatts, provided it invaded the TVA territory.

Continuing with the letter:

With the knowledge of the other members of the Commission, we are taking this opportunity to bring to your attention our personal view that the proposed action involves the AEC in a matter remote from its responsibilities.

I digress to say that I do not believe Congress invested the Atomic Energy Commission with any responsibility whatever to furnish the city of Memphis, Tenn., with electric energy.

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. Does not a reasonable interpretation of the word "remote" suggest that not only is it not within the realm of the jurisdiction and responsibility of the AEC, but is far removed from its responsibility?

Mr. GORE. And far removed from any reasonable interpretation of law.

In an awkward and unbusinesslike way an additional Federal agency would be concerned in the power business.

What do the Commissioners mean by "in an awkward way"? How would the Senator from Alabama interpret "awkward" in this regard? The two Commissioners say "in an awkward and unbusinesslike way."

Mr. HILL. Does the Senator believe that what they had in mind was that it was embarrassing to the Commission to be put in this kind of position? Does not the Senator believe that the Commission is being put in a position that cannot be defended or justified in any way?

Mr. GORE. I think I can agree with the Senator.

Mr. HILL. Was not that the reason for the use of the word "awkward"?

Mr. GORE. I believe the Commissions might have had that in mind.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. GORE. I yield to the junior Senator from Alabama.

Mr. SPARKMAN. I think that is correct. When the Senator reads a little farther down in the letter he will note a particularly pertinent statement made by both Dr. Smyth and Mr. Zuckert. But to digress for a moment, there was a letter written by Mr. Murray, one of the other Commissioners.

Mr. GORE. He appeared before the joint committee and testified.

Mr. SPARKMAN. I know I have read a statement by him.

Mr. GORE. It is a very strong statement.

Mr. SPARKMAN. I do not want to anticipate, but because of the discussion which has arisen at this time with reference to the "awkward" situation, I should like to suggest that the best way I know of defining what the Commissioners meant by an "awkward" situation is to try to define the arrangement, so that the ordinary person may understand from all its ramifications what was gone through in order to arrive at this tortured position and conclusion. I believe that is what they refer to.

A little later in the letter they say:

The present proposal would create a situation whereby the AEC would be contracting for power not one kilowatt of which would be used in connection with the Commission's production activities.

I believe that does create an awkward situation.

Mr. GORE. The Senator will notice the words "in connection with."

Mr. SPARKMAN. That same phrase is used in the law. In other words, the law that gives them the right to buy power limits it to use in connection with construction or operation of their installations at those three different places. Here the two Commissioners point out the fact that not one single kilowatt of the power the AEC is ordered to go into the market and buy from a nonexistent corporation, from a nonexistent power plant, for which not even the specifications have been drawn, and in connection with which there has been no competition, would be used in accordance with what the law directed, that is, in connection with the work of the Atomic Energy Commission. Does not that really create an awkward situation?

Mr. GORE. It appears to me that it does. Does the junior Senator from Alabama, whose legal opinion and abilities are highly regarded, agree with the interpretation of the Ferguson amendment which the junior Senator from Tennessee placed upon it, namely, that it concedes the doubtful legality, if not the illegality, of the proposal?

Mr. SPARKMAN. When I heard the amendment read on the floor, when it was first offered, naturally, the first impression I had was that it was an admission that what it has been attempted to do is not legal. I simply do not see how any other interpretation could be given to it.

Mr. GORE. With reference to the Commissioners, they foresaw when they learned of the proposal that it would put the Commission in an awkward position, and it seems to me that the predicament of the Atomic Energy Commission, the predicament of the administration, and the predicament of the pending bill illustrate the fact that the Commissioners were speaking prophetically. This attempt to pervert the functions of the Atomic Energy Commission to a wrongful purpose, unrelated to its program, this stretching of a phrase far beyond any reasonable interpretation, has engendered so much doubt, so much suspicion, so much mistrust, that one Senator after another rises on the floor and asks penetrating questions about this or that provision of the bill. It illustrates the fact that if we must comb every single word of every single bill which comes to the Congress with a view of forestalling the administration from doing anything with respect to that specific item, then the consideration of a 104-page bill will require more than a few days.

Mr. SPARKMAN. If the Senator from Tennessee will yield further, I might suggest that, whereas in the beginning it was an awkward situation for the Atomic Energy Commission, it has developed into an awkward situation, it seems to me, for the administration, for the Senate in considering the bill, and for everyone connected with the proposal.

Mr. GORE. It even includes the Ways and Means Committee of the House, the Senate Finance Committee, and the conference on the tax bill. We are expecting to vote upon the conference report on the tax bill. Yet, this contract proposes to violate the tax bill which we expect to pass, because that bill will levy a tax upon every other business, upon every other corporation, upon every other man and woman with sufficient income in the United States, but not upon Dixon-Yates, who, under the terms of the contract which the Commission is directed to negotiate, would be provided with complete tax immunity. It is all right to raise taxes on the men and women working in the textile plants in the State of South Carolina at $30 or $35 a week. Lay the heavy hand of the Government on their paychecks, take some of that money; but as to Dixon-Yates; no, no. They are something special. We say to them, "We will put you in business with a Government contract, a 25-year contract, and you can make a profit, and we will reimburse you to the extent of $800,000 a year for taxes which you would rightfully owe on the profit you make."

I wonder how the Senator from South Carolina is going to react to that? Is the Senator willing to reimburse a corporation $800,000 a year for taxes, while he votes for the conference report which would lay the heavy hand of the tax collector on the men and women working in the textile plants of his State?

Mr. JOHNSTON of South Carolina. Mr. President, I think the Senator from Tennessee realizes how the Senator from South Carolina feels in regard to this matter. I could tell from the way he asked the question that he knew I would not consent to the textile workers of my State being taxed while the big boys slip out of it. It is another instance of people who have millions of dollars being able to get a few million dollars more out of this administration. That is the way it looks to me. I feel just as the Senator from Tennessee feels in regard to it, and I shall take my turn a little bit later and express to the Senate my sentiments concerning the subject.

Mr. GORE. I thank the Senator from South Carolina.

Mr. President, the able Senator from South Carolina illustrates my point. When we started this debate a few days ago we could almost count on the fingers of one hand the Members of this body who thought this an unjustifiable, inadvisable—and I will go further, and say disgraceful—contract. The junior Senator from South Carolina has now become interested in it, and he has announced to the Senate that he will speak on the subject. I hope I may include the Senator from North Carolina also.

Does not the Senator from Alabama agree that this has become an awkward situation and that the Commissioners were prophetic beyond their realization when they used that term?

Mr. SPARKMAN. I certainly do. I think it is significant that the three Commissioners, a majority of the Commission, protested strongly against it just as quickly as the idea was put before them. They did not wait until there was a debate, but just as soon as the suggestion was made, they wrote letters protesting against the contract and saying that it would place them in an awkward position, and calling attention to the fact that it was not in keeping with the law.

May I ask the Senator from Tennessee whether Dixon-Yates is a corporation yet? Has it been organized as a corporation?

Mr. GORE. That is not my understanding.

Mr. SPARKMAN. Sometime in the future they hope to organize. But, of course, the proposal has always been made. The Senator has pointed out that they will be the only private-enterprise corporation in the United States exempt from income taxes and all other Federal taxes. What does the Senator have to say about another little item which guarantees to them a 9 percent return on the equity investment? That is one of the items, is it not?

Mr. GORE. I understand that it is.

Mr. SPARKMAN. They are not only exempted from taxation, but are guaranteed a 9-percent return on the equity investment. Does not the Senator think that is a pretty generous way to deal with the taxpayers' dollars?

Mr. GORE. I will say to the Senator that if one Harry Truman, while President, had ordered an independent agency, over its objections, to sign such a contract as this, the top would have been blown off the Capitol and impeachment proceedings probably would have been filed. The scandal would have been in every headline. I think it no less scandalous because it is proposed under different circumstances.

Mr. SPARKMAN. I agree with the Senator.

Mr. GORE. It is a crooked deal.

Mr. SPARKMAN. Permit me to ask another question, and then I shall not bother the Senator further. I see the able Senator from Minnesota [Mr. HUMPHREY] is on his feet and wishes to ask a question, and I know he has given close study to this bill and that he has been troubled in mind and in spirit regarding many of the provisions found in the bill.

But, since the Senator from Tennessee during his remarks is going to discuss the Ferguson amendment, I wish to point out another thing and ask the Senator to be certain to include in his remarks some discussion of the three words "in replacement thereof."

Mr. GORE. I expect to.

Mr. SPARKMAN. He is talking about power which the TVA has furnished the Atomic Energy Commission. In the letter from two of the Commissioners of the Atomic Energy Commission, from which the Senator was reading, it is pointed out that not one single kilowatt of the Dixon-Yates power will be used in connection with the operations of the atomic energy installations; and it is my understanding that the TVA will not be relieved of one single kilowatt of the power which it is obligated to furnish the Atomic Energy Commission. If that be true, I should like to ask, How can it be in replacement thereof?

Mr. GORE. I do not believe it is in replacement. It is not related to the needs of the Atomic Energy Commission. That seems to be made perfectly plain by the letter which I shall now continue to read:

> In an awkward and unbusinesslike way an additional Federal agency would be concerned in the power business.
>
> The proposal under discussion is an outgrowth of the responsibility to the President's budget message under your letter of December 24, 1953, requesting the AEC to explore the possibility of reducing existing commitments of the TVA to the Commission.

I digress to express some wonderment about the genesis of the provision in the President's budget message. I wonder who suggested that? I do not know the answer to that question, but I notice that the letter from Mr. Hughes, as the Commissioners refer to it, bears date of December 24, 1953. I resume reading the letter of the Commissioners:

> In the course of that exploration it was determined to be unwise to disturb the AEC arrangements with TVA upon which our production schedules depend.

I might digress again to say that the Atomic Energy Commission has been able to depend and rely upon the supplying of electricity by TVA in order to meet its production schedules. I continue to read:

> Since that determination, the explorations have taken a different course.

In other words, the matter has now taken a different course from that which was recommended in the President's budget message.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. SPARKMAN. Before the Senator leaves that point, it is stated in the letter, as a matter of fact, that a different course has been taken. Anyone remembering the President's budget message can very well recall that the recommendation was entirely different from what it here proposed, and mention is made of it in the letter:

> The proposal under discussion is an outgrowth of the responsibility to the President's budget message under your letter of December 24, 1953, requesting the AEC to explore the possibility of reducing existing commitments of the TVA to the Commission.

Does the Dixon-Yates proposal reduce the existing commitments of the TVA to the Atomic Energy Commission by one single kilowatt?

Mr. GORE. Not at all. As a matter of fact, Commissioners Smyth and Zuckert say in the very next sentence:

> In the course of that exploration it was determined to be unwise to disturb the AEC arrangements with TVA upon which our production schedules depend.

So the contractual arrangements between the AEC and TVA have not been terminated. As a matter of fact, the representatives of the Atomic Energy Commission testified that the arrangements had been very satisfactory. It was only later that some effort was made to smear the record of the TVA. I continue to read:

> The present proposal would create a situation whereby the AEC would be contracting for power not one kilowatt of which would be used in connection with the Commission production activities. The creation of such a contractual relationship would place upon the Commission a continuing responsibility during the 25-year life of the contract for stewardship in respect to matters irrelevent to the mission of the Commission.

I digress from a reading of the letter to say that the Ferguson amendment would authorize the Commission to go into the power business for 25 years, to the extent of five times the Dixon-Yates contract. According to the Ferguson amendment, there could be another such contract at Chattanooga, another such contract at Tupelo, another such contract at Knoxville, one at Oak Ridge, another in upper East Tennessee, and one in Kentucky. I continue to read:

> It has been our observation in Government administration that arrangements which are obviously incongruous at the outset tend to become even less clear-cut because no one can foresee what contingencies may arise over a long term of years.

The Commmissioners were looking far into the future. I am not certain that they looked immediately to the floor of the United States Senate, but again they were prophetic. I continue to read:

> It has been our observation in Government administration that arrangements which are obviously incongruous at the outset tend to become even less clear-cut because no one can foresee what contingencies may arise over a long term of years. In addition, the proposed action certainly seems a reversal of the sound philosophy embodied in the community-disposal legislation recently set forward to Congress. One motivation for that legislation was the desire to eliminate responsibilities not essentially involved in the Commission's sober and exacting principal mission.

The principal mission of the Atomic Energy Commission is the development of atomic energy, not only for the purposes of national defense, but also for peacetime uses. The Atomic Energy Commission has the atom in its hands, and I think it has its hands full with the atom. Yet the Ferguson amendment would put the Commission into the power business five times in excess of the

extent proposed by the Dixon-Yates contract. The letter ends as follows:

> Of course, if the President or the Congress directs the Commission to accept such a responsibility we will endeavor to discharge it fully.

I have already expressed my opinion with regard to the last sentence. I respect the members of the Atomic Energy Commission. I understand that neither of the Commissioners who signed the letter is a lawyer. That does not detract from their patriotism, but that fact may shed some light upon their interpretation of their duty.

I wish to point out to the Commission that there is a difference in the directives which the Congress and the President can give to the Commission. A directive from Congress would take the form of law—the law of the land—and this is a government of laws. A directive from the President must take its authority from delegated powers, either in the act or in the Constitution. The act gives certain specified delegated power, and thereby excludes others. In no place in the bill is the President given authority to direct the Atomic Energy Commission to take action which is of clearly doubtful legality, an action which the majority of the members of the Commission have held to be unrelated to its program and contrary to its best interests.

I should prefer to have seen the majority of the Commission either resist this usurpation of its authority, or else hand in their resignations under protest. That, however, was not a decision which I was in a position to make.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. GORE. I yield to the junior Senator from Minnesota.

Mr. HUMPHREY. First of all, let me commend the Senator from Tennessee for his very illuminating and informative discussion of the contractual arrangements between the Atomic Energy Commission, the Tennessee Valley Authority, and the private utility under the so-called Dixon-Yates contract. The Senator has referred to the testimony of the three members of the Atomic Energy Commission who opposed the contract. He has referred to the letter of Mr. Zuckert and Mr. Smyth. Mr. Murray, a third member of the Atomic Energy Commission, expressed his disapproval in testimony before the Joint Committee on Atomic Energy. I have in mind the hearings of that committee on the particular bill now before the Senate. I call the Senator's attention to page 1004, where the distinguished Representative from California [Mr. HOLIFIELD], who, by the way, has demonstrated a clear insight into the problems, and a dedication to the public interest——

Mr. GORE. I wish to interrupt the Senator's preface to his question by joining with him in a commendation of Representative HOLIFIELD. He has done a stupendous amount of work in probing many features of the bill and program, including the proposed Dixon-Yates contract.

Mr. HUMPHREY. I feel that Representative HOLIFIELD has done an outstanding job.

In the hearings he asked Mr. Murray a question, which I shall paraphrase. He asked Mr. Murray to state his position on the pending Dixon-Yates contract. Mr. Murray replied:

> Mr. HOLIFIELD, as I review these negotiations, they amount to this: That if the Atomic Energy Commission enters into a contract with the Dixon-Yates group, we would not cancel, at least at the moment—and I just heard General Nichols says so—any TVA contracts, but would be negotiating for a bulk of power that is not needed by our present or projected production facilities. In other words, the Atomic Energy Commission would be used as a vehicle to supply the expanding needs of the Memphis area.

So, as I interpret the Commissioner's statement, the Dixon-Yates contract is not one directed toward the immediate atomic energy needs or the known projected needs of the AEC, but, rather, to fulfill estimated or projected needs of the private economy in the Memphis area.

Mr. GORE. I would be glad to supply an answer to the question of the able Senator, but I believe Commissioner Murray answers it in the very next sentence of his testimony, which I shall now read:

> Since our program is not advanced by these negotiations and the subsequent administration of this 25-year contract, I do not believe that it is desirable for the Atomic Energy Commission to perform a function that another agency of the Government could perhaps more logically perform.

It would be an additional burden upon the Atomic Energy Commission, whose hands, as I have said, are already full with the atom. The proposal, according to Commissioner Murray, will not advance the program of the Atomic Energy Commission.

Does that answer the Senator's question?

Mr. HUMPHREY. That answers my question. I thank the Senator.

Mr. GORE. If what the Commissioner said was accurate, will the Senator from Minnesota not concede that it would impede the progress of the Atomic Energy Commission to place the Commission in the power business, to burden it with the administration of a 25-year contract, and, if the amendment of the senior Senator from Michigan is agreed to, several more such contracts?

Mr. HUMPHREY. The junior Senator from Minnesota surely does think so.

Mr. GORE. Has it not already done so?

Mr. HUMPHREY. Undoubtedly, as illustrated by the fact of this very extended debate, the long hearings before the committee, and the confusion and division within the AEC.

Mr. GORE. And by the doubts, suspicion, and mistrust which have been aroused because of it?

Mr. HUMPHREY. It appears from what we can see that the AEC is being made an electrical brokerage outfit.

Mr. GORE. For whose benefit?

Mr. HUMPHREY. Apparently for the benefit of a handful of people who will be the recipients of a most unusual contract. We have heard many complaints in Congress about TVA, and have heard it called socialism. If I interpret the contract correctly, here we see the Government of the United States permitting a group of investors to put into a project approximately 5 percent of its cost, $5 million out of a total estimated cost of $107 million, which investment will repay to them a guaranteed profit of 9 percent upon their equity capital during the life of a 25-year contract, which will make it possible for them to finance this great investment——

Mr. GORE. With a Government guaranty.

Mr. HUMPHREY. With a Government guaranty—either to use the power or to make what might be called reparation payments in case the power is not used. I am somewhat shocked by that arrangement. I have been reading in the newspapers, and hearing speech after speech, about the tremendous cost of Government and waste in Government. I have witnessed crocodile tears being shed over the cost of the farm program and the cost of many other programs. But here we see a project which does not have a bit of the element of risk capital in it. There is in the contract more of a guaranty than death, and I was going to say more of a guaranty than taxes, but the Government even pays the taxes in this case. We are setting up a new special breed of economic "cats" the like of which we have never before seen.

I think it ill behooves an administration which has said that it cannot afford to see that the dairy farmer gets a decent price for his commodities to sponsor a project which the Government will guarantee, so to speak, for 25 years, in which the Government will pay all the taxes, in which the Government will see to it that all the investors get a return of 9 percent on their equity capital, and in which the Government will follow up the whole arangement by getting into the AEC's and the TVA's business. I will admit that the Democrats occasionally had confusion in their affairs, but ours was not organized and planned. This is the most organized and planned confusion that ever existed.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. GORE. I yield to the Senator from South Carolina.

Mr. JOHNSTON of South Carolina. The 9 percent return on investment which the Senator is referring to is the least the investors can get.

Mr. HUMPHREY. That is the minimum.

Mr. JOHNSTON of South Carolina. That is the floor which would be put under the investors to maintain for them a 9-percent return, but they could make as much above that as they could.

Mr. GORE. I may say to my distinguished colleague from South Carolina, that is price support for Dixon-Yates.

Mr. HUMPHREY. The farmers were guaranteed that they could not lose more than 10 percent. That is what 90 percent of parity means. In the Dixon-Yates proposal, the Government is telling them. "We are going to guarantee that

you make at least 9 percent, and the sky is the limit from there on."

Mr. GORE. And the Government will also pay the taxes.

Mr. HUMPHREY. It will pay the taxes. What a bonanza. First we gave away the submerged oil lands. Then there were a few raids on public lands. Now apparently we are going to start giving away plain money by guaranteeing the investors a certain amount.

It is absolutely unconscionable to think that a businesslike administration would enter into such an unbusinesslike procedure, to bring the AEC into such an activity, a commission which was created for the security of the country, and to make a political and economic vehicle out of it. The AEC has no interest whatsoever in the development of private utilities; their hand is literally being forced into this arrangement.

Mr. JOHNSTON of South Carolina. Mr. President, I should like to ask a further question: Is it not true that they have brought in the Atomic Energy Commission because they know, since it is a defense agency, that it is very popular with the people, and they believe that when they bring in the Atomic Energy Commission, no Member of Congress will dare attack the bill, but will let the bill pass because it is connected with the national defense? They have picked up, so to speak, this agency, which really is not fitted for this job. But that is done because they think no Member of Congress will dare attack the bill, inasmuch as it is connected with the national defense.

Mr. GORE. In other words, not only are they using the President of the United States, but they are wrapping the American flag around the bill.

Mr. JOHNSTON of South Carolina. Yes.

Mr. HUMPHREY. Mr. President, will the Senator from Tennessee yield to me?

Mr. GORE. I yield.

Mr. HUMPHREY. It is very interesting that in the same bill, which would deny the Atomic Energy Commission the right to establish a pilot plant of proper proportions to carry on the kind of research which should be conducted in terms of low-cost electrical energy, they now are trying to attach a provision which will more or less put the Commission, by proxy, into the electrical generating business. There is a strange paradox here, and we might say it is a bit "duplicitious," because, on the one hand, the statement is made that the Atomic Energy Commission cannot engage in the production of electricity from atomic energy; but, on the other hand, the Atomic Energy Commission is, by contract, put into the production of electrical energy.

Mr. GORE. An additional paradox is that the very section of the bill upon which they seek, tenuously, to base authority for this crooked deal, was advanced on the floor of the Senate as being for the purpose of taking the Atomic Energy Commission out of the power business.

Mr. HUMPHREY. Mr. President, will the Senator from Tennessee yield again to me?

Mr. GORE. I yield.

Mr. HUMPHREY. I believe we should pursue further the question of the authority or lack of authority in the pending bill regarding the right or ability of the Atomic Energy Commission to develop the electric-energy power resource. As I recall, several days ago the distinguished senior Senator from Colorado was somewhat shocked when he learned, after discussion of the bill on the floor of the Senate, that the language of the bill denies the Atomic Energy Commission the right to produce power, through a main reactor plant, even for its own uses. Does the Senator from Tennessee recall that?

Mr. GORE. Yes, I do.

Mr. HUMPHREY. Yet in the same bill, by means of which we are contemplating a system of licensing to give almost exclusive or monopolistic rights to certain corporations or utilities, we deny the Atomic Energy Commission the authority even to carry on the kind of experimentation it ought to carry on in a powerplant of sufficient size to produce substantial quantities of electrical energy; and then we proceed, according to what the Senator from Tennessee has been developing, to have a contract, such as the Dixon-Yates contract, which makes the Atomic Energy Commission a participant in the production of electrical energy, without ever once having the Atomic Energy Commission directly itself produce power. Is not that correct?

Mr. GORE. In other words, according to the amendment of the Senator from Michigan, it will be fine and good for the Atomic Energy Commission to go into the power business to five times the extent of the Dixon-Yates proposals, provided it invades the TVA territory. But the bill says, in effect, "The Atomic Energy Commission shall be forbidden to develop electricity in commercial quanties from the fission or fusion of the atom."

Mr. HUMPHREY. Let me ask another question: Why is there need for the Ferguson amendment, if authority to make the Dixon-Yates contract already exists?

Mr. GORE. I believe the submission of the amendment by the distinguished senior Senator from Michigan—who, let me point out, is chairman of the Republican policy committee—amounts to a confession that the proposed contract is illegal; I place that interpretation upon it, for the RECORD.

Mr. HUMPHREY. So we see the Senator from Michigan proposing an amendment—as of last Friday, I believe—to legalize, by formal language, a contract which has been ordered by the President, through the Bureau of the Budget; and apparently contractual relationships are under way already; is that correct?

Mr. GORE. I do not believe contractual relationships have been consummated. The directive was unusual. It not only directed the Commission, over the opposition of a majority of its members, to negotiate this contract, but specified certain provisions of the contract, the first being that it must provide reimbursement for all taxes. Does not the Senator think that is most unusual?

Mr. HUMPHREY. It is not only unusual; this form of contractual arrangement seems to me to be an innovation in public policy.

Mr. GORE. A little later I shall discuss in detail the legislative intent of the section of the law upon which it is sought to pin this authority, and which now seems to be conceded to be inadequate.

Mr. HUMPHREY. Mr. President, will the Senator yield for one further observation?

Mr. GORE. I yield.

Mr. HUMPHREY. Does the Senator recall the occasion when former President Truman, in what he deemed to be the public interest in the matter of protecting the national security, seized the steel mills during the prolonged steel strike 2 or 3 years ago?

Mr. GORE. I do recall it.

Mr. HUMPHREY. Does the Senator recall that the Congress made its views very clear, as did the Supreme Court, and expressed, by resolution and by act, denial to the President of any such authority?

Mr. GORE. I do; and I was one of those who took such a position.

Mr. HUMPHREY. Does the Senator not believe, therefore, that since the precedent has been established of the Congress of the United States protecting the rights of the people and insisting that the Executive live by the Constitution and the statutory law of the land, in this instance it may be the duty of the Congress again to restrain the hand of the executive and of his departments in connection with the Dixon-Yates contract?

Mr. GORE. I thought that was the case until the submission of the Ferguson amendment. I am not so sure now but that the onus of affirmative legislation is on the proponents of the contract. I expect to discuss that question a little later. I believe that the offering of the Ferguson amendment, conceding as it does, I believe, the doubtful legality if not the admitted illegality of the proposal, constitutes a part of the legislative history which will be looked to by the courts. There are some indications that the courts will have an opportunity to look at this contract if it is consummated—which I now doubt. Therefore the offering of this amendment may have significantly changed the legislative situation. But if action on the part of the Congress is needed to stop the contract that action must be taken. I believe there is something more important involved, which I expect to discuss at some considerable length at a later date. I refer to the precedent of overriding an independent agency. This will be but a brief reference. A more exhaustive study will be necessary, but I should like to read from the case of *Humphrey's Executor* v. *United States* (295 U. S. 602). This is not prophetic.

Mr. HUMPHREY. I recall the case.

Mr. GORE. I read paragraph 4 from the syllabus

Mr. HUMPHREY. This Humphrey is neither George nor Hubert. This is another Humphrey; is it not? Was he not a member of the Federal Trade Commission?

Mr. GORE. I believe so. Reading from the syllabus:

> The authority of Congress, in creating quasi-legislative or quasi-judicial agencies, to require them to act in discharge of their duties independently of executive control cannot well be doubted; and that authority includes, as an appropriate incident, power to fix the period during which they shall continue in office, and to forbid their removal except for cause in the meantime.

This is more fully spelled out on page 629. I read the following paragraph:

> The fundamental necessity of maintaining each of the three general departments of Government entirely free from the control or coercive influence, direct or indirect, of either of the others, has often been stressed, and is hardly open to serious question. So much is implied in the very fact of the separation of the powers of these departments by the Constitution and in the rule which recognizes their essential coequality.
>
> Whether the power of the President to remove an officer shall prevail over the authority of Congress to condition the power by fixing a definite term and precluding a removal except for cause, will depend upon the character of the office.

This case should be studied by all those who are interested in preserving the truly independent character of our independent agencies. I expect to address the Senate at a later date upon that subject also. I regard it as the most important single question involved in this particular issue.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. GOLDWATER. I ask unanimous consent to make a brief statement.

Mr. GORE. Mr. President, I ask unanimous consent that I may yield to the distinguished junior Senator from Arizona without losing my right to the floor.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Arizona may proceed.

Mr. GOLDWATER. I shall occupy not to exceed 2 or 3 minutes.

(At this point Mr. GORE yielded to Mr. GOLDWATER, who then addressed the Senate. Mr. GOLDWATER's remarks were ordered to be transposed in the RECORD, to follow those of Mr. GORE.)

Mr. GORE. Mr. President, while the senior Senator from Delaware is on the floor, I wish to digress from the course of my remarks to call to his enlightened attention some of the peculiar features regarding the tax laws as they relate to this proposed contract.

The distinguished Senator from Delaware is one of the able and conscientious members of the Committee on Finance. He has opposed on the floor of the Senate drastic reductions in our revenue on the ground that we must borrow the money to reduce taxes.

The junior Senator from Tennessee voted for the amendment of the able Senator from Delaware. In fact, since being a Member of the Senate, the junior Senator from Tennessee has on several important occasions found his views to coincide with those of the senior Senator from Delaware.

I wish to point out to the Senator that this contract provides for complete reimbursement of this private corporation of all its taxes—local, State, and Federal. We would have to borrow to give this concern tax immunity. We would have to borrow the $800,000 a year to reimburse this corporation for what it rightfully owes in taxes under the tax laws.

Some people have sought to justify that proposal on the basis that the Government would be exempt.

Let us see where that argument leads us. If one corporation with a Government contract is entitled to reimbursement of its taxes, how can we deny reimbursement to the others, particularly if the others are national-defense contractors? The corporation under consideration would be formed for the purpose of obtaining a Government contract. After the corporation had come into existence for the purpose of obtaining a Government contract and for the purpose of being favored with a Government contract, and after it has been guaranteed an annual profit, it would be provided, at the President's direction, complete reimbursement of all the taxes that the corporation would owe.

This is not a national defense contract. It is a contract made for the purpose of furnishing electricity to the Memphis area, a normal civilian need. If a contractor unrelated to the national defense program can be so favored, then it would seem to me that a contractor contributing directly to the Nation's defense should have at least an equal if not a superior claim to such preferred treatment.

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. WILLIAMS. I may say to the Senator from Tennessee that I agree with him to a certain extent. I do not like the idea of giving tax exemption to any group. On the other hand, I think we must be realistic on this point. The basis on which this formula was originated was that this private corporation will be competing with tax-exempt Government-owned powerplants. I think that points out the inherent danger of having a part of our economy Government operated and a part of it privately operated. A privately owned company that must pay taxes cannot compete with a Government corporation on which no taxes are levied.

Our country cannot operate half socialistic and half private enterprise.

The proper answer would be to let the TVA and all other Government-owned businesses compute tax obligations in their reports. Then we can get a real picture of whether or not they are earning money. I think the TVA or any other publicly operated organization should have to render their annual reports as if they were paying taxes. As one who believes that we should operate as much as possible through private industry, we must add on to the prices being paid by the Government an amount sufficient to enable the corporation to pay its corporation taxes. I think we would get the same end result. At the same time I want it understood that I am not necessarily endorsing this particular proposal. I would approach the solution from the other angle.

Mr. GORE. I thank the able Senator from Delaware. Again, I find myself in agreement with him in several respects. First, the distinguished Senator has said that the purpose of this tax reimbursement is to give this private corporation, for the purpose of obtaining a Government contract, the opportunity of presenting a rate structure which, in the opinion of some persons, would be comparable to the TVA rates. I would say that the basic purpose of the tax-reimbursement proposal is to make it possible for this concern to give an artificial presentation of its rates.

The Senator goes one step farther and says that the TVA should be taxed, or possibly he said it should calculate the tax in its rate. I think that is a more accurate statement. The TVA is a wholly Government-owned corporation. Therefore to tax the TVA would be for the Government to tax itself. As a matter of fact, the operations of TVA are taxed to the extent of all its net earnings. A private corporation, except Dixon-Yates, is required to pay a portion of its net profits to the Government in the form of taxes. Our taxes, as the able Senator knows, are on a graduated basis: the more a person or a corporation makes, the more tax he or it pays. In the case of TVA, all the profits, all the net earnings from its operation, belong to the Treasury of the United States.

Mr. WILLIAMS. Mr. President, will the Senator from Tennessee yield further?

Mr. GORE. I yield.

Mr. WILLIAMS. That is true, and if there is a loss, the loss belongs to the United States. Mathematically, there would be no difference to the taxpayers whether TVA paid taxes or whether it did not. But it would make a more realistic picture if the taxes were computed, because we cannot say TVA is paying taxes. There has been a great deal said throughout the country to the effect that public power is much cheaper to the consumers than is private power. That is only true because taxes are waived. If we extend it further, automobiles could be manufactured more cheaply; many other things could be manufactured more cheaply if taxes were waived. But because the taxes are not waived, we have to pay private corporations correspondingly higher prices. It takes a great amount of money to operate the United States Government, and the money comes from only one source—the American people. Whether they pay taxes in the form of corporation taxes, personal taxes, or in some other form makes very little difference. Every dime comes from the American people.

Likewise, as a part of our economy goes off the tax rolls, either as public power or in some other form, the remaining taxpayers must pick up the extra check. That is unfair.

Mr. GORE. Of course, it is idle to say that a Government agency and a private corporation are the same. They are not the same. They are not so designed. In this country we have the principle of levying a tax on corporations and persons according to their ability to pay. Whether TVA should have been created

is not the question involved here. The Tennessee Valley Authority is an accomplished fact. So, incidentally, are other Government corporations.

Lest the importance of Government agencies and Government business operations be minimized, I wish to call to the attention of the Senate the fact that the Treasury of the United States receives substantial income every year from the operations of Government enterprises. The TVA is not the only source of that income. TVA's net earnings amount to many millions of dollars every year, and the net earnings of the Government enterprises together amount to several billions of dollars a year.

So, if we eliminate the income of the Government from the enterprise in which the Government engages, we, indeed, knock a big hole in the income of the Treasury. But if we start exempting private corporations from the payment of taxes, we shall knock an even larger hole in the income of the Treasury.

I should like to inquire of the Senator from Delaware whether he would agree with the junior Senator from Tennessee that if we provide tax exemption, or if one does not like that word, if we establish the precedent of reimbursing Federal income taxes for one corporation, that might be a dangerous precedent which would lead to claims of other contractors, particularly national-defense contractors, for similar preferential treatment?

Mr. WILLIAMS. I certainly was not endorsing that principle when I was speaking.

Mr. GORE. I understand.

Mr. WILLIAMS. But I did say that we must be realistic in our approach to this problem when we speak of whether required power is to be furnished through private operations or public operations. We have got to take into consideration the fact that private-power producers have to pay taxes, and we cannot expect to get a cheaper rate from a company which is paying taxes than from a Government-owned company which does not pay taxes. I think that has to be taken into consideration.

This whole question settles down to one basic question.

Do we believe in Government ownership of our utility system or do we believe in the private-enterprise system upon which this country was established? I do not like the other approach.

Mr. GORE. I beg the Senator's pardon. They are not exactly the same. I do not wish to draw the Senator into a discussion of the contract. That was not my purpose. I wish to discuss and examine with him the principle of reimbursement of taxes. I should like to disagree with the Senator that it amounts to the same thing, because the difference in the cost of power in this case between the TVA plant and the Dixon-Yates proposal is $3,600,000 a year. If from that amount there is subtracted $800,000 of tax reimbursement, there is still $2,800,000 a year, which is more than this contract would cost the taxpayers of the Nation.

However, if the Senator from Delaware thinks I am trying to draw him into a discussion of the proposal, I assure him that I am not. I merely wished to examine with him the dangerous precedential character of tax reimbursement.

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. WILLIAMS. I certainly am not defending the principle of tax reimbursement. I want that understood. However, I am not sure that I could go along with the figures the Senator has mentioned because there are other factors which must be taken into consideration. Whether they have been taken into consideration, I am not in a position to say at this time.

The Senator speaks of the public power feature of the TVA system. My criticism of the operation of TVA for many years has been on the basis that there is not a complete separation of the different functions of TVA.

For instance, the law provides that the TVA shall allocate so much of its operations to flood control and various other projects which are paid for with appropriations by Congress, but the TVA can reduce or raise these allocations at will and almost make their earnings statements, with regard to public power, either increase or diminish, at their discretion. I do not say that that has been done. I simply say that if a public power project or any other kind of public business is to be operated by the Government, there must be a complete separation within the organization of all public business, and regular Government business must be kept strictly out of the public power business. Let them operate on exactly the same basis as private industry.

I am one who believes that in the United States private industry can operate more efficiently than can the Federal Government, but I realize there is a different school of thinking. There are those who think the Government can operate business more efficiently than can private industry, but I must say that the Government has yet to demonstrate its ability to do so.

Mr. GORE. I would not at this moment wish to engage in a discussion of the relative merits of Government enterprise and private enterprise, except to say that, in general, I agree with the Senator's statement. In the case of TVA, I think that as between the Shawnee plant and the Joppa plant, both being of equal size, and both serving the atomic energy plant at Paducah, the TVA, in this instance, at least, has demonstrated its superiority.

I would not ask the Senator from Delaware to confirm this interpretation of his remarks; but if I may take the liberty to do so, as I paraphrase his position, it is that he does not like tax immunity, and he does not like public power either. So my friend is in quite a dilemma with respect to this contract.

Mr. WILLIAMS. The same dilemma as some of those who like public power and lower taxes for other taxpayers all at the same time.

Mr. GORE. I wish to point out to the Senator that if this precedent should be followed, then why should Senators place a tax upon their own salary? The Government pays our salaries. Why not simply give us tax reimbursement, instead of a salary increase, which some are advocating?

What about all the Government employees? Instead of granting a raise to the postal employees, why not merely give them complete immunity from taxation?

How far can we go with this? It is dangerous in its precedential character.

I am delighted to know that the senior Senator from Delaware does not endorse such a principle or such a plan.

As I started to say earlier, I am convinced that the Dixon-Yates proposal has, for its primary purpose, the dismemberment of the TVA service area, and that if such a contract is actually executed, in pursuance of the Ferguson amendment, it will constitute the opening wedge calculated to alter and destroy the concept of the TVA program as it has been developed pursuant to laws enacted by Congress.

There are those of us, however, who have from the outset of the debate, insisted that despite the importance of the proposal as an attack upon the operating efficiency of TVA, other issues are raised by the proposal which are of more far-reaching importance and which vitally affect certain well-defined principles of government as we know it today.

In the first place, we have raised the issue of the wisdom and the propriety of action on the part of the administration in directing the Atomic Energy Commission, an independent agency of Government, to enter into a contract which a majority of the Commission has publicly stated to be unwise and foreign to the purposes for which the Commission was created by the Congress.

In the second place, we have questioned the wisdom of certain of the provisions that are to be incorporated in the contract under consideration. It has been clearly established that the contract, if executed, will be without precedent in the annals of this Government, in that a number of its terms clearly constitute departures from accepted contractual procedures heretofore employed by the Government.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HICKENLOOPER. The Senator from Tennessee, of course, is aware of the fact that the TVA puts the same kind of tax immunity and tax reimbursement in its contracts with AEC; so the situation would not be without precedent, because the existing TVA contracts contain the same tax-immunity provisions when they deal with the AEC.

Mr. GORE. I most respectfully disagree with my able friend, the senior Senator from Iowa. The TVA contract does not provide for similar tax reimbursement. The TVA contract has such a provision as this: It provides that in case Congress should, by law, require the TVA to increase its payments in lieu of taxes, which it makes by law to local and State communities in which it operates, then the AEC would, by operation of the same act of Congress, reimburse the TVA to that extent.

That, however, is an entirely different matter from the reimbursement of income taxes. I wish to read to the Senator a summary of decisions following World War I in which various companies with cost-plus contracts to build naval vessels and naval installations undertook to obtain reimbursement of their Federal income-tax payments. I could read a detailed analysis of a number of such cases, because there are a great many of them, but this is a summary:

Federal income and excess private taxes cannot be allowed as part of costs under Navy cost-plus contracts, even when the contracts included "taxes of all kinds, including munitions taxes," because the statute commands the contractor to pay such taxes from profits.

That is the distinction. It has been resorted to in contracts heretofore, particularly on cost-plus contracts, as to which the Government has reimbursed the Government contractor for the payment of local taxes or for the payment of excise taxes.

But this is the first instance I can find, or that the Library of Congress can find, in the history of the United States when a Government agency has put its stamp of approval upon reimbursement of income taxes. That is precedential.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HICKENLOOPER. Does the Senator take the position that it is illegal to reimburse for income taxes?

Mr. GORE. I believe it is.

Mr. HICKENLOOPER. I understood that was the purport of the decision.

Mr. GORE. If the Senator will permit me to read from the Code of Federal Regulations, volume XXVI, promulgated by the Armed Forces, in compliance with and in pursuance of the laws of the United States, I read from page 189:

Among the items which shall not be included as a part of the cost of performing a contract or subcontract or considered in determining such cost are the following: * * * Federal and State income and excess-profits taxes and surtaxes.

Mr. HICKENLOOPER. Is that a regulation, or does the Senator take it that that is the law as upheld by the courts?

Mr. GORE. This is a regulation promulgated in pursuance of Federal law.

Mr. HICKENLOOPER. I was trying to draw a distinction between a term contained in a contract as a matter of agreement, on the one hand, and a condition or term in a contract which was prohibited by law, on the other. Contracts often contain a provision that no illegal action will be done or performed, or agreed to be done or performed.

Mr. GORE. I have been advised by those whom I regard as competent authorities that such a contract would be illegal, although, of course, if such a contract should be entered into, unfortunately, by the Government, the courts would finally have to decide whether it was illegal.

Mr. HICKENLOOPER. It seems to me to make the argument somewhat moot, in that if reimbursement of income taxes is in fact illegal, and it has been so established by the courts a contract could not contain such a provision. So why are we worrying about the question of reimbursement for income taxes if such a provision is illegal? Such a provision would not be contained in a contract, because I do not think the legal authorities of the Commission would permit the insertion in a contract of terms which are manifestly under the law held to be illegal. So I think we need not worry about income tax reimbursements, or having them calculated, as a matter of cost. The question of whether income taxes are reimbursable does not enter into the question. If they are illegal, such a provision will not be made part of the contract. We will not have to worry about the contract on that score.

Mr. GORE. I appreciate the contribution of the able Senator from Iowa. He is an eminent attorney from Iowa, and I recognize him as such. I was heartened during the debate day before yesterday when I heard the able Senator say—though I am not undertaking to quote him verbatim—that if he were a member of an independent commission that was ordered to perform what to him appeared to be an illegal or unconscionable act he would not do it. I applauded him. I think we must preserve that independence, and that is an attribute of character I would like to see manifested in a candidate for membership on an independent commission for whose confirmation I had to vote.

Mr. HICKENLOOPER rose.

Mr. GORE. Let me complete my answer, then I shall yield again.

Mr. HICKENLOOPER. I merely want to clear up the particular point the Senator mentioned. Then I shall be delighted to have the Senator's answer.

Mr. GORE. I hope I did not misquote the Senator or put him in a false light.

Mr. HICKENLOOPER. I merely wanted to say that if I were a member of a board I would not presume that a President of the United States would order me to do a manifestly illegal act. I would not presume that any President would do that. A President might attempt to order an individual on an independent commission to do an act which that member thought was unwise or was not a proper step in carrying out his responsibilities. I am leaving out the question of an act being illegal. I am not assuming a President would order a person to do an illegal act. But under the circumstances I have cited, if an order violated my conscience and I seriously opposed it within my own mind as being against public policy, I would not only refuse to obey it, of course, but I probably would resign the job. I think that is what should be done. As I have said, I wish to leave out of consideration the presumption that any President would order a person to do an illegal act. I will not make such a presumption.

Mr. GORE. I wish to correct my statement to the extent that it went beyond the presumption made by the Senator from Iowa.

Mr. HICKENLOOPER. The Senator was in substance correct. I am not taking him to task for quoting me incorrectly.

Mr. GORE. I thank the Senator, and I again wish to compliment him. He needs no further demonstration of my respect for him. I must disagree with the statement that this is a moot question. It is a very live question. Here is the direction of the President of the United States, as set forth in the letter of the Director of the Budget, as it appears on page 952 of the hearings:

In working out the arrangements between AEC and TVA, it is contemplated (1) that the Atomic Energy Commission will bear all local, State, and Federal taxes payable by the Government under terms of the contract.

Now let me read to my colleague the testimony of Mr. Nichols, General Manager of the AEC, as it appears on page 949 of the hearings before the joint committee, of which the distinguished Senator from Iowa is the able vice chairman. I read from Mr. Nichols' testimony:

The proposal provides for reimbursement by the AEC for all taxes, licenses, and fees—State, local, or Federal.

So it is not a moot question; it is as live as a question can ever become, and I say it is a question which is precedential in character.

Let me read from one other decision, made back in 1919. As I said earlier, vested interests have been seeking for a long time to get the privilege they are after in this case. Greed is not new.

Let me read a decision of the Government:

Tax accruals during the period of the contract shall be included in overhead, except that Federal income, Federal excess, or war-profit taxes, and Federal taxes of the same economic character shall not be included in cost.

The line is clearly drawn between a tax upon the property and a tax upon doing business—in other words, a tax upon a transaction, a tax on a percentage of the profit. That line is as clear as the aisle in this Chamber. This is the first time, so far as I have been able to determine, or so far as the agencies serving the Congress can ascertain, that an agency of the Federal Government has put its stamp of approval upon any such precedent-setting action.

Mr. HICKENLOOPER. Mr. President, if the Senator from Tennessee will yield to me—although I do not wish to labor the point—let me say that he has cited decisions which he believes to be applicable. However, I say again that if the inclusion of the provision regarding Federal income taxes is found to be illegal, under a holding of the courts, then the question is, indeed, moot because, if such a provision is illegal, it cannot then go into the contract, and therefore the provision is out.

Mr. GORE. But that is not the only feature of the proposed contract which I believe to be illegal. I think the Commission is without authority to make the contract, in the first place, but it was directed to do so by no less an authority than the President of the United States of America. So I say it is not a moot question. It is a live question, and I shall insist that the Senate take a position on it.

Mr. HICKENLOOPER. I understand there is a difference of opinion as to

whether section 164 authorizes the Commission to make such a contract. I happen to disagree with the Senator from Tennessee; I happen to believe that section 164 gives authority to the Commission to make the contract. Those of us who entertain that belief are supported by the legal division of the Atomic Energy Commission, which has given an official written opinion that the Commission has legal authority under section 164 to do so, and I accept that opinion.

Mr. GORE. I think the fact that the chairman of the Republican policy committee has submitted the pending amendment is certainly an indication of a recognition that there is a great deal of doubt about it.

Mr. ANDERSON. Mr. President, if the Senator from Tennessee will yield to me, let me say that I wonder whether the attorney gave the opinion under section 164 or whether he gave the opinion that the Commission could do so when directed to do it by the President of the United States. I think the latter is what the opinion was.

Mr. GORE. Under the circumstances, with a Presidential directive having been issued, and with the Chairman of the Commission riding herd for the contract, and with the general manager being a partisan of the contract, it seems to me that to ask the general counsel whether the Commission had such authority would be about like asking me if I have been a good boy. The answer is, "Yes."

Mr. JOHNSON of Texas. Or, if I may intervene, to ask whether Tennessee is a good State.

Mr. GORE. In response I would also say "Yes." [Laughter.]

Mr. ANDERSON. Mr. President, will the Senator from Tennessee yield to me?

Mr. GORE I yield.

Mr. ANDERSON. I was interested in what was said about income taxes. Suppose $100 million worth of securities were marketed in contemplation of the contract, which permits full payment by the Government of Federal income taxes; and suppose thereafter the courts knocked out the provision regarding income taxes, as was suggested by the Senator from Iowa. Certainly the innocent purchasers of the securities, who when purchasing them felt the income taxes would be paid by the Federal Government, would then be placed in a sad situation, at that late date.

If there is a possibility that the courts can knock out that provision, surely the Atomic Energy Commission should remove the provision from the contract, rather than permit the provision to be in the contract at the time when the securities are offered to the public.

Mr. GORE. I would not be at all surprised to find that, before the debate is over, someone from the Commission will make such a statement.

Mr. President, let me point out that during the debate there have been some remarkable guests in the gallery. We have been favored by visits from some of the utilities tycoons and a whole battery of attorneys. I have an idea that after the distinguished Senator from Mississippi made his typical, irrefutable, hard-driving, country-judge analysis of the contract and the lack of authority for it, they got their heads together and said, "We have to get some Member of the Senate to submit an amendment to make this legal." So—well, Mr. President, perhaps I should not use the word "so"; it might indicate that the Senator was acting as their agent—but I will say that finally the Senator from Michigan submitted an amendment to make legal what was clearly an illegal contract.

Mr. HICKENLOOPER. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I shall yield in a moment.

Mr. President, let me say I should not be surprised to find that, before the debate is over, they back away from this part of the contract, which I believe to be illegal. The result will be that the taxpayers of the United States will see clearly that the difference between the two proposals will not be $3,600,000 a year. Instead, then we shall be able to see clearly that we shall have to pay to this outfit a subsidy and tribute of more than $5 million a year for this electricity. That would render the contract all the more unjustifiable; and that is the purpose of this unusual and bizarre proposal, in connection with which the Bureau of the Budget—for the first time in the history of the Nation, so far as any agency of the Federal Government is concerned—has placed its stamp of approval upon the proposal for reimbursement of income taxes. The very purpose of that was to permit this combine to present an artificial rate structure, in comparison with the TVA yardstick, which has worried them no end.

Mr. STENNIS. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. STENNIS. Something has been said about the opinion of the attorney for the Atomic Energy Commission, in which he held that the Commission has authority to enter into this contract, either under the terms of the present law or by force of a directive from the President of the United States. I seek information. Does the Senator from Tennessee have a written opinion, or has he seen a written opinion, from the attorney for the Atomic Energy Commission in regard to that subject matter?

Mr. GORE. I heard him testify before the joint committee that, in his opinion, section 12 (d) does give authority for this contract.

Mr. HICKENLOOPER. Mr. President, I have the opinion in my hand; I have been wating to place it in the RECORD.

Mr. STENNIS. That is the answer to my question, Mr. President. If there is a written opinion, I think we should have the benefit of it.

Mr. GORE. I shall be glad to have it printed at the conclusion of my remarks, or else to have it read into the RECORD at this point.

Mr. HICKENLOOPER. I do not wish to trespass on the time of the Senator from Tennessee by reading the entire opinion into the RECORD at this time, although I shall be glad to have the entire opinion placed in the RECORD, and I should like to read the significant sections.

Mr. GORE. Mr. President, I ask unanimous consent that I may yield to the Senator from Iowa, in order to permit him to read into the RECORD whatever portions of the opinion he wishes to read.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. HICKENLOOPER. Mr. President, this is a written memorandum from William Mitchell, General Counsel of the Atomic Energy Commission, to Mr. K. D. Nichols, General Manager. It recites certain preliminary circumstances, and then it quotes section 12 (d) of the Atomic Energy Act, which is section 164 of the pending bill.

Section 12 (d) of the Atomic Energy Act, which is identical with section 164 of the bill, reads as follows:

> The Commission is authorized in connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission, without regard to section 3679 of the Revised Statutes, as amended, to enter into new contracts or modify or confirm existing contracts to provide for electric utility services for periods not exceeding 25 years, and such contracts shall be subject to termination by the Commission upon payment of cancellation costs as provided in such contracts, and any appropriation presently or hereafter made available to the Commission shall be available for the payment of such cancelation costs. Any such cancellation payments shall be taken into consideration in determination of the rate to be charged in the event the Commission or any other agency of the Federal Government shall purchase electric utility services from the contractor subsequent to the cancellation and during the life of the original contract.

After quoting the statute, Mr. Mitchell says:

> This statute gives the Commission the necessary authority to make the contract in question.

Mr. ANDERSON. Does it not say "when directed by the President"?

Mr. HICKENLOOPER. No. I read it to the Senator. I shall place the entire opinion in the RECORD. The only place in the opinion where reference is made to a contract "when directed by the President" is in the next to the last paragraph:

> The increased cost to the Government of the Dixon-Yates proposal as against the Commission's present contract with TVA would be approximately $3,685,000 annually. However, if the President directs the Commission and TVA to modify their existing arrangements so as to release to TVA 600,000 kilowatts under the present contract (and we do not question the President's authority to do this), then the Commission has authority to make the best contract it can for replacement of the power thus released.

His flat statement, immediately after quoting the statute, is:

> This statute gives the Commisssion the necessary authority to make the contract in question.

The Senator may read it if he wishes. I offer the entire opinion for the RECORD.

Mr. STENNIS. I hope the entire opinion may be printed in the RECORD.

Mr. HICKENLOOPER. With the consent of the Senator from Tennessee, I ask unanimous consent to have it printed in the RECORD at this point as a part of my remarks.

Mr. GORE. I shall be glad to have it printed at this point as a part of my remarks.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

JUNE 22, 1954.

Memorandum.
To K. D. Nichols, General Manager.
From William Mitchell, General Counsel.
Subject: Commission's authority to enter into a 25-year contract with the Dixon-Yates group to provide electrical energy.

You have asked my opinion on the question of whether or not the Commission has legal authority to enter into a 25-year contract with the Dixon-Yates group to provide electric-utility services for the Commission's plants at Paducah and Oak Ridge.

The Commission presently has a contract with TVA to supply the requirements for electric power at the AEC plant at Paducah. In December 1953, the Bureau of the Budget requested the Commission to explore the possibility of releasing 600,000 kilowatts annually to TVA under this contract and making arrangements with privately owned utilities for replacement of the electric power which would be thus released. After considering the engineering and economic factors, the Commission decided that the best arrangement would be to contract for construction of a new generating plant in the Memphis area which would tie in with the TVA system. Two offers were received, one from the Dixon-Yates group and another from Von Tresckow. Both offers were carefully analyzed and the results of these analyses were transmitted to the Bureau of the Budget. The Commission took no position on the advisability of this arrangement for replacement of the Paducah requirements, stating to the Bureau of the Budget that the question was one for higher authority to decide. However, the Commission stated to the Bureau of the Budget, that if this plan were to be adopted, the Dixon-Yates proposal appeared to be much more favorable to the Government.

The Bureau of the Budget, upon direction of the President, has now directed the Commission to make appropriate arrangements with TVA and with the Dixon-Yates group for release of 600,000 kilowatts under the present TVA contract, and construction by the Dixon-Yates group of a new generating plant at West Memphis, Ark., with a capacity of 600,000 to 650,000 kilowatts, tied into the TVA system, to meet the Commission's requirements for power at Paducah and additional requirements which have recently developed at Oak Ridge.

The question is whether, under these circumstances, the Commission has authority to make a 25-year contract with the Dixon-Yates group for this purpose.

Section 12 (d) of the Atomic Energy Act reads as follows:

"12. (d) The Atomic Energy Commission is authorized in connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission, without regard to section 3679 of the Revised Statutes, as amended, to enter into new contracts or modify or confirm existing contracts to provide for electric-utility services for periods not exceeding 25 years, and such contracts shall be subject to termination by the Commission upon payment of cancellation costs as provided in such contracts, and any appropriation presently or hereafter made available to the Commission shall be available for the payment of such cancellation costs. Any such cancellation payments shall be taken into consideration in determination of the rate to be charged in the event the Commission or any other agency of the Federal Government shall purchase electric-utility services from the contractor subsequent to the cancellation and during the life of the original contract."

This statute gives the Commission the necessary authority to make the contract in question. The TVA system is an integrated unit, supplied from various plants owned by TVA, and, on occasion, by delivery from privately owned generating plants. Once electric power has been delivered to the system, it is impossible to identify the source of power which is supplied out of the system for end use. If additional generating capacity is constructed at West Memphis and fed into the TVA grid in an amount which is necessary to supply the Commission's requirements at Paducah and Oak Ridge, this can properly be said to be a contract for electric-utility services in connection with the operation of the Oak Ridge and Paducah installations of the Commission.

The increased cost to the Government of the Dixon-Yates proposal as against the Commission's present contract with TVA would be approximately $3,685,000 annually. However, if the President directs the Commission and TVA to modify their existing arrangements so as to release to TVA 600,000 kilowatts under the present contract (and we do not question the President's authority to do this), then the Commission has authority to make the best contract it can for replacement of the power thus released.

My conclusion, on the assumptions set forth above, is that the Commission would have authority under section 12 (d) of the Atomic Energy Act to make a 25-year contract with the Dixon-Yates group for the purposes indicated.

WILLIAM MITCHELL.

Mr. HICKENLOOPER. Mr. President, I should like to comment on the statement made by the Senator from New Mexico [Mr. ANDERSON], if the Senator from Tennessee will further yield.

Mr. GORE. I yield.

Mr. HICKENLOOPER. A few moments ago the Senator from New Mexico made a statement with which I thoroughly agree. He said exactly what I was attempting to say a while ago, namely, that if it is illegal to include Federal income taxes as a reimbursable item, then, of course, they will not be included in this contract, because it is against the law. A moment ago I said that I think the question of Federal income taxes is a moot question. If, in fact, the Senator from Tennessee is correct in the statement that the inclusion of Federal income taxes as a reimbursable item is illegal, it will not be in the contract.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. STENNIS. I should like to ask the Senator from Iowa a question.

Mr. GORE. I yield for that purpose.

Mr. STENNIS. Will the Senator from Iowa give us the date of this opinion?

Mr. HICKENLOOPER. It is dated June 22, 1954.

Mr. STENNIS. If the Senator from Tennessee will further yield, I should like to ask the Senator from Iowa a further question.

Mr. GORE. I yield for that purpose, provided I do not lose the floor.

Mr. STENNIS. The Senator from Mississippi did not exactly understand the condition stated in the concluding paragraph, to the effect—as it was understood on this side of the aisle—that if the President ordered certain power released——

Mr. HICKENLOOPER. I did not wish to take the time to read the entire opinion, on the time of the Senator from Tennessee.

Mr. GORE. I yield for that purpose, if I may do so without affecting my right to the floor.

Mr. HICKENLOOPER. The memorandum is addressed to K. D. Nichols, general manager, from William Mitchell, general counsel. The subject matter is stated as follows:

Commission's authority to enter into a 25-year contract with the Dixon-Yates group to provide electrical energy.

You have asked my opinion on the question of whether or not the Commission has legal authority to enter into a 25-year contract with the Dixon-Yates group to provide electric-utility services for the Commission's plants at Paducah and Oak Ridge.

Then he recites the general understanding about the area of the Dixon-Yates proposal. He then quotes the statute, which is section 12 (d) of the existing law, and section 164 is the bill before us. They are both identical. After quoting that statute, which says that the contract may be made in connection with the Paducah, Portsmouth, and Oak Ridge installations, he makes this statement:

This statute gives the Commission the necessary authority to make the contract in question.

He goes on with a discussion of some other matters——

Mr. GORE. Mr. President, will the Senator read the other matters?

Mr. HICKENLOOPER. Yes; I will read the rest of the memorandum. I did not wish to take the time to read it in full. I did not believe that what followed had an important bearing on the question which has been raised.

As I have stated, immediately following the quotation of the statute, Mr. Mitchell says:

This statute gives the Commission the necessary authority to make the contract in question. The TVA system is an integrated unit, supplied from various plants owned by TVA, and, on occasion, by delivery from privately owned generating plants. Once electric power has been delivered to the system, it is impossible to identify the source of power which is supplied out of the system for end use. If additional generating capacity is constructed at West Memphis and fed into the TVA grid in an amount which is necessary to supply the Commission's requirements at Paducah and Oak Ridge, this can properly be said to be a contract for electric-utility services in connection with the operation of the Oak Ridge and Paducah installations of the Commission.

The increased cost to the Government of the Dixon-Yates proposal as against the Commission's present contract with TVA would be approximately $3,685,000 annually. However, if the President directs the Commission and TVA to modify their existing arrangements so as to release to TVA 600,000 kilowatts under the present contract (and we do not question the President's authority to do this), then the Commission has authority to make the best contract it can for replacement of the power thus released.

My conclusion, on the assumptions set forth above, is that the Commission would have authority under section 12 (d) of the

Atomic Energy Act to make a 25-year contract with the Dixon-Yates group for the purposes indicated.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. STENNIS. If I correctly understand the opinion, it says that if the President releases 600,000 kilowatts of electricity, that will create a vacancy and make the contract legal.

Mr. HICKENLOOPER. I do not so understand it at all.

Mr. STENNIS. There had to be a shift or alteration in the situation in order to justify the legal basis for the contract.

Mr. HICKENLOOPER. I simply cannot agree with the Senator on that premise at all. The opinion is a flat statement that the statute gives the Atomic Energy Commission the authority to make this contract. Then Mr. Mitchell discusses the surrounding circumstances of the contract, but he again comes to the conclusion, at the end of the opinion, that the Commission would have authority to make the contract. He does not say anything about any "ifs," "ands," "buts," or "maybes." This is the last paragraph in the letter:

My conclusion, on the assumption set forth above, is that the Commission would have authority under section 12 (d) of the Atomic Energy Act to make a 25-year contract with the Dixon-Yates group for the purposes indicated.

Mr. STENNIS. Of course, the memorandum will speak for itself, but as I understand the statement of facts, there had to be a change in the situation with reference to existing conditions in connection with this power before the attorney could justify the legal basis for the contract. It seems the contract is dated after the order had already been made on June 16, 1954, for the consummation of this contract. It is very interesting to have the opinion in the RECORD, even at this late date, so that it may be further studied.

I thank the Senator.

Mr. COOPER. Mr. President, will the Senator yield so that I may address a question to the Senator from Iowa?

Mr. GORE. Mr. President, I ask unanimous consent that I may yield to the Senator from Kentucky for the purpose of addressing a question to the Senator from Iowa [Mr. HICKENLOOPER].

The PRESIDING OFFICER. Is there objection?

Mr. FULBRIGHT. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. GORE. I yield to the Senator from Kentucky for a question.

Mr. COOPER. It would appear from a hasty reading of the memorandum that the Atomic Energy Commission could enter into the contract in question; but I should like to ask the distinguished Senator from Tennessee if there is not another step which would have to be taken in this proceeding. Even if the Atomic Energy Commission should enter this into contract with the Dixon-Yates group to produce power, would not the Senator say that before it could become effective it would require the assent of the Tennessee Valley Authority, which is just as much an independent agency as is the Atomic Energy Commission?

Mr. GORE. That independent agency is also under orders. That board was not consulted, but was ordered. I do not believe the President can legally order the Tennessee Valley Authority board of directors to relinquish their legal responsibility for the management functions of the TVA. I have not brought out that point in the debate, but I certainly think the order trespasses upon legal authority.

Mr. COOPER. Mr. President, I should like to propose a hypothetical case to the Senator from Tennessee. Suppose in this instance the TVA were not involved, but that it was a question of the Atomic Energy Commission replacing in a private power company the electrical energy it was receiving from that private power utility. Does the Senator believe that the private power company would accept the replacement unless the replacement fitted into its own plans?

Mr. GORE. And at a comparable price? No, I do not. That company would have an improvident management, if it did so.

Mr. COOPER. Does the Senator believe that a private company that would be a prime supplier of the Atomic Energy Commission would have power forced upon it?

Mr. GORE. I know of no company of which I would have that opinion.

Mr. COOPER. I ask the Senator also what view he holds as to whether there is any power in the executive branch of the Government to make this determination, and whether the executive branch has any power other than the power granted in the acts themselves?

Mr. GORE. I know of no power the Atomic Energy Commission has except delegated power. I know of no power the President of the United States has except delegated power, other than his constitutional power as Commander in Chief. This is not a national defense contract. This is a contract for furnishing power for the civilian needs of the city of Memphis. Therefore, I believe we must look to the act itself for the powers of the President. The act sets forth certain powers which the President is authorized to exercise.

By the very specification of those powers, I think other powers are necessarily excluded. I believe we must look to the act for those powers, and in looking to the act, we need to look at the legislative intent. I should like now to review for the Senate the legislation on which the general counsel seeks to pin his authority.

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. Is not the key word in the opinion of Mr. Mitchell the word "release"? In other words, is it not true that if the Atomic Energy Commission released to the TVA an amount of power the TVA is now committed to supply to the Atomic Energy Commission, then of course the Atomic Energy Commission could make a contract for an amount of power equal to what it would use for itself in its own installations? Is that not true?

Mr. GORE. I believe that is true.

Mr. HILL. In other words, if the power were given to the TVA, then of course the Atomic Energy Commission could make a contract with Dixon-Yates, or with any other group or company, or with any other supplier of power, and get the power itself for its own installations?

Mr. GORE. I believe that is very true, and I thank the Senator from Alabama for his contribution.

Mr. HILL. If the Senator had time to examine the letter carefully I believe he would find that that is the basis of Mr. Mitchell's opinion.

Mr. GORE. It is an "iffy" opinion.

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. Is it not true that the President, in his budget message in January, made that very suggestion, and that that was the whole idea, namely, the idea of turning back, so to speak, to TVA, certain power that TVA was obligated to furnish the Atomic Energy Commission, until the disclosure on June 17 before the joint committee?

Mr. GORE. That is correct.

Mr. HILL. It was not until the 17th of June that anyone had any idea at all that the administration was thinking in terms of directing the Atomic Energy Commission to act as broker to buy power for TVA.

Mr. GORE. I read into the RECORD a letter in which Commissioners Smyth and Zuckert commented upon the fact that that was the original explorations they made, but that it took a different turn, and that they determined they would not cancel the contracts with TVA and that TVA would not be released from any of its obligations to furnish power, because, the Commissioners said, they depended upon this power for their production schedule, and therefore the explorations took a different turn. Therefore this bizarre arrangement was finally conjured up.

Perhaps because of my experience in the other body before being honored with membership in this body, I have been more directly connected with this particular development than any other Member of the Senate.

As acting chairman of the Subcommittee on Appropriations of the House of Representatives, I conducted hearings on the request for appropriations to expand the atomic energy program to build the Paducah facility and the Savannah facility. The Atomic Energy Commission, in pursuance of that expansion, came before the committee and requested the committee to recommend appropriations for the TVA to build the Shawnee steam plant.

TVA did not come except that they were requested to do so. The initiative was out of the Atomic Energy Commission. We held hearings. The committee really had no serious reservations

about supplying the necessary appropriations. The national defense required its approval.

Subsequent to that, the Commission came back for an additional hearing, and represented to us that certain negotiations had been under way and that it had found that it could secure one-half of the power from a private concern at a rate comparable to the TVA rate. The committee approved it. The committee thought it was a fine idea.

The deal did not turn out that way, unfortunately. Commissioner Murray, who was the chief negotiator in that field—and I think he has taken responsibility therefor—testified recently how disillusioned he had been. However, the House Committee on Appropriations took it on face value and approved the request.

The request passed the Senate, and the program became law. The program was under way. Then last year the Commission came before the joint committee and said the private group was having great difficulty selling its bonds—in fact it could not sell them because there was not, in the opinion of the investors, a sufficient guarantee for cancellation damages and reimbursements. Therefore the Commission asked that the Atomic Energy law be amended. I appreciate the attention of the Members of the Senate who are here. I should like to read the proposed draft of the bill as it came to the committee from the Commission.

The Atomic Energy Commission is authorized in connection with the construction or operation of installations of the Commission, without regard to section 3679 of the Revised Statutes, as amended, to enter into new contracts or modify or confirm existing contracts to provide for electric utility service for a period not exceeding 25 years.

And then they spelled out the cancellation provision. What did the committee do? First, it held a hearing, and I wish to read a portion of the proceedings of that hearing:

Representative VAN ZANDT. Mr. Chairman, could we insert language in this bill that would make this particular type of contract subject to review by this committee?

Dr. SMYTH. Mr. VAN ZANDT, you have written in Oak Ridge, Paducah, and Portsmouth.

Who did that, Mr. President? The committee. I read the proposed draft which came to the committee. The committee did not want to grant more power than was necessary. The problem related to these particular production facilities. So the committee wrote in that the Commission was authorized to enter into these contract in connection with its production facilities at Portsmouth, Ohio, Paducah, Ky., and Oak Ridge, Tenn.

Continuing reading the testimony of Dr. Smyth:

Any further extension of those plants would certainly presumably come to this committee for general discussion and approval. It does not appear to me to be necessary or desirable to try to get specific contracts into the bill. * * * As I understand it, the way the bill is now modified, Oak Ridge, Paducah, and Portsmouth are to be inserted. Is that right?

Chairman COLE. Yes.

Representative VAN ZANDT. Then the bill as written will restrict it to Paducah, Oak Ridge, and Portsmouth?

Dr. SMYTH. That was Mr. Hinshaw's suggestion.

That was written into the law.

Let me read a portion of the draft which came from the Joint Committee on Atomic Energy:

The Atomic Energy Commission is authorized, in connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission—

There it is. That is how it came to the Senate, and it came with a report accompanying it. I am setting out in detail, Mr. President, the legislative history of this proposal. It has been set out, in part, before, but I think the questions raised here, as I have indicated, have been heard by the utility tycoons who have honored us with their presence in the gallery, and by their attorneys. They, too, perchance, have come to have doubts.

Let me read a portion of the report:

The bill permits the Atomic Energy Commission to enter into contracts for periods not exceeding 25 years to purchase electrical power for the operation of these plants without regard to section 3679 of the Revised Statutes, as amended. It also would permit the AEC to provide in such contracts for cancellation charges in the event the Commission should find it necessary or desirable to terminate the contracts before the expiration of their original terms.

Reading further from the report:

This power is to be used for the operation of gaseous diffusion plants at the three sites specified.

Could anything be plainer? I doubt if we could construct or fabricate a set of circumstances more clearly establishing the manner in which the functions of this Government agency are attempted to be subverted. Let me read that sentence again:

This power is to be used for the operation of the gaseous diffusion plants at the three sites specified. The utilities cannot enter into power contracts with this limit on cancellation charges—

Why can they not enter into contracts?

since they cannot arrange financing with such a small cancellation charge guaranteed.

I continue to read:

By the arrangements which have been negotiated with the three utility companies the Commission is kept out of the utility business.

The committee report tells us that if we had adopted this amendment last year the Atomic Energy Commission would have been kept out of the utility business, and yet, with this "iffy" opinion and this bizarre directive in this unusual contract proposal, this very section of the law is to be stretched and distorted and misused so as to put the Atomic Energy Commission into the utility business.

Mr. HUMPHREY. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. HUMPHREY. The Senator has been reviewing legislation which pertains to the contracts of the AEC with the three mentioned utilities in that particular authorization. It is clear, is it not, therefore, from the bill, H. R. 4905, that the purpose of the contract of the AEC with a utility was for the express purpose of getting electrical energy for the plant operations of the Atomic Energy Commission? That was the sole base and the sole purpose for the contract.

Mr. GORE. That is what the report says.

Mr. HUMPHREY. And it goes further and says that the purpose of these contracts was to make sure that the Atomic Energy Commission would not get into the utility business.

Mr. GORE. And that is what the bill provided.

Mr. HUMPHREY. That is what the bill which we acted on last year provided.

Mr. GORE. And that is what those who testified in favor of it said, and what those who advocated its passage on the floor of the House and of the Senate said.

Mr. HUMPHREY. Yet today we are faced with the situation that the proposed contract with the Dixon-Yates group is based upon—at least, there must be some basis for it—the House bill about which we have been talking, and yet that House bill, which became public law, states that the only purpose of the contract with the utility is to provide electrical energy for the AEC. Yet in the Dixon-Yates contract there is not one kilowatt which goes to the AEC for the purposes of the Atomic Energy Commission program.

Mr. GORE. That is what Dr. Smythe said.

Mr. HUMPHREY. Nor is it even a replacement of the normal use of electric energy. Is not that correct?

Mr. GORE. That is correct. I wish to cite the statement of the Bureau of the Budget, which was handed out to the public recently in an effort to justify the contract This is from the public release of the Bureau of the Budget on July 9, 1954. I read:

The President's decision to provide for the 1957 expansion of power consumption in the Tennessee Valley area through facilities to be constructed by private enterprise—

And so forth. It does not refer to any power for the Atomic Energy Commission. Not even the Bureau of the Budget refers to it.

Mr. HUMPHREY. In other words, what we really see here is the deep concern—in quotation marks—over the TVA. Apparently the administration decided that it would be wise or prudent, or would be good politics, to work through the AEC as a sort of middle man, or, as has been said before, a broker, so that the AEC would be a sort of "fall guy" for making a contract with the Dixon-Yates group to supply power back into the TVA—which the TVA did not even say it needed, nor had it requested it—in order to furnish power to the city of Memphis, Tenn. Is that correct?

Mr. GORE. The AEC did not request this plant. The TVA did not request this plant. The people of Tennessee did not request this contract. The people of Arkansas did not request the contract—that is, I know of no citizens' movement in Arkansas for it. There

may be a fellow down there, who is a right important tycoon in Arkansas, who requested it. We do not know who thought this up.

Mr. HUMPHREY. In other words, it did not come from the grass roots of Tennessee or Arkansas. It may have come from the bulrushes of the Potomac. Would the Senator from Tennessee feel that that might be somewhat true?

Mr. GORE. I think the able Senator would have to give some further identification of the bulrushes.

Mr. HUMPHREY. I shall let that statement stand on its own merits. If there was any voice of the people in the matter—any great demand or great outcry for more power—it did not come from around the Mississippi.

I am looking at the map in the rear of the Chamber, which shows where the Mississippi River divides Tennessee from Arkansas. The voice did not come from that area. It must have come from close to our beautiful Potomac River.

Mr. GORE. Some of these times perhaps we shall know. It will be a very interesting story as to who first thought up the idea. I doubt if the President of the United States first conceived the idea. I doubt if the Atomic Energy Commission did. I am certain the TVA did not. I think those who wanted a little free profits thought it up. Those who wanted to invade TVA territory thought it up. They devised a very clever scheme. But they have tripped their toes; they have stubbed their toes.

Mr. HUMPHREY. Would the Senator say that this is a new kind of Trojan horse, a gift which was not asked for, if this can be called a gift? Its delivery was not made under the most friendly auspices to the people of the area; nevertheless, there it is. What the Senator from Tennessee is concerned about, I assume, is, What is going to come out of the horse?

Mr. GORE. I hope it will not be this contract.

Mr. ANDERSON. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. ANDERSON. The Senator from Tennessee had asked earlier today about an opinion, and the opinion was produced and was finally read into the RECORD. It was dated June 22, 1954.

Some days ago I placed in the RECORD the proposal of Dixon-Yates for the construction of these facilities. That proposal was dated April 10, 1954. It refers to the proposal they made on February 25, 1954.

Does the Senator from Tennessee not think it strange that the Atomic Energy Commission had consultations with the Dixon-Yates group from sometime last fall, and certainly since February 25, and it took until June 22 for anyone to try to find out whether what they were talking about was legal or illegal?

Mr. GORE. It is a remarkable circumstance.

I wish to say to the junior Senator from Minnesota that I would have to qualify any agreement with him that this suggestion arose on the Potomac. If this device was designed or had its genesis in the bulrushes of the Potomac, then it was conceived by those who have been transplanted there from Wall Street. This is a clever design by shrewd financiers. I would not like to identify, I could not identify, the author of the plan. Maybe a great many persons got together and contributed to it. Perhaps it began with a real suggestion that the TVA be relieved. I refer to the suggestion in the budget. Perhaps someone made a suggestion earlier than the suggestion in the budget, because we have the letter of the Commissioners, referring to a letter from Mr. Hughes, the Budget Director. Maybe that is an indication. What was his background?

Mr. HUMPHREY. Would the Senator from Tennessee mind telling us about this? This is one of the most interesting mystery stories of this decade. It used to be "Button, button, who's got the button?" Now it is "Kilowatt, kilowatt, who's got the kilowatt?" Or should we say, "Contract, contract, who's got the contract?"

Mr. GORE. Should it not be "Profit, profit, who's got the profit?"

Mr. HUMPHREY. It could be.

Mr. GORE. Free profit.

Mr. HUMPHREY. At 9 percent.

Mr. GORE. A guaranteed percentage.

Mr. HUMPHREY. For 25 years.

Mr. GORE. And tax exempt.

Mr. HUMPHREY. With all taxes paid.

Mr. GORE. Is it not wonderful?

I should like to proceed with the relation of the legislative history of the proposal, which has been so badly distorted.

Mr. HUMPHREY. Before the Senator does that, let us refer back to the Ferguson amendment. Does not this appear to be somewhat of a postdated birth certificate? We are trying to ascertain when the baby arrived on the scene. There seems to be some doubt as to its legality, speaking, of course, of the contract.

Mr. GORE. I should say it is an effort to legitimatize something about which there is some question.

Mr. HUMPHREY. We are even having trouble determining its parentage. Now we are in doubt as to the date of its birth. But we can be grateful to the Senator from Michigan for having given us one point around which we can rally.

We know that as of last Friday there was an area of doubtful legality. The Senator has offered an amendment, which is a little late in arriving, it having come in on a slow freight.

Mr. GORE. The amendment of the Senator from Michigan has far-reaching effects. It not only seeks to legalize the Dixon-Yates deal, but also to authorize the Commission to make five times as many such deals.

Mr. HUMPHREY. It is a large family for which the Senator from Michigan provides. The problem we have is to find out who are the parents, and the date of arrival of the first born.

But I say that we owe the Senator from Michigan a debt of gratitude, because he has provided a kind of postdated birth certificate for the first arrival. If we can ascertain the genesis of this new development, this first born, we shall have made some progress. I am only trying to help the Senator from Tennessee, in view of this great mystery.

Mr. GORE. The Senator is providing wonderful assistance.

Mr. HUMPHREY. I am grateful to the Senator. I am merely trying to learn how all this got started. One would think that if the atom could be split, we should, at least, be able to learn who let the contract.

Mr. GORE. The TVA yardstick has been worrying some people. It has been worrying them no end. They have been hoping for the time to come when they could have in high places those who would help them destroy the TVA yardstick. They have been hoping for the time to come when they could invade the TVA territory, when they could obliterate the yardstick which has been used by persons from the Atlantic to the Pacific, from Canada to the Gulf of Mexico, to force down the exorbitant, unconscionable electric rates which the power trust would force upon the people.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. SCHOEPPEL in the chair). Does the Senator from Tennessee yield to the Senator from Arkansas?

Mr. GORE. I am delighted to yield.

Mr. FULBRIGHT. The Senator from Tennessee has said much about the yardstick. It was my impression that the private companies were attempting to measure up to that yardstick for the first time, and now Senators representing the TVA object to it. This is the first instance of which I am aware in which private companies have made a contract and offer, having in view the existing contract for power at Paducah, and have sought to equal, and have come very close to equaling, the yardstick. It seems to me that if a yardstick were established, then it should serve the purpose of being a goal to shoot at. If that be so, the Dixon-Yates group have hit in the bull's eye, within $282,000. Of what good is a yardstick if no use is to be made of it?

Mr. GORE. The comments of my distinguished and able colleague from Arkansas illustrate once more how badly he has misunderstood the whole proposal. His attitude has been an enigma to me.

The Senator now says that this is an instance of the private power trusts seeking to measure up to or matching the TVA yardstick. This is an instance in which they seek to destroy the TVA yardstick. They are resorting to this bizarre contract, which provides for a guaranteed profit and complete tax reimbursement, and which permits them to present an artificial rate structure. That is not meeting the TVA yardstick; that is subverting the yardstick.

Mr. ANDERSON. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield to the Senator from New Mexico.

Mr. ANDERSON. The Senator from Arkansas has referred to the figure $282,000, which I thought had finally been eliminated from the discussion. I think the Senator from Tennessee ought to read again from the official records of

the AEC that portion of the attorney's opinion in which the attorney said again the difference in cost will be $3,685,000.

Mr. FULBRIGHT. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. Not just yet. The experts of the Budget Bureau testified the minimum difference would be $3,600,000. The experts of the Atomic Energy Commission said the minimum difference in rate would be $3,600,000 a year. The experts of the Federal Power Commission said the minimum difference would be $3,600,000 a year. And the only expert who disagrees with all those experts is the junior expert from Arkansas. [Laughter.]

Mr. FULBRIGHT. Mr. President, will the Senator yield further?

Mr. GORE. I yield.

Mr. FULBRIGHT. I hesitated to ask a question of the Senator from Tennessee for fear I might be accused of joining in the delay of action on the bill, so I withdraw my question, because I would not want to cause a further reiteration of the inaccurate statements which have been made relative to the amount the contract will cost the country. With the Senator's permission, I shall withdraw the question, and I hope he can then proceed to the second page of his prepared statement.

Mr. GORE. I fear it would not be quite parliamentary to have a withdrawal of the statement of the Senator, which I have already answered. If the Senator would not mind, I should like to have the statement remain in the RECORD, in order that the RECORD may show that I answered the question once again. I would not want to encourage the Senator unduly to participate in the colloquy. I know he does not care to delay the Senate in the consideration of the pending measure. Neither do I. It is my desire to promote the full and adequate consideration which this problem deserves. I say to the Senator if what is proposed is an example of how the Atomic Energy Commission is to be misused in an attempt to violate the clear intent of the Congress, then we had better pause before we grant to it all these vast powers over licensing of atomic energy development, and giving patent rights to persons many of whom have some knowledge of the subject already tucked away in their safes and secret vaults.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. GORE. I yield to the Senator from Arkansas.

Mr. FULBRIGHT. I wonder if the Senator will explain why the board of directors of the chamber of commerce of the city of Memphis, Tenn., in the State which the Senator in part represents, are in favor of proceeding with the Dixon-Yates contract, and want no further delay in the construction of the powerplant. Could the Senator explain that? He is familiar with that fact, is he not?

Mr. GORE. I had heard that such action had occurred. I am unable to explain it. Perhaps the able Senator from Arkansas is in better position to explain it than I am. I have not been having close communion with the persons who are connected with the power trusts and those who are generally identified with the leadership of the United States Chamber of Commerce.

Mr. FULBRIGHT. Oh, no; I said the Memphis Chamber of Commerce. The Senator misunderstood me. He is familiar with the city of Memphis, on the Mississippi River, is he not?

Mr. GORE. I have had some slight acquaintance with it.

Mr. FULBRIGHT. The Senator knows where the city is, and he knows it has a chamber of commerce, does he not?

Mr. GORE. I know that.

Mr. FULBRIGHT. The members of the Memphis Chamber of Commerce are interested in the industrial development and in the social, moral, economic, and political welfare of Memphis, are they not?

Mr. GORE. I am sure they are.

Mr. FULBRIGHT. They are not Communists, Socialists, or Fascists, are they?

Mr. GORE. Oh, no; I would not say that. Is the Senator suggesting guilt by association?

Mr. FULBRIGHT. No; I said they are not. They are good, loyal American citizens, are they not?

Mr. GORE. Far be it for me to say that any of my constituents are not good, loyal citizens.

Mr. FULBRIGHT. Does the Senator say I am better able to explain the actions of his own constituents than he is?

Mr. GORE. The Senator may be better able to explain the actions of that particular group of constituents.

Mr. FULBRIGHT. Are they not reputable constituents?

Mr. GORE. I am sure they are.

Mr. FULBRIGHT. I cannot understand the Senator's inability to explain their action.

Mr. GORE. I have not been talking with the persons who are interested in the contract. I have been talking with the people in the city of Memphis who are interested in keeping themselves free from the clutches of those whom they voted out of Memphis several years ago by a ratio of 16 to 1.

Mr. FULBRIGHT. That is a mystery to me. I do not know about whom the Senator from Tennessee is talking. I know so little about the internal political situation in Memphis, that I did not follow the last remark of the Senator. I do not know about whom he is talking. Who was voted out of Memphis by a ratio of 16 to 1?

Mr. GORE. The very private power trust combine which seeks now to regrab the power service area of Memphis, Tenn.

Mr. FULBRIGHT. I did not know that.

Mr. GORE. The question was submitted to referendum.

Mr. FULBRIGHT. Is that Wendell Willkie's company?

Mr. GORE. The people voted that out 16 to 1. Yet by this contract, by this misuse of the Atomic Energy Commission, by this stretching of a statute beyond any reasonable interpretation or any legislative intent, the same group seeks to use the President of the United States and the atomic energy program to return, with facilities to produce 600,000 kilowatts of electricity, at a guaranteed profit for 25 years, with complete tax immunity.

Mr. FULBRIGHT. I understand the Senator is saying, in a rather roundabout way——

Mr. GORE. I did not think my reply was in a roundabout way; I thought I was answering the Senator directly.

Mr. FULBRIGHT. He is saying that the Chamber of Commerce of the city of Memphis, Tenn., does not understand or is not interested in the industrial development of the city of Memphis.

Mr. GORE. No, the able Senator incorrectly understands me, if he so understood.

Mr. FULBRIGHT. Does the Senator from Tennessee say I did not understand him correctly?

Mr. GORE. Yes, I say so.

Mr. FULBRIGHT. Then I am mystified.

Mr. GORE. I do not impugn the motives of the Memphis Chamber of Commerce. I do not know from what office the resolution may have originated. I do not know what interests may be involved. I have not been advised as to who offered the resolution, how many were present, how large the group was. I simply am not informed on the subject about which the Senator from Arkansas seeks to catechize me.

Mr. FULBRIGHT. Mr. President, will the Senator from Tennessee yield for a question?

Mr. GORE. I yield.

Mr. FULBRIGHT. Then, I think that, for two reasons, we had better not pursue this matter: First, if the Senator from Tennessee is not acquainted with the action of the chamber of commerce of a large city in his State; and, second, if he and I do not speak the same language—because if the Senator from Tennessee was not condemning the action of that chamber of commerce, I do not speak the English language at all.

Mr. GORE. Mr. President, far be it from me to suggest that the distinguished junior Senator from Arkansas, perhaps the most highly educated Member of this body, misunderstands the English language. I was undertaking to say that I was not acquainted with the author of the resolution or the source of the resolution——

Mr. FULBRIGHT. I did not say who the author of the resolution was.

Mr. GORE. And I am not acquainted with the one who presented the resolution, how many were there, who voted for it, or what were the particular interests of those who were involved. I do not know. I only had a report that such a resolution had been passed. That is the extent of my knowledge of the matter.

I was saying that the same interests who were voted out of Memphis, by a margin of 16 to 1, were seeking to use the President of the United States and the Atomic Energy Commission in the effort to return and again grab that service area.

The Mississippi River is the dividing line between the TVA service area and the service area of the Arkansas Power

& Light Co. I have not sought to have the TVA invade the service area of the Arkansas Power & Light Co. I shall resist it, if such an effort is made. But the river can be crossed in two ways. This is an attempt of the power combine of that area to cross in the other direction, and to invade the TVA service area; and they are using the Atomic Energy Commission in that effort; and the President of the United States, I am sorry to say, is their agent in this regard.

Mr. FULBRIGHT. Mr. President, will the Senator from Tennessee yield, to permit me to make a comment?

Mr. GORE. I yield.

Mr. FULBRIGHT. Is it not a fact that for many, many years the TVA has been purchasing power from the Arkansas Power & Light Co? Is there not a crossing now, right below the site of the proposed plant, where the Arkansas Power & Light Co. sells large quantities of power to the TVA, every year?

Mr. GORE. There is an exchange of power.

Mr. FULBRIGHT. Certainly.

Mr. GORE. The relationships are very satisfactory.

Mr. FULBRIGHT. Certainly.

Mr. GORE. The TVA has satisfactory interconnections and relationships with the private utilities throughout the periphery of its service area. But that question is not the one before us.

Mr. HUMPHREY. Mr. President, will the Senator from Tennessee yield to me?

Mr. GORE. I yield.

Mr. HUMPHREY. I was delighted to hear the Senator from Tennessee respond as he did to the Senator from Arkansas. It appears that the Senator from Arkansas would like to lead some of us down a primrose path into a wonderful, fantastic fairyland, because what he is talking about has no relevancy whatever to the question before us.

Is it not true that a majority of the Commission did not want the contract? Is it not true that the TVA did not request the contract? Is it not true that the electrical energy supplied by the Dixon-Yates group will not be furnished to the Atomic Energy Commission for its normal functions and activities? In other words, is it not true that the so-called yardstick our good friend, the Senator from Arkansas, was talking about was being used to measure a project which has no relevancy whatsoever to either the TVA or the Atomic Energy Commission?

Mr. GORE. I believe the answer is "yes" to all those questions.

Mr. HUMPHREY. In other words, we are hearing about how nicely the TVA and the Arkansas Power & Light Co. get along. That is good, and we are delighted.

But what really has happened is that a contract has been ordered, not to buttress the TVA, not to serve the needs of the Atomic Energy Commission; but the contract has been ordered in the name of the Atomic Energy Commission, although for none of the purposes of the Commission, and without the request of the Tennessee Valley Authority, and not for the purpose of serving the people of Memphis. How the contract can be tied up with atomic energy, I should like to know—a 25-year contract, with $5 million of equity capital, and a $107 million firm, with a 9-percent profit guaranteed on the equity capital, and with all taxes to be paid by the Federal Government. Let the RECORD show that no other utility in the United States can enjoy such a position. The Dixon-Yates group will, under the terms of the contract, be the first utility company in America to obtain such a golden bonanza. Once this Pandora's box of special privilege is opened, let me say to my friend, the Senator from Arkansas, there will be no end to it. This is a culmination of all we have ever heard regarding special privilege in the public utilities field. It makes the holding companies look like paupers.

Mr. MONRONEY. Mr. President, will the Senator from Tennessee yield to me?

Mr. GORE. I yield.

Mr. MONRONEY. Will not this contract constitute a new kind of yardstick for private utilities; and as a result, will not all private utilities expect practically the same treatment?

Mr. GORE. Yes; once one private corporation is able to enjoy the benefits of a tax-proof position, we may be very sure that all corporations will want the same treatment.

Mr. MONRONEY. Certainly; and that desire will not be confined to the utilities, but, certainly, similar requests will be received from the manufacturers of aircraft and tanks and from all other firms engaged in defense industries.

Mr. HUMPHREY. And probably also from peanut vendors.

Mr. MONRONEY. If this contract can be stretched so far and if it can be applied, in the extreme, to the absorption of income taxes—although the Dixon-Yates group is not by any stretch of the imagination serving a distinct national-defense industry, but merely is serving the commercial needs of the Memphis area—then I do not know what bulwark Congress can erect, by means of which it can say "no" to genuine national-defense contractors who then will say, "We want the same 'deal,' and we are entitled to it; we think it is the best deal that has ever been given, in all the history of the United States, to those engaged in defense activities. So we want the same arrangement."

In short, what the President of the United States has said, by way of the Dixon-Yates contract, might as well be shown in brilliant neon lights from the dome of the Capitol, so as to enable all other industries in the Nation to say to the Congress, "Give us the Dixon-Yates deal, too, because it is the best ever offered, and we want it extended to companies that have properly and well served the country."

Mr. GORE. If it is used for defense purposes, then the development the Senator from Oklahoma foresees certainly will come to pass. On the other hand, if it does not become a precedent, but if this is the only concern to whom we grant this special privilege, then consider the inequity. In that event, no matter how the storms may rage during the next 25 years, no matter how high we may raise the taxes on the average citizen or on other corporations, no matter whether we may have to reimpose the excess-profits tax, we still will say to the Dixon-Yates group, "But not on you, my dear brother. You are something very special. No taxes will be raised on you. In fact, you will not pay any taxes in the next 25 years, no matter how high may be the taxes paid by all other persons in the country."

Oh, Mr. President, the senior Senator from Iowa [Mr. HICKENLOOPER] questioned me as to the legality of it. I say that I believe it would be illegal. But I am not asking the United States Senate to declare whether it is legal or illegal. I am asking the Senate to say whether it is right or wrong, whether or not it is in the interest of the United States to establish such a precedent, by which others may receive such benefits; whether it is right or wrong to establish a special benefit for this special corporation, which was brought into existence particularly for the purpose of receiving a fat Government contract with a guaranteed, built-in profit of 9 percent and tax immunity for 25 years. I am asking the Senate to declare whether it is right or wrong.

Mr. LEHMAN. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. LEHMAN. Is it not a fact, also, that if we pass the bill in its present form it will be used as an entering wedge to continue to prevent the Atomic Energy Commission from producing energy derived from nuclear fission in its own facilities or in the facilities of other governmental agencies? And if that is a fact, does not that constitute a complete giveaway of this tremendous asset which has been built up and made possible only through the investment of $12 billion of the taxpayers' money?

Mr. GORE. I listened to the very able and provocative address of the Senator from New York on Saturday. He made a fine contribution to the debate.

I must say that the Dixon-Yates proposal has so shocked the junior Senator from Tennessee and other Members of this body that he and others are looking carefully into the broad discretionary powers proposed to be vested in the Atomic Energy Commission by this bill, and looking also with the greatest of doubt upon the fact that it is proposed to prohibit this agency of the Government from developing power in commercial quantities through fusion of fission. Nevertheless, the proposal by the senior Senator from Michigan is that if it develops power by orthodox means, and invades the TVA territory, that is all right. Tax immunity is all right in that case.

Mr. LEHMAN. But under the bill as it stands today, and as it has been urged for passage upon the floor of the Senate, the Atomic Energy Commission is prohibited from developing energy derived from nuclear fission.

Mr. GORE. In commercial quantities. Let me say that that is a very important qualification. The junior Senator from Tennessee does not pretend to be an expert in this field. I did gain some limited knowledge through 5 years' service on the particular subcommittee in the

House which handled the appropriation bill for the atomic-energy program.

A pilot plant to produce a small amount of energy is very useful, but it may not be very useful from a research standpoint, in developing, at an economical rate, electricity that can be competitive with or cheaper than electricity produced by present methods. Unless the Government has some agency to develop such power, I think the operation does take on the characteristics of a giveaway. If we prohibit the Government from doing it and prohibit the agencies of Government—the people's agencies—from having control of this natural resource which belongs to the people, and at the same time make it available to those who have the vast funds necessary to develop the resource, then it seems to me that it becomes exclusively available to those with huge financial resources. As I said to the junior Senator from Rhode Island [Mr. PASTORE] a few days ago, merely to say that the door is open for all to come in is not sufficient protection, either for small business or public enterprise, if the steps to that door are so high and so difficult that only a few can climb thereto.

I am not sure that we ought to direct the Atomic Energy Commission to do this work. I should like to suggest, as I did Saturday, for the consideration of the Senator from New York and other Senators, that it might be advisable to establish another governmental agency, free from some of the responsibilities and some of the leanings of certain present members of the Atomic Energy Commission, to engage in research and development of electricity by atomic means, in commercial quantities. I think it is unwise, however, to deny to the Atomic Energy Commission or any other agency of the Government the privilege of such research and development.

Does that answer the Senator's question?

Mr. LEHMAN. Yes. Mr. President, will the Senator further yield?

Mr. GORE. I yield.

Mr. LEHMAN. Assuming that the Atomic Energy Commission is not to be the exclusive governmental agency to develop energy from nuclear fission, the prohibition which is now sought to be placed on the Atomic Energy Commission, and which would prevent it from developing such power, certainly would give exclusive rights to private enterprise for private development to be conducted by extremely large or monopolistic organizations. They are the only ones which could possibly provide the capital for such development, unless the Government itself should make use of its facilities, its research work, its know-how, its experience, and its investment of $12 billion, which has been made over the past 10 or 12 years.

Mr. GORE. I think I am in substantial agreement with the Senator from New York.

In addition, this misuse of the power of the Atomic Energy Commission, and the wrongful use of the Atomic Energy Commission itself, raise serious doubts in my mind as to the wisdom of vesting of the patenting power under the proposed act. I do not wish to change any wrongful act on the part of anyone. However, we must recognize a few facts. Certain very large, very wealthy corporations have had contracts to operate the Oak Ridge facilities, the Hanford facilities, the Paducah facilities, and the Savannah facilities. In fact, the atomic-energy program is operated almost entirely under contracts with private corporations, most of them large ones.

Is it not reasonable to presume that in the conduct of this program those companies have developed an unusual amount of know-how? They have almost a monopoly upon the know-how of atomic energy. If we grant patenting privileges without proper safeguards, are we not paving the way for a huge giveaway? Are we not paving the way for the corporations on the inside to fasten their hands on the bottlenecks and thereby block the use by the people of this great natural resource?

I say again and again that if the Atomic Energy Commission is to misuse its power, or if the administration is to misuse the Atomic Energy Commission against its majority opinion, then we must pause a long time before we vest in that Commission the vast powers contained in the proposed bill.

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. The Senator from Tennessee was a member of the House Committee on Appropriations and acting chairman of the Subcommittee on Appropriations which handled the appropriations for the Atomic Energy Commission. He knows that the people of the United States, through their Government, have in the field of atomic-energy production and research an investment of approximately $12 billion. That investment is already there.

Mr. GORE. That investment has been made by the people of the United States.

Mr. HILL. I do not criticize the private corporations for receiving their rewards or compensations or profits for whatever they may have done in connection with production and research.

Mr. GORE. The know-how they have developed has not been considered as a part of their reward, although I say that under this bill it may turn out to be their greatest reward.

Mr. LEHMAN. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. LEHMAN. The Senator has referred to certain facilities which are now being operated by private corporations, from which they receive compensation. Is it not a fact that those great facilities were constructed from money provided by the taxpayers of the United States?

Mr. GORE. Entirely so.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HUMPHREY. If we strip this issue down to its bare facts, or expose it for what it is, I ask the Senator whether it is not fair to say that it has little or no relevancy to national defense or atomic energy, but that it is an effort to get the public utility camel under the TVA tent. In other words, this is the first opportunity the administration has had, backed up by many private utilities, to break in point blank upon the TVA and to start the process of weakening the Tennessee Valley Authority structure.

Mr. GORE. There is no question but that this is the first attempt at dismemberment of the TVA service area. The city of Memphis is the largest power market in the TVA area. As the Senator from Minnesota knows, most of the profit in the electric utility business is made through distribution of electricity in concentrated areas, and 400,000 or 500,000 people live in the city of Memphis. We have before us a proposal to reinvade the TVA territory.

There has been relative peace in that area since 1939 between the Tennessee Valley Authority and the facilities serving in the Southeast. The boundaries have been relatively stable. The TVA has not crossed the Mississippi River in one direction, and the private utilities have not crossed in the other direction. The TVA has made no major expansion of its area. In fact, it has steadily resisted expansion. I will say to the distinguished junior Senator from Minnesota that I have resisted any expansion of its area. I do not want it to expand its area. It has enough to do to take care of the service area it now has. What I have pleaded for is an expansion of its generating facilities sufficient to serve the people in the area who must depend upon the TVA, and upon TVA alone.

Since 1939, when Congress passed the act establishing this service area, there has been stability in the service area. There has been relative peace between the TVA and the surrounding utilities. There has been an interchange between TVA and the Duke Power Co. There has been a satisfactory relationship. I have heard the head of that company so testify. The Arkansas Power & Light feels the same way, as do the people in Kentucky, and in Virginia, and in Alabama, and along the Mississippi. Of course, the Senator knows that the entire gridwork of the utilities of the country has interconnections. One utility will need more power at one hour and less power at another, and there is a constant exchange back and forth.

However, under these circumstances the private utilities are seeking to declare war again—in fact, they have declared war, and this is the first major invasion. The beachhead is at Memphis.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HUMPHREY. I am sure the Senator is familiar with the article written by Mr. Joseph C. Harsch, special correspondent of the Christian Science Monitor, and published in the Christian Science Monitor of July 15, 1954. If the Senator will permit me to do so, I should like to read a few lines from the article, because they fit very well into the thoughts he has just expressed.

Mr. Harsch says:

The real issue is whether the frontiers of public power should be allowed to expand, should be stabilized, or should be broken and forced back. Private power interests have been on the defensive for more than 20 years. The areas in which they were allowed to earn profits were being contracted

by other Federal projects throughout the West.

Mr. GORE. I think the author is slightly in error. Since 1939, at any rate.

Mr. HUMPHREY. I continue to read:

Now the private power interests are attempting to go over to the offensive and regain some of their lost provinces. It is a natural and inevitable historical phenomenon. Their hope is to drive a salient back into the Tennessee Valley. The President is on their side, helping them, in effect ordering the TVA to open its frontier and permit a regiment from the opponent's camp to take up a position inside the TVA lines.

Mr. GORE. Would the Senator reread the last sentence? I want the distinguished senior Senator from Alabama to hear it.

Mr. HUMPHREY. The article states:

The President is on their side, helping them, in effect ordering the TVA to open its frontier and permit a regiment from the opponent's camp to take up a position inside the TVA lines.

The next sentence goes a little further.

The chosen method is, however, under heavy criticism in Congress (a) because competitive bidding was not employed and (b) because the Atomic Energy Commission was an obviously reluctant vehicle for bringing private power back into the Tennessee Valley.

Mr. HILL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HILL. Is it not true that the testimony of Commissioner Murray of the Atomic Energy Commission, to be found on page 1006 of the hearings before the Joint Committee on Atomic Energy, absolutely confirms what the writer of the article says? In testifying before the joint committee Mr. Murray said, at page 1006:

Mr. MURRAY. Well, let me answer you a little differently. I would say it is not an act initiated by the Atomic Energy Commission.

He is referring to the Dixon-Yates proposal.

I would say it is not an act initiated by the Atomic Energy Commission. It was initiated by the administration. We all know that.

There is the testimony of a member of the Commission, confirming what the writer of the article has spelled out in more detail.

Mr. GORE. There is no question that that is the case. I should like to read from another article in the Christian Science Monitor, written by Josephine Ripley. She, too, may have been a bit prophetic in this article. She says:

It is building up with great force toward a showdown.

The article proceeds to show that the administration has, without reference to Congress, altered the Federal power policy which had been built up over a long period of years in the West, in the South, and in the East. This is the boldest attempt. This is a reinvasion of the TVA territory, which had been stabilized by an act of Congress. All this fight, the Christian Science Monitor says, is building up with great force toward a showdown.

Mr. HUMPHREY. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. HUMPHREY. I should like to ask the Senator if he would be willing to yield to me for the purpose of making a brief statement with reference to a situation which has developed in my home State of Minnesota.

Mr. GORE. Mr. President, I ask unanimous consent that I may yield to the junior Senator from Minnesota for a brief statement such as he has described, without prejudicing my rights to the floor.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Minnesota may proceed.

CROP DAMAGE IN MINNESOTA

Mr. HUMPHREY. Mr. President, I wish to thank the able Senator from Tennessee and also the acting majority leader [Mr. BUTLER] for permitting me to make this statement.

I hold in my hand a press dispatch, dated today, from St. Paul, Minn., stating that Gov. C. Elmer Anderson declared an emergency as west central Minnesota battled great masses of army worms which have destroyed 10 percent of the area's crops. United States Air Force and National Guard planes flew emergency supplies of insect poison into the area.

T. L. Aamodt, State entymologist, said the crop damage was estimated at 10 percent and will run into millions of dollars. However, "many millions" more were saved by fast action during the weekend, he said. "Crop loss could have been 50 percent," he said.

Governor Anderson declared the emergency in order to facilitate the movement into the area of such worm-destroying chemicals as toxaphene, DDT, and parathyon. The worms damaged small grains and flax and started moving into corn, Aamodt said.

This matter was brought to my attention as of last Saturday. I immediately got in touch with the Department of Agriculture and followed up that contact this morning to see what could be done in terms of aiding the people in the western part of the State of Minnesota who are suffering from very heavy crop losses. I am happy to report that, through the cooperation of the National Association of Chemical Manufacturers, as well as the Air Force and the National Guard, along with technicians of the Department of Agriculture, a full-scale offensive is being waged against the invasion of the army worms.

I merely wish to make this comment. I have been reading in recent weeks about the favorable crop estimates which have been made by the Department of Agriculture, and I have been reading that those crop estimates indicate that there will be an ever-growing surplus of agricultural commodities.

Mr. President, I think it is time to reevaluate the crop estimates and quit using them as a propaganda vehicle and as a propaganda technique to fight an agricultural legislative battle.

A terrible heat wave has engulfed the entire Midwest and Southwest. I should like to have the Senate know that the price of corn has sharply increased. Why? Because the ticker-tape and news dispatches over the weekend inform us that the corn crop is suffering severe damage.

I make the prediction on the floor of the Senate today—and I make it in the presence of the distinguished majority leader [Mr. KNOWLAND], who commented last Saturday on the proposed agricultural legislation—that we will be thanking God Almighty that we have a surplus of corn come next fall. The corn crop in Minnesota, in Illinois, and in other areas is already severely damaged. There is about a 4-month surplus of corn. That surplus will not be enough to tide us over. The market would not be going up today as it has been if the people in the corn market did not know we are going to be faced with a shortage.

I remind my friends that we have had 90-percent price supports on corn since 1941, and we have now only a 4-month surplus of corn. Without the price supports we might not have had that much. We are going to need the corn, Mr. President.

Egg prices jumped from 2 to 6 cents a dozen from 17 cents last week. Why? It is attributable in part to the hot weather. There is one thing that neither the Secretary of Agriculture nor the Congress nor the President can take care of, and that is the weather. When we talk about agricultural legislation I suggest that, rather than look at the political barometer, we look at the real difficulty—the weather.

In this instance I point out that the price-support program we have had is going to stand us well. I repeat, we are going to find ourselves in some areas short of small grains.

Last week I received reports from my State of an attack of rust now hitting many of our small grains. There has been higher humidity in the Midwest than there has been for years. The small grains, instead of being firm, hard, and filled with nutrition, are like a cellophane capsule, without the moisture content, the stock, and the substance which should be there.

We have no great surplus of oats or barley or rye or grain sorghums. We are going to have little or no problem of surplus in connection with those grains in those areas. If the dry weather continues, there will be a shortage of pasture. That, in turn, will take its toll upon dairy herds and dairy production.

I suggest, Mr. President, that rather than to tamper with an agriculture program which has done fairly well throughout the years, we proceed to improve it and not weaken it. I cannot help but take this opportunity to say to my distinguished friends on the other side of the aisle that, from my reading of the weekend blasts as they appeared in the Sunday morning newspapers, rather than start propaganda with regard to farm legislation, they had better talk about the Dixon-Yates contract.

I listened to the distinguished Senator from Kentucky [Mr. COOPER], who pointed out the weaknesses in the atomic energy bill. I have been reading in the newspapers that he has gone as high as the White House, at least, to one

of the President's assistants, Mr. Sherman Adams, and to the Bureau of the Budget. I wish to suggest to my good friend, the majority leader, that he join with the Senator from Kentucky in proceeding forthwith to the President's office, not to talk about scuttling the farmers, but about scuttling the Dixon-Yates contract; not to talk about lowering farm income, but about protecting the public interest in the great field of atomic energy. I am of the opinion that if he will take these steps one at a time, we will do better and will proceed with more prudent judgment.

I have noticed again and again that the continuous barrage of propaganda which this Senator feels must be met head on.

I ask unanimous consent, Mr. President, that the clipping to which I have referred, pertaining to the very serious crisis in my State, be incorporated in my remarks at this point.

There being no objection, the clipping was ordered to be printed in the RECORD, as follows:

ST. PAUL, MINN.—Gov. C. Elmer Anderson declared an emergency as west central Minnesota battled great masses of army worms that have destroyed 10 percent of the area's crops.

United States Air Force and National Guard planes flew emergency supplies of insect poison into the area.

T. L. Aamodt, State entomologist, said crop damage was estimated at 10 percent and will run into millions of dollars.

"However, many millions more were saved by fast action during the weekend, he said.

"Crop loss could have been 50 percent," he said.

Anderson declared the emergency to facilitate movement into the area of such worm-destroying chemicals as toxaphene, DDT, and parathyon.

The worms damaged small grains and flax and started moving into corn, Aamodt said.

Mr. HUMPHREY. Mr. President, I wish to make note of the fact that the Secretary of Agriculture has just indicated that he expects the price supports on the 1955 wheat crop not to drop below 80 percent. This Secretary of Agriculture is the most expensive speechmaker in the Nation's history. By the Secretary's comment, he has injected much speculation into the corn market. As every Member of this body knows, when we start talking about price supports being down to 80 percent next year, we immediately throw the market out of balance. Before any more statements like those coming from the Secretary are made, which cost the farmers millions of dollars, I suggest that the Secretary commune with the weatherman. If he will do that, it may help.

Mr. GORE. Some moments ago, I had undertaken to show that by the history of section 12 (d), Congress had not intended to grant authority for the Atomic Energy Commission to go generally into the power business. I shall read from a letter which is contained in the report of the Joint Committee on Atomic Energy which accompanied the bill (H. R. 4905). The letter was written by Representative STERLING COLE, Chairman of the Joint Committee on Atomic Energy, and was addressed to Mr. Jerome K. Kuykendall, Chairman of the Federal Power Commission. I read as follows:

I enclose a proposed revision of H. R. 4905. This bill provides authority for the Atomic Energy Commission to enter into long-term power contracts for the gaseous diffusion plants at Oak Ridge, Tenn., Paducah, Ky., and Portsmouth, Ohio, and to pay cancellation charges under these contracts from currently available funds and future appropriations.

Mr. President, that is a description of the bill by the chairman of the committee. The Chairman of the Federal Power Commission replied, in part, as follows:

DEAR CONGRESSMAN COLE: Your letter of June 11, 1953, states that it would be most helpful to the Joint Committee on Atomic Energy if the Federal Power Commission could give its assurance that the cancellation provisions in the Atomic Energy Commission's long-term contracts for the production of electricity for the gaseous diffusion plants at Oak Ridge, Tenn., Paducah, Ky., and Portsmouth, Ohio, are fair to both the Government and to the power companies. Pursuant to this request, the Commission has carefully reviewed the cancellation provisions in the contracts of the Atomic Energy Commission with Ohio Valley Electric Corp., Electrical Energy, Inc., and Tennessee Valley Authority.

Thus it will be seen that in every instance the committee report refers to the grant of authority as relating specifically to the three facilities.

The bill came to the Senate. On July 6 it was called on the consent calendar.

I should appreciate the attention of the distinguished and able majority leader, for whom I have high respect and fond and friendly regard.

I am trying to show that this section of the act, the amendment which was adopted last year, has been stretched beyond the intent of Congress and beyond any reasonable interpretation. Prior to the time when the majority leader came into the Chamber, I had cited the testimony of the Atomic Energy Commission before the joint committee.

The fact is that when their draft was brought to the committee, it did not specify those three production plants, but the committee had them specify the places and the facilities where this authority was to be used.

I have just read from the report. I had already read from other parts of the report.

The attention of the Senator from California is so valuable that I wish to read briefly from the report:

This power is to be used for the operation of the gaseous diffusion plants at the three sites specified.

I read further the purpose of the provision:

The utilities cannot enter into power contracts with this limit on cancellation charges, since they cannot arrange financing with such a small cancellation charge.

That was the purpose of the bill. It came up on the consent calendar. As the Senate knows, I serve as a member of the minority calendar committee. The bill was called up on July 6, 1953. I was interested in it, because it involved a contract with the TVA. I had been instrumental in the House in the passage of an appropriation making it available. I had some doubts about the bill, and I asked that it go over for another week. In other words, I entered an objection.

At the same time, the junior Senator from Oregon [Mr. MORSE] entered certain objections and asked certain questions. Action on the bill was postponed.

I obtained the committee reports and made a study. The bill came up again on July 9, but on July 8, the previous day, the senior Senator from Iowa [Mr. HICKENLOOPER] inserted in the RECORD certain answers to the questions which the junior Senator from Oregon had asked. Those answers may be found on page 8464 of the unbound CONGRESSIONAL RECORD of July 9. Again the purpose of the amendment was made plain.

On July 9, 1953, the bill was called up. I wish to refer each of my colleagues to the colloquy which took place on the Senate floor in connection with the passage of the bill.

It is interesting to note that two of the questions which had been propounded by the junior Senator from Oregon were as follows:

First. Do the contemplated contracts with the private utilities provide for a recapture of the facility? If not, why not?

Second. Why is it that the contracts do not provide for an option on the part of the Government to resale of the power canceled?

In propounding these questions, the junior Senator from Oregon sought to inquire why, in the event of cancellation of the contracts by the AEC, the Commission should not be allowed to mitigate the canceled power by offering to find an alternate market for it, or, in the alternative, to take over control of the plants at their then unamortized cost.

In the answer provided for these two questions, the proponents of the legislation tried to make it clear that any such eventualities as proposed by the Senator from Oregon would have the effect of placing the Atomic Energy Commission in the power business. The senior Senator from Iowa, in discussing these questions during the colloquy on July 9, stated specifically that the purpose of providing for a cancellation payment in lieu of a recapture clause or resale authority was to take the Atomic Energy Commission out of the electric sales business.

I submit, Mr. President, that if Public Law 137 was enacted so as to authorize the AEC to enter into contracts for procurement of its power needs "without going into the power business," that purpose is most certainly being subverted when it is now insisted that the very same act constitutes authority for the AEC to go into the power business.

I believe that the junior Senator from Oregon [Mr. MORSE] performed a distinct public service when he propounded certain questions about that pending legislation. The Senator from Oregon had no desire to impede the progress of the AEC program. He promptly withdrew his objection to the bill as did the

junior Senator from Tennessee, as a result of the legislative record made on passage of the bill, a record which we felt clearly limited the authority contained in the bill to those contracts essential to fulfill the power requirements of the Atomic Energy commission.

In his closing remarks in connection with the passage of that bill the junior Senator from Oregon made his position clear. I should like to quote from his remarks for the information of the Senate. He stated:

I raised the questions I did last Monday, resulting in this bill's being brought up by motion rather than on a call of the Consent Calendar, because we now have in the RECORD a legislative history which I think is very much needed in connection with legislation of this kind.

Here is a piece of legislation—Mr. President, mark you well what I say—which will be used for precedental purposes in the future. I was aware of that last Monday, and I wanted the record to be clear as the Senator from Iowa has made it, so that in the future, principles which were followed in this case will be clearly understood.

When the Senator from Oregon stated that the enactment of that legislation, in the absence of a clear legislative record, might be used for purposes not intended by the Congress, he was surely being even more prophetic than he realized. Despite the efforts of the junior Senator from Oregon and others to establish a clear legislative record limiting the authority contained in the act, it is now asserted that this same authority may be used as a vehicle for the purpose of imposing the power philosophy of the President, or of others, on the people of the Tennessee Valley.

I submit, Mr. President, that if the intent of the Congress in the passage of an act, as reflected by the legislative history of subsection 12 (d) can be clearly ignored by the Executive, the Congress has no alternative other than to specify in the terms of the legislation itself the exact limitations of the authority conferred.

I thought we had done so. I hold in my hand the CONGRESSIONAL RECORD, volume 99, part 6, and I read from page 8339 a statement by the vice chairman of the Joint Committee on Atomic Energy, the senior Senator from Iowa [Mr. HICKENLOOPER], as follows:

Mr. HICKENLOOPER. * * * It is a matter of protecting the original capital investment, and also of protecting the Atomic Energy Commission. The advantage in the main, as I see it, is that it obviates the necessity of the AEC from assuming the risk, first, of either having to use all the power that is produced, or of having to go out on its own to find customers for it. It takes the AEC out of the electric sales business and transfers that responsibility to private groups.

I have discussed this matter with the Senator from Oregon. He is present and, of course, he can speak for himself. I am sure he told me that he feels satisfied at the moment with the explanations which have been given, and has withdrawn his objection to consideration of the bill at this time, as did the Senator from Tennessee.

Mr. BRICKER. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I yield to the Senator from Ohio.

Mr. BRICKER. It also saves an investment by the Federal Government of approximately a billion dollars in plant construction, does it not?

Mr. HICKENLOOPER. It transfers the plant investment of $1 billion from the Government to two private enterprises and TVA. The three outfits jointly have assumed the capital investment risk. The survey showed that there would probably be a balance of some amount involved; but the Atomic Energy Commission would be relieved of the responsibility of making a large capital investment and the responsibility of disposing of the power. If they use the power for 10 years, as they probably will, they can at the end of the 10 years cancel the contracts, with no liability under any circumstances.

Mr. BRICKER. Mr. President, will the Senator yield further?

Mr. HICKENLOOPER. I yield.

Mr. BRICKER. Merely for the purpose of the record, after the study by the Joint Committee on Atomic Energy, the Senate members of that committee concurred in the recommendation for approval of the contract and joined in the introduction of the bill. Is that correct?

Mr. HICKENLOOPER. Yes. I am quite certain the statement I am making is factually correct, although it is late and the staff of the committee did not know this bill was to come up tonight, and so they are not here with all the statistical data we should have, but I am certain there was no vote against the bill on the part of any member who was present; and, while there might have been 2 or 3 absentees and the Joint Committee on Atomic Energy may not have been polled, I can give the Senate the assurance that after full consideration by that committee there was no objection and there was universal approval.

Mr. BRICKER. I thank the Senator.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. HICKENLOOPER. I yield.

Mr. ANDERSON. I fully agree with the statement just now made by the Senator.

Mr. HICKENLOOPER. I thank the Senator, who is very much interested, and who I may say is a very attentive member of the Joint Committee on Atomic Energy.

Mr. GORE. Mr. President, will the Senator yield?

Mr. HICKENLOOPER. I yield to the Senator from Tennessee.

Mr. GORE. At the time the AEC expansion program was inaugurated it was my privilege to conduct the hearings of the House Appropriations Committee. At that time we went into the contract very thoroughly. A number of people asked, "Why does not the Atomic Energy Commission build its own powerplants?" Other people asked, "Why must they contract with TVA for powerplants? Why do they not contract entirely with a private utility? Others asked, "Why not contract with TVA entirely?"
